On Oct. 18, they got a break. Donald Wilson, a state Senate computer technician who had been granted immunity, suddenly remembered something, according to a newly unsealed FBI affidavit. He still had two portable data cards - with all the passwords to open the e-mail.

Wilson's lawyer called authorities and turned over the passwords. The feds were in.

With that breakthrough, the affidavit said, agents were able to read more Fumo office e-mails talking about destroying records and fretting about the FBI - a trail that helped lead to obstruction-of-justice charges against two other Fumo computer technicians, Leonard Luchko and Mark Eister.

Thus far, they're the only ones charged. Prosecutors, who have been investigating Fumo for three years, say they will decide by Christmas whether to indict Fumo, or others.

The FBI's corruption and extortion probe is focused on whether Fumo or others misused a South Philadelphia charity, Citizens Alliance for Better Neighborhoods, for personal or political gain. Donations from Verizon and Peco Energy Co. to Citizens Alliance are also under review.

Prosecutors declined to comment yesterday, as did Wilson's lawyer, Mark Cedrone. Fumo's lawyer, Geoffrey Johnson, did not return a phone call.

Fumo, long considered the most powerful Democrat in the state Senate, has said he has done nothing wrong. He has said the investigation was politically inspired by Republicans.

The newly unsealed affidavit also includes other new information about the case.

For example, it says the charity "organized and managed" by Fumo paid money to a polling company, Kiley & Co. of Boston. Sources say it was for a 2002 poll that cost $44,800.

Tax laws prohibit charities from engaging in political activity.

The charity paid another polling firm about $215,000, The Inquirer reported last year. A Fumo politicial committee repaid the charity for that expense, public records show.

The series of events that led the FBI to the computer passwords last fall are detailed in the affidavit, written by FBI agent Kathleen McAfee:

Wilson was an apparently reluctant witness who was granted immunity and testified to the grand jury Oct. 4, 2005.

According to the affidavit, Wilson said then that he and Luchko "systematically destroyed" e-mails and other evidence after The Inquirer reported the existence of the investigation in January 2004.

The FBI had already seized computers but couldn't unlock certain files because of an encryption program. Wilson told the grand jury that he no longer had the passwords - he had deleted them to thwart the FBI.

Two weeks later, his lawyer called prosecutors with news: Wilson had found a copy of the passwords in an Excel spreadsheet.

Wilson also gave authorities two portable computer drives; on one, agents found a document that suggested Luchko had stashed backup copies of Citizens Alliance records at his home.

That triggered a scramble by the FBI to search Luchko's house in Collingdale. The affidavit that agents used to obtain the warrant for that search is the one that was unsealed late Friday.

On Oct. 20, agents raided Luchko's home and hauled away boxfuls of electronic storage devices, including CDs, portable data cards, a Blackberry, and a large quantity of computer backup tapes, records show.

Luchko and Eister were charged in May with trying to thwart the FBI's corruption and extortion investigation. They have pleaded not guilty.

Federal Prosecutors Start Special Child Porn Fight (SLPD)

By Robert Patrick, ST. LOUIS POST-DISPATCH

St. Louis Post-Dispatch, October 11, 2006

Missouri's federal prosecutors said Tuesday that they are reinforcing the battle against an "epidemic" of online child pornography, in an effort funded in part by well-known St. Louis concert promoter and philanthropist Steven Schankman.

He said he donated $100,000 toward the estimated $600,000 annual budget to help provide a more coordinated attack. He said his desire comes from various directions, including experiences of his employees' children.

Schankman said it had little or nothing to do with federal charges that sent his son, Jason P. Schankman, to prison in April for almost 16 years for producing and receiving child pornography here. The younger Schankman, 31 when he was charged last year, lived in Kirkwood.

Steven Schankman said his financial help was not intended to get his son a break from U.S. Attorney Catherine L. Hanaway's office. "I'm too smart to say this will help my son and she's too smart to say it will," he said. "Catherine Hanaway did what she had to do."

Hanaway said she had told Steven Schankman she could not work with him on the project while his son's case was open.

On Tuesday, her office announced creation of a child exploitation unit, which will refocus some prosecutors' efforts on child pornography. She also said the FBI is planning to bear down on pornographers who use "peer-to peer" file-sharing networks that are commonly used to share music.

Several cases where child pornographers used the Kazaa network have been prosecuted in federal court in Kansas City, said Bradley Schlozman, U.S. attorney for the Western District of Missouri. Kazaa cases have also been handled in St. Louis, Assistant U.S. Attorney Jeff Jensen said.

Schlozman, who is introducing similar initiatives in his office, is cooperating with Hanaway, Gov. Matt Blunt and Attorney General Jay Nixon in the statewide initiative.

Its Website, INOBTR.com, pronounced "I know better," will debut in January to provide information to children, parents, teachers and law enforcement.

The initiatives have roots in February's launch of "Project Safe Childhood" by U.S. Attorney General Alberto Gonzales, designed to coordinate federal, state and local law enforcement efforts "to prosecute predators and rescue their victims." At the time, Gonzales cited an "epidemic of sexual abuse and exploitation of our children."

Former LA Sergeant Charged With Abusive Sexual Contact (MHCA)

Monterey (CA) Herald, October 11, 2006

LOS ANGELES - A retired police sergeant and former television reporter was charged Tuesday in connection with several encounters between him and two 12-year-old boys in a cruise ship spa, authorities said.

Roderick "Rod" Bernsen, 58, was arrested at the Port of Los Angeles Saturday by FBI agents investigating a complaint by the mother of one of the boys, authorities said.

He faces one count of abusive sexual contact. He made his first appearance in federal court Tuesday, where his bail was set at $850,000.

"He is shocked and devastated by these charges, as minor as they are," Bernsen's attorney, James Epstein, said about his client. " ... and I think we should let this play out in court."

While aboard the Princess cruise ship to Mexico, Bernsen met and befriended the boys after they sneaked into a spa restricted to men and women over the age of 16, according to an FBI affidavit.

During an encounter in the steam room, the boys alleged that Bernsen inappropriately touched himself in front of them. They claim he later followed them to shower stalls where he inappropriately touched them, the affidavit said.

The boys told their parents about the alleged encounters, which led to a heated discussion between a boy's mother and Bernsen, the affidavit said. They reported him to the security staff, which also spoke with Bernsen about the complaints.

"Bernsen stated that he spoke to the boys, but not in an inappropriate manner," the document said.

Bernsen, who lives in Colorado, was KTTV-TV's law enforcement specialist until he left the station in 2004. His broadcasting career followed service in the Los Angeles Police Department as a sergeant and spokesman.

From late last year until May, he filled in as a host on KFI-AM, Los Angeles' most popular talk radio station.

Ex-Reporter Appears In Court To Face Sex Count (LAT)

By Joe Mozingo, Times Staff Writer

The Los Angeles Times, October 11, 2006

DOJ_NMG_0078898

In shackles and handcuffs, former Los Angeles police spokesman Roderick "Rod" Bernsen appeared in a federal courtroom Tuesday to face a felony count of "abusive sexual contact" during an encounter with two 12-year-old boys in a cruise ship sauna.

Bernsen, 58, also a former Fox 11 news reporter, was arrested on board the Diamond Princess after it docked in Long Beach on Saturday at the end of a weeklong cruise to Mazatlan, Puerto Vallarta and Cabo San Lucas, Mexico.

The single criminal count alleges that Bernsen spanked the bare buttocks of one boy, and touched the other's penis with his toe. His lawyer, James Epstein, downplayed the allegations. "He's shocked and devastated by these charges, minor as they are," he said.

The count carries a statutory maximum of two years in prison, according to Assistant U.S. Atty. Patricia Donahue. Prosecutors have until Nov. 13 to return with a grand jury indictment, which could contain different charges, or to drop the case.

Bernsen was released on $850,000 bond and ordered to stay away from children. In court, he sat behind glass gazing at former colleagues in the news media, mostly with a pained expression, but at one point clowning with a court artist he knew by briefly covering his face with his hands and then laughing.

According to the arrest affidavit, the two boys, cousins and part of an extended family taking the cruise together, first encountered Bernsen in the Lotus Spa sauna Sept. 30. Children were not allowed in the sauna, but it was not monitored.

Bernsen was naked. He introduced himself and chatted about golf, eventually showing them a scar from a back injury that he said prevented him from playing sports, the boys told FBI Special Agent Julie Viana, according to the affidavit.

"John Doe 2 explained that he was surprised when Rod stood up, since he was naked…. It appeared to John Doe 2 that Rod was purposefully sticking out his buttocks to the boys," Viana wrote in the affidavit.

"The boys were uncomfortable … " she wrote. "As they left the sauna Rod tried to arrange a time when the three of them could meet again."

The boys went to the steam room later, where Bernsen allegedly talked to them about puberty and questioned them about erections while "holding and rubbing his own penis with his hand." As the boys left to take a shower, Rod spanked John Doe 2 "hard enough to sting," according to the affidavit.

Wearing only towels, they then moved to the sauna, where Bernsen shortly thereafter arrived naked, authorities allege. As one of the boys walked out, arranging his towel, Rod touched the adolescent's uncovered penis with his big toe, the affidavit said.

The boys allegedly had three more encounters with Bernsen before one of their mothers confronted the older man and accused him of saying inappropriate things to the children. She then reported to security what the boys had told her, including the touching, the affidavit said.

Later that day, Bernsen went to ship security too, said nothing inappropriate had happened, but promised to stay away from the boys. A Princess Cruise Lines executive called the FBI that day to report "a possible sexual assault of two 12-year-old boys by a 58-year-old man." The FBI waited until the ship docked five days later to question and then arrest Bernsen.

Outside the court building Tuesday, Bernsen's lawyers questioned why the boys would repeatedly return to the sauna after such allegedly disturbing behavior. "They kept sneaking back in," Epstein said.

Aviation Debate Centers On Use Of Criminal Probes (USAT)

By Alan Levin

USA Today, October 11, 2006

Two U.S. charter pilots being held in Brazil following a fatal midair collision over the Amazon jungle are at the forefront of the latest debate over whether members of flight crews should face criminal charges in jet crashes, aviation experts said Tuesday.

Authorities in Brazil are trying to determine why a Gol Airlines Boeing 737 and a Embraer Legacy 600 corporate jet collided at 37,000 feet on Sept. 29, sending the Gol jet plunging to the ground. All 154 people aboard the large jet died, but the pilots of the corporate jet with seven people on board managed to land at a military base.

The pilots, Joseph Lepore, 42, of Bay Shore, N.Y., and Jan Paladino, 34, of Westhampton Beach, N.Y., are being held in a Rio de Janeiro hotel. The local acting federal police director, Geraldo Pereira, said last week that the pilots were not under arrest but could face charges of involuntary manslaughter.

Lepore and Paladino work for the New York charter company ExcelAire.

The main question investigators seem to be focusing on is why the two jets were flying at the same altitude; flight rules are designed to keep jets at different altitudes when flying near each other.

Criminal investigations after an accident are part of "an increasing and alarming trend," said William Voss, president of the Flight Safety Foundation, a safety group. "This tends to get in the way of the safety investigation, whose purpose is to find the causes and prevent future tragedies," Voss said.

"There is nothing like the threat of criminal charges to put a chill on an accident investigation," said Peter Goelz, former managing director of the U.S. National Transportation Safety Board.

The NTSB determines the "probable cause" of accidents, but steers away from criminal cases or civil lawsuits. Groups such as the Flight Safety Foundation say that punishing individuals for mistakes does not help prevent accidents.

Among the recent criminal cases:

•Two retired airline executives, an Airbus official, a retired French aviation official and an air traffic controller face charges of negligent homicide in connection with a 1992 crash of a jet in Strasbourg, France.

•Charges were brought this year against eight air traffic officials for their roles in a 2002 midair crash in Swiss-controlled airspace above Germany that killed 71 people. The controller who issued the command that led to the crash, Peter Nielsen, was later stabbed to death by the father of one of the victims.

•Five aviation officials were convicted of manslaughter for their roles in a 2001 crash that killed 118 people on two jets that collided on the ground in Milan. The convictions were upheld in July.

A lawyer for the two pilots in the Brazil crash, Jose Carlos Dias, issued a statement saying they are "confident that they acted appropriately." Calls to the Brazilian Embassy in Washington were not returned.

Assault Charge Against Miller Dropped For Lack Of Evidence (WP)

By Ovetta Wiggins

The Washington Post, October 11, 2006

A Baltimore prosecutor dropped an assault charge yesterday against Senate President Thomas V. Mike Miller Jr., who was accused last month of punching a developer in the jaw during a public meeting.

Gerard B. Volatile, who was handling the case on behalf of the Prince George's County state's attorney's office, said he did not have enough evidence to move forward with the case. State's Attorney Glenn F. Ivey recused himself from the case because of his political ties to Miller (D) and Leo Bruso, the developer, who accused the senator of hitting him during a County Council meeting.

"After interviewing numerous potential witnesses, including the witnesses closest to Mr. Bruso at the council hearing and persons in a position to have the best perspective to see what happened, I do not believe that this allegation rises to a criminal matter," Volatile told District Judge Thurman H. Rhodes yesterday.

"I'm just glad it's over," Miller said. "I'm very grateful for the citizens of my district that came forward and their honest testimony to assist the prosecutor in this investigation."

Volatile said that he interviewed more than a dozen potential witnesses and that none corroborated Bruso's account.

"I talked to the man directly behind him, the man directly in front of him, people in front of the room, people in back of the room," Volatile said. "None characterized it the way he did."

Bruso said: "I'm highly disappointed with the judicial system. I just don't know why I wasn't given my day in court."

According to the charging documents filed last month, Bruso said Miller put his left arm on Bruso's left bicep, then slugged him in his left jaw.

"I did nothing to provoke this attack," Bruso wrote in the documents. "Apparently my political positions offend him. He has seen me at other political functions."

DOJ_NMG_0078900

Shortly after the charges were filed, several witnesses came to Miller's defense, calling Bruso's charges false.

William Brennan, Miller's attorney, said Miller was just saying hello as he left the public hearing. "There is no such thing as an assault by handshake," Brennan said.

Because Bruso, a supporter of Miller's Republican opponent, reported the incident to the District Court commissioners, a summons rather than an arrest warrant was issued against Miller.

"Fortunately I was in a room with 400 people, and there were eyewitnesses galore," Miller said.

Don't Scrimp On Care, Prosecutor Warns Nursing Homes (SLPD)

By Robert Patrick

St. Louis Post-Dispatch, October 11, 2006

With a nursing home CEO facing prison and stiff fines for scrimping on care, U.S. Attorney Catherine L. Hanaway gave a "strong warning" to the industry Tuesday that patients must come ahead of profits.

American Healthcare Management and its former chief executive officer, Robert Wachter, reaped at least $4 million by slashing care while some patients lay dehydrated, underfed or in their own filth, officials said. One resident was covered in ants, one was bruised from falls, one wandered off across a six-lane intersection and one was beaten to death by an employee.

Wachter, AHM and three nursing homes pleaded guilty Tuesday to one count of conspiring to defraud the federally backed Medicare and Medicaid programs by taking payments for a level of care not provided.

The homes named in the plea agreement, Claywest House Healthcare, Lutheran Care Center, and Oak Forest North, now operate under different names and owners. Claywest was in St. Charles, Lutheran in north St. Louis and Oak Forest North in north St. Louis County.

Eight other Missouri nursing homes cited in the charges - in St. Louis, Florissant, Ballwin, Herculaneum, Lexington, Linn, Jefferson City and Rolla - also have new names and owners. AHM owned or managed all 11.

The company also has settled civil lawsuits by residents or their relatives for millions of dollars.

Prosecutors will recommend 18 months in prison for Wachter, 59, of Jackson, Wyo., and a total fine of $750,000 spread among him and the companies. The government agreed to drop five charges of making false statements.

"This is really a first-of-its-kind prosecution in the country," Hanaway explained at a news conference, in that the charges did not allege billing for service not performed but for service "so minimal that it just didn't exist."

State surveys originally alerted the Department of Health and Human Services to problems, said Roland Corvington, special agent in charge of the FBI at St. Louis, which joined the investigation.

Hanaway held Wachter responsible because he kept ordering cost cuts, she said.

Nursing home administrators complained to AHM's then-president, Charles Kaiser, that they didn't have enough workers, but he threatened them with probation if their staff costs went too high, officials said. Kaiser later served a year in jail for failure to report elder abuse in the death of an Alzheimer's patient.

Wachter lied and told others to lie about conditions at the homes, according to the indictment. It says administrators were ordered to limit hiring and hold down payroll expenses, and that staff members were told not to report suspected abuse.

From 1998 to 2000, Wachter's salary ranged from $426,000 to $892,000, the indictment says. As co-owners of the company, he and former vice president R. William Breece Jr. took distributions of more than $5.5 million from 1997 to 2003, court documents show. Breece has not been charged, and officials declined to comment about him.

Wachter, an AHM representative and defense lawyers all declined to comment as they left the federal courthouse in St. Louis.

But relatives of two former residents had plenty to say after watching Tuesday's hearing.

"They got him," said Joyce Thiele, who with her sister, Gloria Stringer, had picked ants off their mother, Ruth Cawthon, at Claywest. She said the ants were attracted by urine from a disconnected catheter on the floor.

"I can't imagine an individual who could let something happen to another human being's loved one," Thiele said.

"All for the love of money," added Bonnie Thorpe, who said her mother, Edythe Beck, also was neglected at Claywest. She said her mother had nothing to eat or drink for a week before being admitted to a hospital and dying of double pneumonia.

DOJ_NMG_0078901

Thorpe said that she found few staffers in her mother's Alzheimer's wing. Once, she said there was a single staff member for 21 patients. "One person for 21? I couldn't do it one on one," she said.

The women suggested that Wachter would be treated better in prison than their loved ones were in his nursing homes.

AHM has agreed to be permanently excluded from Medicare and Medicaid programs. Wachter agreed to be excluded for 20 years, and Breece agreed to restricted involvement for five years.

Woman's Property Eyed In Probe Of Prostitution Case (WT)

By Gary Emerling

The Washington Times, October 11, 2006

Federal officials have filed suit against two California properties owned by a woman whose D.C.-based escort service is the subject of a money-laundering and prostitution investigation.

A civil suit filed Oct. 3 by the U.S. Attorney's Office in the District lists two properties owned by Deborah Jean Palfrey -- one in Vallejo and one in Escondido, Calif. -- as subject to forfeiture pending the outcome of the criminal investigation. As of July, the properties were worth $495,000 and $480,000, respectively.

"We're alleging this property was derived from or traceable to proceeds of criminal activity," Assistant U.S. Attorney William Cowden said.

Miss Palfrey, 50, of Vallejo, Calif., has been at the center of a two-year investigation by the Internal Revenue Service and U.S. Postal Service, which are examining charges that she illegally earned money from prostitutes working as escorts for her business, Pamela Martin and Associates.

The federal investigation focuses on the escort service she has operated since 1993 as a call-girl ring in the District, Maryland and Virginia, according to court documents.

IRS investigators already have seized more than $427,000 from accounts in Miss Palfrey's name, court documents show.

Miss Palfrey, who court documents say served 18 months in prison on a 1991 conviction for operating a prostitution business in California, could not be reached for comment via phone or e-mail yesterday.

In an interview with the Web site the Smoking Gun -- which first reported the investigation Monday -- Miss Palfrey said that she never kept records in order to protect her clients' confidentiality.

She also said that her workers did not engage in "illegal sexual activities."

There are "a lot of erotic activities that one can do without participating in things that are illegal," Miss Palfrey said.

Miss Palfrey advertised the business online, in the Yellow Pages and in the Washington City Paper, court records show. She hired women who were at least 22 years old and required that they mail her an application and photo before being employed.

The women also went through a screening process in which they were required to engage in sexual activity without being paid to ensure that they were not law-enforcement officers, according to court records.

The prostitutes were encouraged to work at least three nights a week, charging their clients as much as $300. They would send money or postal orders with half of their earnings to Miss Palfrey, who used the funds to pay for her mortgage, car lease and stocks.

Court documents say that she earned more than $750,000 from the ring since January 2000.

According to search warrant records, investigators on Oct. 3 seized items including appointment books, binders of notes on men for the escort service and binders containing women's profiles from Miss Palfrey's home and her car in Vallejo.

Investigators also seized mapbooks of the District, Maryland, Northern Virginia and New York, as well as gold coins from Canada and South Africa.

The seizures have fueled speculation that the prostitutes' clients may have included high-profile doctors, lawyers and politicians in the D.C. area.

Channing Phillips, a spokesman for the U.S. Attorney's Office, said he could not comment on what prompted the investigation but added that "it's not because of her suspected clientele."

DOJ_NMG_0078902

"The affidavit speaks for itself in terms of the allegations, which like in any case, we would have an obligation to investigate," Mr. Phillips said.

Islamic Center Files Suit On Checks (WT)

By Jim Mcelhatton

The Washington Times, October 11, 2006

The Islamic Center of Washington, D.C., one of the most prominent mosques in the country, is accusing its longtime financial manager of embezzling hundreds of thousands of dollars by funneling checks to companies under his control.

Farzad Darui of Falls Church was suspended last month as financial manager of the center, according to court records.

Officials for the Islamic Center, located in the 2500 block of Massachusetts Avenue Northwest, have told their attorneys that they discovered more than $300,000 in canceled checks since 2000 that were paid by the center to at least two Virginia companies under Mr. Darui's control, court records show.

Center officials have declined to discuss the matter but detailed the scandal in a recent lawsuit against Mr. Darui in federal court in Alexandria.

No criminal charges have been filed in the case.

According to the federal lawsuit, since the mid-1990s, Mr. Darui has handled the finances of the Northwest mosque, which receives funding from Saudi Arabia.

For years, Mr. Darui prepared checks to legitimate entities, then after getting the required approval, altered the names of the payees to businesses under his control, including Virginia-based Blue Line Travel Inc. and Zaal Inc., the lawsuit states.

Mr. Darui yesterday called the lawsuit "factually incorrect," but referred questions about specific accusations in the suit to his attorney, Victoria Toensing. She declined to discuss the case.

"This, from my point of view, is about me opposing a Saudi takeover of the center," said Mr. Darui, who is a corporate officer for Blue Line Travel Inc. and Zaal Inc. "They've been trying to unilaterally appoint a new Saudi director without going through the board."

Mr. Darui frequently has served as the public face of the center and has been quoted in several national and international publications.

A woman who answered the phone at the Islamic Center yesterday said that officials have no comment on any matters in connection with Mr. Darui's employment.

The center's director, Abdullah M. Khouj, approved various checks at Mr. Darui's request but never approved payments to Blue Line Travel, which also is referred to as BLT Inc. in the lawsuit, or Zaal Inc., according to the lawsuit.

Concern about the center's finances arose after Mr. Khouj ordered an independent audit because he was planning to leave his post to become Saudi ambassador to South Africa, the suit states.

Mr. Khouj asked Mr. Darui to commission the audit, but Mr. Darui put the matter off, the suit says. Ultimately, Mr. Khouj obtained copies of canceled checks from Bank of America and found previously undisclosed payments to Blue Line Travel and Zaal Inc.

"Neither Dr. Khouj nor anyone else at the Islamic Center ever authorized checks to be written to Blue Line Travel Inc., BLT Inc., Zaal Inc., or any other companies controlled or owned by Mr. Darui," the suit states.

Mr. Darui declined to discuss questions about Zaal Inc. or Blue Line but said "things will be clarified" when his attorney files an answer to the lawsuit.

According to the suit, the center receives funding from Saudi Arabia and is required to send copies of its checks to the Saudi Embassy in the District.

Dedicated in 1957, the Islamic Center is the District's oldest mosque and serves thousands of local Muslims each month.

The center is ruled by a board of governors that mostly consists of ambassadors from Islamic countries. Saudi Prince Bandar bin Sultan, former ambassador to the United States, is the current board chairman.

The mosque has been a focal point in the District. Days after the September 11 terrorist attacks, President Bush visited the center to call for an end to violence against Muslims.

In March 1977, a dozen Muslim gunmen took over the center, the B'nai B'rith headquarters and the District Building, holding 139 persons hostage. One person was fatally shot during the siege. Marion Barry, who was wounded in the incident, won his first mayoral election the following year.

Suspect Held In Triple Slaying (CHIT)

By David Heinzmann And Jason Meisner

Chicago Tribune, October 11, 2006

Chicago police were questioning a suspect Tuesday in the weekend slayings of an 80-year-old grandmother and two of her adult children and the assault of a teenage relative in their South Side home.

The male suspect was in custody and charges were expected, but none had been filed Tuesday evening, Chicago police spokeswoman Monique Bond said. She declined to say how long he had been in custody or whether it was believed he acted alone.

The bodies of Elnora White, her son Curtis, 56, and her daughter Elnoria Countee, 54, were found Saturday afternoon in their first-floor apartment in the 8100 block of South Green Street in the Auburn Gresham neighborhood, police said. A neighbor and a family member entered the home because they had been unable to reach anyone inside for several hours.

Countee's 14-year-old daughter, Veronica Giles, was found on the floor near the door to the home, critically injured and barely conscious. Giles, a freshman at Bogan Computer Technical High School, remained hospitalized at Advocate Christ Medical Center in Oak Lawn.

According to the Cook County medical examiner's office, which conducted autopsies Sunday, Curtis White, who was disabled and found dead in bed, died of stab wounds in his face. Elnora White, who was found on the floor of the dining room, died of blunt trauma wounds. Countee, who was found on her bedroom floor, died of a stab wound in the chest.

Police have not said whether a motive for the attack was known.

Chicago police have kept a vigilant watch on homicide trends in the last few years and have touted the continuing decline in the number of killings. After the number of murders hovered above 650 in 2001 and 2002, murder totals had dropped steeply—to 599 in 2003, and then a dramatic 25 percent drop to 448 in 2004. Last year the number was 447.

But a recent surge in homicides in the city has pushed the murder total so far this year higher than the same period last year.

As of Tuesday, there had been 371 murders in Chicago, compared with 369 by the same date in 2005, police officials said. At the end of September, there had been 10 fewer murders in 2006 than in the year-earlier period, Bond said.

Gang Member Accused Of Shooting 3 Year Old Caught (LAT)

By Richard Winton And Erika Hayasaki

The Los Angeles Times, October 11, 2006

A 17-year-old gang member accused of intentionally shooting a 3-year-old girl at point-blank range last month was captured by an LAPD-FBI task force in San Bernardino County today after community members gave up his location, police said.

Jonathan Banks of Los Angeles was named Monday by the LAPD as the man who killed Kaitlyn Avila and wounded her father, Cesar, during a Sept. 24 attack that stunned the Baldwin Village neighborhood.

An alleged accomplice of Banks was arrested Friday.

At an afternoon news conference, LAPD Chief William J. Bratton announced the arrest of the man believed to be the shooter. Bratton and members of the Avila family praised the community for helping to catch Banks.

"Without your help," Bratton said, "this would not have been possible."

LAPD Deputy Chief Charles Beck said: "This case would never have come to a conclusion so quickly without the help of the public."

Cesar Avila, the dead girl's father, also thanked the community and "the people out there for giving out clues on the whereabouts of this criminal....

"We feel a lot better now," he said.

DOJ_NMG_0078904

On Monday, police said Kaitlyn was intentionally targeted by a teenage gang member. The announcement prompted new anxiety in the Southwest Los Angeles neighborhood of Baldwin Village, which has struggled with gang violence for decades.

Deputy Chief Beck on Monday said the killer approached Kaitlyn, her father and her 6-year-old sister as they were getting out of the car outside their apartment building.

He shot and wounded Cesar Avila, a glass worker, erroneously believing that he was a member of a rival gang. The suspect then aimed his gun at Kaitlyn and shot her once in the chest, police said.

"This wasn't an accident or case of her getting caught in the fire," Beck said. "He intended to kill her. This was callous killing. It is beyond even what gangsters consider usual."

Authorities said they pieced together the chain of events after interviewing people who witnessed the shooting, as well as Cesar Avila and Kaitlyn's sister Kassey, who was unhurt in the attack.

The shooting occurred at 2:45 p.m. on a block of densely packed apartment buildings. Several people were outside and saw the attack, detectives said.

Beck said Kaitlyn's death underscored the continuing gang problems in Baldwin Village, a neighborhood of less than a square mile between La Brea Avenue and Crenshaw Boulevard off Coliseum Street.

The revelations stunned residents there.

One mother, who asked that her name not be used, suggested that the shooter was trying to "earn his stripes" and gain respect from gang members.

"I don't even feel safe walking down the street," said a 20-year-old woman who was holding her 5-year-old son's hand.

Another mother, Joy Daniels, 17, carried her 1-year-old daughter home from day care, across the street from a memorial for Kaitlyn that was overflowing with teddy bears, flowers and candles.

She said she was scared to drop her daughter off every morning, fearing that bullets from outside the school might somehow find her daughter.

The thought of the killer deliberately targeting a child gave her chills. Daniels said she wanted to knock some sense into the shooter.

She wished she could ask him: "How do you feel? Do you have remorse? You just took her little life, and on top of that it was intentional?"

The killer may have earned the respect of gang members, Daniels said, but the community was disgusted with him.

"I just pray and ask God to watch over all these little kids," she said.

Avila and his daughters were getting out of their car outside their Pinafore Street home when the killer jumped out of a gray Chrysler Pacifica and began firing a 9-millimeter handgun. Both the shooter and the driver, identified as Laron Lee Larrimore, allegedly shouted gang slogans.

Avila spent nine days in the hospital, some of them in critical condition.

"Something made me come back," he said Monday. "The whole time I was thinking about my [other] daughter. I still had something."

Avila said it was hard for him to return to his home, where his daughter's bedroom overlooks the crime scene.

The LAPD has focused considerable resources recently on cracking down on gang violence in Baldwin Village, with help from the U.S. Justice Department, police officials said. Though crime in Baldwin Village is down, officials said, the influence of gangs remains strong.

"The monster of gangsterism in South Los Angeles is the cause of this shooting," Beck said.

Two warring gangs occupy the area: the Black P-Stones, a mostly black gang, and 18th Street, a mostly Latino gang.

Though the victims were Latino and the suspects African American, police officials said they believe the shooting was gang-related, not racial.

L.A. Liquor Store Owner Dares To Stand Up To Gangs (LAT)

By Hector Becerra And Richard Winton, Times Staff Writers

The Los Angeles Times, October 11, 2006

DOJ_NMG_0078905

His hunt for the men who robbed his store 10 times yields two arrests. Now he fears payback.

They would march into the liquor store like pirates ready to gorge on ill-gotten goods.

Ten times in the last month, the same group of robbers walked in and hauled away beer, chips and other food. Brandishing a knife, the robbers warned the store's owner: "We know where you live."

But the owner of the Washington Boulevard shop would not back down.

Instead, he installed video cameras around the store to capture images of the robbers. Then he roamed the neighborhood with the photos, getting their identities.

The culmination of his detective work came Monday night when undercover Los Angeles police officers watched as several of the young men walked out of the store with two cases of stolen beer. The detectives chased the men and arrested two of them.

But in a neighborhood where street gangs cast a large shadow, the crackdown brought more anxiety than relief for the liquor store owner and his customers.

Speaking from behind a slab of bulletproof glass that protects the counter, he said: We don't just have to work here, we have to survive. Worried about reprisals, he asked that the newspaper not publish his name or the name and exact location of his store.

"They found a solution to their problem, they found these guys, got photos and did their own investigation," Grace Yoo, executive director of the Korean American Coalition, said of the owner and his family. "But now that they've done it, they're in fear of their lives."

It was this fear of gang payback that made the owner hesitate about going to police, Det. Rick Ramos of the Los Angeles Police Department said. When the heists began, the owner decided not to involve the authorities. But on Sunday, a group of the robbers came into the store, one brandishing a bat, Ramos said. It alarmed the owner so much that he finally told police about the robberies.

The suspects are members of a tagging crew that, like the gangs in the area, has increasingly turned to extorting merchants, Ramos said.

"They thought they could take control of this particular business," the detective added. "And take advantage because they'd robbed them several times without any consequences."

As word spread of the merchant's actions, some rose to praise him.

Councilman Ed Reyes, who represents the area, said he hopes the owner's actions send a message to gang members and empower the community.

"What this owner did was very brave and calculating in a positive way. You've got to do something. Enough is enough," he said.

"The truth is you have to be proactive if you want to change things, otherwise you're a sitting duck."

But Reyes said he can also understand the fear the owner and many of his customers still have about gang activity.

Despite a drop in crime in his district over the last few years, gangs remain a potent force, the councilman said.

"The ratio of officers to gang members is just crazy," Reyes said. "There's a distinct disadvantage."

In the neighborhood south of MacArthur Park, one woman applauded the owner's actions, but declined to give her name.

She said a "bad element" kept bringing the neighborhood down.

A longtime resident who lives blocks from the liquor store, she said people were disturbed to hear that the business had been hit so many times. But they also have mixed feelings about such stores, which tend to draw drunks and troublemakers.

Still, she said, the owner was brave to stand up to the robbers.

"People have to overcome their fear, pick up the phone and call the police," said the woman, who is a Guatemalan immigrant. "The community is always in fear. They think, 'If the police take away this kid, they're going to know it was me who reported him. They're going to know it was me who complained.' "

The neighborhood is a melting pot of blacks, Latino immigrants and others. The liquor store owner is Korean.

The LAPD's Rampart Division has seen a significant drop in crime over the last four years as the department has launched a new crackdown and some neighborhoods have undergone gentrification.

DOJ_NMG_0078906

But more than a dozen gangs still operate there. Last month, federal authorities accused a group of 18th Street gang members of charging "rent" to drug dealers on certain street corners.

So far this year, homicides are down 22% but rapes and robberies are up about 10% in Rampart, according to police statistics. Bucking a citywide trend, burglaries rose 4% this year.

LAPD Senior Lead Officer Iris Santin, who patrols the streets around the liquor store, said it would be naive to separate the tagging crews from the more sinister gangs.

For one thing, these graffiti vandals are operating in territories prowled by major street gangs, something that would be nearly untenable without some sort of consent.

"These tagging crews associate with gangs. The gangs allow them to tag these neighborhoods," Santin said. Tagging crews are "where the delinquency usually starts. The step before heading to the gang."

Bertha Woolridge, 63, said she could relate to the anger the store owner must have felt after being robbed so many times. The Mexican immigrant said her hardware business was robbed 19 times.

The last time, Woolridge said, "five guys came in here [with guns] and had us all laid down on the floor."

Woolridge said her experiences prompted her to become active in the local Neighborhood Watch, and to help organize events telling gang members they were not welcome.

"It made me so upset that people can come in and take whatever you build up, and they don't even have to work," Woolridge said. "They don't have to do anything to take possession of what you own. That's why I turned around and said, 'No more.' "

Three Men Charged In Robbery, Slaying (WP)

By Joshua Partlow

The Washington Post, October 11, 2006

Three Prince George's County men have been charged with attempting to rob a 41-year-old man of his backpack and cellphone, then beating him with a baseball bat and fatally shooting him, according to charging documents.

The three men -- Timothy McLeod, 20, James D. Brumfield, 19, and Douglas I. Riley Jr., 21 -- are charged with first-degree murder in the killing of Jose Vicente Yaque, who lived along Edmonston Road in the Bladensburg area. They appeared yesterday via teleconference in Prince George's County District Court for a bond hearing.

Brumfield, of Seat Pleasant, told investigators that he helped plan the robbery and then hit Yaque repeatedly with an aluminum bat early on Oct. 5, according to charging documents. Brumfield said that McLeod, of Suitland, drove the getaway car. McLeod told investigators that Riley, of Capitol Heights, was the shooter, the documents show.

Police found Yaque lying in the street after the attack.

Investigators tracked Yaque's stolen cellphone to McLeod's home in the 600 block of Birchleaf Avenue in Suitland, where two of the suspects admitted their roles in the robbery and homicide, and said a 9mm handgun was used in the killing, according to charging documents. They were not named in the documents.

Investigators said Brumfield waived his Miranda rights and admitted planning the assault and attacking the victim with the bat. McLeod also waived his Miranda rights, according to police, and admitted helping plan and participating in the robbery.

At a bond hearing, McLeod's attorney, Joseph L. Gibson Jr., said his client was a high school graduate with no previous criminal record who lives with his mother and was "probably in the wrong place at the wrong time."

He said that McLeod denies taking part in the crime and that his statement to police, in the course of spending more than 30 hours with investigators, was "not voluntary." An attorney for Riley said his client was a hardworking man whose mother died last year of lung cancer and who had a young child himself.

Brumfield said he planned to get a public defender.

All three men were denied bond.

Oracle Agrees To Pay $98.5 Million To Settle Suit Over GSA Contracts (WSJ)

By Vauhini Vara

The Wall Street Journal, October 11, 2006

Oracle Corp. agreed to pay $98.5 million to the U.S. government to settle a lawsuit alleging PeopleSoft Inc., which Oracle acquired last year, overcharged the government on contracts for software and services.

Under a General Services Administration program, vendors agree to disclose pricing policies for their private-sector customers in exchange for a chance to sell to government customers under one contract.

In this case, during PeopleSoft's negotiation with the government over an initial software contract and two extensions, the company understated the discounts it provided to commercial customers, according to a statement from the Justice Department. That meant most federal purchasers under the contract paid inflated prices between March 1997 and Sept. 2005, the Justice Department said.

The conduct alleged in the suit predated Oracle's purchase of PeopleSoft in January 2005, according to the Justice Department.

"Oracle cooperated fully with the government in its investigation of the PeopleSoft GSA contract and conduct at issue in the suit," Oracle spokesman Bob Wynne said. "Oracle was not aware of the suit at the time of the acquisition."

The case was filed in the U. S. District Court for the District of Maryland by James A. Hicks, a former PeopleSoft employee. Federal prosecutors in Baltimore joined the lawsuit earlier this year.

It was filed under the "qui tam," or "whistleblower," provisions of the False Claims Act, in which private citizens can sue on behalf of the government to recover federal funds obtained by false or fraudulent claims and receive a portion of the proceeds of a settlement or judgment awarded against the defendant. Mr. Hicks will receive $17.7 million.

The payment to the government is the largest the U.S. has ever obtained in a civil settlement under the False Claims Act involving the multiple-award-schedule program, said the Justice Department.

Oracle Settles Price-Gouging Claim (WP)

By Eric Rich

The Washington Post, October 11, 2006

Database giant Oracle Corp. has agreed to pay $98.5 million to settle claims that PeopleSoft Inc., a software maker it acquired last year, had overcharged the government by providing false pricing information to the General Services Administration, the Justice Department said yesterday.

The civil settlement, reached at U.S. District Court in Maryland, was disclosed at a news conference in Washington as officials announced a new task force targeting procurement fraud. Deputy Attorney General Paul J. McNulty said the task force, established by the department's criminal division, would detect and prosecute fraud associated with increased contracting activity for national security and other government programs.

McNulty said the task force is modeled on efforts to combat fraud after Hurricane Katrina and a similar program he initiated last year when he was U.S. attorney in the Eastern District of Virginia.

The settlement with Oracle resolved allegations that PeopleSoft understated to the GSA the discounts it provided to commercial customers. GSA regulations require that a vendor disclose its commercial pricing policies during negotiations for a single contract that can give a vendor access to hundreds of government purchasers.

As a result of the defective disclosures, the government alleged, federal purchasers buying through the GSA program paid inflated prices for software and maintenance services for many years. Oracle inherited the liability when it acquired PeopleSoft, which was based in Pleasanton, Calif.

Maryland U.S. Attorney Rod J. Rosenstein said the 1997 contract resulted in about $127 million of software sales and $77 million in maintenance sales before it was cancelled by Oracle in September 2005.

DOJ_NMG_0078908

A former employee of PeopleSoft's federal sales office in Bethesda filed the case in 2003 under seal in federal court in Greenbelt. James A. Hicks said in the lawsuit that he was fired in 2000 after repeatedly raising the issue with senior company officials. The government later took over the case, which had been filed under the False Claims Act.

Under the act, whistleblowers may collect a portion of any money recovered by the government that had been obtained by false or fraudulent claims. Hicks will receive $17.73 million, government officials said.

Oracle To Pay $99 Million Settlement (AP)

By Lara Jakes Jordan, The Associated Press

AP, October 11, 2006

WASHINGTON - Software maker Oracle Corp. agreed Tuesday to pay $98.5 million to settle complaints that it overcharged the government for nearly a decade on a slew of contracts, Justice Department officials said.

The settlement with Oracle's PeopleSoft kicked off what the department called a crackdown on waste, fraud and abuse in federal contracts.

"Criminals who cheat the government must be identified, stopped and punished," Deputy Attorney General Paul McNulty told reporters in Washington. He estimated that 5 percent of federal agencies' annual revenues is wasted on faulty or otherwise illegal contracts.

The case against Redwood Shores, Calif.-based Oracle Corp. is the largest settlement from a single company that had multiple contracts with the General Services Administration, McNulty said. Between 1997 and 2005, he said, the government "paid vastly inflated prices" for computer software and maintenance for human resources and financial systems for 60 federal agencies.

The federal investigation followed a complaint against PeopleSoft by a former employee, James A. Hicks, who tipped off officials that the government was not receiving discounts for buying multiple products and services - as other clients were given.

Hicks will receive $17.7 million - 18 percent of the settlement - for his complaint as allowed under federal whistle-blower provisions.

Oracle said the complaints originated with PeopleSoft, which Oracle purchased in January 2005 for $11.1 billion after an 18-month hostile takeover battle. The deal created the world's second-largest business software manufacturer after Germany's SAP AG.

"Oracle was not aware of the suit at the time of the acquisition," said Oracle spokesman Bob Wynne. "Oracle is pleased to have fully resolved this legacy PeopleSoft suit and all claims under the PeopleSoft contract."

In all, the government paid about $300 million to PeopleSoft's office in Bethesda, Md., which was responsible for selling software products to federal agencies. U.S. Attorney for Maryland Rod J. Rosenstein called the case the largest fraudulent federal contract settlement in state history.

The Justice Department's new task force is modeled in part after efforts to track relief money and contracts rushed to the Gulf Coast last year after Hurricane Katrina, which has so far yielded 400 investigations into complaints or criminal cases.

McNulty said the task force also will closely monitor spending to military contractors, and noted an increase in prosecutions of contracts involving reconstruction efforts in Iraq. Inspectors from about 25 federal agencies will participate in the task force.

Oracle Agrees To Pay U.S. $98 Million (CNET)

By Ina Fried, Staff Writer, CNET News.com

CNET News, October 11, 2006

Deal to settle charges that PeopleSoft provided false pricing information to obtain a federal contract.

Oracle has agreed to pay the U.S. government $98.5 million to settle charges that PeopleSoft provided false pricing information to obtain a federal contract.

According to a Justice Department press release issued on Tuesday, federal agencies overpaid for PeopleSoft products from March 1997 through September 2005 because of faulty disclosures by the software vendor, which was acquired by Oracle in January 2005.

DOJ_NMG_0078909

The settlement was the largest ever related to the General Services Administration's Multiple Award Schedule program, the Justice Department said. The MAS program requires vendors to provide their commercial pricing information to the government in exchange for the ability to strike deals with hundreds of federal agencies under a single contract. The Justice Department said PeopleSoft's disclosures "were not current, accurate and complete."

"The program works well when vendors follow the disclosure rules and provide GSA with the information it needs to negotiate good prices for government purchasers," Deputy Attorney General Paul McNulty said in a statement. "This agreement demonstrates the department's determination to hold vendors accountable for abusing GSA's trust and damaging its programs."

This case originated as part of a whistleblower action brought under the Federal Claims Act. Former PeopleSoft employee James A. Hicks, who filed suit in the U.S. District Court for the District of Maryland, will receive $17.7 million of the settlement, as provided for under the statute. Under the Federal Claims Act, whistleblowers can sue on the government's behalf and can garner some of the proceeds of any settlement or judgment.

Oracle said it was not aware of the suit at the time it bought PeopleSoft and said it "cooperated fully with the government" in its investigation of the PeopleSoft contract and the company's conduct. "Oracle is pleased to have fully resolved this legacy PeopleSoft suit and all claims under the PeopleSoft contract," Oracle spokesperson Bob Wynne said in a statement.

Oracle Agrees To Pay $98M For 'defective Pricing' (CNN)

By Terry Frieden, Justice Producer

CNN.com, October 11, 2006

The fraud settlement stemmed from multiple government contracts with the computer software maker and PeopleSoft.

WASHINGTON (CNN) -- Justice Department officials Tuesday said computer software maker Oracle has agreed to pay the government $98.5 million dollars in a procurement fraud settlement stemming from multiple federal contracts with the firm's PeopleSoft software sales operations.

Officials said Oracle acknowledged "defective pricing disclosures" in connection with software licensing contracts with federal agencies.

Deputy Attorney General Paul McNulty was expected to announce the settlement at a news conference Tuesday afternoon.

McNulty also planned to announce establishment of a Procurement Fraud Task Force designed to combat efforts to defraud the government in contracting.

Justice Department officials said the Task Force would be modeled after the Hurricane Katrina Fraud Task Force, which they say has been successful in uncovering efforts to defraud the federal government.

Shares of Oracle (Charts) rose nearly 1 percent during after hours trade on Nasdaq while rival BMC Software (Charts) and Symantec Corp (Charts) edged higher.

Oracle Settles Government Claim Of Overcharging By PeopleSoft (MRKTWTCH)

By Michael Paige, MarketWatch

Market Watch, October 11, 2006

Business-software giant agrees to pay government $98.5 million

LOS ANGELES (MarketWatch) -- Oracle Corp. agreed to pay $98.5 million on behalf of PeopleSoft Inc. to settle charges that PeopleSoft provided inaccurate pricing information and overcharged the government on multiple contracts before it was acquired by Oracle, Justice Department officials said on Tuesday.

Oracle (ORCL: news, board) inherited liability under the government contracts through its acquisition of PeopleSoft, which closed at the beginning of last year following a bitter hostile takeover battle.

The settlement resolved allegations that PeopleSoft provided inaccurate and incomplete pricing information for licenses of its software and related maintenance during negotiations with the government. As a result, federal agencies overpaid for software and maintenance between March 1997 and September of last year, according to the Justice Department.

A spokeswoman for Oracle, of Redwood Shores, Calif., said the company cooperated fully with the investigation of the PeopleSoft contract.

DOJ_NMG_0078910

"Oracle was not aware of the suit at the time of the acquisition," said Deborah Hellinger, the spokeswoman. "Oracle is pleased to have fully resolved this legacy PeopleSoft suit and all claims under the PeopleSoft contract."

PeopleSoft was the focus of the suit that was initiated by one of its former employees on behalf of the government under whistleblower provisions.

Companies agree to disclose their current and complete commercial pricing policies to the General Services Administration during negotiations for a contract that allows them to sell services to multiple government agencies under a single order.

PeopleSoft, the suit alleged, understated the size of discounts it provided to commercial customers and failed to disclose accurate details of a program that gave clients incrementally steeper discounts based on the number of products purchased at one time.

"Because PeopleSoft did not give GSA [General Services Administration] accurate pricing information, it negotiated higher prices for its products and services than it would have obtained if GSA had known the truth," according to a statement issued by U.S. Attorney Rod Rosenstein of the District of Maryland.

Oracle's stock closed up 18 cents, or 1%, at $18.74 Tuesday -- a new 52-week high.

Michael Paige is a reporter for MarketWatch in Los Angeles.

Justices Back Small Tobacco Firms (WSJ)

By Mark H. Anderson And Vanessa O'connell

The Wall Street Journal, October 11, 2006

WASHINGTON -- A group of 30 states failed to persuade the Supreme Court to review whether three small tobacco companies can use one lawsuit to challenge state-by-state payment requirements related to a massive 1998 industry settlement.

The court's decision not to consider the appeal means the three companies can proceed, in a New York federal court, to challenge payments to state accounts established to cover damages in tobacco lawsuits.

The companies had challenged provisions of the settlement under which all tobacco companies -- even those that didn't participate in the settlement -- are required to make annual payments to the states in perpetuity, an amount estimated to reach $243 billion over the first 25 years.

Following the settlement, most states passed laws requiring cigarette makers that didn't participate -- mostly small players selling discount cigarettes -- to pay money into escrow funds to satisfy future damage awards in cigarette suits. Their payments are based on the number of cigarettes the companies sell annually in each state.

But Grand River Enterprises Six Nations Ltd. of Gowanda, N.Y.; Nationwide Tobacco Inc. of Blaine, Wash.; and 3B Holdings Inc. of Lewiston, Idaho, challenged the payments in a lawsuit filed in New York, where the master agreement was negotiated and signed by the four major cigarette makers and 46 states. The small companies weren't party to the settlement.

The Second U.S. Circuit Court of Appeals ruled in September 2005 that a New York federal trial court could handle the challenge that was made against all of the state escrow-fund laws. The 30 state attorneys general said they believe the court decision violates state sovereignty.

(King v. Grand River Enterprises)

In other rulings yesterday, the court dismissed an appeal from Apotex Inc. of Weston, Ontario, seeking early Food and Drug Administration approval to sell a generic alternative to Pfizer Inc.'s Zoloft, an antidepression and anxiety drug. Pfizer, based in New York, successfully argued that a key Zoloft patent has expired since the Supreme Court agreed to hear the case, and that another company, Teva Pharmaceutical Industries Ltd., of Petach Tikva, Israel, has already begun selling a Zoloft alternative.

(Apotex v. Pfizer)

W.R. Grace & Co., Columbia, Md., lost a final appeal of $55 million in court-ordered Superfund cleanup costs sought by the Environmental Protection Agency for remediation at the company's former vermiculite mine in Libby, Mont. The company closed the mine in 1990, and the EPA began a cleanup of asbestos contamination in and around the mining facility in 1999.

(W.R. Grace & Co. v. U.S.)

Supreme Court Rejects Appeal On Tobacco Escrow Ruling (DOW)

Dow Jones, October 11, 2006

WASHINGTON -(Dow Jones)- A group of 30 states Tuesday failed to convince the U.S. Supreme Court to review whether three small tobacco companies can challenge state escrow provisions that were developed on a state-by-state basis as part of the $245 billion 1998 master tobacco settlement.

The three tobacco companies - Grand River Enterprises Six Nations Ltd., Gowanda, N.Y.; Nationwide Tobacco Inc., Blaine, Wash.; and 3B Holdings Inc., Lewiston, Idaho - in a New York federal court challenged provisions in the tobacco settlement. The national tobacco settlement requires the companies to escrow funds even though they declined to join the master agreement. The lawsuit was brought in New York, where the master agreement was negotiated and signed by four tobacco companies and 46 states in 1998.

The 2nd U.S. Circuit Court of Appeals ruled in September 2005 that a New York federal trial court could handle the challenge against all of the state escrow fund laws. The 30 state attorneys general said they believe the court decision violates state sovereignty because the tobacco company challenge deals with 30 different sets of state laws.

"The Second Circuit's ruling...upsets the delicate relationship between the states and the federal courts," the states said in their appeal.

New York, which also was sued by the tobacco companies, did not join the states' Supreme Court appeal.

Under the tobacco settlement, tobacco manufacturers that don't sign onto the master agreement must pay escrow funds based on the number of cigarettes they sell in annually in each state. The escrow funds are used to fund damage awards from tobacco litigation that could be brought against those companies because they aren't protected by the master agreement from lawsuits.

The three tobacco companies challenged the escrow requirements on federal antitrust and constitutional grounds. In court filings, the companies argued they didn't need to individually challenge each state's escrow arrangements under the national settlement. "The escrow statutes do not stand alone or apart from the master settlement agreement," the companies said.

The case is King v. Grand River Enterprises, 05-1343.

Supreme Court Won't Hear Tobacco Case (AP)

By Pete Yost, Associated Press Writer

AP, October 11, 2006

Supreme Court Declines to Hear Case of 3 Small Cigarette Companies Seeking to Avoid Payments

WASHINGTON (AP) -- The Supreme Court on Tuesday declined to hear an appeal by 30 states in a battle over payments by three small cigarette companies into accounts set up to help cover future damage awards in tobacco-related lawsuits.

The justices' decision allows the companies to continue to fight state laws requiring payments to accounts set up as part of a $206 billion financial settlement eight years ago with the largest tobacco companies. Each of the 30 states had passed a law requiring companies that didn't participate in that settlement to pay into the escrow funds to help cover future damage awards.

The three small companies sued, alleging the states violated antitrust law and the Commerce Clause of the U.S. Constitution. The laws each state passed were mostly identical to model legislation contained in an appendix to the settlement with the biggest tobacco companies.

The 2nd U.S. Circuit Court of Appeals in New York, the state where the settlement negotiations had taken place, allowed the small companies to pursue the antitrust claims.

In asking the Supreme Court to take the case, the state governments say the appeals court is treating a state's most sovereign act, the passage of legislation, "as though it were the culmination of a commercial antitrust conspiracy."

The states wanted the court to consider whether principles of due process and state sovereignty permit a federal judge in New York to exercise jurisdiction over the state attorney general in another state.

The major companies that were part of the tobacco settlement manufacture over 97 percent of all cigarettes sold in the country.

The cigarette companies are Grand River Enterprises Six Nations Ltd., Nationwide Tobacco Inc., and 3B Holdings Inc.

The case is Troy King v. Grand River Enterprises Six Nations Ltd., 05-1343.

Inside The Beltway (WT)

By John McCaslin

The Washington Times, October 11, 2006

File and run

"Or maybe the case has no merit."

So suggests the latest issue of the American Lawyer, citing one theory as to why Valerie Plame of CIA-leak fame suddenly parted ways with her attorney, Proskauer Rose partner Christopher Wolf -- her next-door neighbor, no less -- shortly after her civil action was filed against senior Bush administration officials, including Vice President Dick Cheney and White House aide Karl Rove.

"The breakup was a shock," writes the magazine's Elizabeth Goldberg, given that Mr. Wolf had filed the suit only "a month earlier."

Headlined "File and run," the article quotes lawyer Victoria Toensing, a former chief counsel to the Senate Select Committee on Intelligence, as saying: "I'm amazed Proskauer took the case in the first place."

Another theory: "Proskauer might have gotten cold feet," writes Ms. Goldberg. "The firm wants to beef up its D.C. practice ... [a]nd heading the Plame case was not likely to please the Bush administration."

Officials Challenge AIDS Funding Ruling (AP)

AP, October 11, 2006

WASHINGTON (AP) — The Bush administration sought Tuesday to overturn a court decision that lets nonprofit AIDS groups apply for federal funding without signing a pledge opposing prostitution and sex trafficking.

At least one of the groups, DKT International Inc., has refused to sign the pledge because it helps distribute condoms to prostitutes and other sex workers in Vietnam.

DKT last year sued the U.S. Agency for International Development, contending their free speech rights were violated by a 2003 law requiring that they explicitly oppose prostitution and sex trafficking to qualify for part of a $15 billion AIDS program.

In May, U.S. District Judge Emmet G. Sullivan sided with DKT, saying the funding conditions insist that groups "parrot" the U.S. government's position on prostitution.

But the Justice Department, in its appeal Tuesday, called the funding condition "highly germane" to the overall goal of fighting the spread of AIDS and HIV.

"Congress could reasonably determine that the government's efforts to stamp out prostitution and sex trafficking would be most successful if HIV/AIDS services are provided by organizations that affirmatively oppose two underlying causes of the disease," the government said.

The case now heads to the U.S. Court of Appeals for the District of Columbia. A date for arguments has not yet been set.

CIVIL RIGHTS:

U.S. Says Blacks In Mississippi Suppress White Vote (NYT)

By Adam Nossiter

The New York Times, October 11, 2006

MACON, Miss., Oct. 5 — The Justice Department has chosen this no-stoplight, courthouse town buried in the eastern Mississippi prairie for an unusual civil rights test: the first federal lawsuit under the Voting Rights Act accusing blacks of suppressing the rights of whites.

DOJ_NMG_0078913

The action represents a sharp shift, and it has raised eyebrows outside the state. The government is charging blacks with voting fraud in a state whose violent rejection of blacks' right to vote, over generations, helped give birth to the Voting Rights Act of 1965. Yet within Mississippi the case has provoked knowing nods rather than cries of outrage, even among liberal Democrats.

The Justice Department's main focus is Ike Brown, a local power broker whose imaginative electoral tactics have for 20 years caused whisperings from here to the state capital in Jackson, 100 miles to the southwest. Mr. Brown, tall, thin, a twice-convicted felon, the chairman of the Noxubee County Democratic Executive Committee and its undisputed political boss, is accused by the federal government of orchestrating — with the help of others — "relentless voting-related racial discrimination" against whites, whom blacks outnumber by more than 3 to 1 in the county.

His goal, according to the government: keeping black politicians — ones supported by Mr. Brown, that is — in office.

To do that, the department says, he and his allies devised a watertight system for controlling the all-determining Democratic primary, much as segregationists did decades ago.

Mr. Brown is accused in the lawsuit and in supporting documents of paying and organizing notaries, some of whom illegally marked absentee ballots or influenced how the ballots were voted; of publishing a list of voters, all white, accompanied by a warning that they would be challenged at the polls; of importing black voters into the county; and of altering racial percentages in districts by manipulating the registration rolls.

To run against the county prosecutor — one of two white officeholders in Noxubee — Mr. Brown brought in a black lawyer from outside the county, according to the supporting documents, who never even bothered to turn on the gas or electricity at his rented apartment. That candidate was disqualified.Whites, who make up just under 30 percent of the population here, are circumspect when discussing Mr. Brown, though he remains a hero to many blacks. When he drove off to federal prison to serve a sentence for tax fraud in 1995, he received a grand farewell from his political supporters and friends, including local elected officials; whites, on the other hand, for years have seen him as a kind of occult force in determining the affairs of the county.

Still, many whites said privately they welcomed the Justice Department's lawsuit, which is scheduled for trial early next year.

"In my opinion, it puts the focus on fair play," said Roderick Walker, the county prosecutor Mr. Brown tried to oust, in 2003. "They were doing something wrong."

Up and down South Jefferson Street, though, in the old brick commercial district, the white merchants refused to be quoted, for fear of alienating black customers. "There's a lot of voting irregularities, but that's all I'm going to say," one woman said, ending the conversation abruptly.

The Justice Department's voting rights expert is less reserved. "Virtually every election provides a multitude of examples of these illegal activities organized by Ike Brown and other defendants, and those who act in concert with them," the expert, Theodore S. Arrington, chairman of the political science department at the University of North Carolina at Charlotte, wrote in a report filed with the court.

Mr. Brown is coolly dismissive of the case against him. He has no office at the white-columned Noxubee County Courthouse, but that is where he casually greets visitors, in a chair near the entrance. A loquacious man, he both minimizes his own role and portrays himself as a central target. Far from being the vital orchestrator portrayed by the government, "when I was in Maxwell prison in '95 and '96, the show went right on," he said.

There are so few whites in the county, Mr. Brown suggests, that the tactics he is accused of are unnecessary to keep blacks in office.

"They can't win anyway unless we choose to vote for them," he said with a smile. "If I was doing something wrong — that's like closing the barn door when the horse is already gone."

He sees the lawsuit against him as merely the embittered reaction of whites who feel disenfranchised, and he scoffs at a consent decree signed last year in which county officials agreed not to harass or intimidate white candidates or voters, manipulate absentee ballots, or let poll workers coach voters, among other things. "I wouldn't sign my name," Mr. Brown said.

But the Justice Department is pressing ahead with its suit, and wants to force Mr. Brown to agree to the same cease-and-desist conditions as his fellow county officials.

DOJ_NMG_0078914

The state's Democratic establishment has hardly rallied around Mr. Brown; privately some Democrats here express disdain for his tactics. Instead, he is being defended by a maverick Republican lawyer who sees the suit as an example of undue interference in the affairs of a political party.

"To do what they want to do, they would virtually have to take over the Democratic Party," said the lawyer, Wilbur Colom, adding that Mr. Brown's notoriety had made him the focus of the investigation. "I believe they were under so much pressure because of Ike's very sophisticated election operation. He is a Karl Rove genius on the Noxubee County level."

In Jackson, though, a leading light in Mr. Brown's own party, Mississippi Secretary of State Eric Clark, a longtime moderate in state politics, refused to endorse him.

"Anybody who tries to prevent people from voting is breaking the law," Mr. Clark said. "I certainly suspect some of that has been going on."

Back in Macon, in the shadow of the courthouse green's standard-issue Confederate monument, Mr. Brown spoke of history: "They had their way all the time. They no longer have their way. That's what it's all about." The case is "all about politics," he said, "all about them trying to keep me from picking the lock."

But Mr. Walker, the county prosecutor, insisted the past had nothing to do with the case against Mr. Brown. "I wouldn't sit here and pretend black people haven't been mistreated," he said. "I hate what happened in the past. But I can't do anything about it."

SC GOP, Democrats Agree To No Crossover Voting In '08 Primaries (AP)

By Jim Davenport

AP, October 11, 2006

COLUMBIA, S.C. - South Carolina Republican and Democratic party leaders have agreed to swap voter rolls in their 2008 presidential primaries to stop people from casting ballots in both contests.

Neither party likes the idea of voters casting a ballot in both primaries.

"I don't want people who have voted in their primary attempting to vote in ours," state Democratic Party Chairman Joe Erwin said Tuesday.

But that might not be an easy task in a state where the parties pay for and run the presidential primaries. Voters don't register by party and State Election Commission spokesman Chris Whitmire said the parties can set whatever rules they want.

"We don't view it as a real election. We liken it more to a straw poll" that guides delegates at national conventions, he said.

A quarter of presidential primary voters here describe themselves as independents. The Legislature has repeatedly refused to require party registration in the presidential primaries.

The first party to hold a primary will hand over the voter rolls to the other party, leaders said.

"There was no other way to be able to stop anybody from crossing over," state GOP Chairman Katon Dawson said.

Both parties are scheduled to hold first-in-the-South primaries.

Democrats are slated for Jan. 29, 2008, a week after New Hampshire's primary.

South Carolina Republicans have planned a Feb. 2 primary. However, that date could be moved earlier, Dawson says.

Erwin said he's having legal experts look at the plan.

"I want a legal opinion on whether or not a poll worker can deny anyone from voting because they are looking at a list," Erwin said.

Dawson said if the plan runs into a legal challenge, "we'll have to be able to take the arrows and legal backlash."

"If we had registration by party, that problem would be solved," he said.

A U.S. Justice Department spokeswoman on Tuesday could not immediately answer questions about the plan.

Lee Parks, an Atlanta lawyer and Voting Rights Law expert, said it doesn't appear to violate federal law.

"Under the law, you can only participate in one primary," Parks said.

State Rep. Todd Rutherford, D-Columbia, sued the state GOP in 2002 over its primary election plans because the party didn't plan to open every precinct, particularly those in black neighborhoods.

Rutherford is skeptical of the list-swapping plan.

DOJ_NMG_0078915

"I think that's dangerous," he said. "What you've got is a non-government entity having a list of people's names saying that they're excluded from voting," Rutherford said. "It's almost like a 'do not fly' list.'"

This "is something we probably need to address legislatively," Rutherford said.

Report Skeptical Of Fraud At Polls (USAT)

By Richard Wolf

USA Today, October 11, 2006

WASHINGTON — At a time when many states are instituting new requirements for voter registration and identification, a preliminary report to the U.S. Election Assistance Commission has found little evidence of the type of polling-place fraud those measures seek to stop.

USA TODAY obtained the report from the commission four months after it was delivered by two consultants hired to write it. The commission has not distributed it publicly.

At least 11 states have approved new rules for independent voter-registration drives or requirements that voters produce specific forms of photo ID at polling places. Several of those laws have been blocked in court, most recently in Arizona last week. The House of Representatives last month approved a photo-ID law, now pending in the Senate.

The bipartisan report by two consultants to the election commission casts doubt on the problem those laws are intended to address. “There is widespread but not unanimous agreement that there is little polling-place fraud, or at least much less than is claimed, including voter impersonation, ‘dead' voters, non-citizen voting and felon voters,” the report says.

The report, prepared by Tova Wang, an elections expert at the Century Foundation think tank, and Job Serebrov, an Arkansas attorney, says most fraud occurs in the absentee ballot process, such as through coercion or forgery. Wang declined to comment on the report, and Serebrov could not be reached for comment.

Others who reviewed the report for the election commission differ on its findings. Jon Greenbaum of the liberal Lawyers' Committee for Civil Rights Under Law says it was convincing. The committee wrote to the commission Friday seeking its release.

Conservatives dispute the research and conclusions. Thor Hearne, counsel to the American Center for Voting Rights, notes that the Justice Department has sued Missouri for having ineligible voters registered, while dead people have turned up on the registration rolls in Michigan. “It is just wrong to say that this isn't a problem,” he says.

That's one reason the commission decided not to officially release the report. “There was a division of opinion here,” Chairman Paul DeGregorio says. “We've seen places where fraud does occur.”

The consultants found little evidence of that. Barry Weinberg, former deputy chief of the voting section in the Justice Department's civil rights division, reviewed their work. “Fraud at the polling place is generally difficult to pull off,” he says. “It takes a lot of planning and a lot of coordination.”

New Voter Registration Laws Keep Thousands Off The Rolls (USAT)

By Richard Wolf, Usa Today

USA Today, October 11, 2006

WASHINGTON — Some of this year's elections could be decided by those who can't vote.

Across the country, new laws restricting who can register and vote have reduced the number of people who may have voted otherwise. Some of those laws have been blocked in court. Even so, critics say, the damage has been done:

•In Arizona, about 21,000 voter registration applications were rejected because of inadequate proof of citizenship, required under a 2004 law. Most who were affected lacked up-to-date driver's licenses, birth certificates or passports.

A federal appellate court blocked enforcement of the law — which also requires voters to show ID at the polls — last week, four days before the registration deadline. “We're looking at an enormous disparate impact on people of color,” says Linda Brown, executive director of the Arizona Advocacy Network.

•In Florida, a law setting up new requirements for independent groups that register voters prompted the League of Women Voters to suspend registration drives for five months until a court intervened. In that period, the league could have registered

DOJ_NMG_0078916

thousands of people, The registration deadline is Tuesday. “You've just got to assume it's going to have an impact,” says Dianne Wheatley-Giliotti, the league's state president.

•In Ohio, a law that made paid workers liable for the validity of the registrations they collect caused several groups to stop signing up voters for two months this summer. By the time courts intervened, the opportunity had been lost for thousands of registrations.

The group ACORN, which advocates for low-income families, wanted to sign up 138,000 Ohioans this year; now it will settle for 100,000. “Those were really the critical months,” head organizer Katy Gall says. “In past years, we've met or exceeded our goals.”

Advocates of registration and photo identification laws say they are needed to prevent fraud. They say the rules apply to all potential voters, regardless of race, ethnicity, income or ideology. “This is a matter of voter confidence, whether or not the fraud is real or perceived,” says Indiana Secretary of State Todd Rokita, whose state has one of the nation's strictest ID requirements.

Laws tightening the rules on registrations also have been passed in Colorado, Georgia, Maryland, Missouri, New Mexico and Washington. Laws imposing photo ID requirements at the polls were passed in Georgia and Missouri, but courts have intervened.

Paul DeGregorio, chairman of the Election Assistance Commission, says the laws should not discourage citizens from voting. Far worse, he says, would be for states to ignore problems that cause Americans to distrust the process.

Wendy Weiser of the Brennan Center for Justice at New York University School of Law disagrees. “All of them will have an impact in suppressing votes,” she says. “Even when courts have overturned them, they have ongoing impact.”

Supreme Court Rejects Gay Marriage, Abortion Cases (LAW/AP)

The Associated Press

AP, October 11, 2006

The Supreme Court refused to intervene Tuesday in a legal fight over same-sex marriage, declining an appeal from a gay California couple who were denied a license to wed.

The justices declined without comment to take the case of Arthur Smelt and Christopher Hammer of Mission Viejo, Calif. The men had sought a marriage license in southern California's Orange County in 2004 and, after they were turned down, filed a federal lawsuit that challenged federal and state laws against same-sex marriage.

A U.S. District judge said the federal Defense of Marriage Act was constitutional but declined to rule on the state ban because a separate legal challenge is making its way through California state courts.

The 9th U.S. Circuit Court of Appeals agreed in May that the couple should await the outcome of the state court challenge.

Last week, a California appeals court upheld the state ban on same-sex weddings. That case appears headed for the California Supreme Court.

A trial judge in San Francisco last year declared the state marriage ban invalid because it violated the civil rights of gays and lesbians.

Major civil rights groups opposed the federal lawsuit, preferring to fight for recognition of gay marriage in several states before the Supreme Court is asked to weigh in.

The case is Smelt v. Orange County, 06-5742.

COURT REJECTS COMPANION CASE TO 'ROE V. WADE'

The Supreme Court on Tuesday turned aside the case of Sandra Cano, one of the women behind the legalization of abortion, who had sought to reverse the victory she won 33 years ago.

Cano says she never wanted an abortion and that her difficult early life resulted in her becoming the anonymous plaintiff in Doe v. Bolton, the lesser-known case which the justices ruled on the same day in 1973 as the landmark Roe v. Wade.

"We're very disappointed that the Supreme Court has not decided to protect women and children from the harm of abortion," said Allan Parker, one of Cano's attorneys. "The court has aborted the normal regulation of medicine in this area."

Cano says she was a 22-year-old victim of an abusive husband and that her children were in foster care when she sought legal assistance in getting a divorce and in getting her children back.

DOJ_NMG_0078917

She said an aggressive attorney pushed her into the abortion case.

"What I received was something I never requested -- the legal right to abort my child," Cano said in an affidavit six years ago.

Her current lawyers' legal brief says that despite advances in medicine, science and technology, the justices have "frozen abortion law based on obsolete 1973 assumptions and prevented the normal regulation of the practice of medicine."

The 11th U.S. Circuit Court of Appeals ruled in January that neither it nor a U.S. District Court had the authority to reverse the Supreme Court's decisions in Doe v. Bolton or Roe v. Wade.

Giving Up Too Much On Choice (WP)

By Ruth Marcus

The Washington Post, October 11, 2006

At the Sioux Falls headquarters of the campaign to repeal Referred Law 6 -- better known as the South Dakota abortion ban -- is a handlettered sign that sums up the opponents' case: "This law simply goes too far."

Yes, it does. But I worry that those fighting to undo the abortion ban have, with the best of intentions, also gone too far in conceding the moral terrain of the abortion debate.

The South Dakota statute is chilling in its remorseless reach. The sole exception to the criminal prohibition on abortions -- doctors would face up to five years in prison for performing them -- is to save the life of the mother. Rape or incest victims, and women whose health would be jeopardized by carrying a pregnancy to term, get no leeway under the statute, passed overwhelmingly in February by the state legislature.

On one level, then, it's little wonder, especially in conservative South Dakota, that the effort to repeal the law -- it's on the November ballot -- has focused on its inflexibility. After all, exceptions for pregnancies that result from rape or incest are a staple of even the most conservative politicians' political platforms -- President Bush, for one; John Thune, South Dakota's Republican senator, for another. Federal law requires Medicaid funding for abortions in cases of rape or incest.

Given that consensus, it's alarming that the vote on repealing the law may be so close. An independent poll in July found 47 percent of voters opposed, 39 percent in favor. But a more recent poll, commissioned by an antiabortion group, showed the gap much narrower, 47 to 44 percent. Four of the eight Republican state senators who had opposed the ban were ousted in primary elections.

So if the campaign against the law echoes the rhetoric usually employed by antiabortion forces, that may be smart politics, at least in the short term. "South Dakotans agree: honor and protect human life, reduce the number of abortions," opens a new television ad by the South Dakota Campaign for Healthy Families. (If you're confused about which side they're on, this is the group opposing the ban.)

Here's the problem, though, with this apologetic approach: What happens next? The decision to submit the ban to voters, rather than challenge the law in court, where it would almost certainly be overturned, carries twin risks -- failure and success.

If the repeal campaign fails, that could incite antiabortion forces elsewhere, not that they need much prodding. The Louisiana legislature passed -- and the Democratic governor signed -- a similar statute this year, to take effect if Roe v. Wade is overturned. Mississippi came close to enacting a South Dakota-like ban; Ohio could be poised to do so in a lame-duck session.

But if, as is more likely, voters reject the law, what happens if and when antiabortion forces come back with a version more palatable to South Dakotans? The July poll showing 47 percent of voters opposed to the ban found that 59 percent would support it with exceptions for rape and incest.

"I've spent a great deal of time and thought wondering if it would have been wiser to write in the exceptions," House Majority Leader Larry Rhoden told the Associated Press. Next time around, I fear, Rhoden and his colleagues will.

Nancy Keenan, president of NARAL Pro-Choice America, dismisses that worry as "hypothetical," saying that "once the people of South Dakota have spoken, elected officials are going to sit up and take notice." Perhaps, but the history of antiabortion forces hasn't exactly been that they give up easily.

And this is the flaw inherent in the South Dakota strategy. It abandons what for me is the essential question of the abortion rights debate: Who gets to decide? Instead, it silently concedes that this is a matter that can be determined by a legislative majority considering a more situational question: What excuse is good enough -- or, more precisely, what excuse does

DOJ_NMG_0078918

government deem good enough? Once the argument is framed in those terms, the right to choose as a bedrock guarantee starts to crumble.

Why does this matter? Because contraceptives fail -- and not only in ways that can be remedied by resorting to emergency contraception (not that abortion opponents want to make access to Plan B any easier). Because even the most wanted pregnancies produce tragic genetic anomalies. Because people, teenagers especially, take stupid risks that result in unwanted pregnancies.

Pregnant women in these circumstances face a difficult -- and, yes, even tragic -- decision. But it's a choice that should be theirs, not one that's up for majority vote.

And so I hope the advocates of repeal succeed in overturning the abortion ban. But after that, they will need to figure out how to argue against the next law -- one that, under the terms they have tacitly accepted, doesn't "go too far."

Report Alleges Bias By A Real Estate Giant (NYT)

By Janny Scott

The New York Times, October 11, 2006

The National Fair Housing Alliance, a consortium of 220 groups and individuals working against housing discrimination, charged yesterday that agents in the Brooklyn Heights office of the city's largest residential real estate brokerage, the Corcoran Group, had engaged in discriminatory sales practices, including racial steering and withholding information from African-American clients.

"During our 16 years of existence, the National Fair Housing Alliance has never seen such a literal and blatant example of sales steering," the group wrote in a report detailing its allegations. In that particular instance, the report said, an agent "produced a map of Brooklyn and drew a red outline of the areas in which the white home seeker should consider living." The agent used arrows to indicate neighborhoods that were "changing."

"This racial steering tactic is reminiscent of discriminatory conduct from the 1970's, when real estate agents would go into white neighborhoods with the specific intention of triggering white flight by showing on a map where an African-American family had bought a house," the alliance wrote. "This Corcoran Group agent applied a new trick — he used a map to tell whites instead where they should 'flee to.' "

Pamela Liebman, president and chief executive officer of Corcoran, said in an interview yesterday that her firm "has always been devoted to fair housing" and recently required all of its agents to undergo four hours of training in fair housing law and practices.

She said, "I have never been given the specific charges as they relate to the Corcoran Group and I anxiously await them as we intend to defend ourselves vigorously."

She said she could not comment further on the allegations because she had not seen them.

Shanna L. Smith, president of the alliance, said her group conducted the investigation under contract with the federal Department of Housing and Urban Development, following up on earlier housing discrimination findings in a 2000 H.U.D. report. She said the alliance has filed a complaint with the housing agency against Corcoran and its parent company, NRT Inc. NRT describes itself as the nation's largest residential real estate brokerage firm, with companies in more than 35 metropolitan areas and more than 1,000 offices.

In its report, the alliance said the investigation of the Corcoran office "uncovered blatant housing discrimination against African-Americans, as well as steering of whites away from neighborhoods of color and to Prospect Heights, Park Slope, Windsor Terrace, Cobble Hill, Brooklyn Heights and parts of Carroll Gardens." It said agents withheld from black clients information about incentives, like ways to reduce costs, that it gave to white clients.

The alliance said it conducted the investigation by sending white and African-American "testers" into the office posing as potential home buyers. The black testers were better qualified than the whites, based on income, employment and other factors.

Corcoran announced late last month that it was devoting the month of October to training its agents in the country's fair housing laws, which prohibit discrimination in housing based on race, color, religion, sex, national origin and other factors. Ms.

DOJ_NMG_0078919

Liebman, who said she received three days' worth of "diversity training" in 2003, said that month of training for agents was initiated before Corcoran knew of the alliance's allegations.

300 Million (NYT)

The New York Times, October 11, 2006

America's 300 millionth person will be here any day now. The Census Bureau has combined birth, death and immigration rates and expects him or her to arrive in mid-October. No one knows where or how — squalling in a birthing room in Los Angeles, maybe, or darting out of the desert east of Phoenix.

That's too bad, because whoever it is should get a bouquet and a thank-you card. It should be signed by President Bush on behalf of a grateful nation that is buzzing with a youthful energy for which the aging powers of Europe would gladly trade their pension obligations. If the newcomer is an immigrant, he or she should also get an apology from Mr. Bush for the scarcity of worker visas, and a promise to get right on that problem.

Whenever the population odometer hits a huge round number, it creates unease, but we usually get over it. Predictions of planetary famine made the 1968 book "The Population Bomb" a raging bestseller, but today you find it only at garage sales.

The doomsayer's torch has lately been grabbed by cultural sentinels like Patrick Buchanan, whose new book warns that the United States is being reconquered by disease-carrying Latinos. Unless Americans of white European descent can Ziploc the borders and start churning out babies, he says, their age of civilizing domination is done for.

Mr. Buchanan's fantasy is a common one among social conservatives, a supposed era of cultural homogeneity that roughly corresponds with the postwar baby boom. But if you take the longer view of our nation, you will see that it has been fed and nourished by immigrants, and has an iron stomach for seemingly undigestible newcomers.

Mr. Buchanan wants us all to go back to Mayberry, but the retro-future he imagines would have the sedated stillness of a gated community. Or a nursing home, which the rest of the rich, industrialized world — Japan, Italy, Germany and Britain, for instance — is beginning to resemble.

In America, growth and vitality are the same thing. The engine of assimilation hums on, with immigrants' children trading their mother tongues for teenage upspeak with clockwork regularity. Annoyingly brilliant young people, of which we have lots, keep coming up with world-upending ideas like Apple, Google and YouTube.

Our teeming immensity keeps us from going stale, and despite some people's panic attacks, our population issues have mysterious ways of working themselves out. America has big problems, but it also has 300 million reasons to be hopeful.

ANTITRUST:

AT&T-BellSouth Merger Expected To Get OK (AP)

By John Dunbar

AP, October 11, 2006

WASHINGTON -- The Justice Department is expected to approve AT&T Inc.'s buyout of BellSouth Corp. without attaching any conditions to the deal, three people knowledgeable about the matter said Tuesday.

The proposed merger, now valued at about $78 billion, would create a telecommunications giant with both the largest landline and wireless networks in the nation. A Justice Department official declined to comment on the decision, and the sources who disclosed it declined to be identified because the action had not been formally announced.

The Justice Department is expected to approve the buyout Wednesday despite a plea from the chairman of the House Judiciary Committee, Rep. James Sensenbrenner, R-Wis., and other members of Congress that the deal not be allowed to go through until details related to two previous telecommunications mergers are settled and other concerns are addressed.

Critics say the government is well on its way to reconstituting the old Ma Bell monopoly, which was broken up after years of fighting in the early 1980s.

The department's approval, together with a green light from 18 state governments, would leave the Federal Communications Commission as the lone hurdle to the merger, which has been approved by shareholders of both companies.

DOJ_NMG_0078920

An FCC vote is set for Thursday morning, and the outcome is far from certain. Republican Chairman Kevin Martin circulated an order recommending approval of the merger last month and will probably receive support from fellow Republican commissioner Deborah Taylor Tate. However, the two Democrats on the commission, Jonathan Adelstein and Michael Copps, are expected to ask that conditions be placed on the deal.

That leaves Robert McDowell, the third Republican on the commission, who has thus far recused himself in the case. Before joining the FCC, he worked in the telecommunications industry and lobbied in favor of competitors to companies like AT&T and BellSouth.

The combination of San Antonio-based AT&T and Atlanta-based BellSouth would create a company of 300,000 employees with operations in 23 states. AT&T estimates that about 10,000 redundant jobs would be phased out over three years.

The anticipated Justice Department decision would come just seven months after AT&T announced its intentions on March 5 to buy BellSouth -- a breakneck pace for a merger of its size and scope.

AT&T is already the largest telecommunications company in the United States, reporting $62 billion in revenue in 2005 and serving customers in Texas, California and the Midwest. BellSouth provides service to nine states in the Southeast and reported $34 billion in revenue in 2005.

Both companies say the merger would help eliminate challenges they now face in their dual management of Cingular Wireless, 60 percent of which is owned by AT&T and the rest by BellSouth.

But critics charge the merger would reduce competition and drive up prices in the telecommunications industry.

Two consumers groups -- Consumers Union and the Consumer Federation of America -- have urged the Justice Department to block the deal, warning that increasing consolidation in the telephone industry would boost the prices for local, long-distance and cell phone services. Moreover, they argue, limited choices for phone service -- dovetailing with a similar merger trend in the cable industry -- threatens a reduced variety of broadband Internet services available to consumers.

BellSouth has struggled with recovering from equipment damage and disruptions to its customer base inflicted by Hurricane Katrina. The 2005 storm destroyed 11 of the company's central offices, downed 18,000 telephone poles and incurred costs to BellSouth of up to $900 million.

Associated Press writer Lara Jakes Jordan contributed to this report.

AT&T's BellSouth Purchase To Get Antitrust Approval, People Say (BLOOM)

By James Rowley

Bloomberg, October 11, 2006

Oct. 10 (Bloomberg) -- AT&T Inc.'s $67 billion purchase of BellSouth Corp. will receive U.S. antitrust clearance as early as tomorrow with few or no conditions, people familiar with the matter said.

AT&T, formed last year by SBC Communication Inc.'s takeover of AT&T, is the largest U.S. telephone company. The combination with BellSouth, the third-largest U.S. phone company, would provide service in 22 states.

The Federal Communications Commission is scheduled to vote on the deal two days from now. The FCC typically doesn't act on a takeover before the Justice Department has announced its decision. FCC Chairman Kevin Martin has pushed for approving the transaction without conditions.

Sprint Nextel Corp. and Global Crossing Ltd. have asked the FCC to allow equal access to high-speed networks. Cable operators, such as Cox Communications and Cablevision Systems Corp., have sought conditions from the FCC so their phone customers' calls can be easily connected to AT&T's network.

A Justice Department spokeswoman couldn't immediately be reached for comment.

Justice Near OK Of AT&T-BellSouth Deal With No Restrictions (USAT)

By Paul Davidson, Usa Today

USA Today, October 11, 2006

The Justice Department is expected to clear AT&T's (T) $67 billion purchase of BellSouth (BLS) as early as Wednesday without requiring any divestitures, say people with knowledge of the matter.

Justice could still shift course and require some last-minute concessions, these people say. But the department typically acts on telecom mergers before the Federal Communications Commission, which is scheduled to vote on the deal Thursday.

A Justice decision not to require concessions could embolden FCC Democrats to seek even tougher conditions than they might otherwise, say people with knowledge of the situation. They requested anonymity because Justice has not announced its decision.

FCC Chairman Kevin Martin, a Republican, has recommended approval without conditions.

In the SBC-AT&T and Verizon-MCI (VZ) mergers, Justice forced the companies to let rivals lease their spare fiber-optic lines serving business customers. The department was concerned about 800 or so buildings in which SBC and AT&T, or Verizon and MCI, were the only providers serving big businesses.

A federal judge is scrutinizing the consent decrees signed by the companies in those mergers after suggesting that the leasing requirements did not go far enough.

But AT&T has argued there are only 32 buildings in which both it and BellSouth have duplicate facilities. Even if Justice doesn't require divestitures, the companies could still agree to lease or sell facilities in those areas to win FCC approval.

FCC Democrats also have discussed imposing on the merger similar conditions to those imposed on the SBC and Verizon deals.

For example, the agency prevented the companies from blocking consumers' access to rival Internet-based phone services or websites for two years.

In the AT&T-BellSouth deal, the Democrats could seek further concessions. For example, they could try to prevent AT&T-BellSouth from discriminating against video rivals, such as Google. That could hinder AT&T's plans to charge websites extra fees to ensure fast delivery of their multimedia content.

FCC Republican Robert McDowell has said he will recuse himself from voting on the merger because he formerly worked for a group that opposed the SBC and Verizon deals. A stalemate between the remaining two Democrats and two Republicans could force the FCC to postpone Thursday's meeting.

Spokesmen for Justice, AT&T and BellSouth declined to comment.

AT&T, BellSouth Expected To Clear Merger Review (WSJ)

By Amy Schatz

The Wall Street Journal, October 11, 2006

WASHINGTON -- The Justice Department is expected to approve AT&T Inc.'s $67 billion purchase of BellSouth Corp. as early as today with few or no conditions, lawyers close to the matter said.

Justice Department officials are expected to say that the merger of the two phone giants doesn't pose significant competitive threats that require divestures, conditions or a consent decree, the lawyers said. The Federal Communications Commission has scheduled a vote to approve the deal tomorrow. A Justice Department spokeswoman declined to comment.

The decisions by the Justice Department and FCC to approve the deal quickly come despite bipartisan requests from some congressional leaders to hold off until a federal judge rules on an antitrust review of the mergers last year of SBC Communications Inc. and AT&T Corp., and Verizon Communications Inc. and MCI Inc.

Opponents of the AT&T/BellSouth deal, including smaller phone companies and consumer groups, have complained the deal will result in higher prices for consumers and high-volume business customers. The fact that the government appears to have few qualms about approving the deal so soon after the Baby Bell mergers last year shows how much the communications industry has changed in the 22 years since the government broke up Ma Bell.

Only four of the five FCC board members are expected to vote; Robert McDowell is expected to be recused.

Microsoft Helped Utah Company Finance Legal Battle Over Linux, Investor Says In Court Filing (AP)

By Paul Foy, AP Business Writer

AP, October 11, 2006

SALT LAKE CITY (AP) Microsoft Corp. helped a Utah company raise money for its legal challenge to the open-source Linux operating system, an investor said in a court filing.

In a sworn statement, Lawrence R. Goldfarb, a founder of BayStar Capital Management of Larkspur, Calif., said he invested $50 million in The SCO Group Inc. at the urging of Microsoft executives who promised to guarantee BayStar's investment against any losses.

Goldfarb says Microsoft reneged on the promise. In a statement to The Associated Press, Microsoft denied making any such assurance.

Goldfarb's statement was filed in federal court last week by IBM Corp. as the tech company asked a judge to throw out what remains of a long-running legal battle. SCO sued IBM for $5 billion in 2003, accusing it of donating SCO's proprietary Unix code to Linux developers.

A magistrate, however, has dismissed 182 of SCO's 294 claims against IBM. U.S. District Judge Dale Kimball has scheduled an Oct. 24 hearing to hear SCO's appeal of that ruling.

Goldfarb said he was approached in 2003 by Richard Emerson, a Microsoft senior vice president for strategy, about investing in SCO, ``a company about which I knew little or nothing."

Emerson ``stated that Microsoft wished to promote SCO and its pending lawsuit against IBM and the Linux operating system. But Microsoft did not want to be seen as attacking IBM or Linux. For that reason, Microsoft wanted to further its interest though independent investors like BayStar," Goldfarb said in the five-page declaration.

Microsoft has reason to fear Linux, a freely distributed operating system that is gaining commercial acceptance and market share. Many companies are choosing Linux to power their computer servers. SCO maintains its Unix code has helped make Linux sturdy and reliable.

Goldfarb said he invested $50 million after Emerson and two other Microsoft executives ``assured me that it would in some way guarantee BayStar's investment," though they refused to put the pledge in writing.

SCO attorney David Boies was confident that IBM ``would settle the case fairly quickly," Goldfarb said.

But Goldfarb said he quickly became ``very concerned" about SCO's viability and its ``high cash burn rate."

He believed BayStar's funds were primarily being used to pay a law firm led by Boies, formerly the lead Justice Department lawyer in an antitrust case against Microsoft.

SCO's stock price declined, and Microsoft stopped returning phone calls and e-mails, Goldfarb said. So did Boies's firm.

Goldfarb took steps to salvage BayStar's investment. He said the firm sold preferred shares back to SCO for $13 million and SCO common stock. The court filing didn't make clear whether BayStar was taking a loss on the transactions.

Goldfarb's statement was filed in court to counter SCO's claim that IBM induced him to terminate their relationship.

SCO declined comment Tuesday. The AP could not locate a phone number for Emerson, who no longer works at Microsoft. A spokeswoman for Boies's firm didn't immediately return a message. Goldfarb also didn't answer a message left with his investment firm, now named LRG Capital Group LLC.

In a response to the AP, Microsoft said it had no financial relationship with BayStar and never agreed to guarantee any of the $50 million investment. The company notes that even Goldfarb conceded he had nothing in writing.

SCO's lawsuit against IBM has deepened its losses. The company has spent more than $40 million battling IBM, which shows no sign of agreeing to a settlement.

Buyout Firms Get Antitrust Inquiries, Person Says (Update2) (BLOOM)

By Brett Cole

Bloomberg, October 11, 2006

Oct. 10 (Bloomberg) -- The U.S. Department of Justice has begun an informal antitrust inquiry of private-equity firms and their collaboration on leveraged buyouts, a person familiar with the matter said today.

DOJ_NMG_0078923

Justice officials in recent weeks sent letters to firms seeking information about deals and business practices, according to the person, who asked not to be identified because the probe isn't public. Kohlberg Kravis Roberts & Co. and Silver Lake Partners were among those contacted, the Wall Street Journal reported earlier today.

``It's very serious for the buyouts firms as this investigation could last up to a year," Sean Boland, co-chair of the antitrust practice at Washington-based law firm Howrey LLP, said in a telephone interview.

LBO firms have teamed up on $201 billion of acquisitions this year, compared with $31 billion in all of 2001, according to data compiled by London-based Private Equity Intelligence Ltd. In July, the industry's biggest deal was announced, the $33 billion takeover of hospital chain HCA Inc. by KKR, Bain Capital LLC, Merrill Lynch & Co. and HCA co-founder Thomas F. Frist Jr.

Buyout firms form partnerships to spread risk and increase the size of purchases they can make. The Justice Department may be concerned that cooperation among bidders is unfairly pushing down prices, said Robert Burka, an antitrust lawyer at Foley & Lardner in Washington and a former official the Federal Trade Commission.

``This is a new area for antitrust law enforcement," he said.

Legitimate Reasons

Collaboration among firms alone isn't anticompetitive, said Steven Sunshine, a partner at Cadwalader Wickersham & Taft LLP in New York and a former antitrust enforcer at the Justice Department.

``If a bunch of makers of some chemical get together in a room and fix prices, it's criminal," he said. ``The question is whether there is enough of a legitimate reason for private-equity firms to talk to one another such that it is not a naked cartel."

KKR spokeswoman Ruth Pachman and Silver Lake spokesman Matthew Benson declined to comment.

New York-based KKR and Silver Lake, which has offices in New York and Menlo Park, California, have together participated in $23.5 billion of acquisitions since 2005, including the takeover of Royal Philips Electronics NV's semiconductor unit for 7.4 billion euros ($9.4 billion) in August.

Last year, the firms bought Agilent Technologies Inc.'s semiconductor unit for $2.66 billion and joined with five others to acquire SunGard Data Systems Inc. for $11.4 billion.

Buyout firms raise money from institutions such as pension funds and endowments, and use debt to finance about two-third of the price of their acquisitions. Their goal is to improve a company's performance, often through layoffs and other cost reductions, and sell at a profit.

Buy-out Groups To Face Inquiry (FT)

By James Politi And Ben White In New York And Stephanie Kirchgaessner In Washington

Financial Times, October 11, 2006

The US private equity industry was hit on Tuesday by the revelation of a government inquiry into potentially anti-competitive behaviour by some of its top groups.

The Department of Justice investigation appears to focus on whether buy-out groups colluded to keep asset prices down in company auctions, according to industry executives.

In a letter to buy-out groups including Carlyle, Kohlberg Kravis Roberts and Silver Lake Partners the government demanded information about deals dating back to January 2003, people familiar with the requests said on Tuesday.

“The letter asks what deals did we do, who did we work with, when did we find out about them,” one person said, suggesting the inquiry was broad and in its early stages.

The DoJ declined to comment, as did Carlyle, KKR, Silver Lake and other private equity groups.

The government inquiry risks damaging the credibility of the private equity industry at a high point of its influence in corporate America.

If it moves forward the inquiry could also raise questions about the role of a number of investment banks that provide advice and finance for private equity deals. The banks could have been witnesses or parties to collusion, or victims.

Buy-out groups have grown into vast private conglomerates but have rarely faced heavy government scrutiny, particularly in the US. In recent months groups such as Texas Pacific, Carlyle and Blackstone have considered creating a private equity trade association to represent their interests in Washington and elsewhere.

DOJ_NMG_0078924

Henry T.C. Hu, a University of Texas law professor, said the justice department sent out similar requests for information in 1999 on potential antitrust violations by investment banks underwriting initial public offerings. Nothing came of the probe.

"A lot of these things never end up going anywhere," he said.

The issue of how much competition exists among the top groups in the industry has been debated for several years.

On the one hand private equity firms are in a constant battle to raise ever-larger funds from investors and spend the money as quickly and successfully as possible. On the other hand many of the large buy-out funds maintain that one of the attractions of investing in consortiums to buy large companies rather than midsized ones is that there is limited competition for the assets, which keeps prices down.

It is also extremely rare for private equity groups to bid against each other after the end of an auction. More often they will attempt to buy a slice of the equity from the winning bidder.

Equity Deals Attract Eye Of Justice (NYT)

By Andrew Ross Sorkin

The New York Times, October 11, 2006

Two rival leveraged buyout firms make bids for the same company. At the 11th hour, one firm drops out of the auction, unwilling to pay more.

The remaining buyout firm is declared the winner. A month later, another company is put up for sale — only this time the two firms that had just been fierce competitors have teamed up to bid together for it.

Friendly competition? Or collusion?

That question is what the Justice Department appears to be examining as part of a preliminary inquiry into possible anticompetitive behavior in the clubby private equity industry, according to people briefed on the investigation.

Several of the nation's largest firms, including Kohlberg Kravis Roberts & Company, the Carlyle Group, Clayton, Dubilier & Rice and Silver Lake Partners, have received letters from the Justice Department seeking broad information about their business practices and involvements in auctions going back to 2003.

The letters, sent within the last 10 days, appear to be the beginning of a wide-ranging inquiry into private equity, an industry that has become an increasingly powerful force on Wall Street in recent years but remains relatively unregulated. Of particular concern has been the emergence of consortiums in many big buyouts.

When firms get together to form consortiums, or clubs, as they are known in the industry, to bid on a specific company, that could have the effect of limiting competition and thus artificially depressing the price of takeover bids — and hurting corporate shareholders in the process.

And private equity firms have worked together on other fronts. Kohlberg Kravis and the Texas Pacific Group have been forming a trade association to represent the industry's views in Washington.

The inquiry comes at a time when private equity's grasp has reached into every corner of corporate America. Toys "R" Us, Hertz and Neiman Marcus are among the well-known names owned by private equity.

Firms have spent hundreds of billions of dollars so far this year on buyouts. Yet that deal-making may have reached its peak. Leveraged buyout prices appear to be reaching record levels, leading some analysts and investors to suggest that valuations have become inflated.

The inquiry also comes only a month after a particularly brutal takeover battle spilled into public view when a group led by Kohlberg Kravis Roberts and Bain Capital tried to jump onto a nearly signed deal between Freescale Semiconductor and a rival private equity group led by Blackstone Group.

The last-minute bid by the Kohlberg Kravis-Bain group pushed the Blackstone Group to pay $1.6 billion more than it had originally agreed to pay.

It was unclear yesterday how widespread the inquiry could be. People who have reviewed the letters, sent by the New York regional office of the Justice Department, described them as being broad and without mention of any specific transaction or auction. They also described the letters as indicating a lack of familiarity with how the industry works.

DOJ_NMG_0078925

A response to the letters is completely voluntary; the letters are neither subpoenas nor what is known as civil investigation demands. News of the inquiry was first reported on The Wall Street Journal's Web site.

The firms contacted are expected to hold separate meetings with the Justice Department within the next week to clarify the scope of the information being requested, people involved in the inquiry said.

It is unclear why certain firms received the letters and others — like the Blackstone Group — did not.

Some lawyers involved in the inquiry speculated that the list, which is likely to grow, started with firms mentioned in a newspaper column published in October 2005 that explored the subject of collusion in the industry.

Antitrust lawyers suggested yesterday that it could prove difficult to mount a case against the firms, but allowed that it was possible the Justice Department could find e-mail messages or other documentation of discussions among the firms about bidding.

Proving a case could be difficult because in most auctions the company being bid for, which is typically sophisticated and well advised, has the option to sell or not.

There are also several cases, including the landmark United States v. Morgan in 1953 that held that investors — in that case, underwriters — were allowed to band together to spread risk among several firms.

In many auctions, the seller takes great pains to prevent buyers from colluding. Some recent sellers, like Albertsons, have actually directed the formation of teams themselves to prevent the possibility of one group becoming too powerful.

Sellers have also taken steps to prevent private equity firms from locking up some of the biggest banks to finance their deals, which could make those funds unavailable to other buyers.

Sellers have also begun a practice called staple financing, which is when the bank advising the seller also offers financing to all of the buyers at the same rate. The practice has been questioned because it puts the bank on both sides of the deal, but it also levels the playing field for buyers in an effort to encourage spirited bidding.

Probe Brings 'Club Deals' To Fore (WSJ)

By Dennis K. Berman And Henny Sender

The Wall Street Journal, October 11, 2006

When hospital operator HCA Inc. announced a deal to be taken private by a trio of private-equity firms earlier this summer for $21.3 billion, the buyers worried that a rival bidding group would crash the party and force the price higher. But no such bid materialized.

At least some of these rivals held off, say people familiar with the decision making, because they feared a competing bid for HCA would open the door for other firms to jump in on the rivals' own, other buyout deals, these people said. (In other words, you don't bid on my deal, I won't bid on yours.)

Such calculations on whether to join forces or face off against competitors have been at the heart of private-equity investing over the last three years. Assessing these rules of engagement in the multibillion-dollar world of corporate buyouts is also part of a new Justice Department inquiry into private equity's auction practices since 2003, according to people familiar with the effort.

The inquiry, reported yesterday by The Wall Street Journal, centers on how groups of private-equity firms conduct their bidding in corporate auctions, according to people familiar with letters sent to buyout firms.

In many of these transactions, powerhouse private-equity firms -- which pool large sums of capital from wealthy investors and institutions -- team up to make bids to take companies private, hoping to cash in by selling them later at a higher price.

The inquiry, run by the Justice Department's antitrust division in Manhattan, is preliminary and like other such matters, may eventually lead in a different direction or nowhere at all. Those receiving letters include Kohlberg Kravis Roberts & Co., Silver Lake Partners and Carlyle Group, according to people familiar with the matter, and the list is likely to grow. All three firms declined to comment.

The two-page document is described by someone who has read it as being relatively generic, asking a general set of questions about the firms' bidding history, bidding partners and timing and nature of pricing changes in auctions.

The Justice Department has put a priority on combating business collusion and price-fixing in recent years. But such cases usually proceed as criminal investigations with subpoenas, and the letters that were sent in this instance were non-

compulsory requests for information. That suggests the inquiry is at an early stage. The head of the antitrust division's New York office, Ralph Giordano, referred calls to a Justice Department spokesman, who declined to comment.

The Justice Department's antitrust record on Wall Street is mixed at best. Back in the 1950s the Justice Department sued 17 Wall Street investment banks -- then known as Club 17 -- on antitrust charges, but the case was thrown out of federal court.

Today, legal and economic scholars say it would be hard to prove that private-equity shops -- who actively bid share prices higher and not lower -- are colluding to suppress prices of the companies they buy.

Nonetheless, the firms were preparing yesterday for what could be a long legal challenge. The general counsel of one major buyout firm advised employees to preserve documents in case regulators send a request for information. In addition, private-equity attorneys held a conference call yesterday afternoon to discuss strategy and compare notes.

WHO'S WHO IN PRIVATE EQUITY

1 • See a rundown of high-profile private-equity firms, their histories, holdings and biggest deals.2

News of the letters touched off a range of reactions around Wall Street, where the buyout funds have become powerful presences, having paid out some $9.6 billion globally in fees to investment banks year-to-date for advice, capital raising and other activities, according to data analysis firm Dealogic.

If there is going to be any slowdown in deal making, it didn't show up in markets. In the latest multibillion-dollar deal, private-equity firm Texas Pacific Group and one of its investors clinched a deal to buy French television and cellphone transmission business TDF SA.

At least some described the inquiry as an "inevitable" outgrowth of the evolution of the big-ticket buyout game. Wielding smarts, ego and capital, elite firms have clustered at auctions for a virtual buffet of the nation's largest companies: movie chains, satellite operators, newspaper companies, and semiconductor-makers among others.

To pay for such large targets -- with total price-tags of upward of $30 billion -- the firms have in recent years begun to partner into what have come to be known as "club deals." These clubs are largely limited to a handful of buyout firms with roughly more than $10 billion each in capital, such as Kohlberg Kravis Roberts & Co., Blackstone Group, Texas Pacific Group, and the investment arm of Goldman Sachs Group Inc.

These clubbing arrangements present both opportunities and problems for companies on the auction block. On the plus side, they allow for the assembly of the immense pools of cash necessary to bid on a large target in the first place. That in turn helps buyers spread the risk of any one transaction, which is another essential ingredient to making a bid.

Yet inside these clubbing arrangements is a fraught dynamic. While often ferocious competitors, the firms are just as likely to end up co-owners of a number of targets. For instance, two of the buyout world's top firms, Blackstone Group and Carlyle Group, are often on different sides of transactions. For example, when Kinder Morgan Inc. was considering a management buyout involving Carlyle earlier this year, Kinder's board hired Blackstone's advisory arm to evaluate the bid. But they are also bidding together to buy Freescale Semiconductor Inc.

In all, Carlyle has done 20 club deals since 2005, and Texas Pacific Group 25 club deals, according to Dealogic data. Some 44% of all $1 billion-plus buyouts are done in club deals this year.

Legal scholars are far from convinced that any legal case may arise from the inquiry.

"These are hard [cases] to make for a variety of reasons. One of them is an evidentiary reason. There is not going to be a document where somebody says, 'What we really need to do is team up so we can keep the price down," said Todd Henderson a professor at the University of Chicago Law School.

Lauren S. Albert, an attorney at New York's Axinn, Veltrop & Harkrider said that a case was possible given a certain set of conditions. "If a bidder or group was able to bid on its own -- but to avoid competition joined with other bidders capable of bidding on their own -- that could be viewed as unlawful."

One area that could receive significant attention is the use of confidentiality agreements in auction situations. These agreements are designed to contractually hold competing parties to a vow of silence with each other, unless permission is granted by the seller.

DOJ_NMG_0078927

Nonetheless, information can leak between these parties and their bankers, at times conveyed in media stories or via a third party. Attorneys suggested yesterday that one point of inquiry could be the investment banks and lending desks of major Wall Street firms who oftentimes will fund multiple bidders in the same auction.

It is these fulcrum points that could at least theoretically keep the flow of information going between two rival groups -- and potentially affect pricing of an auction.

Judge Delivers Split Ruling In Cell Phone Technology Case (AP)

AP, October 11, 2006

LOS ANGELES - Semiconductor maker Qualcomm Inc. violated parts of a patent held by rival Broadcom Corp. that helps cell phones conserve battery power when out of cellular network range, a judge ruled Tuesday.

However, Qualcomm did not infringe two other patents on chips used in cell phones and other wireless devices, according to Charles E. Bullock, an administrative law judge hearing the case in Washington, D.C., on behalf of the International Trade Commission.

Qualcomm had challenged the patents held by Broadcom, but the judge ruled all three patents were valid.

The case was brought to the commission by Broadcom, based in Irvine, Calif.

Qualcomm, based in San Diego, said it would appeal the decision to the full commission as it explored designs to replace the disputed technology.

The judge's ruling will go to the full commission next year for a final determination.

Broadcom said it would ask the commission to review the portion of the ruling that favored Qualcomm.

The rival chip makers have 10 suits and countersuits pending in courts from California to Europe over trade and patent issues relating to technologies that power cell phones, Bluetooth devices and wireless Internet equipment.

Last week, a federal court judge in San Diego ordered the billionaire founders of the feuding companies to face each other behind closed doors to try to resolve their differences. No agreement was struck and the judge was expected to order further sessions.

In August, a federal judge in New Jersey dismissed an antitrust lawsuit filed by Broadcom against Qualcomm. The suit accused Qualcomm of thwarting competition in the market for advanced cell phones and associated chips.

Broadcom contends that Qualcomm's licensing practices are unfair and violate antitrust laws. Broadcom, which has in the past focused on chips for TV cable boxes, is now trying to expand into the cell phone market and asserts Qualcomm is infringing on 18 of its patents.

Qualcomm claims Broadcom is infringing on 10 of its patents to create products using knowledge of stolen technical specifications.

Qualcomm Averts Sanction In Broadcom Chip Spat (WSJ)

By Don Clark

The Wall Street Journal, October 11, 2006

Qualcomm Inc. avoided a tough sanction in a legal skirmish with Broadcom Corp. But the chip makers continue to tangle on multiple fronts and face increasing pressure to reach a settlement.

An International Trade Commission administrative law judge ruled that Qualcomm's chips infringed on a Broadcom patent. Judge Charles Bullock stopped short, however, of recommending that cellphones containing the chips be barred from importation to the U.S. He also ruled that Qualcomm didn't infringe on two other patents that Broadcom had cited.

The possibility of import restrictions against Qualcomm-powered cellphones has spooked the telecommunications industry. Handset makers including Motorola Inc., Samsung Electronics Co., LG Electronics Inc. and Kyocera Corp. could be affected by such a ban. U.S. cellphone service providers also could be affected.

Although the full ITC could contradict the judge's recommendation in a commission ruling expected in February, Qualcomm investors breathed a sigh of relief after yesterday's ruling. Qualcomm's shares were up 83 cents, or 2.3%, to $37.07 in 4 p.m. composite trading yesterday on the Nasdaq Stock Market. Broadcom's shares were down 79 cents, or 2.7% to $28.80 on the Nasdaq.

Louis Lupin, Qualcomm's general counsel, said his company was pleased. The patent that the judge said Qualcomm infringed upon involves a feature for managing power in chips, and Qualcomm should be able to create new chips to avoid that issue, he said.

David Rosmann, Broadcom's vice president of intellectual-property litigation, said the finding of infringement was a victory. "We're very encouraged by that," he said.

Qualcomm, San Diego, sells chips based on a technology called CDMA, for code division multiple access, and licenses patents to cellphone makers and other chip companies.

Broadcom, an Irvine, Calif., maker of communications chips, is a relative newcomer to cellphones. It has unsuccessfully negotiated for a patent license from Qualcomm, which it accuses of demanding unreasonable terms.

In the meantime, Broadcom has kept up the pressure by filing the ITC action and lawsuits that accuse Qualcomm of violating a total of 18 patents. Though a federal judge in New Jersey dismissed its antitrust suit against Qualcomm, Broadcom is appealing that ruling and is pressing a complaint about Qualcomm with antitrust regulators in Europe.

Qualcomm, which has said its licensing terms are fair, has filed suits that accuse Broadcom of infringing on 10 patents and improperly obtaining trade secrets. Last week, a federal judge in San Diego summoned Qualcomm Chairman Irwin Jacobs and Broadcom Chairman Henry Samueli for talks about settling the companies' legal disputes. The judge ordered the parties not to discuss the talks, but most observers expect a patent-licensing deal eventually.

"We are not trying to keep Broadcom out of the market," Mr. Lupin said. "One would expect a deal would ultimately be reached."

Broadcom's negotiating position could improve if it can convince the full ITC to issue an exclusion order. Lyle Vander Schaaf, an attorney with Bryan Cave LLP who has worked at the ITC, said the full commission regularly disagrees with recommendations of its administrative law judges. Qualcomm and its customers "cannot be popping champagne corks yet," he said.

Carriers that could be affected by restrictions on Qualcomm-powered telephones include Sprint Nextel Corp.; Verizon Wireless, which is a joint venture of Verizon Communications Inc. and Vodafone Group PLC; and Cingular Wireless, which is co-owned by AT&T Inc. and BellSouth Corp.

High Court Hears Case Pitting Telecoms Against Pay-Phone Providers (AP)

By Christopher S. Rugaber, The Associated Press

AP, October 11, 2006

The Supreme Court heard arguments Tuesday in a case that could force telecommunications companies to compensate pay-telephone providers billions of dollars for so-called 10-10-220 calls made by consumers, legal experts said.

The case stems from federal laws and regulations requiring long-distance telephone companies to compensate pay-phone providers for calls that consumers make using special dialing codes, commonly known as 10-10-220 or coinless calls.

Metrophones Telecommunications Inc., based in Washington state, sued Global Crossing Telecommunications Inc. in 2003, alleging that Global Crossing had not fully compensated it for phone calls made from Metrophones pay phones. Metrophones claims Global Crossing owed it $31,330.42 in fees and interest.

While the dollar damages in that particular case are low, at issue is whether companies can sue in federal court over regulatory violations or whether they can only sue over violations of federal laws.

Global Crossing has argued that federal law does not necessarily require long-distance companies to compensate pay-phone providers, but instead directs the Federal Communications Commission to issue rules governing how the pay phone providers would be compensated. Telecom providers Verizon Communications Inc., AT&T Inc. and Sprint Communications have filed briefs in support of Global Crossing.

Tobias Zimmerman, a telecom attorney at the Washington-based law firm Akin, Gump, Strauss Hauer & Feld, wrote on the firm's Web site that a ruling against the telecom giants could run into the billions.

DOJ_NMG_0078929

The FCC, in a 2003 order, sided with Metrophones as did the U.S. Solicitor General. Federal appeals courts have issued conflicting opinions, however, with the 9th Circuit Court of Appeals ruling in 2005 that Metrophones could sue in federal court over violations of FCC regulations, while the D.C. Circuit, in a separate case in 2005, found that companies could not.

The justices questioned lawyers for both sides closely during oral arguments. Justice Antonin Scalia expressed concern that if all violations of the FCC's regulations were seen as "unjust and unreasonable" and therefore equivalent to violations of law, numerous suits could be filed in federal courts and could yield contradictory rulings.

The case is Global Crossing Telecommunications Inc. v. Metrophones Telecommunications Inc. (05-705).

Poor Reception After Sprint And Nextel Merge, Customers And Executives Leave (WSJ)

By Amol Sharma

The Wall Street Journal, October 11, 2006

With telecom deal making in full swing around him, Sprint Corp. chief executive Gary Forsee made his own big move last year. His century-old company paid $35 billion to buy a hot rival, Nextel Communications Inc. The deal gave the No. 3 wireless company a big new weapon in telecom's fastest growing market.

But since then, Sprint Nextel Corp. has been losing ground. Millions of its cellphone subscribers have defected to competitors. Its remaining customers have increasingly been switching to less profitable calling plans.

Yesterday, amid mounting troubles at Sprint Nextel, former Nextel CEO Tim Donahue said he was retiring as executive chairman. The move came just two months after Len Lauer, Sprint's chief operating officer, was let go after the release of dismal financial results. The stock price has fallen more than 30% since the deal closed in August 2005.

The Sprint-Nextel saga shows the perils of consolidation in an intensely competitive field where technology and customer expectations keep changing quickly. Instead of each company fixing the other one's weakness, the problems have just added up.

Nextel executives say Sprint erred by downplaying the Nextel brand. Some top Sprint executives feel duped for buying an aging Nextel network that drops customers' calls. The two companies have yet to combine their cellular networks and management structures. Meanwhile, Sprint has been slow to catch on to important trends in the industry, such as the enormous popularity of Motorola Inc.'s ultrathin Razr phone.

Mr. Forsee concedes that Sprint has stumbled in the short term, though he says it is well-positioned for long-term growth. "We've got one more box left to check, and that's to execute," he said in a recent interview.

Mr. Forsee has had to put together two companies that couldn't have been more different. Sprint, based in Overland Park, Kan., before the deal, was founded at the turn of the 20th century as the Brown Telephone Co. It has its roots in the landline phone business, where many of its top executives, including Mr. Forsee, got their start.

Nextel, whose Reston, Va., offices became the headquarters of the new company, was a wireless pioneer when it started in 1987. Its phones with a walkie-talkie feature quickly became popular with construction workers and security guards. Its employees boasted of the company's entrepreneurial culture, fast decision-making, and penchant to take risks.

The 56-year-old Mr. Forsee moved from BellSouth to take over the top Sprint job in 2003, after Sprint's top two executives were forced out over their use of personal tax shelters. Mr. Forsee had been vice chairman of BellSouth and heir apparent to its chief, so the move came with a big handcuff for Sprint. At BellSouth's insistence, Mr. Forsee was barred from taking part in merger and acquisition discussions for a year.

The timing was tough: Mr. Forsee and Sprint were forced to sit on the sidelines at a crucial moment of consolidation in the industry. In the ensuing months, AT&T Wireless came on the block, and several U.S. and foreign carriers made bids. In early 2004, Cingular acquired AT&T and became the nation's leading carrier, measured by number of subscribers.

Mr. Forsee knew he needed a wireless partner to keep up with the scale of his rivals. Nextel, then the fifth largest carrier, was attractive, because its quickly expanding base of business customers spent, on average, more than $60 a month -- the highest in the industry. The timing of a merger also worked for Nextel's CEO, Mr. Donahue: His company's aging network would be especially hard to upgrade for Internet and data services, seen as the future of the wireless industry. Sprint thought it had the technology to solve that problem.

DOJ_NMG_0078930

Problems emerged soon after the deal closed in August 2005. Though Sprint was bigger, Mr. Forsee accepted a "merger of equals," and key personnel and management decisions were made to appease both sides. For example, Nextel executive Barry West became the new chief technology officer, while Sprint executive Kathryn Walker was given the title of chief network officer. Both positions had responsibility for the future of the carrier's network. Such doubling up led to extra bureaucracy that sometimes slowed decision-making, former executives from both companies say.

The two companies also had vastly different organizational structures. Sprint's was divided by which clients were being served -- consumers, government or corporate. Nextel was divided by function, such as sales, distribution, and customer service, no matter what type of customer. Instead of favoring one model, Mr. Forsee combined elements of each, though he now is moving toward the Nextel model.

Friction between the Sprint and Nextel camps began to surface. Starting in the fall of 2005, a series of corporate bonding sessions were held in Overland Park and Reston to try to cultivate ties between the two camps. Nextel employees accused Sprint's managers of being too slow to make decisions and requiring too many layers of approval for everything from budgeting to new product initiatives. Sprint's people said they needed some time to show they could execute, a person who attended one of the sessions said.

One big decision early on was what brand name to use. Some Nextel executives and an outside consultant advised the company to keep the separate brand names, because Sprint and Nextel reached such different markets. But Mr. Forsee decided to blend them into one, with Sprint as the lead and "together with Nextel" as a smaller tagline. Some former executives say Mr. Forsee downplayed Nextel's brand to the company's detriment, contributing to the slow growth on the Nextel side of the business. Months later, acknowledging that the initial branding strategy wasn't working, Mr. Forsee reversed course and began pumping up Nextel's brand in ads once again: A recent print ad touts the brand "Nextel," with "only from Sprint" in a smaller font.

The company had other unforeseen complications. Small regional affiliates of each company, which offer service in small markets under the Sprint and Nextel brands, complained that the merger would violate agreements that barred the national carriers from competing in the affiliates' territories. After bitter legal fights, Sprint ended up buying out seven affiliates, costing more than $14 billion and forcing Sprint to incorporate thousands of new employees.

Sprint also inherited a swath of valuable radio spectrum that Nextel had acquired from the federal government. But it came with a price: The company had to meet a Federal Communications Commission mandate to resolve interference problems with emergency-services users such as police and firefighters -- mostly by switching them to other bands. The expected cost was $2.8 billion, but Sprint says it will have spent half that by the end of this year and analysts say the total could ultimately rise, given how much is left to do.

Since mid-2005 the company has been in talks with hundreds of state and local agencies over the costs and logistics. For instance, in the Washington, D.C., area, the carrier has to replace or update about 35,000 radios and negotiate with counties in Maryland and Virginia, several federal law-enforcement agencies, and even the Washington metropolitan transit system. It took almost a year for Sprint to strike an agreement with the lead county in the region, Fairfax, Va., just for $609,000 in planning money. Meanwhile, some of the old first-responder radios have receivers made of crystal. Replacing the crystals to retune the radios to a new band was so difficult that Sprint has begun growing them in a lab.

Worse, the reshuffling of frequencies makes it hard for Sprint to add customers on the Nextel network and is hurting phone reception in some regions because of reduced bandwidth, the company says.

Customers are increasingly complaining about dropped calls and reception problems. Frank McBride, a chauffeur in Los Angeles, says his limousine service started using Nextel phones a few years ago because of the Nextel walkie-talkie function, which allows users to press a button to reach a colleague without making an actual phone call. Mr. McBride says he got another Nextel phone for his personal use, but in the past year has seen a substantial deterioration in phone reception. "It's been dropping calls like crazy and it's getting worse," Mr. McBride says. He plans to change carriers when his phone contract is up next March.

Mr. Forsee has decided the best way to keep all Nextel subscribers happy is to bring them onto Sprint's more reliable network. But to do that he needs to add a Sprint walkie-talkie feature to match Nextel's. That isn't proving easy or cheap, and the company says it won't be able to abandon the Nextel network until at least 2012, instead of 2010 as forecast at the time of the

DOJ_NMG_0078931

merger. Meanwhile Sprint is scrambling to put out "dual mode" phones for Nextel customers that can take advantage of Sprint's network for phone calls and Nextel's for walkie-talkie functions.

Sprint also has been faulted by some customers and analysts for sparse choice of phone styles and features compared with rival carriers. Nextel phones "are a little short on what they offer," says Shaun Cannon, a Nextel subscriber from Newburgh, N.Y., who is switching to Verizon because he says its phones offer more.

Under Mr. Forsee, Sprint failed to latch onto a major trend in the handset market, the Razr phone. Cingular offered the phone first, in November 2004, heavily marketing it in TV ads. It caught on quickly, and as sales soared, other carriers took notice. By late 2005, Verizon Wireless put out its own Razr. In the past six months, the Razr has been the most popular handset on the U.S. market by far, getting a 10% overall market share, according to surveys conducted by Telephia Inc., which tracks data on the wireless industry.

Sprint decided to back two Razr look-alike phones. In late 2005, the company released the Samsung A900, dubbed "The Blade" by some bloggers. In July of this year, the company put out the Sanyo Katana -- named after the Japanese word for "sword." Both had the same sleek flip-phone design of the Motorola device. But now Mr. Forsee has decided to put the Razr in Sprint's stores later this year as well. "Obviously when that brand caught hold, that's something we wanted to pay attention to," Mr. Forsee says.

Sprint shares tumbled in August after the company reported its second-quarter results, including a 38% drop in earnings caused largely by integration costs. The company said its customer-turnover rate, a figure watched closely in the industry, had stayed flat at 2.1%, almost twice the rate of rival Verizon. Sprint also is signing comparatively few of its new customers to annual contracts.

Trying to calm angry investors, Mr. Forsee last month let go of Mr. Lauer, Sprint's chief operating officer, who oversaw merger integration and was responsible for improving subscriber growth and customer retention. Neither Mr. Lauer nor Mr. Donahue responded to requests for comment on Sprint's fortunes.

Mr. Forsee took on Mr. Lauer's responsibilities. He has ordered an image makeover to stress the reliability of Sprint's network -- under the new slogan "Power Up" -- and demanded higher deposits than before from customers who have a higher credit risk. He also is trying to change the way the company is organized, favoring Nextel's old playbook of giving local managers more autonomy to make important sales and marketing decisions quickly. He has vowed to make the new corporate culture "crazy competitive."

Yesterday's departure of Mr. Donahue, 57, may intensify concerns about the company. Many investors say they have more faith in the managers from the Nextel side of the business, because of the strong results their scrappy operation delivered prior to the merger. Mr. Donahue joined Nextel in January 1996 as president and chief operating officer, and is well respected among investors and company insiders. Prior to his position at Nextel, he held positions at AT&T Wireless and McCaw Cellular. As Mr. Donahue made his exit, Sprint also disclosed millions of dollars in deals with companies owned by his brother-in-law, Glenn Grella. The company said that the disclosure, which raised eyebrows among industry observers, wasn't related to Mr. Donahue's retirement and his departure was voluntary.

Mr. Forsee says Sprint has made some progress in the merger. It has closed 168 retail stores and slashed one-third of its directors and officers. By year's end, it will have achieved only $1 billion of the $14.5 billion in savings it has promised investors, but he points out most of the savings were expected to come later.

Mr. Forsee also spun off Sprint's local phone division as a new entity called Embarq Corp., bringing the company closer to focusing solely on wireless service. To try to distinguish Sprint Nextel from competitors, he has announced he plans to spend up to $3 billion to build an entirely new network for wireless data and Internet services using a nascent technology called WiMax. It's meant to deliver Internet connections to laptops, cellphones, PDAs, and other consumer-electronics devices at faster speeds than rivals.

Texas Pacific, AXA To Buy 60% Of France's TDF (WSJ)

By Jason Singer

The Wall Street Journal, October 11, 2006

DOJ_NMG_0078932

LONDON -- U.S. private-equity firm Texas Pacific Group and one of its investors has clinched a deal to buy a 60% stake in French television and cellphone transmission business TDF SA for about €3.3 billion ($4.16 billion), according to people close to the deal.

TDF, or Telediffusion de France, transmits TV signals and mobile-phone calls across the country for all carriers. It is controlled by U.K. private-equity firm Charterhouse Capital Partners LLP and French state investment firm Caisse des Dépôts & Consignations, which will together retain a 40% stake, these people added. The deal will bring fresh money into the company, which is seeing strong growth from the transfer of analog TV signals to digital service. Television transmissions account for the bulk of TDF's business.

Get alerts for breaking news -- such as Fed moves, major world events and big mergers -- delivered straight to your desktop. Alerts will appear in a small window on your screen, much like an instant-messaging window. See a sample and get more information.2

Television and cellphone towers have attracted interest from financial investors as the business increasingly has been classified as an infrastructure asset that brings steadily growing revenue. The deal will value the company at about €4.8 billion, including TDF's existing debt. Texas Pacific Group is buying the 60% stake with one of its investors, French insurance giant AXA SA. The insurer is buying about a quarter of the stake, with Texas Pacific taking about a 75% share, these people said.

After the deal, Texas Pacific will hold 42% of the company, CDC will hold 24%, AXA Private Equity 18%, Charterhouse Capital 14% and management and employees 2%. A Texas Pacific spokesman declined to comment. Representatives for TDF, Charterhouse, CDC and Axa Private Equity couldn't be reached.

Dot-Com Boom Echoed In Deal To Buy YouTube (NYT)

By Andrew Ross Sorkin

The New York Times, October 11, 2006

A profitless Web site started by three 20-somethings after a late-night dinner party is sold for more than a billion dollars, instantly turning dozens of its employees into paper millionaires. It sounds like a tale from the late 1990's dot-com bubble, but it happened yesterday.

Google, the online search behemoth, agreed yesterday to pay $1.65 billion in stock for the Web site that came out of that party — YouTube, the video-sharing phenomenon that is the darling of an Internet resurgence known as Web 2.0.

YouTube had been coveted by virtually every big media and technology company, as they seek to tap into a generation of consumers who are viewing 100 million short videos on the site every day. Google is expected to try to make money from YouTube by integrating the site with its search technology and search-based advertising program.

But the purchase price has also invited comparisons to the mind-boggling valuations that were once given to dozens of Silicon Valley companies a decade ago. Like YouTube, those companies were once the Next Big Thing, but some soon folded.

Google, with a market value of $132 billion, can clearly afford to take a gamble with YouTube, but the question remains: How to put a price tag on an unproven business?

"If you believe it's the future of television, it's clearly worth $1.6 billion," Steven A. Ballmer, Microsoft's chief executive, said of YouTube. "If you believe something else, you could write down maybe it's not worth much at all."

In a conference call to announce the transaction yesterday, there were eerie echoes of the late 1990's boom time. There was no mention of what measures Google used to arrive at the price it agreed to pay. At one point, Google's vice president, David Drummond, gave a cryptic explanation: "We modeled this on a more or less synergistic kind of model. You can imagine this would be hard to do on a stand-alone basis."

The price tag Google paid may simply have been the cost of beating its rivals — Yahoo, Viacom and the News Corporation — to take control of the most sought-after Web site of the moment. It was also perhaps the only price that two YouTube founders, Chad Hurley, 29, and Steven Chen, 28, and their big venture capital backer, Sequoia Capital Partners, were willing to accept, given that they most likely could have continued as an independent company. A third YouTube founder, Jawed Karim, left the company to pursue an advanced degree at Stanford.

DOJ_NMG_0078933

The deal came together in a matter of days. After rebuffing a series of other overtures, YouTube's founders decided to have lunch on Wednesday with Google's co-founder, Larry Page, and its chief executive, Eric E. Schmidt. The idea of a deal had been broached a few days earlier. The setting was classic Silicon Valley start-up: a booth at Denny's near YouTube's headquarters in San Bruno, Calif. The Google executives threw out an offer of $1.6 billion and autonomy to continue running the business.

That set off a marathon of meetings and conference calls over the next two days, which kicked into even higher gear on Friday, when news of the talks began to circulate, putting pressure on Google to sign a deal before a rival bid emerged. In fact, the News Corporation sent a letter to YouTube seeking to start talks but never received a response.

"The Google-YouTube deal has to feel a little like the 1990's, but it isn't," said Dmitry Shapiro, chief executive of Veoh, a YouTube competitor that is backed by Time Warner and Michael D. Eisner, the former chairman of Disney. Arguing that online video represents an entirely new medium, he said, "If you knew then what you know now and you had the chance to acquire Amazon or eBay — which weren't making any money either — you would have bought them."

Of course, YouTube has also been compared to Napster, whose music-sharing service was eventually shuttered after a series of lawsuits. While YouTube has made some deals with content providers, including one yesterday with CBS, its users have uploaded millions of copyrighted clips, leading some to question whether Google is inheriting a legal minefield. YouTube has said it is different from the old Napster service because it removes content when a copyright holder complains.

"There are some issues with YouTube," Sumner M. Redstone, chairman of Viacom, said last week on "The Charlie Rose Show." "They use other people's products," he said, alluding to pirated video. "The only way they avoid litigation now is they stop doing it if you call them."

Mark Cuban, who founded Broadcast.com, an early audio and video site that was bought by Yahoo, is even more skeptical of Google's legal position, writing on his blog: "I still think Google lawyers will be a busy, busy bunch. I don't think you can sue Google into oblivion, but as others have mentioned, if Google gets nailed one single time for copyright violation, there are going to be more shareholder lawsuits than Doan's has pills to go with the pile-on copyright suits that follow."

Yet the deal with Google was announced hours after YouTube disclosed deals with entertainment companies that appeared to reduce the risk that it would become mired in copyright disputes.

YouTube is Google's first big acquisition after making a series of much smaller deals for companies, including Pyra Labs, creator of Blogger. Google now joins the Internet's establishment — Yahoo, eBay and Amazon.com, among others — which have all made giant acquisitions to expand their businesses beyond their traditional trade.

But those companies have had mixed results. Yahoo paid $3.6 billion in 1999 for Geocities, a company that allowed users to create their own Web sites; today, MySpace, a social networking site bought by Rupert Murdoch's News Corporation last year for only $580 million, far eclipses it. EBay, on the other hand, acquired PayPal, a rapidly growing start-up that lets people make payments via e-mail, for $1.5 billion in 2002. It now represents more than a third of eBay's revenue.

Rather than pursuing big acquisitions, Google has been known for plowing money into research and development, spending $483.98 million last year, an increase of more than 114 percent over the previous year.

The success of the YouTube acquisition will probably lie in embedding video advertising into the clips that millions of people watch everyday from their computers. So far, YouTube's management has been reluctant to include advertising within clips, for fear of alienating users.

Yesterday, however, Mr. Hurley, one of YouTube's founders, appeared more open to experimenting, saying that he was even considering testing what's known as a pre-roll — a 15-second ad before a clip — something he had long derided as potentially ruining the user experience.

While more marketers have been eager to advertise against online video, some big consumer companies have been reluctant to fully embrace advertising against user-generated content because it is difficult to differentiate good content from offensive material. YouTube has created an assortment of tools for users and content creators to police its site.

YouTube said it had struck accords to license content from two of the four major music conglomerates — the Universal Music Group and Sony BMG Music Entertainment — and the CBS television network in exchange for a percentage of YouTube's advertising revenue.

DOJ_NMG_0078934

YouTube is also expected to use new technology to identify copyrighted material that users have uploaded to the site without permission, and to share ad revenue with media companies that own the video or music content. (YouTube made a similar pact with the Warner Music Group last month, and had a previous advertising deal with NBC in June).

The deals reflect how media companies are rethinking the distribution of their entertainment content online.

The deal with Universal, the world's biggest music corporation, drew particular attention because the company had said it was contemplating a lawsuit against YouTube over copyright issues.

Phil Leigh, the president of Inside Digital Media, said the new arrangements represented "a strong endorsement that the major media companies are going to see YouTube as a legitimate business partner."

Mr. Leigh said that also suggested a rethinking of the approach the companies took to Napster. "It shows that very important, erstwhile reluctant media companies have got religion," he said.

The YouTube alliances also came the same day that Google announced separate deals to license music videos from Sony BMG and Warner.

Under the terms of the deal, YouTube, which has about 60 employees, will retain much of its identity and will keep its name and its office in San Bruno, more than 25 miles from Google's headquarters in Mountain View.

The transaction was announced after the stock market closed. Earlier, Google shares rose 2 percent, to $429, after DealBook, a Web log published by nytimes.com, reported that a deal would be announced at the end of the market day.

Benjamin Schachter, a UBS analyst, wrote in a note to investors. "The price tag of about $1.6 billion is difficult to justify on a spreadsheet and may be somewhat of a throwback to the days of paying for eyeballs and page views, but this is a strategic bet that Google would be placing for a long-term objective: to be the technology and distribution partner for content owners and publishers."

YouTubers Ponder Google (WP)

By Sara Kehaulani Goo

The Washington Post, October 11, 2006

On YouTube, where members are encouraged to express themselves through amateur video, it took only a few hours before they started chiming in on Google's $1.65 billion acquisition of the popular online video site.

Dozens of YouTubers turned their cameras on themselves to share their opinions on the sale, while thousands responded to a video posted yesterday by YouTube founders Chad Hurley and Steve Chen.

The reaction was mixed and displayed a range of emotions, from outrage and accusations that YouTube had sold out to corporate interests to admiration and optimism that Google will improve it.

From his bedroom in Britain, 15-year-old Clive Newstead appeared with his long brown hair hanging in his face, proclaiming that the deal is bad news for video amateurs like him.

"It just wouldn't be quite right. There are people fearing Web sites like Google have way too much influence over the Internet," Newstead said in his video, posted under the screen name "nuodai." He enjoys watching TV shows and movie clips on YouTube and fears that they will go away, he said. "Its good to watch stuff that's been on TV that you can't find anywhere else."

Joel McDonald, 22, of Virginia Beach disagreed, reasoning that Google is a good company that won't mess too much with YouTube. "Google's great at anything they do," McDonald said into the camera at his home. "Google would do a great job at managing YouTube. It would be wonderful and the features would be better."

How things will change has yet to be seen, though Hurley and Chen -- in a video that was recorded outside what appeared to be a T.G.I. Friday's restaurant -- said they were committed to developing a site that remains fun for its users.

"The most compelling part of this is being able to really concentrate on features and functionality for the community," Chen said.

But, in true YouTube fashion, the two founders -- overnight millionaires from a technology deal reminiscent of the late 1990s -- quickly turned silly as they poked fun at a recently posted video featuring hip-hip mogul Sean "Diddy" Combs inside a Burger King restaurant.

DOJ_NMG_0078935

"Two kings have gotten together: The king of search and the king of video. We're going to have it our way, salt and pepper," Hurley says, mocking Combs.

Chen walks away from the camera, doubled over, laughing.

"You can't do that. Cut," Hurley says just before the video ends.

Hurley, 29, and Chen, 26, are likely to make tens of millions of dollars by selling their company, which is just over a year old, to Google in an all-stock deal. Sequoia Capital LLC, the sole venture firm to invest in YouTube, is reported to have made $495 million from its $11.5 million investment in YouTube.

Hurley and Chen will stay with the company, Google said.

How the site will change under Google is unclear. Google executives said Monday that they planned to keep YouTube a separate Web site that would run independently of Google and its own video site, Google Video.

Google and YouTube offered vague descriptions of how they might work together to improve features for users and opportunities for advertisers.

When asked whether YouTube would continue to ban "pre-roll" advertisements that viewers are forced to watch before viewing the video they have selected, Hurley said YouTube was "going to be exploring a lot of options."

That prompted some YouTubers to predict that the site will have a more corporate feel in the coming months. After MySpace.com, the social networking site made popular by teenagers, was sold to Rupert Murdoch's News Corp. last year, some members of that site complained that it was becoming overrun with ads.

A member indentified as "crashomatic" wrote: "i think we are going to have to watch commercials after every 3 video clips or something, but hey its great -- for the guys who started this whole thing."

Another member, with the screen name "redstripedthinker," warned: "do not let youtube get TOO commercialized like myspace. The audience knows when they're being sold to . . ."

In buying YouTube, Google gains a huge social networking community on the Web, something it has been eager to develop without much success. Google's equivalent of MySpace.com, Orkut, is hugely popular in Brazil but not in the United States. Google Video gets about one-fourth the Web traffic as YouTube.

Jennifer Simpson, an analyst with the Yankee Group research firm, said Google should maintain the YouTube community and let its unique culture flourish.

"The younger audience who traditionally have been attracted to social-networking sites will always be fickle and will switch their allegiances to whatever site fits their needs," Simpson said.

A few members made it clear that they would leave the site if there are too many changes. A member who uses the name "peterhk69" wrote: "I see only a few things in the coming months -- more ads, more fees and less fun. Half of us will look for a new place."

Yahoo Feels Breath On Neck (NYT)

By Saul Hansell

The New York Times, October 11, 2006

As Google whips out its fat wallet to buy the video site YouTube, it is making Yahoo look even more out of step with the fast-changing Internet advertising market.

Yahoo itself tried to buy YouTube just a few weeks ago and got as close as negotiating price and terms, according to an executive briefed on the discussions. But the talks broke down, and Google swooped in and closed the deal quickly, just as it has in several recent partnership negotiations. Indeed, many Internet executives are noting just how often Yahoo appears to be late and slow, both in its own business and in negotiations with other companies.

Yahoo would seem to have a strong hand. It is the world's most popular Web site, with more than 400 million monthly users and a major seller of advertising for its own and other sites. It has top Web properties in areas like e-mail messaging and music. And its management team, led by Terry S. Semel, a former Hollywood executive, is well regarded for its skill and financial rigor.

DOJ_NMG_0078936

But in recent months the company has suffered some embarrassing setbacks in its sales of both display and Web search advertising. Many advertising industry executives say Yahoo's lead in working with big marketers has eroded as other companies have built up popular Web sites, sales operations and advertising technology.

"Yahoo has lost the favor it enjoyed a year or two ago," said David Cohen, a senior vice president of Universal McCann, a media buying agency of the Interpublic Group. He said his clients were reducing the share of their budgets they allocate to Yahoo in favor of newer sites, like MySpace, and sites developed by big media companies like Viacom.

"There are more players in town, and the others are closing the gap relative to the things Yahoo is good at," Mr. Cohen said.

But the problems at Yahoo go beyond advertising. From video programming to social networking — areas of interest to users and advertisers alike — the company is losing its initiative. And each time a product fails in the market or is late, Yahoo loses some ability to do more deals and hire more talented employees. The shares are down 38 percent this year, sending some employees out the door in search of better shots at stock market wealth.

Google, in the meantime, is taking advantage of Yahoo's problems to cement crucial deals that could make its rival's recovery even more difficult. Before Google agreed to buy YouTube for $1.65 billion in stock, it paid $1 billion for 5 percent of AOL, locking in the right to sell text ads that appear next to its search results. And it agreed to pay $900 million over three and a half years to sell ads on MySpace.com, giving it a huge number of pages where it can place banner ads. (Yahoo flirted with AOL and bid actively for MySpace.)

With these and other deals, Google has neutralized Yahoo's big competitive advantage on Madison Avenue: its ability to sell the full range of advertising, from splashy video campaigns to text ads on search results.

Joanna Stevens, a spokeswoman for Yahoo, said that no Yahoo executive would comment for this article.

"We feel our business is very strong, even if we are not growing at the rates at which the financial community is expecting us to," Ms. Stevens said. "Of course growth will slow when you already reach one out of two people on the Internet." She said that Yahoo frequently discusses business arrangements with other Internet companies, but declined to discuss any potential negotiations with YouTube.

Yahoo has been stymied because its text advertising business has been largely frozen until it completes a new software system. The upgrade is more than a year late and the delay has sucked up the company's engineering resources and prevented it from developing new advertising products. Yahoo's system produces much less money from every page than Google, a handicap in bidding for advertising deals.

Moreover, Google has grown so much wealthier and has so much more stock market value, it can afford to make deals that would be much more risky for Yahoo, said Jordan Rohan, an analyst for RBC Capital Markets.

Google has $11 billion in cash and a market value of $131 billion, while Yahoo has $4 billion in cash and is worth $34 billion. "In poker terms, Google is the dominating chip stack," Mr. Rohan said.

Some analysts argue that Yahoo needs some bold moves to signal to investors, advertisers and customers its commitment to innovation. Its growth in users is slowing. The United States audience grew just 6.5 percent in September from a year earlier, to 106 million unique visitors, while Google's grew 25 percent.

Yahoo has made several overtures to buy Facebook, a social networking site popular among college students. This would help compensate for the failure of Yahoo's own social network — Yahoo 360 — to find a place in the market. It could also expand Yahoo's appeal to young people, an area in which it has slipped.

But Mr. Rohan said it would be a mistake to respond to the Google-YouTube deal with a big offer for Facebook. "Facebook is a nice small business," he said. "I would prefer they spend less than $1 billion for it."

The company's stumbles are a puzzle, as Mr. Semel is widely considered to have built a mature and disciplined management team. He led the company out of the collapse of the Internet ad market and built a credible Internet search unit after it became clear that Google was more a rival than a partner. But in this market, what was once admirable discipline may now look like timidity.

Yahoo may well be slipping because of the sheer scope of its ambitions. It competes in news with CNN, in sports with ESPN, in e-mail with Microsoft, in instant messaging with AOL, in social networking with MySpace, and of course in searching with Google. And it does so in dozens of countries.

DOJ_NMG_0078937

"It's hard to figure out what they want to be when they grow up, even though they are grown up now," said Tim Hanlon, a senior vice president of Denuo, the media futures consulting arm of the Publicis Groupe. "Are they a content company? Are they a services company? Or are they a portal to other things? You ask three people and you may get three different answers."

Current and former Yahoo employees say the company has been bogged down by bureaucracy and internal squabbling. For example, the media group, which handles video programming, and the search group, which has a system to find videos on the Web, both wanted to offer a service for users to upload their own video clips. The search group won, but the delay allowed YouTube, a start-up, to dominate the market.

"When you become Yahoo's size, you become a little complacent, a little fat and happy," said Youssef H. Squali, an analyst for Jefferies & Company.

Companies that try to do deals with Yahoo also say they find it to be slow, demanding and inconsistent in negotiations. The discussions with YouTube floundered, in part, over Yahoo's demands for assurances over how YouTube would handle copyrighted material, concerns that were not so important to Google, the executive briefed on the negotiations said.

"They can't close a deal," said a top executive of a large media company who said he was frustrated because negotiations over a partnership with Yahoo had bogged down. "They are smart guys, but they are having real problems," said the executive, who declined to be identified because his company has other dealings with Yahoo.

Yahoo's faltering image and plunging stock price may also be hurting its ability to recruit talented people. "A lot of entrepreneurs I talk to would rather work for a hypergrowth technology company than what they consider — and this is funny — a stodgy old Internet company," Mr. Squali said.

Yahoo's existing employees are grumbling that with the stock price so low, many of their options have become worthless. Some Yahoo veterans have bolted for trendier start-ups. For example, Mike Murphy, a longtime ad salesman, is now the chief revenue officer of Facebook, and Gideon Yu, Yahoo's treasurer, quit last month to become chief financial officer of YouTube.

"They woke up and realized they had an attrition problem," said one executive who quit for a start-up this year.

Yahoo has responded by giving substantial raises to favored executives it wants to keep, according to one current executive who spoke on the condition of anonymity because he did not want to jeopardize the raise he received.

Yahoo has also had trouble developing many new offerings that capitalize on the latest trends on the Web and offer innovative formats for advertisers. Many marketers, for example, have become intrigued by the possibilities of weaving their products into the fabric of social networking sites. Even more, they are sponsoring original Internet content, especially video programs.

Two years ago, Yahoo made an expansion in Hollywood in an attempt to produce new video-focused Web sites, but it later backed off from the plan amid internal bickering.

Perhaps the biggest area of strategic confusion for Yahoo is its advertising network, which sells ads on other sites. Its Yahoo Search Marketing division has been falling further and further behind Google in selling text ads on other search sites. Yahoo lost a major source of attractive search pages when MSN began selling its own ads this year. And the Yahoo Publisher Network, which is meant to sell ads on blogs, news sites and other content pages, has languished. Dow Jones, for example, withdrew The Wall Street Journal and other sites out of the Yahoo network this spring, hiring Seevast, a small New York firm, instead.

Moreover, Yahoo has made few moves to expand its ad network to sell other types of advertisements like banners and video commercials, even though it is a leader in selling such ads on its own site. With a plethora of blogs and Web publishers looking to earn money from their efforts, there is a booming business in selling ads for these sites. AOL has made a major play in this field, buying the leading banner network, Advertising.com, and Lightningcast, a video network.

Google has moved to expand its network from text ads to selling banners and video ads, and the YouTube purchase will no doubt accelerate its push into video. Moreover, Google wants to sell ads in print, radio and soon traditional television as well.

"Google is so much ahead," said Peter Hershberg, a managing partner of Reprise Media, a search advertising agency. "Google is going into new channels like video and Yahoo is still trying to fix their core channel."

MySpace Seeks A Wider Relationship With YouTube Victor, Google (WSJ)

By Julia Angwin

DOJ_NMG_0078938

The Wall Street Journal, October 11, 2006

News Corp.'s MySpace.com, rebuffed in its effort to bid for YouTube Inc., is seeking to expand its relationship with the company that snatched the video-sharing Web site away, Google Inc.

Google Chief Executive Eric Schmidt and Advertising Sales Vice President Tim Armstrong are expected to meet this week in Los Angeles with News Corp. executives, including Chairman Rupert Murdoch, to discuss new ways of working together. One possibility is to expand Google's recently signed ad deal with social-networking site MySpace to include video advertising on the Web.

"If we can figure out the ways to work with them or integrate with them, that could be really good for us," said Ross Levinsohn, head of News Corp.'s Fox Interactive Media division, which oversees MySpace. He declined to comment on specifics.

Plans for the meeting come just days after Google struck a $1.65 billion deal to buy YouTube, significantly boosting the search titan's presence in the fast-growing Web-video arena. But the deal poses a potential competitive threat to MySpace, which is a direct competitor with YouTube among Web sites that let users post their own content.

At the same time, though, the fates of the competitors are also intertwined. YouTube gets a substantial share of its audience from MySpace users who link to YouTube videos from their MySpace pages. Google also recently signed an ad agreement with MySpace.

Circumstances of the deal upset executives at News Corp. The media conglomerate had sniffed around YouTube several times in recent months, but never made a firm offer because the start-up's executives said it wasn't for sale, say people familiar with the matter.

On Friday, after the news of Google-YouTube negotiations broke, News Corp. sent a letter to YouTube asking for an opportunity to participate in the sale process, the people said. YouTube didn't respond.

In reaction, News Corp. executives over the weekend discussed cutting off the MySpace links to YouTube, according to a person close to the situation. YouTube says that less than 20% of video views on its site come from MySpace.

It isn't clear whether News Corp. is still contemplating those threats. But a lot is riding on the outcome of Google's discussion with News Corp. executives this week.

Google and MySpace's recently signed joint advertising deal requires Google to provide a minimum of $900 million in ad revenue to News Corp. over the next few years in return for providing search technology and advertising on MySpace and other News Corp. sites. But the pact doesn't include video advertising. Online video advertising is in such hot demand from advertisers that the ad rates are sometimes higher than on broadcast TV. And as the one of the most popular online video sites, YouTube is poised to be a big beneficiary of the video advertising boom.

Although YouTube doesn't currently run advertising within the videos on its site, it has said it intends to expand the advertising it carries. In a conference call announcing the deal with Google, YouTube co-founder Steve Chen said, "We're going to be exploring a lot of options" in video advertising with Google.

News Corp. has also been trying to figure out how to capitalize on the video-advertising boom for some time. It has beefed up the video components of MySpace and even flirted with the idea of building a competitor to YouTube.

Over the summer, News Corp. held discussions with General Electric Co.'s NBC Universal and Viacom Inc. about building their own video portal, according to people familiar with the situation. But the talks are now dormant, these people say. This month, News Corp. announced it would put video clips from its Fox TV shows up on a MySpace section.

Viacom is currently in talks with YouTube about licensing its video content to YouTube. Viacom already has a video-advertising relationship with Google.

ENVIRONMENT:

No E. Coli In Calif. Lettuce, Company Says (WP/AP)

Associated Press

The Washington Post, October 11, 2006

DOJ_NMG_0078939

Lettuce from California that was recalled over E. coli fears tested negative for a sometimes-deadly strain of the bacteria, company officials said yesterday.

Nunes Co. said multiple samples from among the more than 8,500 cartons of recalled green leaf lettuce tested negative for pathogenic E. coli O157:H7. That strain is the one responsible for the E. coli outbreak linked to spinach that killed at least three people and sickened 199 others.

The company ordered the recall after irrigation water tested positive for E. coli. Follow-up testing of water samples determined it did not contain the pathogenic strain of the bacteria.

"We are relieved that all results were negative, and we are confident our product is safe," company president Tom Nunes said in a statement.

The Food and Drug Administration is also testing the company's irrigation water. The results should be available late today or tomorrow.

Nunes is based in California's Salinas Valley, the agricultural region at the center of the contaminated-spinach outbreak.

By Monday, Nunes reported it had tracked down all but 250 cartons of the recalled lettuce.

As part of the investigation into the E. coli outbreak spread through spinach, investigators plan to catch wild boar this week and swab them to collect samples to test for the outbreak strain of E. coli, FDA spokeswoman Julie Zawisza said. Investigators have found "a lot of evidence of wild boar" on several of the farms being searched, Kevin Reilly, a top California food safety official, said yesterday.

Set Guidelines For E. Coli (LAT)

The Los Angeles Times, October 11, 2006

THE SALINAS VALLEY GROWER that recalled 8,500 cartons of lettuce this week did all the right things: The company tested its irrigation water, and when it found E. coli, it took its lettuce off the market even before the tests could show whether it was a dangerous strain. But the current E. coli outbreak, the 20th in a decade, indicates that not all farmers take all the steps they should.

Most farms are more careful than most people realize. They regularly test their soil and irrigation water for E. coli and follow other common safety practices. The companies that buy their produce insist on it, and they require audits to back it up. Growers and markets have a powerful built-in incentive not to poison customers.

But how often do farms perform the tests and follow other safety measures? Does every farm do them, and how much is enough? These questions are difficult to answer — but they shouldn't be. Different buyers sometimes require different practices; some farms fail to take all the necessary steps. Government-mandated, uniform protocols could go a long way toward avoiding health-related catastrophes.

As long as farming is done outdoors, there is no way to guarantee against E. coli getting on produce. Although the investigation into another recent case, involving spinach contamination, is not complete, agricultural safety experts suspect that it happened in the field, not at the packaging plant, and that it was not caused by the chance droppings of a bird or other wild animal. It appears to have come up through the roots, indicating that the soil or the irrigation water was compromised.

In addition to testing, common safety practices involve locating fields at a distance from livestock operations in order to avoid contamination from manure. If farms use manure as a fertilizer, it's supposed to be pathogen-free, and even then there's generally a waiting period between fertilizing and planting. But not all farms follow all these practices, or to the same extent. In the spinach contamination case, investigators are examining manure from a cattle pasture next to the field. The strain of E. coli found in the manure is the same as that implicated in the deaths of three people who ate the contaminated spinach.

Each time there is an E. coli breakout, the state and the U.S. Food and Drug Administration demand that the industry clean up its act. The industry asks for precise guidelines on what to do, and it gets no answers. Regulators can start by outlining mandatory, common-sense safety practices to protect both public health and farming's reputation.

Courts Mow Down Development Strategy (USAT)

By Tom Kenworthy, Usa Today

USA Today, October 11, 2006

DOJ_NMG_0078940

DENVER — The Bush administration's push for more commercial development on federal land in the West is colliding with the environmental legacy of former president Richard Nixon.

In a half-dozen cases since August, federal courts have slapped down the administration's plans to drill for oil and gas in Utah and Alaska, to allow road-building and logging in federal forests, to ease regulation of livestock grazing on public rangeland and to divert water from a Colorado national park.

The judges in each case said the administration failed to comply with a landmark environmental law overwhelmingly passed by Congress and signed by Nixon in 1970 called the National Environmental Policy Act (NEPA).

The law requires government agencies to study potential environmental consequences of federal projects and to allow citizens to comment on those actions. Agencies must prepare "environmental impact statements" that can run hundreds of pages, or issue less extensive "environmental assessments" on minor projects.

In its nearly 40-year history, the law has had a broad impact on how government agencies decide on everything from constructing highways to logging forests to building dams. The Supreme Court noted in a 1989 case: "Simply by focusing ... attention on the environmental consequences of a proposed project, NEPA ensures that important effects will not be overlooked."

In recent months, the law has been an effective tool for environmentalists seeking to block initiatives that would allow commercial activities on hundreds of millions of acres of public land.

"This administration has taken some very risky positions that disregard (NEPA's) legal requirements, and those risks are now coming home to roost," says Robert Dreher, of Defenders of Wildlife, who wrote a 2005 study of the law at the Georgetown Environmental Law & Policy Institute.

James Connaughton, chairman of the White House's Council of Environmental Quality, which oversees implementing the law, says thousands of environmental reviews are performed each year, and less than 1% are challenged in court. "It's extremely rare that cases are litigated, and even rarer that the government loses," he says. The administration won recent challenges to oil and gas drilling in Alaska and New Mexico.

Some government plans blocked by federal courts since August:

• Rules covering nearly 50 million acres of national forest that could have led to road-building, logging and other development. U.S. Magistrate Elizabeth Laporte in California reinstated a Clinton-era ban on nearly all commercial and development activities on land mostly in the West. That leaves so-called roadless areas open to recreational use like hunting, hiking and horseback riding, but not to drilling and logging that require roads.

• Oil and gas drilling near 400,000 acres of wildlife habitat in northern Alaska. U.S. District Judge James Singleton ruled that the Interior Department's plan to drill in the Teshekpuk Lake area of the National Petroleum Reserve had failed to consider the impact on wildlife, particularly caribou.

• A plan by the Bureau of Land Management to sell oil and gas leases in parts of Utah was stopped by U.S. District Judge Dale Kimball. He ruled the agency did not consider an analysis by the Clinton administration that the undeveloped area was pristine and could qualify as wilderness with federal protection if Congress agreed.

• Rules for grazing on federal land that would allow ranchers more time to correct environmental damage and give them title to improvements such as fences. U.S. District Judge B. Lynn Winmill said the Bureau of Land Management violated NEPA by limiting public comment and by ignoring evidence the rules could harm the rangeland.

• Commercial logging in California's Giant Sequoia National Monument. U.S. District Judge Charles Breyer said the Forest Service plan "trampled the applicable environmental laws," including NEPA.

The Justice Department could appeal these rulings.

Copper Plant Illegally Burned Hazardous Waste, E.P.A. Says (NYT)

By Ralph Blumenthal

The New York Times, October 11, 2006

HOUSTON, Oct. 10 — A bankrupt copper giant facing billions of dollars in pollution claims across the nation pretended for years to recycle metals while illegally burning hazardous waste in a notorious El Paso smelter, according to a newly released Environmental Protection Agency document.

DOJ_NMG_0078941

The agency, in a 1998 internal memorandum, said the company, Asarco, and its Corpus Christi subsidiary, Encycle, had a permit to extract metals from hazardous waste products but used that as a cover to burn the waste until the late 1990's, saving the high costs of proper disposal.

Among the more than 5,000 tons the company was accused of misrepresenting as containing metals for reclamation were more than 300 tons of nonmetallic residues from the former Army chemical warfare depot at the Rocky Mountain Arsenal outside Denver. (It is not clear what the arsenal's material contained.)

"This activity, plain and simple, was illegal treatment and disposal of hazardous waste," the environmental agency said in the memorandum, long held confidential but recently obtained by two El Paso environmental groups opposed to the smelter. "Encycle's own business records provide compelling evidence of sham recycling."

There was no response to messages left for an Asarco spokeswoman at corporate offices in Tucson and for the El Paso plant manager. But a company history states, "Asarco is committed to responsible management of our natural resources."

Asarco was founded as the American Smelting and Refining Company in 1899 and was bought by Mexican interests in 1999. It has long faced complaints of contaminating broad swaths of downtown El Paso and borderland areas of Mexico with lead and other dangerous metals, and it has been the target of federal, state and local complaints involving at least 94 sites in 21 states.

But although the environmental agency reached a landmark national $20 million cleanup and penalty settlement with Asarco in 1999, the details of the violations had never been disclosed. The El Paso plant was shut down in 1999, but the company is now seeking permission to reopen it.

The long-confidential records were obtained from the Texas Commission on Environmental Quality through public information requests by the two citizens groups, the Get the Lead Out Coalition and the Sunland Park Grassroots Environmental Group, which provided copies to The New York Times.

"They were supposed to recycle reusable residues," said Heather McMurray, a teacher who requested the records. "They just burned them."

Ms. McMurray said the disclosure came as news to her and other activists who had been opposing Asarco for years with claims that pollutants released by the plant caused untold sickness.

"How could this not have been made public before?" said State Senator Eliot Shapleigh, Democrat of El Paso, who has long campaigned against the company and tracks developments on his Web site. "I was not aware of it."

Mr. Shapleigh added: "In the American West, the modern trail of tears is the lead and arsenic left behind from Asarco."

Michael D. Goodstein, who as a Justice Department environmental lawyer helped negotiate the 1999 settlement with Asarco, said the E.P.A. memorandum detailing Asarco's violations was for internal use and was not meant to become public.

"This was the E.P.A. position, and it was addressed in the enforcement actions and the settlement approved by the judge," Mr. Goodstein, who is out of the government, said in an interview. Although the 122-page settlement does not spell out misdeeds, it commits Asarco to lengthy remedies, including the proper recycling of hazardous waste.

Terry Clawson, a spokesman for the Texas Commission on Environmental Quality, also said, "You can't say this was unknown."

Mr. Clawson pointed to an E.P.A. news release in 1999 that announced the settlement of federal and state claims against Asarco. But the release, while citing the company for "failing to properly manage hazardous waste and otherwise engaging in unlawful recycling practices" and accepting "shipments of unmanifested hazardous waste," does not say specifically that the company burned the waste under a subterfuge.

Although the company has filed for Chapter 11 bankruptcy protection, it is also awaiting action from the Texas commission on an application to renew smelting in El Paso, and it still faces a mountain of litigation and enforcement actions. As recently as August, the Justice Department filed a claim under the bankruptcy proceedings to assure Asarco's compliance with terms of the agreed-upon cleanup at Encycle.

At the same time, Mr. Shapleigh said a tabulation showed that legal claims filed against Asarco amounted to more than $21 billion.

DOJ_NMG_0078942

Cleaner Diesel Fuel Is Set To Pump (WSJ)

By Mike Spector

The Wall Street Journal, October 11, 2006

Ultralow-Sulfur Formula Could Cut Reliance on Oil; Economy's 'Invisible Force'

Ultralow-sulfur diesel fuel will start hitting U.S. fuel pumps this month, opening the door for auto makers to expand the use of European diesel technology in U.S. cars and light trucks.

The Bush administration and the Natural Resources Defense Council, an environmental group, yesterday hailed the expected arrival Sunday of ultralow-sulfur diesel fuels and the potential for modern diesel engines to use such fuels to help the U.S. reduce its oil consumption. The new diesel contains 97% less sulfur than the old version, officials said, emitting only 15 parts per million of sulfur, compared with 500 parts per million.

Auto makers -- particularly those that have made substantial investments in diesel-engine technology for Europe -- are gearing up to try to take advantage of the arrival of ultralow-sulfur diesel fuel in the U.S., the world's largest single auto market. The exhaust-scrubbing technology that auto makers have developed to attack the soot and other pollutants that tarnished diesel's reputation in the U.S. needs almost sulfur-free fuel to work properly.

Strict State Rules

DaimlerChrysler AG's Mercedes-Benz brand will start selling its diesel-powered E320 Bluetec sedan in 45 states starting next week. The current model bests the stringent federal emissions standard but falls short of the standard in five states. Mercedes says it will offer further Bluetec models that will meet standards in all 50 states as early as 2008.

"Fuel that's cleaner initially, that's the key to getting more diesels on the road and also meeting emissions requirements," said Mercedes spokesman Rob Moran.

Volkswagen AG, currently the top seller of diesel-engine passenger cars in the U.S., plans to offer new diesel models in 2008 that will meet emissions standards in all states. Other auto makers, including Japan's Honda Motor Co. and U.S. market leader General Motors Corp., have recently announced plans to offer clean-running light-vehicle diesels for the U.S. market over the next two to three years.

Under the rollout, 80% of diesel pumped at U.S. retail stations must be the new ultralow-sulfur type. Officials said they expect as much as 90% of new diesel deliveries to be of the new variety. Ultralow-sulfur diesel will be the only diesel fuel allowed beginning in 2010.

"Diesel is the invisible force that moves the American economy, but until now it has also been a big polluter," said Richard Kassel, head of the NRDC's clean fuels and vehicles project. "Combining the new fuel with cleaner and more energy-efficient engines will mean healthier air and reduce our dependence on oil."

Environmental Protection Agency officials also predicted significant long-term health benefits, including $150 billion in annual health-care and welfare-related savings and 20,000 fewer premature deaths each year.

Until now, diesel has primarily powered trucks and buses in the U.S. Diesel trucks move more than 18 million tons of the nation's freight a day, according to the NRDC. About 14 million Americans ride half a million diesel buses to work and school, the group says.

Pollution vs. Mileage

Diesel has historically been viewed as an environmental problem because burning it produces more pollutants than gasoline. But diesel engines get better mileage than gasoline engines.

Now, Americans could see more diesel engines in passenger cars. Researchers at J.D. Power & Associates predict diesel sales will nearly triple in the next 10 years because of the engine's fuel efficiency -- typically 20% to 40% more miles per gallon than gasoline engines.

In Europe, diesel cars account for nearly half of the car market. In the U.S., diesel-powered passenger cars and light trucks are a niche market, despite recent efforts by VW and DaimlerChrysler to reignite interest in their European diesel engines.

Cost is an issue. In North America, diesel engines could add $2,000 to passenger-car prices, and possibly more, said Charles Freese, GM's executive director of diesel engineering. In addition, after-treatment technology to address nitrous oxide and particulate emissions can run thousands of dollars, he said.

DOJ_NMG_0078943

Large markets such as California and New York have tough emissions standards that many auto makers cannot yet meet. That will remain a major hurdle for production of new diesel-engine vehicles. Toyota, for example, doesn't plan any diesel rollouts in the near future because of those strict standards and will instead stick to its well-selling hybrid vehicles, said Wade Hoyt, a spokesman for Toyota Motor Corp. Toyota does sell diesel-powered passenger cars in Europe.

Low-Sulfur Diesel Fuel Is Reaching Market (NYT)

By Felicity Barringer

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — The biggest revolution in highway fuels since lead was removed from gasoline will be nearly complete on Sunday as a vast majority of trucks and buses will be able to fill their tanks with diesel fuel with just 3 percent of the sulfur content in the older fuel.

Like lead, sulfur generates air pollution that leads to severe health consequences. Like lead, it also gums up the works of fine-tuned pollution control devices, making it exceedingly difficult to produce cleaner-burning engines.

So the new fuel will pave the way for new generations of diesel engines that experts say will eventually cut lethal particulate pollution from diesel tailpipes an estimated 95 percent.

On Tuesday, the Bush administration embraced this signal accomplishment as its own, ignoring the origins of the underlying regulation in the 1990's and the fact that it became effective in December 2000, before President Bush took office.

In a news conference in Columbus, Ind., the headquarters of Cummins Engine, a major manufacturer of diesel engines, the environmental protection administrator, Stephen L. Johnson, said, "Under President Bush's leadership, the pumps are primed to deliver clean diesel and a cleaner future for America."

The new fuel contains 15 parts per million of sulfur, down from the standard of 500 parts per million, thanks to changes in the refining process. As of Sunday, at least 80 percent of the diesel available for trucks and buses has to meet the new standard.

Officials of the environmental agency said Tuesday that the changeover was occurring so swiftly that 90 percent of the fuel would be compatible.

Old diesel engines burning the cleaner fuel will reduce dangerous particulate emissions by 10 percent, experts say. New engines with improved controls, which have to be available by Jan. 1, will cut this particulate pollution by more than 95 percent. The rule mandates more improved engines in 2010. It is unclear how soon existing trucks and buses, which often are in use for more than 10 years, will be turned in for newer models.

The new fuel is expected to cost 3 cents to 5 cents more per gallon. Like many regulations that took effect in the twilight of the Clinton administration, the diesel rule, covering fuel and the seven million trucks and buses on the roads, was temporarily stayed by the Bush administration.

Then the Environmental Protection Agency allowed it to proceed and in 2004 supplemented it with a similar rule requiring tight controls on engines in off-road equipment like cranes, tractors and construction equipment.

Leading environmental groups linked arms with industry in a chorus of praise for the new fuel and engines to follow. They emphasized the health benefits and the novel wording of the rule. Unlike earlier regulations, the new rule links the development of the new fuel to developing cleaner-burning engines. Richard Kassel, a senior lawyer and air-pollution specialist with the Natural Resources Defense Counsel, said that when planning for the rule began in 1995, gasoline-powered cars outnumbered diesel-powered trucks and buses by 190 million to 6.7 million.

The diesel vehicles emitted 43 percent of the smog- and particulate-forming nitrogen oxides and more than two-thirds of the soot. Even though the diesel-produced particulates were 3 percent of the total particulate matter in the air, most of which was from industrial sources, Mr. Kassel added, "tailpipe particulates are coming out right where we breathe."

Mr. Johnson said diesel engines had been the workhorses of the economy and the vehicle fleet.

The relatively high sulfur levels in diesel have been a significant obstacle to producing diesel-powered cars that met federal environmental standards.

Several engine and automobile manufacturers have signaled that more high-mileage diesel-fueled cars, a fixture on European highways, may become available.

DOJ_NMG_0078944

Allen Schaeffer, executive director of the Diesel Technology Forum, an industry group, said in a conference call Tuesday that the new standard was also significant because it "opens up the door of possibility" to a new generation of light-duty diesel cars and trucks in the United States in the near future.

The environmental agency estimates that when the current truck and bus fleets have been replaced and all are using the heavy-diesel engines that will become standard-issue next year, the new rule will prevent 8,300 premature deaths annually.

In the Clinton and Bush administrations, the development and roll-out of the diesel rule for trucks and buses has been notable for the cooperation among industry, the government and environmental groups, officials of the three groups have said.

Margo T. Oge, director of the office of mobile sources in the agency's air division, said Tuesday that the speed with which the new fuel became available had exceeded the agency's expectations.

Carol M. Browner, the administrator who signed the original rule, bristled on Tuesday at the Bush administration's proprietary attitude.

"The best they can do in environmental policy," Ms. Browner asked, "is take credit for someone else's work?"

Biologist Bushwhacks His Way To Court (LAT)

By Bob Pool, Times Staff Writer

The Los Angeles Times, October 11, 2006

He has spent decades working to protect Los Angeles' endangered Ballona Wetlands.

But did environmentalist Roy van de Hoek go too far when he took his pruning shears to a nonnative tree and plants in the Westside nature preserve?

Los Angeles prosecutors say yes. They have filed six vandalism counts against Van de Hoek, alleging that he entered the wetlands without permission and destroyed city parks property when he cut down the invasive plants. If convicted, he could face six years in prison and fines of up to $15,000.

Conservationists who support the veteran ecologist disagree. They assert that the prosecution is simply payback from those who for years have felt the sting of Van de Hoek's activism. The case, they suggest, is designed to scare away others from actively harvesting invasive plants from local nature preserves.

Van de Hoek has not denied cutting the plants. Characterizing the eradication work as a continuation of his years of plant removal in the wetlands, he said he intends to plead not guilty to the charges Thursday in Los Angeles Superior Court. But for now, he has been banned from leading tours and doing rehabilitation work at the wetlands, where Ballona Creek meets the ocean south of Marina del Rey.

"My entire life has been dedicated to conservation, preservation and restoration of endangered species and wild lands," said Van de Hoek, 50, of Playa del Rey.

The proliferation of such vegetation in ecologically sensitive areas has become a major issue with conservationists, who worry that it squeezes out native plants. Though the trend in landscaping has been toward planting native foliage, even natural areas such as the Ballona Wetlands still have many nonnative plants that have taken root over the years, from seeds carried by birds and the wind.

The Friends of Ballona Wetlands, which has assumed a major role in the restoration of the onetime marshy area, has condemned what it calls "its continuing deterioration because of nonnative plant invasions."

The dispute illustrates the deep passions that continue to surround the 600-acre preserve despite what seemed three years ago to be a peaceful conclusion to an emotional 20-year campaign to save the wetlands.

The state agreed in 2003 to spend $140 million to purchase acreage in the wetlands from the developers of Playa Vista. As part of the deal, builders of the residential project scaled back their plans and donated hundreds of additional acres as open space.

But relations have remained strained among some of the nearly two dozen groups that have environmentalist-sounding "Ballona Wetlands" names. Some of the organizations favored a total ban on development to preserve all open space as part of the wetlands. Others preferred fostering a working relationship with developers that would focus preservation on the wettest parts of the land.

DOJ_NMG_0078945

That has led to some groups being branded "radical extremists" and others "sellouts."

The misdemeanor criminal complaints were issued by Los Angeles City Atty. Rocky Delgadillo. They allege that Van de Hoek took shears to a pair of city-owned myoporum shrubs without authorization in August 2005 and to a city-owned ficus tree in March.

The charges are not the first for Van de Hoek, a trained biologist who has worked for the federal and local governments. Nine years ago he was convicted of misdemeanor vandalism for cutting down nonnative eucalyptus trees at the federally owned Carrizo Plain National Monument in Central California. He was sentenced to community service: removing nonnative plants from state parkland near Morro Bay.

As his arraignment approaches, the current case remains murkier than the brackish freshwater-saltwater mix that all hope will someday rejuvenate the Ballona Wetlands.

Van de Hoek's supporters insist that the city's parks department has no jurisdiction over the land where the myoporums were allegedly cut because it is owned by the state's Department of Fish and Game.

That agency has issued permits to two environmental groups to weed out invasive vegetation from wetland areas — something that would have covered Van de Hoek if he did remove any shrubs.

Some suggest that the prosecution is political in nature, a reward to Playa Vista developers who have contributed to Delgadillo and whose project has been a target of Van de Hoek's activism over the years.

Playa Vista President Steve Soboroff scoffs at that notion.

"I donated to Rocky Delgadillo's campaign for attorney general," he said. "But I also donated to Jerry Brown. Playa Vista supported them both."

Soboroff said no one from the 5,846-unit Playa Vista project pushed for Van de Hoek's prosecution.

Nick Velasquez, a spokesman for Delgadillo, also denied that the plant-cutting case was rooted in politics.

Celebrity lawyer Thomas A. Mesereau Jr., who said he is representing Van de Hoek at a discounted fee, strongly disagrees. He complained that Delgadillo's office issued a news release touting the charges, followed by a city-produced "news report" on the city-run cable TV channel.

"It has to be political," Mesereau said. "Why in the world in a city as crime-ridden as Los Angeles, where the city attorney repeatedly talks of stopping gang violence, would something like this occur?"

The television segment riled Van de Hoek's supporters. It depicted a Ballona Wetlands expert condemning what was described as "the ugly shadow of vandalism." But it failed to identify the person as a former Playa Vista consultant, said Marcia Hanscom, a fellow activist who heads the Wetlands Action Network and is Van de Hoek's fiancee.

Others complain that Delgadillo's press statement inaccurately listed the state Department of Fish and Game as an agency that helped conduct a "thorough investigation" that led to Van de Hoek's prosecution.

"To my knowledge, there has been no communication between the city attorney and Fish and Game," said Brad Henderson, who is in charge of the Ballona Wetlands for the agency.

Henderson said officials don't condone plant eradication by rogue do-gooders. However, he did describe Van de Hoek as a "knowledgeable naturalist."

Invasive weeds are considered "one of the top threats to native biodiversity" and something he is seeking additional state money to combat, Henderson said.

Thin, intense and earnest-looking, Van de Hoek is a familiar presence in wetlands and coastal areas.

On sunny days he's often clad in shorts and a floppy straw hat as he makes his way across grasslands and sandy hillocks.

Those who support the city's prosecution say witnesses from the Department of Sanitation had no difficulty recognizing Van de Hoek cutting the shrubs during daylight hours. A nearby resident reportedly saw him cut the ficus, on city parkland at the edge of the wetlands, in predawn hours.

As for Van de Hoek, he said fast-growing nonnatives kill native plants by crowding them out. But he predicted that his own brush with the law won't smother environmentalists' weed-out-the-invaders campaign.

"It may encourage other people to stand up," he said.

Firm Must Pay Asbestos Costs (LAT)

By Sam Howe Verhovek, Times Staff Writer

The Los Angeles Times, October 11, 2006

The high court upholds the EPA's claim that W.R. Grace must clean up a Montana mine site.

SEATTLE — The Supreme Court on Tuesday let stand lower court rulings that require W.R. Grace & Co. to pay a $54.5-million federal bill for asbestos cleanup in a Montana mining town described by federal regulators as one of the nation's most contaminated Superfund sites.

The court rejected Grace's appeal of a decision in favor of the Environmental Protection Agency, which sued Grace five years ago to recover the cleanup costs at a vermiculite mine in the town of Libby.

The government is also pursuing a criminal case involving several former executives or managers of the mining company for allegedly concealing health risks at the mine.

That trial will not begin until next year at the earliest.

The asbestos-laden vermiculite, laced into the mountains around Libby, was used as insulation in hundreds of thousands of homes and office buildings.

The mine, which opened in 1939 and was purchased by Grace in 1963, once produced about 80% of the world's supply of the mineral.

Grace operated the mine until 1992, unleashing what the U.S. attorney for Montana, William W. Mercer, described as a "human and environmental tragedy" in the town.

Nearly two-thirds of employees with more than 10 years of service tested positive for lung ailments, according to accompany memorandum written in 1976 by one of the indicted men.

The cleanup of the town continues, and some residents said the matter would wind up in court again because the ultimate cost of remediation would be much higher than the $54.5 million at issue in the case decided Tuesday.

"It's a small step, really, but it's another step forward," Gayla Benefield, a former bartender and a leader of Grace critics in Libby, said of the court's action. She and her husband have been diagnosed with asbestosis, and her parents died from it.

In its appeals, the company argued that the EPA's efforts in Libby amounted to a long-term rehabilitation of the area, rather than an emergency cleanup.

Under the law, toxic polluters can be forced to repay the EPA the full cost of cleaning up hazardous substances that pose an immediate risk to the public but face more limited charges for such long-term "remediation" of the area.

Grace argued that much of the agency's work was indeed remedial, but the federal courts disagreed and sided with the EPA, which contented that the public health crisis required ongoing action.

"The situation confronting the EPA in Libby is truly extraordinary," the U.S. 9th Circuit Court of Appeals said in December.

About 12,000 residents of Libby and nearby communities "face ongoing, pervasive exposure to asbestos particles being released through documented exposure pathways. We cannot escape the fact that people are sick and dying as a result of this continuing exposure."

For that reason the appeals court, based in San Francisco, upheld a judge's order requiring Grace to repay the EPA's cost for the emergency cleanup.

The EPA "is committed to making polluters pay, and today's decision allows us to continue holding W.R. Grace responsible for cleanup of the contamination in Libby," said Jessica Emond, a spokeswoman for the agency.

During its cleanup over the last several years, the EPA has used vacuum trucks and other equipment to remove vermiculate-laced soil.

Grace, which filed for bankruptcy protection in 2001 under the weight of thousands of asbestos-related claims across the nation, said it has spent millionsof dollars in Libby to help residents address health issues.

An EPA toxicologist once said people in the Libby area had experienced "the most severe residential exposure to a hazardous material this country has ever seen."

The criminal case, tied up in part over legal arguments about admissible evidence, centers on the question of whether company officials knowingly failed to warn workers of the dangers of prolonged exposure to vermiculite.

DOJ_NMG_0078947

The 2005 indictments said the officials were criminally negligent, a contention Grace denied. "Though court rules prohibit us from commenting on the merits of the government's charges," the company said in a statement at the time, "we look forward to setting the record straight in a court of law."

Times staff writer David Savage contributed to this report.

W.R. Grace Must Pay EPA Cleanup Bill (BSUN)

By Allison Connolly, Sun Reporter

The Baltimore Sun, October 11, 2006

Having exhausted its appeals, W.R. Grace & Co. must pay $54.5 million to clean up land and buildings around its former Montana mine that has been linked to hundreds of illnesses and deaths from asbestos-related diseases.

The Supreme Court declined yesterday to consider Grace's appeal of lower-court decisions that sided with the Environmental Protection Agency. The EPA sued Grace in 2001 to recover cleanup costs related to the mine in Libby, Mont., which Grace and its predecessors operated between the 1920s and 1990.

The EPA's costs include cleaning or demolishing contaminated buildings, removing contaminated soil, and providing health screening for Libby residents and former mine workers.

Grace will pay the government with reserve funds the company has set aside, said Greg Euston, a spokesman for the Columbia company. The payment should have no bearing on the company's bankruptcy status or its reorganization plan, he said.

The specialty chemicals company filed for Chapter 11 bankruptcy protection in 2001 in response to a rising number of asbestos-related claims.

As of June 30, Grace estimated its environmental liabilities associated with the Libby mine - including the $54.5 million owed to the EPA - at $255.4 million, according to a filing with the Securities and Exchange Commission.

That price tag will likely grow, the company said, because it does not include the cost of cleaning up the mine itself.

The EPA began investigating reports of health problems among Libby residents and former mine workers in 1999. The government estimates 1,200 of 8,000 local residents have died or become sick from exposure to asbestos-laden dust. The vermiculite mined there also was used in insulation in residents' homes and public buildings.

Criminal charges Grace and seven current and former executives face criminal charges of covering up the extent of the contamination. Their federal trial was supposed to start last month but was delayed until late next year at the earliest, after prosecutors appealed several pretrial rulings.

Grace doesn't dispute it has a financial obligation to clean up the contamination. However, the company challenged the EPA's method of calculating the cost. Grace argued that those costs are capped at $2 million unless an analysis is conducted before the cleanup starts to ensure it is done cost effectively.

The 9th U.S. Circuit Court of Appeals sided with the EPA, and wrote in its Dec. 1, 2005 decision that an "immediate, aggressive response" was necessary and exempt from any cap.

'Extraordinary' "The situation confronting the EPA in Libby is truly extraordinary," wrote Judge M. Margaret McKeown. "We cannot escape the fact that people are sick and dying as a result of this continuing exposure."

In August, Solicitor General Paul D. Clement issued a statement endorsing the appeals court's decision and urging the Supreme Court not to hear the case. The EPA referred calls yesterday to the Justice Department, which did not respond to a request for comment.

Grace stock closed up 5 cents yesterday at $12.70.

High Court Rejects Cleanup Costs Case (AP)

By Associated Press

AP, October 11, 2006

WASHINGTON – W.R. Grace & Co. lost its bid to the Supreme Court Tuesday to get out from under a $54 million bill to clean up asbestos in the Montana mining town of Libby.

DOJ_NMG_0078948

Justices rejected without comment Grace's appeal of rulings that said the company was responsible for the entire cost of removing asbestos-contaminated soil in Libby.

The case pits Grace, which operated a vermiculite mine in Libby for 27 years, against the Environmental Protection Agency, which oversees the Superfund program for the nation's worst hazardous waste sites.

Grace argued in court papers that the EPA had no authority to hand the company the entire cleanup bill, as well as responsibility for future costs. The 9th Circuit U.S. Court of Appeals and a federal district judge sided with EPA, which sued Grace in 2001 to recover cleanup costs.

Grace said others appeals courts have ruled that companies can't be forced to pay the entire cost of cleaning a polluted site without being allowed to challenge whether the cleanup was necessary.

Abortion case reversal

The Supreme Court turned aside the case of Sandra Cano, one of the women behind the legalization of abortion, who had sought to reverse the victory she won 33 years ago.

Cano says she never wanted an abortion and that her difficult early life resulted in her becoming the anonymous plaintiff in Doe v. Bolton, the lesser-known case which the justices ruled on the same day in 1973 as the landmark Roe v. Wade.

Cano said an aggressive attorney pushed her into the abortion case.

Her current lawyers' legal brief says that despite advances in medicine, science and technology, the justices have "frozen abortion law based on obsolete 1973 assumptions and prevented the normal regulation of the practice of medicine."

The 11th U.S. Circuit Court of Appeals ruled in January that neither it nor a U.S. District Court had the authority to reverse the Supreme Court's decisions in Doe v. Bolton or Roe v. Wade.

Do-not-call challenge

A political polling firm lost a Supreme Court challenge to a North Dakota law that bars telemarketers from making prerecorded interstate calls to the state's residents.

The North Dakota "do-not-call" law says callers cannot use robo-call machines unless a live operator obtains the subscriber's consent before a prerecorded message is delivered.

The Virginia-based political polling firm, FreeEats.com, argued that the North Dakota law is preempted by the federal Telephone Consumer Protection Act, which allows prerecorded non-commercial calls. Justices declined to review a state Supreme Court ruling upholding the law.

Same-sex marriage fight

The Supreme Court refused to intervene in a legal fight over same-sex marriage, declining an appeal from a gay California couple who were denied a license to wed.

The justices declined without comment to take the case of Arthur Smelt and Christopher Hammer of Mission Viejo, Calif. The men had sought a marriage license in southern California's Orange County in 2004 and, after they were turned down, filed a federal lawsuit that challenged federal and state laws against same-sex marriage.

A U.S. District judge said the federal Defense of Marriage Act was constitutional but declined to rule on the state ban because a separate legal challenge is making its way through California state courts.

Illegal immigration

Judges and prosecutors make mistakes, a Justice Department lawyer told the Supreme Court, but sometimes those errors are so minor that they don't warrant reversing a conviction in a criminal case.

A jury convicted Juan Resendiz-Ponce of attempting to enter the United States illegally from Mexico. But the 9th Circuit U.S. Court of Appeals overturned Resendiz-Ponce's conviction because his indictment by a grand jury did not set out any specific acts showing how he tried to enter the United States.

The omission was so serious that it required automatic reversal of the conviction, the appellate court said.

Deputy Solicitor General Michael Dreeben told justices Tuesday, however, that Resendiz-Ponce received a fair trial at which the government proved that he had displayed two false pieces of identification in an effort to enter the country. Resendiz-Ponce presented his cousin's green card and driver's license when he approached the border crossing at San Luis, Ariz., on June 1, 2003.

DOJ_NMG_0078949

Dreeben conceded that prosecutors should have included more information in the indictment and, when they didn't, the trial judge should have dismissed the charge before the trial began. Even so, he said, the conviction should stand.

Congress Acts To Clean Up The Ocean (CSM)

By Mark Clayton

The Christian Science Monitor, October 11, 2006

A biologically rich coral island chain in the Pacific Ocean northwest of Hawaii, which President Bush designated as a marine national monument, is under assault from floating garbage ranging from plastic bottlecaps to baby diapers.

Hailed by environmentalists as one of the president's most enduring contributions to the environment, the Montana-sized monument includes uninhabited islands home to some 7,000 marine species, at least a quarter of which are found nowhere else on earth.

But the new national monument also resides on the edge what marine scientists call the great "eastern garbage patch": a section of slowly rotating Pacific Ocean currents - or gyre - double the size of Texas that acts as a giant garbage collector.

Sitting between Hawaii and northern California, the patch's sluggish currents wash onto the Northwestern Hawaiian Islands Marine National Monument. That 1,200-mile-long island chain north of Kauai acts as the teeth of a giant comb, straining onto its otherwise pristine beaches and coral reefs floating trash, such as syringes, bags, six-pack rings, and tons of fishing nets and other gear.

Concern about the problem has risen to such a level that Congress has acted on it. On Sept. 27 the House passed a bill that would give a lift to struggling ad-hoc efforts to clear debris from the Northwestern Hawaiian Islands. Their move follows the Senate's approval of the legislation last year. Observers are optimistic that the bill will be finalized, and Mr. Bush will sign it into law after the November election.

It would not be a moment too soon, experts say. About 3 million tons of the trash floating in the garbage patch is plastic, estimates Charles Moore, founder of the Algalita Marine Research Foundation in Long Beach, Ca., who has traversed the gyre on research expeditions.

Samples he collected in a recent study showed that there were more tiny bits of plastic by weight than there were plankton per cubic meter of sea water.

"It's a toilet that never flushes, but just keeps accumulating," he says of the patch. "If you're an organism in this area you have six times as much chance of bumping into something plastic as you do something natural."

Globally, millions of tons of trash enter the ocean each year. Between 60 and 80 percent of it is land-based, washing into streams and rivers and finally the ocean from landfills, storm water discharges, litter, and sewage overflows.

The rest is from ocean-based operations, including fishing gear, junk from oil and offshore mineral exploration, illegal offshore dumping, and shipping containers washed overboard.

A container of thousands of plastic yellow toy ducks bound from China to the US was lost in the Pacific Ocean in 1992, but made news in 2003 when the ducks began washing up in Europe. Examples of trash slopping onto US beaches have included Nike running shoes, Lego building blocks, umbrella handles, and hockey gloves, experts say.

Old "ghost" fishing nets adrift in the sea and smaller plastic objects are special hazards for marine birds and mammals because birds tend to gobble colored plastic until they die. These hazards can have lasting effects on the monument since many species call the region home.

"Marine debris has a tremendous impact on the monument because of what's there in terms of wildlife," says Seba Sheavly, coordinator of the National Marine Debris Monitoring Program, a program funded by the Environmental Protection Agency. "We have a critical situation for Hawaiian monk seals that are horribly depressed in number. In the very place where the young are learning to fish and play, it's where these old nets get caught."

Animals are not all that get snared. In August 2005, a Russian minisubmarine became snagged in an old fishing net 625 feet below the Pacific Ocean surface before being rescued. Cargo ships with propellers bound up in miles of old net pull into Hawaii for repairs, says Christine Woolaway, the Kalaeloa, Hawaii-based coordinator for the Northwestern Hawaiian Islands cleanup.

DOJ_NMG_0078950

But it was the heart-wrenching pictures of animals snarled in plastic packaging and old fishing lines that first grabbed public attention in the 1970s.

As of this past summer at least 130 countries including the US had ratified international agreements. Hundreds of thousands volunteer for regular worldwide beach cleanups sponsored by the Ocean Conservancy, an environmental group that tracks marine debris.

Yet political action, public attention, and cleanup funding have waned in the past decade, overshadowed by issues such as climate change and declining global fisheries. But hurricane Katrina, which pushed tons of debris into the Gulf of Mexico, and the new national monument, have helped give the issue some attention.

A debris-marine bill sponsored by Sens. Daniel Inouye (D) of Hawaii and Ted Stevens (R) of Alaska, was approved by the Senate last year.

Then, last month, the House unanimously approved the legislation, which sends $15 million and a mandate to the National Oceanic and Atmospheric Administration, US Coast Guard, and other agencies to rev up their garbage compactors.

It also provides modest grant funds for research, sets up a trash-tracking database, and mandates that federal agencies educate the public.

"We need some help, that's for sure, because there's more debris out there on those islands than any one agency can handle," says Ms. Woolaway.

Since 1995, at least 680 tons have been removed in the cleanup along the islands - much of it in old nets. With little landfill space in Hawaii, an automotive salvage company shreds the nets with the residue burned to make electricity in an electric company boiler.

But even after a thorough cleanup, the next year tons more debris wash ashore from the eastern garbage patch.

"Every single piece of trash on the beach or in the water has a person's face behind it - it's that simple," Ms. Sheavly says. "The cigarette lighters, shampoo bottles - the animals on the island didn't do that. It comes from improper waste management practices. This is a fixable problem, and the answer is simple: We've got to have more awareness and give people an opportunity to change their behavior."

FBI/DEA/ATF/USMS:

Police Officer Among 6 Charged In Drug Sting (SLPD)

By Heather Ratcliffe

St. Louis Post-Dispatch, October 11, 2006

Bobby Wood figured he could make more money if he stole dope from his supplier rather than pay for it, federal officials said Friday, so he enlisted a corrupt cop and a towing company owner to intercept couriers carrying cocaine.

The FBI spent more than a year watching them, officials revealed Friday in announcing charges against six men that accuse them of trafficking in more than $2.4 million worth of cocaine.

U.S. Attorney Catherine Hanaway said the alleged leader, Wood, 37, arranged for out-of-state couriers to drive through Hillsdale, where police Sgt. Christopher Cornell would stop the vehicles and arrest the drivers.

Bruce Gales, 36, owner of Galez Towing and Recovery in Wellston, took the couriers' cars away and then stole the drugs from hidden compartments, the indictments say. Gales allegedly received at least $35,000 for his role.

Wood paid Cornell $200 to $1,000 each time the officer detained a drug courier, according to the indictments.

Wood arranged to steal the drugs so he would not have to pay the couriers, Hanaway said.

"It saddens me a great deal any time we have to charge a police officer with abusing his authority," Hanaway said at a news conference. "It's sad when we find a police officer cooperating with drug dealers."

Wood, Cornell and Gales were named in the indictments, along with their alleged distributors - Mark Bonds, 43, and Mario Lucas, 35, both of north St. Louis County, and Christopher L. Jones of O'Fallon, Mo. Each is charged with one felony count of conspiracy to distribute cocaine.

DOJ_NMG_0078951

In addition, Wood, of the 1300 block of Woodruff Avenue in Pagedale, was indicted on a charge of conspiracy to commit money laundering. Gales also faces charges of attempting to possess cocaine with intent to distribute, using a communication device to facilitate a felony and conspiracy to commit money laundering. Cornell was charged with attempting to possess cocaine with intent to distribute and use of a communication device to facilitate a felony.

Gales, of the 200 block of Houshang Lane in St. Louis County, is also under investigation by the Missouri attorney general's office for unrelated accusations of overcharging customers.

Federal prosecutors are seeking forfeiture orders against several of the defendants to recover cash and expensive vehicles allegedly purchased with the drug profits - including a 2003 Mercedes-Benz, 2003 Land Rover and several customized cars.

Hanaway said the group bought and sold cars and motorcycles to launder their money so authorities did not know it was tied to drugs. Investigators with the Internal Revenue Service said they dissected the suspects' financial affairs to find the drug money.

Roland Corvington, the FBI special agent in charge at St. Louis, said the probe began in the spring of 2005, after an informer tipped off a St. Louis city police officer assigned to work with the FBI. Authorities used a wiretap and surveillance to document drug activities for more than a year, Corvington said. The drug ring used safe houses to store and distribute the cocaine, according to the indictments. The suspects communicated with cell phones in other people's names.

In August, a federal agent videotaped a pre-arranged traffic stop in which Cornell stopped an FBI informer posing as a drug trafficker. After the officer took away the driver, agents watched Gales and Wood take a duffel bag from the car.

On Friday, all but one of the defendants were arrested or surrendered to federal authorities. Police were still looking for Jones, of the 100 block of Jacobs Way.

Hillsdale Police Sergeant, Five Others Indicted On Drug Charges (SLBIZ)

St. Louis Business Journal, October 11, 2006

Galez Towing and Recovery owner Bruce Gales, Hillsdale Police Sgt. Christopher Cornell and four others were indicted on multiple drug trafficking charges, federal officials said Friday.

The indictment alleges that beginning in January 2005 and continuing to the present, six defendants -- Robert Wood III, Mark Bonds, Mario Lucas, Christopher Jones, Gales and Cornell -- were involved in the distribution of about 120 kilograms of cocaine throughout the St. Louis area, generating about $2.4 million in drug proceeds.

Wood would arrange for the transportation; Bonds, Lucas and Jones were local distributors, according to a release from U.S. Attorney Catherine Hanaway.

As a part of the conspiracy, Wood, Gales and Cornell allegedly would, on occasion, steal cocaine from couriers by arranging for Cornell to arrest the couriers, and while the courier was being processed by Cornell, would break into the vehicle and take the cocaine. A money laundering count of the indictment alleges that transactions were made by Wood to conceal the nature, location, source and control of the proceeds of the conspiracy.

There is also a forfeiture count that seeks a money judgment of $2.4 million and certain specific property including a 2003 Mercedes Benz, a 2003 Land Rover, several customized cars and more than $140,000 in cash.

All defendants were indicted on one felony count of conspiracy to distribute cocaine. Address information and additional charges for some defendants are listed below:

Robert Wood, III, also known as Bobby Wood, 37, of the 1300 block Woodruff in Jennings, Mo.; one felony count of conspiracy to commit money laundering and a forfeiture count;

Mark Bonds, also known as Marco Bonds, 43, of the 5100 block Delcastle in Florissant, Mo., a forfeiture count.

Mario Lucas, also known as Mooney, 35, of the 1200 block Spartina in Florissant, Mo.;

Christopher Jones of the 100 block of Jacobs Way in O'Fallon, Mo.;

Bruce Gales, 36, 200 block of Houshang, Florissant, Mo; one felony count of attempt to possess with intent to distribute cocaine, one count of use of a communication device to facilitate a felony, one count of conspiracy to commit money laundering and a forfeiture count; and

DOJ_NMG_0078952

Christopher Marcel Cornell, 44, 5400 block of Maple, St. Louis, one felony count of attempt to possess with intent to distribute cocaine and one count of use of a communication device to facilitate a felony.

If convicted, each defendant faces up to life in prison and/or fines up to $4 million.

ACROSS MISSOURI (KCS)

The Kansas City Star, October 11, 2006

ST. LOUIS | Grave for fetus found at defendant's home

Investigators have found a marked grave for a baby at the home of the woman accused of attacking a mother in her east-central Missouri home and kidnapping her baby. Franklin County Sheriff Gary Toelke announced Friday that the marked grave at Shannon Torrez's home near Lonedell was for a fetus that apparently died in 2000. Torrez, 36, remains jailed on $1 million bond after pleading not guilty. She allegedly slashed the throat of Stephenie Ochsenbine, 21, and abducted her week-old baby, Abby.

JEFFERSON CITY | SOS for mental health workers

The state's mental health director said Friday he was turning to temporary workers to help fill an "alarming" number of employee vacancies at a facility for the developmentally disabled. Ron Dittemore, interim director of the state Department of Mental Health, said about 70 of the 460 direct-care positions are vacant at Marshall Habilitation Center. The department has been unable to fill them through advertising, job fairs and recruitment efforts.

ST. LOUIS | Charges in shooting of officer

A St. Louis man was charged Friday with aggravated assault, armed criminal action and unlawful use of a weapon for allegedly shooting and wounding a St. Louis police officer. Patrick Moore, 22, was arrested Thursday at his girlfriend's house in the shooting of Officer Justin Johnson, 30. Police were seeking at least two others in the case.

ST. LOUIS | Indictments allege cocaine conspiracy

A suburban St. Louis police officer and a tow truck company owner have been indicted for allegedly running a cocaine distribution conspiracy. U.S. Attorney Catherine Hanaway announced Friday that Hillsdale Police Sgt. Christopher Cornell and businessman Bruce Gales carried out a scheme to steal cocaine from drug runners and then sell it.

SPRINGFIELD | Preliminary hearing could be delayed

Prosecutors said Thursday they would ask a court to delay a Monday preliminary hearing in a child sex abuse case against two southwest Missouri church leaders. The move came after the defense filed a motion to dismiss the charges because of the statute of limitations. Four church leaders in McDonald County and the pastor of an affiliated church in neighboring Newton County face felony counts for allegedly abusing girls from their congregations as far back as the late 1970s, sometimes as part of a ritual or ceremony. Defense attorney Robert Evenson is seeking dismissal of charges against brothers Tom Epling, 51, and Paul Epling, 53, arguing the counts were past the statute of limitations.

Online Pill Sales Lead To Arrests (BSUN)

By Matthew Dolan, Sun Reporter

The Baltimore Sun, October 11, 2006

Baltimore pharmacy accused of selling Vicodin without valid prescriptions

Before federal agents arrested its owners yesterday, Baltimore's Newcare pharmacy appeared to be a phenomenal success.

The prescription drug distributor ordered 4,200 doses of the painkiller hydrocodone in 2003. In 2004, the orders bumped up slightly, prosecutors said in federal court.

Suddenly, sales skyrocketed into the millions. And this year, authorities said, the Northeast Baltimore company had already bought 4.8 million doses of the drug, commonly known as Vicodin.

But according to prosecutors, the amazing performance concealed a lucrative cybercrime: The company sold more than $20 million worth of the painkiller to Internet customers without legitimate prescriptions.

Federal drug agents fanned across the region early yesterday, charging Newcare's owners, seizing their expansive suburban homes in Harford County, locking up their luxury cars and shutting down their multiple bank accounts.

DOJ_NMG_0078953

Carl J. Kotowski, assistant special agent in charge of the Drug Enforcement Administration's Baltimore office, said the operation at Newcare sparked the largest federal pharmaceutical drug investigation in the state's history.

"It's not like [they had] to go out onto the street," Kotowski said of Newcare's customers. "Everything is very discreet. You just go online. It's no different than buying a book on Amazon."

Like Quaaludes and Valium in the 1970s, Vicodin's illicit use has been treated recently by playwrights, novelists and screenwriters as a less dangerous, and more socially acceptable, way for characters to relieve life's pressures without resorting to heroin or cocaine.

On the Fox television show House, the irritable but brilliant Dr. Gregory House has suffered from chronic pain and battled an addiction to Vicodin.

But the increasing problem of illegal sales of prescription drugs online has also worried drug enforcement agents and anti-drug abuse advocates alike.

DEA Administrator Karen P. Tandy told Congress in April that her agency had initiated 100 new Internet investigations involving the online sales of prescription drugs during the last fiscal year, arresting 62 people and seizing $44 million in cash, property, computers and bank account assets.

In the DEA's Operation Cyberchase, agents targeted about 200 Web sites alleged to have illegally sold prescription drugs and arrested 25 people in the United States, Asia, Europe, and the Caribbean.

Some advocates for more regulation said not enough has been done.

For the third year in a row, the number of Web sites selling controlled prescription drugs such as OxyContin, Vicodin, Xanax, Valium and Ritalin has increased, according to a June report released by the National Center on Addiction and Substance Abuse at Columbia University.

The report found that 89 percent of those Web sites selling controlled prescription drugs do not require prescriptions. Of those sites not requiring prescriptions, 30 percent advertised that no prescription was needed, 60 percent offered "online consultations" and 10 percent made no mention of a prescription.

"Any child can get, without a prescription, highly addictive controlled substances like OxyContin, Valium and Ritalin from Internet drug pushers," CASA Chairman Joseph A. Califano Jr., a former U.S. health secretary, said at the time. "The trend of teen 'pharming parties' will continue to increase as long as these drugs are so easy to obtain."

Califano's organization is calling for tighter federal laws to prohibit Internet sale or purchase of these drugs without original prescriptions based on a physician's examination. CASA also wants Internet search engines, financial institutions and shipping companies to help establish a national clearinghouse to catch rogue Internet pharmacies.

Now shuttered, Newcare is in the 3400 block of Sinclair Lane at a busy industrial intersection across from an auto parts store and flanked by a medical office and a heating-cooling business.

Yesterday, its owners - pharmacists Steven Abiodun Sodipo, 50, of Forest Hill and Callixtus Onigbo Nwaehiri, 48, of Jarrettsville - made an initial appearance in U.S. District Court in Baltimore on drug and money-laundering conspiracy charges.

According to state records, Sodipo has been a licensed pharmacist in Maryland since 1988 and Nwaehiri since 1986.

They were joined in the indictment, which was unsealed yesterday, by Ahmed Alhaji Abdulrazaaq, 48, of Forest Hill. Federal authorities described Abdulrazaaq as one of two people who assisted with the illegal financial transactions.

Sodipo, Nwaehiri and Abdulrazaaq were held in custody until a detention hearing scheduled for tomorrow.

A fourth defendant, Nannette C. Patterson, 48, of Baltimore, is expected to turn herself in to authorities today.

Outside Newcare, DEA agents worked into the evening yesterday near a U-Haul truck and about 10 cars parked at the rear of the light-brown, one-story brick building. Blinds on the building's windows were closed, and the double-door entrance was locked.

More than 308,000 hydrocodone tablets were confiscated from Newcare with a estimated street value of $1.5 million, law enforcement officials said. The pharmacy, which was not opened to walk-in retail customers, was the top buyer of hydrocodone in the state, according to the DEA.

DOJ_NMG_0078954

Also yesterday, federal agents in New Orleans shut down an Internet pharmacy they allege bought and sold millions of doses of hydrocodone last year. DEA officials in Baltimore said they could not comment on whether the two investigations are connected.

Prosecutors in Baltimore moved yesterday to seize assets equal to $20 million in illegal drugs sales they say were sold at a 300 percent markup since 2005.

As part of the forfeiture, they targeted 18 bank accounts; 10 vehicles, including a Jaguar, Lexus and Mercedes-Benz; and five properties - three in Baltimore and two in Harford County. Kotowski described the pharmacists' suburban homes - one is more than 8,000 square feet and the other almost 6,000 square feet - as plush.

"When I worked in Miami, I saw some wild places. But this one was up there," he said of Sodipo's eight-bedroom house on Nora Court.

Hydrocodone, the drug at the center of the joint local and federal investigation of Newcare, is also sold under brand names that include Lortab, Lorcet and Zydone. An orally active analgesic, it can be as powerful as morphine.

Legitimate production of the drug increased fourfold in the 1990s, triggering a concurrent rise in illegal use, according to the DEA. About 20 tons of hydrocodone products are used annually in the United States.

Maryland has seen substance abuse treatment admissions for narcotic pain relievers, including hydrocodone, nearly triple in recent years, according to a May report from the Center on Substance Abuse Research at the University of Maryland, College Park.

Armas Bond Hearing Today (RNT)

Rome (GA) News-Tribune, October 11, 2006

A bond hearing is set in federal court today for Rome businessman Mario Enrique Armas, who pleaded not guilty Oct. 5 to charges of money laundering and possession with intent to distribute more than a ton of marijuana.

Beginning at 4:15 p.m. Armas and his defense team will present witnesses to U.S. District Magistrate Judge Walter L. Johnson showing reason why he should be allowed to return home before his trial.

A federal indictment and search warrant accuses Armas, aka Mario Doninelli, 45, who owns multiple businesses and properties in the Rome area, of conspiring with two Rockmart men in trafficking more than 2,200 pounds of marijuana and money laundering at least $2 million generated by Northwest Georgia drug sales.

Armas was arrested last Thursday, culminating what officials said was a two-year investigation by the Federal Bureau of Investigation, the Drug Enforcement Agency and the Internal Revenue Service's Criminal Investigations Division.

To transport the marijuana, according to court documents, the coconspirators traveled with a horse trailer to Arizona, where hundreds of thousands of dollars allegedly provided by Armas were used to buy marijuana that was then transported back in the trailer to Georgia and sold.

Armas allegedly was the principal financier for the purchases, using his business, N&A Corporation, as a front for illegal activity, according to U.S. Attorney David E. Nahmias.

Kevin Redstrom and Lonnie Merren, both of Rockmart, have also been indicted. Prosecutors say they were money couriers for Armas. Neither of the pair has been arrested, but they are not considered fugitives, authorities say.

Here are some legal documents in this case. Some names in these documents have been redacted by the federal government.

Border Crossing Goes Awry When Man Gets Stuck In Tunnel Exit (SDUT)

By Debbi Farr Baker, Angelica Martinez, And Karen Kucher, Union-tribune Breaking News Team

The San Diego Union-Tribune, October 10, 2006

SAN DIEGO – Fourteen people trying to enter the United States through a storm drain tunnel in Otay Mesa ran into a glitch Tuesday morning, when the third person exiting the narrow opening became stuck.

Border Patrol agents using a stationary surveillance camera near the tunnel's exit in an industrial lot on Via De La Amistad spotted the first two people as they emerged from the tunnel shortly after 7 a.m.

They then discovered a man stuck in the tunnel, his hips wedged tightly in the concrete opening.

DOJ_NMG_0078955

San Diego Fire Department crews, responding to a request that came in at 7:14 a.m., covered the man in blankets and chipped away at the opening. "The challenge was that the tunnel itself was partly concrete," said Maurice Luque, a fire department spokesman.

Around 8:48 a.m., crews pulled the man out of the hole and then helped two other men and two women out of the tunnel. All were covered with gray dust.

They were checked by medical personnel. One of the women was taken to a hospital for evaluation, while the rest were taken to a detention center.

Officials said the other seven people in the tunnel went back to Mexico. Officials on that side of the border checked and found that all of them had made it out.

Border Patrol officials suspect the seven who emerged from the tunnel are undocumented immigrants, said Lauren Mack, Immigration and Customs Enforcement spokeswoman. The group will be processed for deportation, she said.

Officials say the group broke into the storm drain system on the Mexican side of the border and traveled through the pipe into the United States.

The incident began when Border Patrol agents spotted a group of about 14 people gathering on the south side of the border fence, in Mexico, around 6:50 a.m. The group appeared as though they were getting ready to cross.

Shortly thereafter, agents spotted two people coming up out of the ground north of the secondary border fence, said Border Patrol spokesman Robert Harvey. Those two were apprehended, he said.

"At that point, we realized there were people still stuck in the tunnel," Harvey said.

The group traveled some 40 yards from the U.S. border through the narrow opening, which was only about two to three feet high and wide. Most of the tunnel's length is on the U.S. side.

It is not known how long they were in the tunnel. They came out in a lot on the property of Air Liquide company.

In recent months, several undocumented immigrants have been found using the sewer system to illegally enter the U.S.

The illegal crossers "are digging small gopher-type holes on the Mexican side of the border and they are climbing into the holes and tapping into the storm drain system," Mack said. "Then they are using the system to find a manhole to get out on the U.S. side."

The San Diego Tunnel Task Force has been working with Mexican authorities to investigate the crossings since they learned of them about three months ago, she said. The task force is made up of agents from the Border Patrol, Immigration and Customs Enforcement and the Drug Enforcement Administration.

Border Patrol spokesman James Jacques said the Border Patrol has discovered 23 tunnels in the last 10 years in the San Diego sector, with 12 of those found in the last 12 months, not counting the one found Tuesday.

The rescue caused a significant delay for cargo trucks that were trying to enter the U.S. from Mexico.

Border Patrol agents asked that northbound cargo trucks be stopped at 7:45 a.m. due to safety concerns, said Vince Bond, a U.S. Customs and Border Protection spokesman.

Authorities feared that the trucks would travel on the road over the tunnel while the group was still trapped inside, Bond said.

The trucks were rerouted and allowed through at 8:15 a.m.

"This is a very busy time for us. We have 2,500 trucks or more a day enter. Sometimes there are as many as 2,900 trucks a day during a peak time like this," Bond said.

Ariz. Pair Resigns Pot Church Leadership (AP)

AP, October 10, 2006

TUCSON, Ariz. -- A Pima, Ariz. couple has stepped down as leaders of a church that considers marijuana a sacrament and deity.

Dan and Mary Quaintance say pending federal charges against them have made it impossible to properly lead the church. In February, the two were arrested in a car that contained 172 pounds of marijuana in the New Mexican town of Lordsburg near the Arizona state line.

DOJ_NMG_0078956

The Quaintances are facing 40 years in prison if convicted on federal charges of conspiracy and intent to distribute marijuana.

Dan Quaintance, 53, said the church is now fractured, explaining that the 45-member congregation he and his wife founded in 1991 no longer has its spiritual leaders.

The Quaintances are scheduled to go on trial Oct. 30 in Las Cruces, N.M., though they hope the case will be dismissed before the end of the month. They're awaiting a decision from U.S. District Judge Judith C. Herrera on whether she'll dismiss the case on the grounds that religious freedom should allow them to use the illegal drug.

The government contends the church is a front for drug trafficking.

The couple's lawyers cite a February decision by the U.S. Supreme Court ruling that the government has no right to seize hallucinogenic tea containing a federally banned substance from members of a New Mexico church.

The tea, called hoasca, contains the substance dimethyltryptamine, or DMT, known for its hallucinogenic properties.

Members of the O Centro Espirita Beneficiente Uniao Do Vegetal, or UDV, said using the hallucinogenic tea during worship helps them gain union with God.

Prosecutors with the U.S. Attorney's Office in New Mexico, which also prosecuted the UDV case, do not comment on pending matters.

But in court documents, they say the Quaintances are "obsessed and focused on marijuana," and Dan Quaintance's writings about his worship are "disjointed, poorly supported, illogical ramblings." They conclude that the couple's "lack of sincerity is patent."

The Quaintances are out on bond and remain under court supervision. They must submit to weekly urine tests. They have been living without marijuana since their arrest.

"We're being deprived the benefits of connection _ health-wise and spiritual-wise," Dan Quaintance said. "I think the judge is going to have a hard time ruling against us on the sincerity of our religious practice. If there isn't a favorable ruling on our religious freedom, then I don't believe there is a justice system in America."

Since the church was founded, at least 20 members have been prosecuted on possession and conspiracy charges, and some have served time in prison, said Mike Senger, a church member who lives in Florence and provides legal assistance to group members.

"Usually, we never win," Senger said. "But we may perhaps win in Mary and Dan's case because it is federal court, and there is quite a bit at stake. They are getting some reasonable due process in that court.

"It is a hellish, torturous experience for people who are peaceful and not criminals, who possess marijuana," he added. "We don't look at ourselves as criminals."

Trial Of Senior Colombian Rebel To Start Thursday In US (AP)

AP, October 10, 2006

BOGOTA (AP)--The most senior member ever captured from Latin America's largest rebel army goes on trial in a U.S. courtroom Thursday for the kidnapping of three Americans - a case that some fear could scuttle moves for the Americans' liberation.

The fate of Ricardo Palmera, better known by his nom de guerre Simon Trinidad, is to be decided by a federal jury in Washington. Extradited in late 2004 after his capture in neighboring Ecuador, he was indicted on charges of providing material support to a terrorist group and hostage-taking.

The case could have profound repercussions in Colombia, where tentative steps are being made toward talks between Palmera's guerrilla group, the Revolutionary Armed Forces of Colombia, or FARC, and the government on a prisoner swap.

The FARC is demanding the release of all its imprisoned comrades, including Palmera, in exchange for the release of 62 hostages, including former presidential candidate Ingrid Betancourt and the same three U.S. defense contractors Palmera is charged with kidnapping.

DOJ_NMG_0078957

"I am hoping this (trial) may put pressure on the FARC," said Jo Rosano, mother of Marc Gonsalves, one of the kidnapped Americans. "On the other hand, I worry they may retaliate against the Americans."

Rosano intends to fly from her home in Connecticut to attend at least part of the trial.

The main charge against Palmera relates to the February 2003 downing of a small U.S. airplane that authorities say was on an intelligence-collecting mission over a FARC stronghold in southern Colombia.

Palmera is charged with conspiring to kidnap three American contractors who were on the plane: Thomas Howes, Keith Stansell and Gonsalves. He also is charged in the killings of U.S. pilot Thomas Janis and Sgt. Luis Alcides Cruz, a Colombian soldier, who were found near the crash site apparently shot to death.

There is little to suggest that Palmera, a frequent face of the FARC in peace talks, participated in or planned the kidnapping. Rather the prosecution argues he belonged to a group that stated it would target U.S. officials and has subsequently used the hostages as leverage for talks to free imprisoned rebels, including Palmera.

The only proof the Americans are alive came on July 2003, when the FARC released a video of the men.

Despite the silence, Rosano is confident.

"I know in my heart that he's alive," she said.

Some observers believe the FARC already may have decided to concentrate on a straight swap of the three Americans in exchange for Palmera and another FARC member, Nayibe Rojas, known as Sonia, who soon faces trial in Washington on drug trafficking charges.

"Basically, Simon Trinidad and the three U.S. contractors are out of this swap ... now the exchange will have to be directly between the FARC and the U.S. government," said Gustavo Duncan, a researcher with the Bogota-based think tank Security and Democracy Foundation.

The Palmera prosecution is the latest sign the U.S. government is stepping up its pressure on the FARC, listed by the State Department as "foreign terrorist organization" in 1997.

The U.S. has given more than $4 billion to Colombia since 2000 to fight the world's largest cocaine industry and the more than four-decade insurgency.

In March, the U.S. government announced drug indictments against 50 leaders of the FARC and a combined $77.5 million in reward money.

Scion of a wealthy family from the Caribbean coast, Palmera abandoned high society to became Simon Trinidad, one of the most notorious guerrillas in Colombia. In an organization that comprises mostly recruits from the countryside, Trinidad stood out as an articulate intellectual.

Palmera's 2004 capture in Ecuador was celebrated by Colombian authorities, who have shown few results in apprehending the FARC's leadership.

But convictions in Washington could complicate any possible exchange of Palmera and Rojas for the Americans.

"Given the policy we don't negotiate with hostage-takers, politically this could be very difficult," said Paul Wolf, a lawyer who specializes in international law and has followed Palmera's case.

He added that if Palmera is convicted and the U.S. government wanted to free him in exchange for the three Americans, one of the few mechanisms available would be a pardon by U.S. President George W. Bush.

"It's hard to imagine," said Wolf.

Colombian Guerrilla Fighter Goes To Trial In US (PRENSAL)

Prensa Latina, October 11, 2006

Bogota, Oct 10 (Prensa Latina) The trial of Ricardo Palmera, alias Simon Trinidad, leader of Colombia's Revolutionary Armed Forces (FARC), began Tuesday following a protest for his liberation by mostly US citizens.

The protesters consider the trial interference in Colombian affairs and Tom Burke, head of the pro-release committee, says the administration lacks the legal and moral authority to judge him.

He added that US taxpayers contribute five billion dollars to Plan Colombia, but they do not wish their country's involvement since they consider it a violation of Colombian laws.

DOJ_NMG_0078958

In addition, the DEA denied FARC involvement in drug trafficking to the US or terrorism in statements to the Bush Administration, he said.

The rebel leader was extradited in December 2004 despite appeals to President Alvaro Uribe, and will be tried in Washington D.C. for terrorism, drug trafficking and the death of a US citizen.

FARC called Trinidad a revolutionary and anti-imperialist fighter and claims his extradition was immoral and unpatriotic, an opinion shared by most Colombians.

Public prosecutor Bob Tucker said the case is delicate because Trinidad belongs to a rebel group at war with the Colombian government, therefore deserves immunity under the Geneva Convention.

ATF, Police Team Up To Get Guns Off New Orleans Streets (AP)

By Mary Foster, The Associated Press

AP, October 11, 2006

NEW ORLEANS (AP) — A day after four people were wounded by gun violence that continues to mar this city's hurricane recovery, local and federal authorities announced their latest attempt to crack down on criminals with guns.

A hot line for reporting illegal firearms is being relaunched, they said at a Tuesday news conference. A similar hot line operated in the 1990s but was eventually discontinued as the city's murder rate declined, police said. The murder rate has picked up this year as the city has repopulated, reaching 113 so far.

Federal law prohibits anyone convicted of a felony from possessing a firearm, U.S. Attorney Jim Letten said.

"And there's no early release in federal cases," Letten said. "If they're convicted they're going to serve the time."

Police Chief Warren Riley is counting on that.

"We have found that through the federal system once they are convicted we don't see them again," Riley said. "We have to get the guns and the people with them off our streets if this city is going to come back."

In 2005 law officers confiscated 2,787 illegal firearms in New Orleans. Since January, 1,522 have been confiscated, even though the city has only about 40 percent of the population it had before the storm.

"Everyone knows the problem New Orleans has with gun violence," Bureau of Alcohol, Tobacco, Firearms and Explosives special agent Robert Browning. "We're going after the illegal guns and the criminals who have them."

Tuesday's news conference had been scheduled several days ago but fell, coincidentally, after another night of gun violence.

A restaurant dish washer who was taking a break, and a friend standing next to him, were seriously wounded when a man walked up and began firing two guns.

A bystander across the street was grazed by a stray bullet.

Also, two National Guardsmen shot a man who refused to stop and drop an object in his hand.

The Guard has been helping police patrol the city since June. The shooting was being investigated, Riley said. The man, who was not identified, was wounded in the upper torso near his back, and his injury was not considered life-threatening.

After the announcement of the gun hot line Tuesday, ATF agents and police officers went door to door in the city, handing out flyers and explaining the program to residents.

"I think it's wonderful, especially with all this shooting that's been going on," said Earline Smith, 76. "I hope everyone will call if they see something. We need to do something in this city."

Lawyer Receives Six Months In Prison (CHASGAZ)

By Tom Searls, Staff writer

Charleston Gazette, October 11, 2006

Federal judge calls di Trapano decision 'extremely close call'

Dante di Trapano was sentenced to six months in prison Tuesday, after pleading guilty earlier to being a drug addict in possession of firearms.

DOJ_NMG_0078959

Chief U.S. District Judge David Faber gave di Trapano the maximum time for the crime, after deciding government prosecutors could not prove the seven handguns found in di Trapano's Johnson Road, Charleston, residence were not collector's items.

He also sentenced di Trapano to three years of supervised release that will include special criteria to be worked out with the federal probation office and a $10,000 fine.

"I think this is an extremely close call," Faber said in ruling di Trapano had purchased the guns as collector items. He added, "I believe [di Trapano] has just made the preponderance test."

Di Trapano, a Charleston lawyer and former agent for National Football League wide receiver Randy Moss, has already served about three months in jail, time that he will be given credit for by the federal Bureau of Prisons.

Monica Dillion, the assistant U.S. attorney handling the case, had called several witnesses in an effort to show di Trapano used the guns for protection because he had a large stash of drugs in his residence.

Prosecutors also failed to show there were drugs in the residence when it was raided last April. Initially, the government said field tests showed a white powder residue on a laptop computer was cocaine. Laboratory tests, however, showed that was not so.

But Faber also showed his disdain for the defendant, noting he did not tell the truth when testifying in September about cocaine use. Faber had released di Trapano on bond in August to receive drug treatment, but revoked that after an initial urine tests showed he had used cocaine.

"The lab test came back and showed he tested positive for cocaine," Faber said.

When di Trapano's attorney, Charleston lawyer Michael Del Giudice, tried to refer to his client's testimony, Faber interrupted him.

"He's testified falsely before me one time before and I'm not likely to believe him," the judge said.

Dillion told Faber that di Trapano also lied when he filled out a federal form in order to purchase firearms, which he bought at a South Charleston gun show. On that form, di Trapano said he was not a drug addict.

"He lied on the form and he's a liar," she said.

"At the time I purchased it I was in denial [of being a drug addict]," di Trapano said of the February purchases.

Di Trapano had pleaded guilty to the charge in July.

His law license was temporarily suspended by the state Supreme Court last month, when Del Giudice said he would not be in the West Virginia predicament if his last name were not di Trapano.

"We don't single people out because of who they are," U.S. Attorney Chuck Miller said following the 90-minute sentencing hearing.

Di Trapano, 43, had been a member of a prominent Charleston law firm headed by his father, Rudolph DiTrapano, a former state Democratic Party chairman. He has since been dismissed from the firm.

Di Trapano appeared to be at the pinnacle of success until last March when he, his wife and three others were arrested in a Tampa, Fla., hotel room. Police said crack cocaine was scattered across the bed and around the floor.

He was then arrested in Georgia a short time later for felony cocaine possession and misdemeanor marijuana possession.

Del Giudice produced 2005 letters from di Trapano to his wife, Teri, who was not in court Tuesday, where he wrote about receiving drug rehabilitation in Florida then. At the time of his Florida arrest, di Trapano said he was there to get drug rehabilitation help.

In a statement prior to his sentencing, di Trapano apologized to the court.

"I'd first like to apologize to the court for the disrespect I've shown you," he said.

He said he had drug and alcohol problems when he was young, then spent 15 years sober. Recently he had personal problems and had begun to use drugs again. "I began to use and it got out of control," he said.

Di Trapano said he had lost most of his material goods — his houses are for sale, he said — and added he has lost his reputation in the community as well.

More Than Three Dozen Gang Leaders Arrested (SEATIMES)

By Sara Jean Green, Seattle Times staff reporter

The Seattle Times, October 11, 2006

Federal and local law enforcement officials today announced the arrests of 40 violent gang leaders, half of whom were taken into custody in the last week.

In a four-month investigation dubbed "Operation Crackdown," members of the Violent Gang Task Force - which is led by the local office of the federal bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) targeted violent gang members suspected in a rash of drive by shootings, narcotics deals and other offenses. The task force also includes members of Seattle police, the King County Sheriff's Office and the FBI.

At a news conference in the Henry M. Jackson Federal Building in downtown Seattle, ATF Special Agent in Charge Kelvin Crenshaw gestured to an assortment of assault rifles and pistols laid out before him.

"What's so unique about these firearms is that they were actually found in the possession of individuals," he said. "They weren't lying on a bed or leaning against a chair… these people were carrying them around."

Of the 40 people arrested, 10 are facing federal charges, including two who will be charged as armed career criminals; a federal statute that carries a mandatory 15-year prison term for anyone caught with a firearm after previously being convicted of three violent crimes or drug distribution charges, said Andrew Friedman, an assistant U.S. Attorney who is coordinating the office's gang prosecutions.

In addition to 10 firearms, police and federal agents seized $38,000 in cash, six vehicles and a large quantity of drugs including crack cocaine, ecstasy, marijuana and heroin, Friedman said.

Over the last year, and particularly, over the summer, law enforcement agencies throughout the region have noticed an increase in gang-related violence, said Crenshaw.

King County Sheriff Sue Rahr, who commanded her office's gang unit in the early 1990s when gang violence was at its peak, said recent "data clearly confirms there's a second wave coming." Just as in the '90s, gang violence, she said, is spreading from Seattle into communities throughout the greater metropolitan area.

Unlike other task force investigations, Operation Crackdown didn't focus on a particular gang, Crenshaw said. Instead, task force detectives gathered intelligence from officers on the street to identify suspects responsible for the kind of intimidation, posturing and violent acts that spread fear through communities. Officials believe that those arrested are affiliated with at a dozen different street gangs that span the area's racial spectrum, he said.

"It's the violence across the board. Their motivation is money. This is all about making money by selling drugs and guns," Crenshaw said.

IMMIGRATION:

Ex-Nazi May Be Deported From Michigan (MCT)

By David Ashenfelter, Detroit Free Press

McClatchy Newspapers, October 11, 2006

DETROIT - An 86-year-old former Nazi concentration camp guard who lives in Michigan and has Alzheimer's disease could be deported following the U.S. Supreme Court's refusal to review his case Tuesday.

It remains to be seen, however, whether the Justice Department will follow through with deportation proceedings against Iwan Mandycz of Sterling Heights, given his age and medical condition. Court records say Mandycz is incompetent.

His lawyers did not return calls Tuesday, and a woman who answered a phone number listed under Mandycz's name referred calls to his daughter, who did not return messages.

Mandycz was stripped of his citizenship last year for not telling U.S. authorities before emigrating that he was a guard at two Nazi labor camps in Poland during World War II, including one where 14,000 Jews were murdered in a single day.

Mandycz, who emigrated in 1949, has denied being a Nazi camp guard.

DOJ_NMG_0078961

Joseph McGinnis, a Cleveland lawyer who has handled cases similar to Mandycz's, said the government may choose to not deport him, or it could obtain a deportation order but allow him to remain in the United States. Even if it obtains a deportation order, McGinnis said, it must find a country willing to take him before he could be kicked out.

A Justice Department spokeswoman declined to say whether prosecutors will seek to deport Mandycz.

Supreme Court Turns Down Case Of Former Guard At Nazi Slave Camp (AP)

AP, October 11, 2006

(AP) - WASHINGTON-The Supreme Court on Tuesday turned down the case of a former guard at a Nazi slave camp suffering from Alzheimer's Disease.

The Justice Department succeeded in revoking the U.S. citizenship of 86-year-old Iwan Mandycz. He could face deportation. His lawyers say the right that prevents the U.S. government from prosecuting a mentally incompetent person also should apply to citizenship cases, which are civil proceedings.

"The accused should be able to assist in the preparation of his defense and consult with his attorneys before he may be punished by the government," Mandycz's lawyers said in a filing that had asked the Supreme Court to take the case.

The Justice Department, which wants to remove him from the United States, initiated denaturalization proceedings, saying Mandycz had concealed that he worked for the Nazis.

Officials said that Mandycz was a guard in 1943 at the Trawniki and Poniatowa labor camps in Poland, where prisoners were starved, beaten and executed en masse.

Mandycz has denied working at the camps and has said he spent World War II working at his parents' farm in Poland and, later, as a forced laborer at a farm in Austria.

The 6th U.S. Circuit Court of Appeals in Cincinnati had ruled there was considerable evidence that Mandycz was Guard 3308 and an absence of competing evidence that he was not.

Ex-Nazi May Be Deported (DEN)

Detroit News, October 11, 2006

Court won't hear case of Sterling Hts. man identified as a guard at a concentration camp.

STERLING HEIGHTS -- Fifty-one years ago, Iwan Mandycz became a U.S. citizen. On Tuesday, his last chance at remaining one appeared to slip away.

The U.S. Supreme Court declined to hear the case of the 86-year-old Sterling Heights resident, whom the U.S. Department of Justice has targeted for deportation because of his past as a Nazi prison guard.

Mandycz's attorneys have argued he should be spared deportation because he suffers from Alzheimer's disease and lacks the capacity to participate in his own defense.

His attorneys could not be reached for comment.

Federal prosecutors believe Mandycz was a guard for six months in 1943 at the SS prison camp Poniatowa in Poland. In that year, the Nazis conducted "Operation Harvest Festival" -- a plan to kill Jews. A total of 42,000 Jews were killed.

Mandycz arrived in the United States in 1949 and became a citizen six years later. He has denied being a Nazi prison guard despite being identified as such by two former guards.

In March 2005, a U.S. District Court judge ruled Mandycz was in fact a guard at the prison and stripped him of his citizenship.

"I can't imagine what would be accomplished by deporting him at his age," said Mandycz' neighbor, Eugene Winowski. "But at the same time, I also understand the flip side -- everything (Jewish prisoners) went through -- you can't ignore that."

Jaclyn Lesch, a Justice Department spokeswoman, told the Associated Press federal officials were weighing their options on how to proceed.

The Associated Press contributed to this report. You can reach Jim Lynch at (586) 468-0520 or jlynch@detnews.com.

Judge Asked To Free Immigrant Detainees (AP)

AP, October 11, 2006

DOJ_NMG_0078962

(AP) - LOS ANGELES-Several legal advocacy groups asked a federal judge to order the immediate release of four immigrants who have been detained for months or years without receiving a hearing on why they're being held so long.

The motion filed Friday asks U.S. District Judge Terry Hatter to release the detainees under conditions of supervision or grant them hearings.

The move followed a class-action lawsuit filed Sept. 25 on behalf of six detainees by the American Civil Liberties Union of Southern California, the ACLU Immigrants' Rights Project and the Stanford Law School Immigrants' Rights Clinic. Two detainees have since been released.

The lawsuit alleges the U.S Department of Homeland Security held immigrants for long periods despite court rulings that banned indefinite detention.

"They're flouting the courts," said Ahilan Arulanantham, an ACLU attorney.

A spokeswoman for U.S. Immigration and Customs Enforcement declined to comment on the lawsuit.

Detainees are typically held for six months but can be held longer if they have previous criminal convictions or if the government believes they pose a threat to the public, agency spokeswoman Virginia Kice said.

"People need to bear in mind that under the law, if they have criminal convictions, we're required to hold them while their immigration cases are adjudicated," she said.

The detainees include a 37-year-old Nigerian man, a 31-year-old Senegalese man, a 38-year-old Chinese man from Indonesia and an Ecuadorean man.

Of the four, only the Ecuadorean immigrant has a criminal record. The ACLU argues his burglary and petty theft convictions aren't serious felonies and that he poses no serious threat if released.

Bush Mum On Immigration As GOP Candidates Vow To Be Tough (WT)

By Stephen Dinan

The Washington Times, October 11, 2006

SCOTTSDALE, Ariz. -- Immigration is a dominant issue in congressional races from Arizona to Michigan to Pennsylvania -- just about everywhere but where President Bush is on the campaign trail.

After having pressed all year to get a broad immigration bill, including legal status for illegal aliens from Congress, Mr. Bush now ignores the issue at campaign events and fundraisers, and Vice President Dick Cheney has even dropped what used to be a regular reference to immigration from his campaign stump speech.

It's an odd mixed message, given that many Republicans are running heavily -- and in some cases almost exclusively -- on the issue, promising an enforcement-first approach and attacking Democrats for supporting citizenship for illegal aliens.

White House deputy press secretary Dana Perino said they think the election will be decided on other issues.

"While immigration is an important issue, this election is also about the philosophical choices facing voters this November when it comes to national security and keeping taxes low," Mrs. Perino said.

She added that Mr. Bush has been consistent in pushing for a broad approach "because he believes that that is the only way to solve any of the individual immigration reform bills."

But most Republicans in Congress disagree, preferring an enforcement-first approach, of which the border fence is crucial.

One incumbent locked in a tight battle for re-election, Rep. J.D. Hayworth of Arizona, said the issue is a no-brainer and pointed to the House vote last month on a provision making it illegal to tunnel under the border.

"In the midst of a contentious election season, despite great wailing and gnashing of teeth, when that bill was offered as a stand-alone provision the final vote was 422-to-nothing. That means every congressman in every district understands the primacy of enforcement," Mr. Hayworth said.

Still, immigration is complicated for Republicans.

The National Republican Senatorial Committee has criticized some Democrats for their support of the same Senate bill that 23 Republicans supported. That also puts them at odds with Mr. Bush, who labeled that legislation a "good immigration bill."

DOJ_NMG_0078963

But Republicans across the country see it as a way to rally conservative voters and to win over some Democrats and independents.

In Pennsylvania, Sen. Rick Santorum, a Republican, repeatedly has turned to the issue to attack his Democratic opponent, Bob Casey Jr..

"Bobby Casey Jr. has been doing anything and everything in an attempt to deceive and distract voters from the fact that he supports amnesty for illegal immigrants," said Mr. Santorum's campaign manager, Vince Galko.

Rep. Tom Tancredo, the Colorado Republican who has come to symbolize the House's enforcement-only position, said Republicans should use the immigration issue "as often as possible."

"Immigration can be tied to national security, inflation, health costs and even traffic congestion, among others, and Republicans have the opportunity to champion the issue as Democrats embrace the images of illegal aliens staging protests in American cities," Mr. Tancredo said.

He said candidates must push the message on their own, in part because Mr. Bush has blocked any chance for a national Republican message.

"Bush's own push for amnesty has damaged his credibility on the issue and has made it difficult for the GOP to come up with a cohesive message which says we are the party that respects the rule of law," Mr. Tancredo said.

Polls show border security to be a tremendously popular issue, which has helped win primaries in Arizona and the special election for an open congressional seat in California earlier this year.

Rep. F. James Sensenbrenner Jr., Wisconsin Republican and chairman of the House Judiciary Committee, said the issue appeals to the parties in different ways.

"Republican base voters are more concerned about illegal immigration than on other issues, whereas Democrat and independent base voters agree with what the Republicans are doing, but think other issues, principally the war, are more important," he said.

Mr. Bush has tackled the issue off the campaign trail.

On Friday, he pressed for legalization of illegal aliens as part of his Hispanic Heritage Month celebration. And in Scottsdale last Wednesday, he signed the homeland-security spending bill, touting the increases in spending as a measurement for the progress made in border security.

It's indicative of the issue's popularity that Arizona's Gov. Janet Napolitano, a Democrat, joined Mr. Bush and four other Republicans for the signing ceremony, even though her party has made it a priority to try to unseat two of those Republicans.

Fence Funding In Budget Just The Start (WT)

By Jerry Seper And Stephen Dinan

The Washington Times, October 11, 2006

President Bush has signed off on a small down payment for a 700-mile fence along the U.S.-Mexico border, but legislators and fence advocates worry the barrier will never be fully funded and fear a lack of White House commitment.

Lawmakers -- including Rep. Duncan Hunter, California Republican and chairman of the House Armed Services Committee -- are forcefully reminding the Bush administration and Homeland Security officials that Congress' "directive" that the fence be built is not optional.

"We didn't put the fence as a goal or an option or something that should be mixed with other solutions, we made it mandatory," Mr. Hunter told The Washington Times yesterday.

"It is not an option for the Department of Homeland Security. What part of 'shall' don't they understand?"

The $33.8 billion Homeland Security funding bill, signed by Mr. Bush with much fanfare during ceremonies in Arizona last week, proposed $1.2 billion for fencing along with lighting, roads, sensors, cameras and other security devices. It does not include actual authorization on how, when or where it should be built.

The House- and Senate-approved Secure Fence Act does that. It outlines specifics on the fence's construction but has not been sent to the president, who has vowed to sign it.

DOJ_NMG_0078964

Most proponents and opponents agree that the proposed $1.2 billion allocation is far short of the up to $12 billion it will take to build 700 miles of fencing, and some advocates have questioned both the White House and Congress' commitment to it.

"Where the fence is concerned, to borrow a quote from the movies, 'Show me the money,' " said Michael W. Cutler, a 31-year Immigration and Naturalization Service veteran who spent most of his career as a criminal investigator and intelligence specialist.

Members of Congress said they will have to revisit the funding every year.

"It's one thing to authorize. It's another thing to actually appropriate the money and do it," Sen. John Cornyn, Texas Republican and a supporter of fencing, said last week.

In a terse, three-paragraph note Friday to Homeland Security Secretary Michael Chertoff, Mr. Hunter noted that Homeland Security has been given flexibility on the exact location of the 700 miles of fencing, but that its actual construction "is not in dispute."

"Congress has explicitly stated that border fencing is a critical component of our national border security plan," wrote Mr. Hunter, the act's lead proponent. He also reminded Mr. Chertoff that he is required within 60 days of the bill's passage to submit to the House Appropriations Committee "an expenditure plan for establishing a security barrier along the border of the United States."

In a report accompanying the bill, Congress said it will withhold $950 million of the allocation until that plan is received and approved.

Yesterday, Mr. Hunter said Congress went through a similar fight with the Clinton administration in the 1990s, when he fought for fencing between San Diego and Tijuana, Mexico.

"With each administration, you have a new set of administrators who don't have a lengthy experience on the border and tend to be duly impressed with the sales pitches made by the high-tech companies," he said. "Those sales pitches usually don't include something as mundane as a fence. But fences work."

The funding bill was touted by the administration and many Republicans as a way to crack down on illegal immigration, drug smugglers and would-be terrorists.

"It's what the people of this country want -- they want to know that we're modernizing the border so we can better secure the border," Mr. Bush said as he signed the bill before a bipartisan group of elected officials in Arizona.

Mr. Chertoff has voiced his support for what he has described as a "virtual fence," which would rely on cameras, motion detectors and other security devices to detect people illegally entering the United States.

During a press briefing last month to announce the award of a contract with the Boeing Co. for sophisticated border-detection technology, Mr. Chertoff said the department was looking to build "a 21st-century virtual fence" along the U.S.-Mexico border.

Mr. Hunter and other legislators say a virtual-fence proposal is fine, but not at the expense of an actual fence.

"If you have 400 high-school kids drowning in a canal, what's the first thing you do? You fence off the canal," he said.

The bill, which would close off about a third of the 1,951-mile U.S.-Mexico border, does not require the government to show any results on the proposed new fence construction until May 2008. State legislatures, governors, and city and county governments, along with Indian tribal councils, have veto power over fencing locations.

While it calls for the construction of "at least 2 layers of reinforced fencing to prevent unlawful entry by aliens into the United States," the bill does not specify what type of fencing to build.

But Mr. Hunter said that because the bill modifies the law that built a fence between San Diego and Tijuana, that is the type of fence Congress wants to be built. He said engineers at Sandia National Laboratories designed the San Diego fence.

U.S. Banks Woo Migrants, Legal Or Otherwise (WSJ)

By Miriam Jordan

The Wall Street Journal, October 11, 2006

DOJ_NMG_0078965

As U.S. leaders craft policies to curb illegal immigration from Mexico, the U.S. Federal Reserve is devising programs to extend banking services to undocumented immigrants. A new remittance program aims to bring Mexican migrants who send money home into the mainstream U.S. financial system, regardless of their immigration status.

Dubbed "Directo a Mexico," the remittance program enables U.S. commercial banks to make money transfers for Mexican workers through the Federal Reserve's own automated clearinghouse, which is linked to Banco de Mexico, the Mexican central bank.

To use the service, a Mexican need only possess a matricula consular, an I.D. issued by the Mexican consulate in most major U.S. cities to those with proof of Mexican birth or citizenship, or a picture I.D. card issued by the U.S. or another foreign government. The idea is to make it cheaper and safer for Mexican workers to send funds to their relatives.

"We offer an extremely competitive exchange rate," says Elizabeth McQuerry, an Atlanta-based assistant vice president for the Federal Reserve Bank's retail payments office. "We cost a third of other providers."

The majority of immigrants currently make transfers, which average $350 each, through companies like Western Union or a hodgepodge of wire-transfer firms, couriers and others that operate out of storefronts in Hispanic enclaves. Family members then collect the wired cash at a shop in their town or village.

The Federal Reserve Bank and Banco de Mexico launched a cross-country road show over the summer to promote the new funds-transfer program to commercial banks. Banks that offer the service hope to attract new customers. Indeed, one of the Federal Reserve Bank's goals is to use the program as a springboard for drawing hundreds of thousands of immigrants into the formal U.S. banking system since commercial banks require that those wanting the service first open a savings account.

"People who didn't have bank accounts establish a relationship with us," says James Maloney, chairman of Mitchell Bank in Milwaukee, one of the first banks to offer the Federal Reserve Bank's remittance plan. "It's great for our business."

Acknowledging that many Mexicans sending money home are illegal immigrants, the Federal Reserve's brochure poses the following frequently asked question: "If I return to Mexico or am deported, will I lose the money in my bank account?" The answer: "No. The money still belongs to you and can be easily accessed at an ATM in Mexico using your debit card."

A team at the Federal Reserve Bank in Atlanta joined forces with a team at the Mexican central bank to design the Directo a Mexico program in response to a mandate by President Bush, following the U.S.-Mexico Partnership for Prosperity struck by Mr. Bush and Mexican President Vicente Fox in 2001. One of the stated objectives was to lower the cost paid by Mexican workers to send money to their native country.

The Federal Reserve Bank's brochure touts the favorable foreign-exchange rate, based on the official rate, and a low transfer fee. "In addition, your money is safer in the bank than in your pockets or underneath the mattress," the brochure says.

Retail banks that participate in the program charge as little as $2.50 a transfer compared with $40 charged by some transfer services. Retail banks in the program pay the Federal Reserve 67 cents per transfer.

Most immigrants operate in a cash economy outside the formal banking system, where they have neither credit nor identity. In a post 9/11 era, bringing immigrants into the banking system -- and tracking their remittances -- is vital to security, supporters say.

Critics, however, say the Federal Reserve Bank is coddling illegal immigrants and helping them engage in capital flight. "Anything that makes it easier for people to live in this country illegally is an inducement for illegal immigration," says Ira Mehlman, a spokesman for the Federation for American Immigration Reform, an immigration-restrictionist group. "On top of that, it is draining money out of our economy."

Latin American migrants in the U.S. transferred $53 billion to $55 billion to their native countries last year, according to the Inter-American Development Bank. About $20 billion went to Mexico, $12 billion to Central America and the Dominican Republic and the rest to South American countries.

Remittances sent by Mexicans topped $15.5 billion in the first eight months of this year, 20% higher than the amount sent during the same period in 2005, according to Mexico's central bank, and this year's annual figure is expected to hit a new record. Savings scraped together by nannies, painters and others working abroad are now Mexico's second-largest source of foreign revenue, after oil exports and ahead of tourism.

DOJ_NMG_0078966

Since the Federal Reserve launched the program last year, about 150 U.S. financial institutions have enrolled. While most Mexicans continue to avoid banks, consumers using the program seem happy with it. Julian Gimenez, who works for a landscaping company in Milwaukee, for years had sent money to his wife, Catalina, in Jalisco, Mexico, through a wire-transfer company in his Latino neighborhood. Now, Mr. Gimenez uses Mitchell Bank. "It's cheaper to send the money and it arrives faster than any other place," he says.

Last month, the program was expanded to enable migrants in the U.S. to open an account for relatives to whom they plan to send money. A bank teller in the U.S. can open the account remotely on a Web site set up by Mexico's Banco del Ahorro Nacional y Servicios Financieros, the development bank known as Bansefi, which has a vast network of branches in urban and rural areas.

The beauty of the program, says Bansefi's chief executive Javier Gavito, is that the "unbanked population" on both sides of the border gets into the formal banking system. In Mexico, only half of all adults hold a bank account.

Directo a Mexico "revolutionizes the remittance market," says John Herrera, co-founder of Latino Community Credit Union, which has five branches in North Carolina and participates in the remittance program.

"U.S. banks have realized that these working-class folks are sending real money back home," says Mr. Herrera.

Illegal Immigrants Become Stuck In Pipeline (LAT)

By Richard Marosi

The Los Angeles Times, October 11, 2006

San Diego — More than a dozen illegal immigrants were briefly trapped inside a cross-border pipeline structure Tuesday after a man got stuck in the narrow passageway and had to be rescued by San Diego firefighters.

The immigrants were crawling through a passageway connecting a Mexican-based industrial gas supplier with a holding tank on the U.S. side, according to Lauren Mack, spokesperson for Immigration and Customs Enforcement.

The concrete-encased passage was used to protect piping that once carried liquefied oxygen, Mack said.

The immigrants had crawled nearly to the exit point in the United States when a man wearing a puffy, woolen sweater got stuck, Mack said. Firefighters had to break through concrete to extract the man.

Authorities with the U.S. Border Tunnel Task Force have been keeping a close watch on the area just east of the Otay Mesa Port of Entry, where many immigrants crawl through vast storm drain networks to get into the country. This is believed to be the first time in the San Diego area that migrants have been caught using an existing subterranean passageway that appears to be privately owned, Mack said. The passageway, which was at least 120 feet long, was extremely narrow and filled with water, Mack said.

"It's really, really dangerous, and they're lucky nobody died," she said.

Seven migrants were apprehended on the U.S. side; the rest are believed to have returned to Mexico.

TAX:

U.S. Expatriates Puzzle Over New Tax Rule (WSJ)

By Tom Herman And Jane Spencer

The Wall Street Journal, October 11, 2006

The U.S. Treasury Department removed part of the sting from a recent law that boosted taxes for many Americans working overseas, but many U.S. expatriates still are facing sharp tax increases this year.

A new Treasury notice allows Americans to deduct or exclude from their U.S. taxes more of the cost of housing in many foreign locations, where rents frequently are higher than in the U.S., than they otherwise would have. Accountants say this new relief varies widely from place to place.

Still, the revised rule, announced by Treasury in a notice issued Friday, offsets only a fraction of the higher tax bills that many individuals must pay this year. Among those hit the hardest are Americans with relatively high incomes working in places

DOJ_NMG_0078967

with high housing costs and low taxes, such as Hong Kong, and whose employers don't protect them from the additional tax cost of working abroad.

The new law already is affecting many companies, as some employers guarantee that their workers don't pay more in taxes than they would if they were living in the U.S. Business groups continue to lobby Congress to change the law, which was enacted in May and is retroactive to the beginning of this year, because they say it undermines U.S. business competitiveness abroad.

Robert Keys, a tax partner in Hong Kong for PricewaterhouseCoopers, says the rule granting a higher housing exclusion will save him several thousands of dollars a year on his U.S. taxes. That is a relatively small gift, because the law enacted in May drove up his U.S. tax liability to $40,000 a year from about $10,000 previously, he says.

"I came here because I thought I could make a bit more money," Mr. Keys says. "But when the costs keep going up, it makes you give some serious consideration to whether it's the place to be."

Americans working in Singapore also will get some relief from the latest change, according to Carol-Ann Simon, expatriate services leader of BDO Seidman LLP in San Jose, Calif. For example, suppose an American in Singapore earned about $200,000 in 2005 and paid around $45,000 in housing expenses. Under the new law enacted in May, that person's U.S. federal income-tax bill would be about $8,700 more for 2006 than in 2005. Thanks to the new Treasury notice, that person's bill now would be about $6,800, a saving of about $1,900, Ms. Simon says.

Americans working in high-tax countries, such as Germany and other European nations, are likely to feel much less effect, or possibly even none at all, from the recent tax law and the latest change to the housing exclusion. How much of an impact will depend on several factors, such as where they are living and the details of their pay and other income. That is because those workers already pay large sums in their host countries that can be used to offset any U.S. tax liability.

Under the new Treasury rule, the amount that can be excluded for housing costs also can vary within the same country. In London, for instance, an American expat can receive $58,916 in housing benefits before having to pay tax to the U.S. on it, according to Deloitte & Touche LLP. In Surrey, a picturesque district just south of London with two U.S. schools, the exclusion is just $21,916, even though property prices aren't much lower in Surrey than London.

"It could make you think, 'I better live on the very edge of London if I want to send my children to the American school in Surrey'," says Lynne Rennie, a Deloitte partner and chairman of the tax group at British-American Business Inc., the former American Chamber of Commerce.

The recently enacted tax law allows Americans working abroad to exclude as much as $82,400 of their foreign-earned pay this year, plus certain foreign housing expenses, when they are filing U.S. taxes. That $82,400, which is a bit higher than before, is known as the foreign earned-income exclusion. In a controversial change, income above that level now is subject to higher rates than before. This change isn't affected by last week's Treasury notice.

Kathy Chiron, who moved to Hong Kong from Washington, says the recent tax increase had a major impact on her family's finances. "It's a huge chunk of money and a real change in our tax bill," says Ms. Chiron, whose husband works for a Hong Kong telecommunications company. "It was like suddenly having another child in college." Ms. Chiron, who has two children attending universities in the U.S., says the latest change to the housing exclusion amount will help somewhat.

American business groups are continuing lobbying efforts to reverse the law, says Nicholas de Boursac, executive director of American Chamber of Commerce in Singapore. "No other civilized country in the world taxes earned income of citizens abroad," he says. "It means you're going to have fewer American expats."

"We have seen candidates turning down offers to come out here" to Hong Kong because of the higher taxes on U.S. expats, says Monica Levine, a consultant at Hudson, an executive recruitment company that is a division of Hudson Highland Group Inc. of New York. "It's less attractive than it was a year ago."

Some companies are unhappy with the tax increase but say it won't affect hiring. Eli Lilly & Co., which offers a tax-equalization package to Americans working overseas, says "we remain firmly committed to using expatriates to develop our global leadership. This won't stop us." General Motors Corp. says it has no plans to change the number of Americans it sends overseas. "Considering that we sell to so many countries, it's important that U.S. employees get experience in an overseas market," a GM spokesman says.

DOJ_NMG_0078968

A U.S. congressional committee estimates the recent tax increase on expats will raise about $2.1 billion in additional revenue in the next decade. The Internal Revenue Service estimates Americans working abroad filed about 295,000 individual income-tax returns for 2004 claiming the foreign-earned income exclusion. Of those, about 139,000 had any U.S. tax liability.

--Anjali Athavaley, Laura Santini, Loretta Chao and Aaron O. Patrick contributed to this article.

The fight continues in a high-profile courtroom battle over whether certain types of awards are taxable.

A federal appeals court ruled recently that a woman doesn't owe taxes on a $70,000 award paid to her by her former employer for "emotional distress" and "loss of reputation." The U.S. Court of Appeals for the District of Columbia Circuit said the award didn't represent "income," and thus wasn't taxable -- and that a 1996 tax-law change was unconstitutional insofar as it permitted taxation of awards for mental distress and loss of reputation. The decision was handed down by a three-judge panel that included Chief Judge Ginsburg.

Now, the Justice Department is asking the full appeals court to review the decision in a legal maneuver known as a petition for "rehearing en banc." The question raised in the case is "one of exceptional importance to the administration of the nation's tax laws," the government said. The appeals court panel's decision "represents the first time in over 85 years that an exercise of Congressional income-taxing power has been declared unconstitutional."

The winner of the recent decision was Marrita Murphy, represented by the law firm of Kohn, Kohn & Colapinto in Washington.

The winner of the recent decision was Marrita Murphy, represented by the law firm of Kohn, Kohn & Colapinto in Washington.

BRIEFS: Procrastinator alert: Monday is the filing deadline for taxpayers who received automatic six-month extensions this year, an IRS spokesman says.

Religion-Based Tax Breaks: Housing To Paychecks To Books (NYT)

By Diana B. Henriques

The New York Times, October 11, 2006

For tens of millions of Americans, the Rev. Rick Warren is best known for his blockbuster spiritual guide, “The Purpose Driven Life,” which has sold more than 25 million copies; his success as the founder of the 22,000-member Saddleback Church in Lake Forest, Calif.; and his efforts on behalf of some of the world’s neediest people.

But for tens of thousands of ministers — and their financial advisers — Pastor Warren will also be remembered as their champion in a fight over the most valuable tax break available to ordained clergy members of all faiths: an exemption from federal taxes for most of the money they spend on housing, which typically represents roughly a third of their compensation. Pastor Warren argued that the tax break is essential to poorly paid clergy members who serve society.

The tax break is not available to the staff at secular nonprofit organizations whose scale and charitable aims compare to those of religious ministries like Pastor Warren’s church, or to poorly paid inner-city teachers and day care workers who also serve their communities.

The housing deduction is one of several tax breaks that leave extra money in the pockets of clergy members and their religious employers. Ministers of every faith are also exempt from income tax withholding and can opt out of Social Security. And every state but one exempts religious employers from paying state unemployment taxes — reducing the employers’ payroll expenses but also leaving their workers without unemployment benefits if they are laid off.

Another religion-based tax break — the only one consistently defeated in the courts in recent years — is an exemption from state sales taxes for religious publications but not for secular ones.

This sales tax break has been struck down as unconstitutional in at least five states, most recently in Georgia in February, when a United States District Court judge, Richard W. Story, ruled that “the unique and preferential treatment the state provides to ‘religious’ literature raises serious constitutional concerns” under the First Amendment clause prohibiting an “establishment” of religion.

DOJ_NMG_0078969

Yet a few states still have a sales tax exemption for religious publications. One of them is Florida, where state officials, lawyers for two religious publications and a national religious liberty advocacy group have joined forces to defend the tax break from a constitutional challenge waged almost single-handedly by an Orlando lawyer named Heather Morcroft.

Ms. Morcroft is a Legal Aid staff lawyer who works with foster children. She is a believer in Wicca, which she described as a neo-pagan faith loosely based on the traditions of ancient earth-centered religions, and serves as president of the state's small Wiccan Religious Cooperative.

The cooperative is the formal plaintiff in the pending lawsuit Ms. Morcroft filed almost five years ago to challenge the constitutionality of the Florida exemption. Her arguments echo those that have prevailed in other states: that by exempting religious publications from the sales tax, the government is favoring religious ideas over secular ones, and that tax officials should not be in the business of deciding what publications are sufficiently religious to be exempt.

In contrast to Ms. Morcroft's lonely fight in Tallahassee, Pastor Warren, who declined to be interviewed for this article, had a host of allies when he went to battle to defend the special tax deduction for housing expenses of clergy members. Ultimately, the allies included both houses of Congress and the president of the United States.

The Housing Exemption

The one small passage in the vast federal tax code that originally conferred the housing-expense exemption on clergy members did not cap the deduction. But in 1971, the Internal Revenue Service limited it to the "fair market rental value" of the furnished home, utilities included.

During a routine audit in 1996, according to court documents, the I.R.S. decided that Pastor Warren's housing deduction exceeded the rental value of his new home on Via Del Sol in the rugged Trabuco Canyon, southeast of Los Angeles.

That's when the fireworks began.

Pastor Warren, who gives 90 percent of his considerable income to charities, later explained in an open letter to other ministers that he decided to sue because the housing allowance was the only way small churches could pay their pastors enough to live — and he knew that those ministers could not fight the I.R.S. as he could.

The deduction, usually called the parsonage exemption, is available to ministers, rabbis and other clergy members of all faiths working at houses of worship. It allows them to live in congregation-owned housing without being taxed on the imputed value of their free housing, as almost all other employees are when they live in company-paid housing.

Since 1954, the provision had also shielded clergy members from taxes on the entire portion of their paycheck designated by their congregations as a housing allowance, whether they spent it on renting an apartment or buying their own home. But the rules the I.R.S. adopted in 1971 limited the deduction to the smallest of three amounts: the "fair market rental value" of the home, the housing allowance paid to the minister or the minister's actual housing expenses.

That ruling lighted the long fuse that, decades later, propelled Pastor Warren into court.

It took four years — and far more of Pastor Warren's money than the $55,300 disputed in the audit — but on May 16, 2000, the United States Tax Court struck down the I.R.S.'s cap and ruled that clergy members could deduct "the amount used to provide a home," however much that might be.

If the story had ended there, Pastor Warren's battle would have been an unequivocal victory for the clergy. But the I.R.S. appealed to the United States Court of Appeals for the Ninth Circuit in San Francisco. And in March 2002, that court raised an unexpected question: was this tax break constitutional? Or did it treat the clergy so favorably that it violated the First Amendment?

The court appointed Erwin Chemerinsky, a law professor then on the faculty at the University of Southern California, to research the constitutional issue and file a friend-of-the-court brief. The court was immediately pelted with defending arguments from lawyers representing almost every religious organization in the country, from the Central Conference of American Rabbis to the Church of the Nazarene.

Some defenders noted that employees required to live in certain places for the convenience of their employer, as pastors are, had long been eligible for tax relief. (A similar exemption is available to some military and diplomatic personnel. But only clergy members can apply it so broadly — for example, applying it even when they work for a church they themselves founded at a location of their own choosing, as was the case with Pastor Warren.)

DOJ_NMG_0078970

Others argued that tax deductions favoring religion had been granted for more than 200 years without any objections from the Supreme Court, and this one was no exception. And a few simply pleaded that clergy members deserved the deduction because they were so poorly paid for their contributions to society.

Professor Chemerinsky studied the relevant First Amendment case law, especially the 1989 case Texas Monthly v. Bullock in which the Supreme Court had drawn the line at government's granting a "tax break to those who spread the gospel that it does not also give to others." He urged the appeals court to find the tax break unconstitutional.

Under I.R.S. rules, he noted, this benefit is available to all clergy members who administer sacraments, conduct worship and direct the spiritual life of a religious institution. "The government thus has to determine what constitutes 'sacraments,' 'religious worship' and the 'spiritual life' of a religion and then to evaluate whether the clergy member is sufficiently engaged in these tasks," Professor Chemerinsky continued.

"It is difficult to imagine a greater entanglement with religion than this evaluation," he wrote in his brief for the court.

Moreover, "the parsonage exemption is a subsidy for religion" and is therefore unconstitutional, he argued. Current Congressional budget records show that the exemption has cost the government as much as $500 million in tax revenue a year, shifting that much of the national tax burden onto other taxpayers.

He did not address the pastoral poverty argument in his court briefs, but in an interview, he noted that poorly paid inner-city teachers and day care workers do not benefit from the parsonage exemption, despite their service to society.

Nor do people at secular nonprofit organizations engaged in humanitarian work. Action Against Hunger U.S.A., based in New York, finances relief programs in Africa, but its director, Cathy Skoula, pays taxes on her entire salary, including what she spends on housing. So does Lawrence Rosenblatt, executive director of the Bowery Residents' Committee, which provides food, shelter and counseling to sick, needy people in Lower Manhattan.

Even amid the distractions of the year after Sept. 11, the constitutional challenge to the clergy housing deduction inspired wide coverage in religious publications and some heated words on radio. Pastor Warren quoted comments made to him by a conservative radio commentator, Hugh Hewitt, who said the issue arose because of "the implacable hostility of the political left to the role of God in the world and the country."

But in fact, the political left and right joined forces with "almost miraculous" speed to defuse this constitutional time bomb, according to Richard R. Hammar, a lawyer and accountant who edits the Church Law and Tax Report newsletter. Within 40 days, the Clergy Housing Clarification Act of 2002 had been approved unanimously in both houses of Congress and signed into law by President Bush.

"It was like the parting of the Red Sea," Mr. Hammar said.

The new law, in Solomonic fashion, affirmed the unlimited deductions ministers like Pastor Warren had taken in the past, but imposed the I.R.S.'s "fair market rental value" restriction on deductions going forward. Satisfied, the tax service withdrew its appeal, ending the constitutional challenge in San Francisco.

Ministers of every faith are also exempt from income tax withholding. And they can opt out of Social Security — an exemption that Mr. Hammar said was probably widely abused.

Until 1968, clergy members were exempt from Social Security unless they joined voluntarily. Since then, they have been automatically covered — but, unlike other citizens, they are allowed to drop out as conscientious objectors if they assert, by a certain point early in their ministry, that they have a religious opposition to receiving public welfare benefits.

"Few people, outside of the Amish, could plausibly say that," said Mr. Hammar, an accountant who also has a law degree from Harvard and attended its divinity school.

Yet his research shows that 3 of every 10 ministers in America have opted out of Social Security. "The only conclusion is that the conscience-based objection is usually really a financial decision," he said.

Because the exemption is irrevocable, why would so many ministers take such a drastic step? Clergy members are considered self-employed and therefore pay a 15.3 percent contribution to Social Security, Mr. Hammar explained. So young ministers on tight budgets sometimes decide, or are persuaded, to drop out and thereby give themselves a 15.3 percent raise.

"The vast majority of clergy who did opt out of Social Security never replaced it with another retirement scheme," he added.

DOJ_NMG_0078971

Several times since 1968, religious denominations have urged Congress to rescue these potentially destitute ministers. On three occasions in the last 20 years, most recently in 1999, Congress has done so, opening a two-year window during which ministers who "irrevocably" dropped Social Security could return.

Mr. Hammar said federal law and the laws of every state except Oregon also exempt religious employers from the unemployment compensation laws that cover other employers. Court rulings widened this exemption to include religious-operated schools, he said, and in 1997 Congress expanded it further to include schools "operated for a religious purpose" but not actually controlled or affiliated with a religious denomination or institution.

As a result, he said, state courts have generally determined that workers who are laid off from these exempt religious employers cannot collect jobless benefits.

Breaks on Sales Taxes

In her 20 years as a lawyer, Heather Morcroft had never argued a case before the Florida Supreme Court.

But there she was, on June 9 — standing alone on her side of the lofty courtroom in Tallahassee to challenge the constitutionality of a Florida law that exempts "religious publications" from the state sales tax.

As Ms. Morcroft sees it, this exemption not only infringes on the liberty of those faiths with writings that may not be deemed sufficiently religious to be exempt, but it also puts government in the role of defining a religious publication and then favoring that publication over secular ones.

None of that, she says, should be allowed under the First Amendment, which provides, in part, that "Congress shall make no law respecting an establishment of religion."

Indeed, in that 1989 case in Texas, the United States Supreme Court ruled that the government could "not place its prestige, coercive authority, or resources behind a single religious faith or behind religious faith generally" without violating the Constitution.

Some legal scholars argue that there was no clear majority opinion, and hence no clear judicial guidance, in the Texas case.

But Ms. Morcroft noted in her lawsuit that since the Supreme Court decision in the Texas case, federal and state courts in North Carolina, Pennsylvania, Rhode Island and South Carolina, as well as Georgia, had "found that a sales tax exemption for items based on their religious content is unconstitutional."

Florida is one of several states that still have some sort of sales tax exemption for religious publications.

Lawyers defending the exemption, which costs the state just under $10 million each year, say it is consistent with a long list of laws, adopted and upheld since the nation's birth, that have benefited religion in some way. Governments "have found it prudent to avoid entanglement of religion with the state taxation process by providing exemptions," argued Kevin Shaughnessy, a lawyer in the Orlando office of Baker & Hostetler who represents The Florida Baptist Witness and The Florida Catholic, which benefit from the exemption. Similar arguments were made by Liberty Counsel, a religious freedom advocacy group in Orlando.

Most states give religious groups some sort of broad sales tax exemption, but most do so simply by including religious organizations in omnibus exemptions that cover sales to, and sometimes purchases from, nonprofit groups of all sorts.

But a few states go further, exempting specific kinds of religious publications from sales taxes no matter who buys or sells them, said John L. Mikesell, a professor at Indiana University and the co-author of a widely used primer on sales taxation. They include Florida, Massachusetts and Texas, which revised its statute after the Texas Monthly case.

Several other states grant special treatment to sacramental equipment and supplies, and to materials a private contractor buys for use on many religious construction projects.

The difficulty of applying these exemptions in real life was revealed in Tallahassee, when Justice Barbara J. Pariente quizzed James A. McKee, the state attorney defending the Florida statute, about how the state went about "deciding whether my Bible is really a religious text, or if it is historical or something else."

Mr. McKee quickly assured her that the revenue department left those constitutionally sensitive "content" decisions to the booksellers. "It's similar to a statute that exempts certain food items," he explained. "The grocery store is actually the one that makes the determination."

Sounding a little shocked, Justice Pariente asked, "So they can say anything is religious and there is no challenge to it?"

DOJ_NMG_0078972

Mr. McKee did not directly respond to her question — but booksellers have.

While there is no way of knowing how small bookshops decide what is an exempt "religious publication," big national booksellers have developed definitions to guide their stores in Florida and other states with similar exemptions.

The problem is, their definitions are different.

Barnes & Noble recognizes a narrow category that includes the Bible and a short list of other "sacred texts," including the Talmud and the Koran, according to Mary Ellen Keating, a company spokeswoman.

At Borders, the exemption is broader, including books on theology and religious history as well as Bibles, hymnals, prayer books and the sacred texts of all religions, according to Anne Roman, a spokeswoman there.

Hearing that, Ms. Morcroft said she was not surprised at the disparities. "I have friends who shop at a local Christian bookstore," she said. "They say the only thing that's ever tax-exempt there is the Bible."

Like the many other tax and regulatory exemptions that have become available to religious organizations in America, the tax breaks for clergy housing expenses and religious publications benefit religion in ways that some critics say go beyond the limits of the Constitution.

Until several years ago, "it was inconceivable for most to think that religion might well be aggressively expanding its power in a way that is harmful to the public good," said Marci A. Hamilton, a law professor at the Cardozo law school at Yeshiva University in New York and the author of "God vs. the Gavel: Religion and the Rule of Law," which is critical of many religious exemptions, particularly in the areas of land use and family law.

But now, Professor Hamilton said, the power of religious entities "is at its apex."

Defenders of these exemptions deny that they raise any questions of excessive power or constitutional violations. "Government deregulation of religion is consistent with a broader pattern of American government going back to the founding," said Anthony R. Picarello Jr., vice president and general counsel of the Becket Fund for Religious Liberty, a legal advocacy group in Washington.

"Providing special treatment is not always constitutionally required," he said, "but it is constitutionally permissible."

In The Congressional Hopper: A Long Wish List Of Special Benefits And Exemptions (NYT)

By Diana B. Henriques

The New York Times, October 11, 2006

For all their gains, some advocates for religious freedom see the last 15 years not as a time of increased accommodation for religious groups but as a long battle in which religious groups have had to fight hard just to hold their own against a tide of unsympathetic policies. Indeed, they say government must do more to protect religious institutions of all kinds from the hostile environment of modern America.

A Congressional wish list supported by some religious leaders and other advocacy groups would accomplish that.

One bill, H.R. 235, would exempt churches and other religious institutions — but not secular nonprofits — from the I.R.S. rule against partisan political endorsements by tax-exempt organizations. Another, H.R. 27, would grant religious employers even more leeway to discriminate on religious grounds in their hiring, specifically in job training programs paid for with federal tax dollars.

There's also H.R. 2679, which passed in the House on Sept. 26 by a vote of 244 to 173. It would prohibit the courts from awarding damages, lawyers' fees or costs to any plaintiff who successfully sues over possible violations of the establishment clause of the First Amendment, cases involving things like the erection of crosses or nativity scenes on public land.

The Public Prayer Protection Act, H.R. 4364, would protect the right of government officials "to express their religious beliefs through public prayer" by barring federal courts, including the Supreme Court, from hearing lawsuits raising constitutional objections to those prayers.

The list also includes the Workplace Religious Freedom Act, H.R. 1445 and S. 677, introduced last year with bipartisan support in both houses, which would amend the Civil Rights Act of 1964 to require employers to be more accommodating to the religious observances of their employees. The bills do not say whether religious employers would be exempt, as they are from the Civil Rights Act's prohibition on discrimination based on religion.

DOJ_NMG_0078973

Another bill, H.R. 1054, would transform into law the executive orders that created President Bush's "faith-based initiative," to make federal grants and contracts more available to religious groups.

Among those who think more should be done is Anthony R. Picarello Jr., vice president and general counsel of the Becket Fund for Religious Liberty in Washington, one of a growing roster of law firms and legal advocacy groups ready to provide free legal help for religious groups or individual believers involved in First Amendment litigation or disputes.

"I don't think we can say the climate for religious freedom is so dramatically improved that we don't need these laws," Mr. Picarello said.

There are still fierce battles over individual religious practices and the display of religious symbols on public property, he noted. And religious organizations — especially those outside the nation's mainstream traditions, like small Latin American or Asian sects and non-Christian houses of worship like mosques, Orthodox synagogues and Hindu temples — still face discriminatory zoning decisions in towns across the country.

He is also concerned that the sexual abuse cases pending against the Catholic church will erode the longstanding judicial doctrine that protects religious employers from lawsuits by disgruntled clergy members and other employees.

"I don't necessarily view the climate as improving," he said, adding a few moments later: "The idea that special protection in the law for religion is unconstitutional has been rejected over and over and over. Yet all these statutes are under continuous attack."

"A lot less frequently, perhaps," he added, "but it hasn't stopped."

Given the broad and expanding benefits available to religious organizations, from tax breaks to government contracts, what explains the continuing complaints about a nationwide hostility toward religion and religious organizations?

A number of legal scholars say some justifiable discontent is warranted over the erratic path the Supreme Court has followed on First Amendment cases since 1990. Derek H. Davis, formerly the director of the J. M. Dawson Institute of Church-State Studies at Baylor University, said that although the courts had clearly become more accommodating to religion, "the whole landscape is in disarray about what the law is."

But at a more human level, specialists on religious law said, basic changes in the workings of government — more lenient rules on revenue bonds, new tax breaks for faculty housing at church schools, higher barriers to workplace lawsuits, beneficial exemptions from licensing rules — just don't attract the emotional lightning that flares over same-sex marriage and religious symbols on public land.

For example, a federal court ruled that a giant cross on city-owned land at the Mount Soledad Veterans Memorial in San Diego was unconstitutional and ordered it removed by August of this year. The public reaction was so fierce that Congress took less than six weeks in the summer to approve a law providing for the federal government to buy the site and preserve it intact.

Much of the angry talk about a national war on religion "is a reaction to modernity and the pace of change in our society," said Edward R. McNicholas, a director of the religious institutions law practice at Sidley Austin. "People want to cling to their religious values as they encounter more cultures that are different and foreign to them. So the language of exclusion has been taken up in the political rhetoric."

Beyond just the talk, the Becket Fund and other religious freedom advocacy groups can cite what they say are examples of unfair attacks on people of faith: a devout librarian fired for refusing to work on Sunday; a local zoning law that allows no churches; a student rebuked for saying "God bless you" to a classmate who sneezed. With the involvement of these advocacy groups, battles like these are getting far more attention, adding to the public concern about threats to religious freedom.

While many of these cases are quickly resolved with a single warning letter or sometimes just a telephone call, they leave a bitter aftertaste in the political arena, said the Rev. Barry Lynn, president of Americans United for Separation of Church and State.

Some scholars and leaders of faith worry that the real threat to religious vitality in the United States is not the "hostility" of a secular culture.

"What's happening with all these tax breaks and exemptions is a soft, subconstitutional establishment of religion returning to the country," said John Witte Jr., director of the Center for the Study of Law and Religion at the Emory University law school. That increasing level of indirect support and patronage, he said, "breeds a level of dependency that I think is dangerous for both religion and government."

DOJ_NMG_0078974

Professor Davis, now the dean of humanities at the University of Mary Hardin-Baylor in Belton, Tex., agreed with that view, but said he was also troubled that religious organizations were pursuing more regulatory exemptions even as more government money is heading their way through contracts, vouchers and grants under the faith-based initiative.

"That suggests to me that they don't want government involved in monitoring religious institutions, but they want the benefits that government is dispensing anyway," he said. "To me, that's unfair. If you're going to take government money, you should a bide by the rules, like everyone else."

CONGRESS-ADMINISTRATION:

Bush Says Democrats Would Raise Taxes (AP-Y)

By Jennifer Loven

AP-Yahoo, October 11, 2006

President Bush portrayed Democrats on Tuesday as the party of big spending and high taxes, aiming to give increasingly endangered Republicans an edge in a midterm election debate dominated recently by congressional scandal and overseas crises.

"If you want to keep your tax cuts, vote Republican on Nov. 7," Bush said at a fundraiser for former Republican Rep. Mac Collins, who is seeking a comeback to Congress. He is challenging Rep. Jim Marshall, seen as one of the most vulnerable Democratic incumbents.

"Next month, our nation has got this choice to make," the president said. "Do we keep taxes low so we can keep this economy growing? Or do we let the Democrats in Washington raise taxes and hurt the economic vitality of this country? ... This decision will have a huge impact on the working people all across the United States of America."

Bush is hoping to help Republicans retain control of both houses of Congress against ever steeper odds by convincing voters that Democrats would raise taxes and compromise Americans' safety if handed the majority. But the taxes-and-terrorism pillars of the GOP midterm election strategy, the mainstays of Bush's campaign-trail speeches, have been partially drowned out of late.

The revelation of a Republican lawmaker's online sexual advances toward male congressional pages has sparked a fierce debate about whether the GOP leadership did enough to protect teenagers working on Capitol Hill. North Korea's reported test of a nuclear bomb has given Democrats ammunition to argue that Bush focused on going to war in Iraq, a country without weapons of mass destruction, while the threat from the communist regime in Pyongyang expanded.

The degree to which the White House is struggling to regain control over the political conversation was demonstrated Tuesday when Bush aides distributed excerpts of the president's tough-on-Democrats speech before he landed in Georgia. Unlike previous administrations, the Bush White House keeps tight control over the president's speeches, usually handing out only the most significant ones in advance and even then only a few minutes beforehand.

On Tuesday, though, the parts of Bush's remarks that went after Democrats on taxes were given to the reporters traveling with the president on Air Force One and also, to maximize their exposure, disseminated by e-mail to hundreds more on the White House press list.

The event at the Macon Coliseum raised $300,000. Outside, there were demonstrators from both sides. About 150 people waved American flags and signs that said "God bless President Bush," while others held placards asserting that the president is a war criminal.

Bush singled out the voting record of House Democratic leader Nancy Pelosi to ridicule her declaration that Democrats "love tax cuts." The president said Pelosi, likely to be House speaker if Democrats win control of that chamber, voted against reducing the so-called marriage penalty, phasing out the inheritance tax and cutting taxes for small businesses and families with children.

"Given her record, she must be a secret admirer" of tax cuts, Bush said of Pelosi, earning appreciative laughs from the friendly audience of GOP donors. "If this is Democrats' idea of love, I wouldn't want to see what hate looks like."

DOJ_NMG_0078975

Pelosi, in a statement, fired back: "Democrats have a strong record fighting for tax relief for middle-class families and small businesses that would spur economic growth and expand opportunity for all Americans, not just the privileged few." She said Democrats would "restore fiscal responsibility with pay-as-you-go budgeting, reducing the budget deficits that have exploded as a result of President Bush's failed economic policies."

With some conservatives in the Republican Party's base of support restive about increased federal spending under Bush's watch, the president defended his record on the budget deficit. He said he is making faster-than-expected progress on his goal of cutting the annual deficit in half by 2009, because of higher tax receipts.

"The Democrats' approach to cutting the deficit is taking more of your money to pay for their spending," he said. "The Republican approach is to restrain spending."

Dangerous Thinking In Compromise On Treatment Of Captive Terrorists (WSJ)

Wall Street Journal, October 11, 2006

The attempt by Sens. John W. Warner, John McCain and Lindsey O. Graham to explain their compromise with the president on treatment of terrorist war prisoners ("Look Past the Tortured Distortions," editorial page, Oct. 2) did more to perpetuate distortions and misconceptions than clarify anything. We have the Geneva Convention, the Detainee Treatment Act, and now the Military Commission Act. Sounds like we are desperately trying to make a square peg fit snuggly into a round hole using a lot of grease known as political mumbo jumbo with a heavy dose of political correctness and pseudo nobility thrown in.

The last I heard, the Geneva Convention applies to the fair and humane treatment of POWs. I believe POW stands for "prisoner of war." How did we get from POWs to "detainees," "suspected terrorists" or "enemy combatants," all used interchangeably in this article? How did we get from "captured' to "arrested"? Are we dealing with people who are trying to destroy America and kill Americans, or armed convenience store robbers who may have killed somebody? Since when do POWs get Supreme Court review on anything?

If I am an American service member in a conflict/battle in Iraq (or wherever) and someone is shooting at me and I shoot back and kill him, whom have I killed -- a potential detainee, a suspected terrorist, the enemy or a non-resident unabomber with distorted religious perceptions? If I capture/arrest a person on my airplane with a bomb in the heel of his shoe that didn't explode, subsequent to an attempt, is he a suspected anything or is he a prisoner of war?

Those who think being kind to terrorists is going to provide any protection to our men and women in uniform, now or ever, needs to update their thinking to a post 9/11 status. While we need not and should not be barbaric and cruel (i.e. pulled fingernails, cigarette burns, humiliation for entertainment, etc.), trying to find a way to be rational and civilized to those who are irrational and uncivilized is tantamount to treating a three-year-old like an adult. It ain't gonna work.

My big question is, are we inadvertently perpetuating a mindset of "kill 'em but for God's sakes don't capture them"? If we have to plead with them or persuade them with flowers and candy to tell us anything after we capture them, what's the net difference, militarily speaking, of course? Somebody, somehow needs to clear up the confusion, quickly. Not for the president or senators, but for those in the middle of a firefight, wherever and with whomever that may be. God save America. If we can't stop the infighting in Washington, He may be our only chance.

James H. Godwin
Lt. Cmdr., USAF (Ret.)
Vietnam Veteran 1968-69
Cold War Veteran 1955-67, 1970-74
Simpsonville, S.C.

When one of the depraved monsters we are fighting considers whether or not to behead a captured American soldier, I doubt that the fact that we will now reveal secret evidence to terrorist defendants will give him pause. Furthermore, this legislation concerns procedures for unlawful combatants. A U.S. Marine wears a uniform with insignia, carries weapons openly, has a chain of command, and does not target civilians. Why would a group that ludicrously declares such Marines unlawful combatants then feel compelled to follow any international strictures or moral norms concerning their treatment?

DOJ_NMG_0078976

Sadly, this foolish and dangerous thinking is unlikely to have any bearing on the treatment of our captured military personnel, but is far more likely to result in more of them dying in the field while placing civilians at greater risk here at home.

Matthew Commons

Lt. Cmdr., USN

Jacksonville, Fla.

Regarding habeas corpus for terrorists, the senators say, "These challenges are in excess of what our soldiers would be afforded as prisoners of war."

What a strange statement by three former military officers, since we have never seen, nor should we ever expect to see, captured Americans treated as prisoners of war by the very same terrorists.

William D. Allen

(Another former military officer)

Placentia, Calif.

By publishing this piece you perform a public service by illustrating how far detached from reality and the sentiment of the American people these senators are. Americans know that the best way "to give protection to our men and women in uniform" is to kill as many of the enemy as fast as we can. Americans also know that none of the people held in Guantanamo or anywhere else, nor anyone being surveilled by the NSA, is even remotely subject to the protections of the Geneva Conventions, nor are they entitled to or covered by the Constitution of the United States.

Carroll Melton

Arlington, Va.

Democrats Want to Assure Middle-Income Tax Relief

In response to your Oct. 3 editorial "An Honest Democrat":

President Bush and Republican campaign committees have attacked Democrats with a claim that we would raise taxes if elected to a majority in Congress. That's not true. Democrats have a long history of supporting targeted relief for middle-income families. In fact, many of the tax benefits extended by this administration began as Democratic initiatives.

Democrats have developed a pay-as-you-go platform for our nation's budget that will not saddle our children and grandchildren with more, unbearable debt. We want to start by closing the "tax gap," collecting the $345 billion owed each year in unpaid taxes. We also believe we should use our tax code to encourage investment and job creation here in America. We would make it a priority to close tax shelters and eliminate benefits for companies that move jobs overseas.

During a recent fund-raiser in Florida, President Bush seized on a statement in the press that I could not support the extension of all of his tax cuts. He said "that's one way of saying they're going to raise your taxes because, you see, if you do not extend the tax cuts your taxes go up." Well, the president is talking about his big rate tax cuts that aren't going to expire until 2010. That's light years away from the debate before us, and we have no way of knowing what the economy or even our leadership will look like then. Democrats want to pursue new priorities to strengthen relief for middle-class families that have been left behind during the Bush administration.

What's done is done. America needs to seek new ways to help middle-income families improve their lives. The only way to achieve this is with cooperation between Republicans and Democrats. I know the president and I agree that comprehensive tax reform is a priority. Further, we both realize that any tax reform proposal signed into law must not increase the national debt. In order to do that, there must be winners and losers. Americans have a choice on the policies we'll pursue; Democrats would work to ensure that middle-income families are not the losers in the tax-reform debate.

Rep. Charles B. Rangel (D., N.Y.)

Ranking Democrat

House Committee on Ways and Means

Washington

The president, the majority party in Congress, and now your editorial page are attempting to convince the American public that Democrats are intent on increasing their taxes.

DOJ_NMG_0078977

We find it curious that Democrats are being accused of planning to increase taxes on middle-income families when decisions made by the current majority have already done so. Those in charge of the Congress now deliberately chose not to extend middle-class tax relief -- such as the deductions for college tuition, state and local sales taxes, and teachers' out-of-pocket classroom expenses -- before Congress adjourned for the elections. And President Bush's fiscal year 2007 budget failed to include relief beyond 2006 from the increasingly middle-class Alternative Minimum Tax.

The majority party in Congress has proven it is ready and willing now to increase taxes on American families.

Sen. Harry Reid (D., Nev.)

Sen. Max Baucus (D., Mont.)

Privatizing Drives Up Cost Of Administering Medicare

Your Oct. 4 editorial "Markets and Medicare" implies that the private sector is more efficient than Medicare. Medicare trustees suggest the opposite, finding that administrative costs for the new prescription drug program's private drug plans average 12% -- six times Medicare's historic 2% ratio.

You also claim that "competition" is responsible for a decline in the drug program's cost. But these reductions are primarily a result of a trend of lower drug spending that is unrelated to Medicare.

And you allege that the Veterans Administration limits drug access. But the VA covers 16,000 prescription drugs on its formulary, and ensures access to other drugs when necessary. VA patient satisfaction is high and the VA negotiates price discounts far below those in Medicare's private plans.

On one point you are correct: I am unhappy with the GOP agenda to privatize Medicare. Why? At the behest of Republicans, the government now pays Medicare-sponsored HMOs and other private plans 11% more than would be spent in the traditional fee-for-service program. If the private sector is so efficient, why do we have to pay it more to do the job?

South Carolina Schools Top Improvement Lists

Your Sept. 27 editorial "Change Comes to a Carolina" seriously misreprents the picture of education in South Carolina.

On the SAT -- always the favored whipping boy of public education critics in our state -- South Carolina holds the top 10-year improvement in the country, gaining 31 points while the nation has gained only eight.

On the National Assessment of Educational Progress (NAEP), the test preferred by the U.S. Department of Education for state-to-state comparisons, South Carolina exceeds the national average in math and is approaching it in reading. Our fourth-graders and eighth-graders are ranked No. 1 in the nation for improvement in math, our fourth-graders are No. 1 for improvement in science, and our eighth-graders are No. 3 for improvement in science.

It is true that too few of our students score "proficient" on state exams. But it is also true, as eight independent national studies have confirmed, that our standards for proficiency are among the toughest in the nation. What most states pass off as "proficient" earns only a "basic" score in South Carolina, making other states look better without actually achieving betterscores.

South Carolinians for Responsible Government, the organization mentioned in your editorial, has a single agenda: to dismantle public education and replace it with private school vouchers. The group has distributed inaccurate information and exerted pressure on legislators. And now it has filed a lawsuit against the South Carolina State Ethics Commission because the commission suggested that SCRG should comply with state election laws and disclose the source of its funding for campaign ads that targeted public school supporters for defeat.

Inez M. Tenenbaum

South Carolina State Superintendent of Education

Columbia, S.C.

Golden Memories

DOJ_NMG_0078978

What a delight it was to read Meghan Cox Gurdon's article "The Other Golden Years" (Weekend Journal, Taste, Friday Oct. 6). The illustrated cover of "The Saggy Baggy Elephant" really took me back to my early childhood and my dear grandmother. After spending hours reading the Little Golden Books to me, I picked up her wrinkled hand and said "Grandma, you have skin just like the saggy baggy elephant." Fortunately for me, her reply is lost in time.

Because my grandmothers and parents read me the Little Golden Books and other wonderful stories I have had a lifetime love affair with reading. Thanks to Little Golden Books and Ms. Gurdon for bringing back such wonderful memories.

Eyes on Romania

I disagree with your editorial suggesting that Romania and Bulgaria must finally be accepted into the European Union ("The End of Enlargement," Sept. 28). As a Jewish Holocaust survivor from Romania, I wish to emphasize that to this day, Romania has not paid restitution to Jews whose properties were confiscated and who were enslaved in forced-labor camps during the Holocaust.

Despite assurances of having established a Holocaust curriculum in schools and universities, Holocaust education in Romania remains optional, not obligatory. Random lectures on the subject given in Lasi University or in Cluj-Napoca University is not what the education law supposedly requires.

Much depends on the attitude of those in power and their willingness to bring about change. As George Orwell wrote: "Those who control the past, control the future. Those who control the present, control the past."

Romania, hoping to join the EU, is expected to clean up its act on a range of issues. It should be made clear that if Romania does not, the country will be at risk of losing its place among the western nations. The world is watching!

Hong Kong Wrong

With reference to Milton Friedman's Oct. 6 op-ed, "Death of the Hong Kong Model":

I always thought that the big story on Hong Kong was missed. Its steady decline was the natural result of liberalism and political correctness. It should have never been given back to China. Hong Kong is just about gone, and no one is really noticing. What a shame.

Brian Grayson

Albuquerque, New Mexico

Mr. Tsang obviously thinks the collective intelligence of his small advisory group is greater than that of 6.8 million Hong Kong residents. What is so surprising about that? The U.S. has 535 members of Congress who believe they know more than 300 million Americans, and every day provides further evidence regarding who knows more.

J. H. Colter

Lindon, Utah

Mr. Friedman wrote in defense of laissez-faire capitalism that "if there are any obvious imperfections, the market will eliminate them." Really? I thought that it was government who took care of "imperfections" such as WorldCom, Adelphia and Enron. And let us not forget how many Wall Street firms a few years ago paid hefty fines and were forced to change the way they do business when the SEC went after them for misleading investors. If in a laissez-faire economy the only thing that matters is making money, then it can be amazing how much "imperfection" can be tolerated by the market.

David P. Graf

Chatham, Illinois

Does this mean that capitalism cannot work outside a democracy? There are countries that are socialist internally but have a government acting as a capitalist in the global market to pay for the cost of internal social policies. France is one such example. Is China trying to use Hong Kong in a similar way?

Painting A Rosy Budget Picture (WP)

By Michael Abramowitz And Peter Baker

The Washington Post, October 11, 2006

MACON, Ga., Oct. 10 -- The federal budget deficit shrank from $318 billion to less than $260 billion in the fiscal year that concluded in September, officials disclosed yesterday. It marks the second year in a row that the deficit has declined after ballooning in the early years of the Bush administration.

White House officials hailed the improving short-term budget picture as a vindication of President Bush's tax-cutting agenda, though the long-term prospects are considerably bleaker, given the escalating costs of health-care and retirement programs and, in the view of many economists, the red ink produced by tax cuts.

Bush pointed to the declining budget deficit in remarks Tuesday evening at a fundraiser in Georgia, where he once again sought to frame next month's midterm elections in part as a referendum on tax cuts that he says have stimulated revenue. The nation "has got this choice to make," Bush told donors here. "Do we keep taxes low so we can keep this economy growing, or do we let the Democrats in Washington raise taxes and hurt the economic vitality of this country?"

The president will step up his efforts to tout the economy at a White House event Wednesday, when officials said he will announce that he has met his target of cutting the deficit in half over five years -- three years ahead of schedule.

That promise was based on what officials once projected would be a $521 billion deficit in 2004. One senior White House official, who spoke on the condition of anonymity because the president has not officially announced the numbers, said the deficit for 2006 will be less than $260 billion, "with a significant margin." The Congressional Budget Office estimated last week the deficit would be $250 billion.

One reason the goal was achieved is that the bar was set low. As the economy improved, the $521 billion deficit never materialized, and the government ended 2004 with a $412 billion deficit. Moreover, Bush's policies, including the tax cuts and war spending, helped wipe out the surplus that his administration inherited from the Clinton administration in 2001; Democrats point out that the government was supposed to be running a $300 billion surplus this past year, so in effect, they say, there has been a downward swing of more than half a trillion dollars.

Sen. Kent Conrad (N.D.), the ranking Democrat on the Senate Budget Committee, said the deficit numbers mask the broader problem, which is that the government is using so much in surplus Social Security taxes that it eventually must repay. When that is added to the official deficit numbers, Conrad said, the country had an additional $550 billion in debt last year. "It's amazing how word games have been used to hide from the American people how serious our fiscal situation really is," Conrad said in an interview. "All of the happy talk is just that."

Still, the budget deficit is declining, in large measure because corporate and individual tax receipts have surged at a much faster rate than the government originally projected. The Congressional Budget Office estimated last week that government receipts were up 11.8 percent in 2006, to $2.4 trillion, the second-highest increase since 1981, surpassed only by the 14.5 percent increase last year.

Meeting with reporters last week, White House budget director Rob Portman said: "This economy is strong and growing. The president's pro-growth policies, including the tax relief, are working."

But Robert D. Reischauer, former director of the Congressional Budget Office and now president of the Urban Institute, gave the tax cuts little credit because the economic effect of putting that money back into the economy was offset by the debt incurred from extra spending on the wars in Iraq and Afghanistan and relief from Hurricane Katrina. "The consensus among

DOJ_NMG_0078980

economists is that the tax cuts of 2001 and 2003 and the extensions have done little to boost economic growth, having been offset by increased spending," he said.

Reischauer agreed that revenue is stronger than most observers expected. "But what we're seeing is the calm before the storm," he said. "Everyone knows that the current revenue and spending structures taken together will be unsustainable as the baby-boom generation begins to enter its retirement years."

Administration officials said the president will continue to talk up the economy as he tours the country in the weeks before the Nov. 7 elections, hoping to overcome voter anger about the war in Iraq and congressional scandals. "In some of the key states and some of the key districts, even within these states, the economy remains the number one issue," said Portman, a former Ohio congressman who remains close to his House colleagues.

Bush was campaigning Tuesday for Mac Collins, a former congressman who is trying to unseat Rep. Jim Marshall in one of the few House races in which the GOP has hope of defeating a Democratic incumbent. Collins aides said they expected the campaign to take in more than $400,000 from Bush's appearance.

Baker reported from Washington.

Medicaid Spending Rises Only Slightly (WP)

By Christopher Lee

The Washington Post, October 11, 2006

Medicaid spending rose by 2.8 percent in fiscal 2006, the smallest increase in a decade, according to a study released yesterday by the nonprofit Kaiser Family Foundation.

At the same time, state tax revenue grew by 3.7 percent as the economy continued to improve, the survey of 50 states and their Medicaid directors found.

Together those trends signal that the state-federal program that pays for health care for the poor and disabled is emerging -- at least temporarily -- from a period in which many states limited eligibility, benefits and reimbursement rates for health-care services in a drive to corral costs. For 2007, only five states plan to restrict eligibility, while 26 indicated they will restore benefits, relax application and enrollment restrictions and undertake new outreach efforts.

"The program continues to grow, but it is not out of control," said Diane Rowland, executive director of the Kaiser Commission on Medicaid and the Uninsured.

"We now see that as the economy is improving that the states are looking at how they can best meet the needs of their citizens using the tools they have available to them."

With total annual costs of more than $300 billion, Medicaid serves more than 50 million people and its fortunes rise and fall with the economy. In tough economic times, when more people are out of work and hurting financially, Medicaid rolls swell. But that is when it is hardest for states to pick up their 40 percent of overall Medicaid costs, because a slumping economy also sends state tax revenues plummeting. (The federal government pays the balance of the costs.) The crunch typically leads Medicaid officials to scramble to impose cost-containment measures as part of broader efforts to rein in overall state spending.

Everything tends to turn around when the economy improves, with state coffers more flush and fewer people eligible for Medicaid. While 2002 and 2003 were lean years for states, the past two were better.

The slower growth in Medicaid spending documented by the Kaiser report was a product of both the improving economy and continued cost-containment efforts, Rowland said. Spending growth would have been even slower, but states had to fork over billions of dollars to help pay for the new Medicare drug benefit, which covers about 6 million low-income people who used to get prescriptions through Medicaid, the report found.

Even in good times, there is upward pressure on enrollment as the population ages and an increasing number of people lack health insurance. Medicaid enrollment grew by 1.6 percent in fiscal 2006, the lowest rate since 1999, the survey found. It does not take many people to drive up costs, however. About 4 percent of the Medicaid population, generally the elderly and disabled, accounted for 48 percent of the program's expenditures in 2001, the survey showed.

Anne Marie Murphy, Medicaid director for Illinois, said officials there have combined expansion and outreach in recent years with a new emphasis on prevention and managing health-care services.

DOJ_NMG_0078981

"We have been very focused on controlling utilization," she said. "We want people to get health care, but to get necessary health care. We want to spend our money wisely and be a prudent purchaser of care."

Although pressure to hold down costs continues, many states plan to expand coverage in 2007.

In California, about 95 percent of Medicaid-eligible children are already enrolled -- but officials will go after the uninsured 5 percent, said Stan Rosenstein, the state's deputy director of medical care services. "The governor has put in major funding for outreach, and we are making major simplifications to our application and redetermination process," he said.

Pump Is Not Only Place For Lower Gas Prices (WP)

By Tomoeh Murakami Tse

The Washington Post, October 11, 2006

As consumers revel in plummeting gas prices, a federal government report released yesterday offered another pleasant surprise: lower heating bills this winter.

For the first time since the 2001-02 season, natural gas bills are expected to drop by an average of 13 percent, or $119, from the previous year, according to the Energy Department's Energy Information Administration. Nearly six out of 10 households in the country rely on natural gas.

Consumers using other fuels won't fare as well, according to the report. Households heated by electricity are likely to see their bills increase by an average of 7 percent, or $58, because of the higher costs late last year for fuels for electricity generation and the loosening of caps on rates. People who use heating oil can expect to pay 6 percent, or $91, more this winter. Users of propane, however, can expect an average decrease of 1.1 percent, or $15, in their heating bills.

The chief reason for the reversal in consumers' natural gas costs is the high level in storage -- near full capacity -- which has caused prices to plunge. Inventory is plentiful, analysts said, because of last winter's mild weather, which significantly cut consumption, and a normal summer season that did not strain resources.

"The winter of 2006 was just off-the-charts warm," said Paul Flemming, director of power and gas at Energy Securities Analysis Inc. in Massachusetts. "We started what we call the inventory-building season in April with a very high starting point."

Last year, natural gas prices were also pushed up by hurricanes Katrina and Rita, which affected pipelines and natural gas processing plants. The estimated bills for this winter are still higher than 2004 levels. Heating oil supplies were also disrupted by the hurricanes, but their prices last year were not as affected as those for natural gas because the International Energy Agency released some reserve supply, said Doug MacIntyre, senior oil market analyst at the U.S. Energy Information Administration. Heating oil prices are continuing on their upward trend this year, while natural gas prices are adjusting to their sharp increases last year.

In the South region that includes the Washington area, natural gas bills would have been about 20 percent lower than last year, said Tancred Lidderdale, senior economist with the EIA. But because this winter is expected to be about 6 percent colder than last season, according to the National Oceanic Atmospheric Administration, the decline in heating bills works out to about 14 percent. "Unfortunately, the lower price is going to be offset somewhat by the expected colder winter," Lidderdale said.

Roger Cooper, executive vice president for policy and planning at the American Gas Association, a D.C.-based trade group, cautioned against reading too much into the forecasts, which were adjusted through the heating season last year as the winter turned out to be warmer than expected.

Still, "I think the direction is right," he said, adding that "I think we will see lower" natural gas bills.

Agency Expects Lower Costs For Gas Heat (NYT/AP)

By The Associated Press

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 (AP) — Families using natural gas can expect their heating bills to drop an average of $119 this winter, the government predicted Tuesday. But those who heat with oil or electricity are likely to see their bills rise.

The government based its predictions on its forecast of a mild winter for most of the nation and its assessment of energy supplies and costs as the nation's oil and natural gas production and refinery output recover from hurricane damage in 2005.

DOJ_NMG_0078982

"This is a very different scene than we had a year ago in the wake of Hurricanes Katrina and Rita," said Guy Caruso, who heads the Energy Information Administration, the Energy Department's statistical agency.

The hurricanes knocked out 20 percent of the nation's gas production, severely damaged Gulf Coast gas processing facilities and shut more than a dozen refineries — an impact "we're only now recovering from," Mr. Caruso said.

"The greatest beneficiaries will be those who use natural gas because prices went up 29 percent last year" and have since fallen back, he said. Natural gas stockpiles are expected to be near capacity by Nov 1.

The Energy Department forecast that the average household using natural gas would pay $826 for home heating this winter, down $119 or 13 percent from last winter.

Natural gas is the largest source of home heating in the United States. It is the primary fuel for 58 percent of all households, including almost four out of five in the Midwest.

A third of households rely on electricity as the primary heating fuel. The government estimates they will pay an average of $839 for heat this winter, up $58 or 7 percent from last winter. Electric heat is most prevalent in the South, where 52 percent of households use it.

Fuel oil users can expect to pay $1,522 on average this winter, up $91 or 6 percent from last winter. They represent only 7 percent of the nation's households but about half the homes in New England.

Households that rely primarily on propane are expected to pay an average of $1,265 this winter, down $15 or 1 percent from last year. Propane is the primary heat source for only 5 percent of households.

Heating Costs For Some Expected To Drop This Winter (USAT)

By Barbara Hagenbaugh

USA Today, October 11, 2006

WASHINGTON — Most, but not all, Americans will pay less to heat their homes this winter than last year, the government said Tuesday in a report that offered good news for natural gas users.

If realized, the drop in average winter bills will be the first in five years.

"The trend is down, and that's the good news," Guy Caruso, head of the Energy Department's Energy Information Administration, said at a winter heating conference.

Prices for natural gas, the most popular heating source in the USA, are expected to be down dramatically from last year, when costs jumped following Hurricanes Katrina and Rita. The average retail natural gas price is expected to be about $1.22 per therm this winter, down from $1.46 last year.

Although this winter is expected to be warmer than normal in most of the USA, it is still expected to be colder than last year, which was exceptionally mild, says Michael Halpert, lead forecaster at the National Oceanic & Atmospheric Administration's Climate Prediction Center. January 2006 was the warmest January on record.

Colder weather means consumers this year will have to use more energy to heat their homes, partially negating some of the price drop for natural gas, Caruso said. He also cautioned that consumers' winter bills will vary widely based on location, fuel source, home size and heating habits.

The agency's expectations:

•Natural gas. Users of natural gas, which heats 58% of U.S. homes, will pay an average $826 this winter, down 13% from last year.

•Electricity. Users of electricity, which heats 30% of U.S. homes, will pay an average $839 this winter, up 7% from last year. Price and usage are expected to rise.

•Heating oil. Users of heating oil, which heats 7% of U.S. homes, will pay an average $1,522 this winter, up 6% from last year. Although prices are forecast to be unchanged from last year, consumers are expected to use more.

•Propane. Users of propane, which heats 5% of U.S. homes, will pay an average $1,265 this winter, down 1% from last year.

Although bills will likely be lower this winter for most households, the average tab will still be up 15% from two years ago and 64% from five years ago, according to the EIA. That means many low-income consumers will continue to struggle to pay

DOJ_NMG_0078983

their heating bills this winter, says National Energy Assistance Directors' Association Executive Director Mark Wolfe. “These are really not affordable bills for low-income families,” Wolfe says.

Also Tuesday, a barrel of crude oil trading for November delivery fell $1.44 to $58.52. EIA predicted oil prices would rise to $67 by January based on tight supplies and demand for heating oil.

Winter Heating Likely To Cost Less (WT)

By Patrice Hill

The Washington Times, October 11, 2006

The government projected a decline in winter heating bills yesterday, adding to the already sizable benefit to consumers from falling energy prices.

The Energy Information Administration yesterday predicted that for the first time since 2001, home heating bills will stay the same or decline from last year's levels, thanks to plunging oil and natural gas prices and forecasts of a mild winter ahead.

Add that to rapidly dropping gasoline prices -- pump prices have plunged 75 cents to $2.26 since August, the fastest decline on record -- and consumers are set to enjoy an energy dividend just in time for the holidays, economists said.

"We expect a powerful surge in discretionary income will lift spending, courtesy of the recent plunge in energy quotes," said Richard Berner, chief economist at Morgan Stanley. He estimates consumers' discretionary income has jumped at a $100 billion annual rate since August because of falling gasoline prices, and will grow by another $20 billion to $30 billion because of lower heating bills.

This should give a small boost to economic growth, he said, but he cautioned that much of the windfall could be wiped out if the weather turns out to be colder than expected.

"We already know that consumers celebrated the drop in gas prices by going shopping in September," said Gina Martin, economist with Wachovia Securities, who predicted gas prices will bottom out between $2 and $2.25 on average this winter before heading up again in the spring.

But consumers may not spend the windfall too wisely, she said. Wachovia expects consumers to blow some of their spare change simply by driving more, leaving about $12.6 billion for spending at shopping malls and stores -- not enough to make a major impact on the economy.

The fall in pump prices already has prompted consumers to revisit their love affair with sport utility vehicles after a flirtation with more fuel-efficient cars brought on by $3 gasoline in the spring and summer, said Patrick Olsen, a managing editor at Cars.com.

"Consumers have a short memory," he said. "It has been less than a month since gas prices dropped below $3 a gallon, and we have seen a surge of consumers looking for SUVs on Cars.com."

Energy analysts expect the drop in energy prices to be temporary, as crude oil prices remain high and world supplies remain fairly tight. Despite the renewed enthusiasm for big cars, surveys show that consumers also are skeptical that gas prices will remain low.

Consumers are enjoying the windfall from lower gasoline prices right now, but the benefit they will receive from lower projected heating bills will not be felt fully until December and January.

The energy agency said the majority of Americans who use natural gas to heat their homes will see a 12.5 percent drop in heating costs this winter as a result of a decline in gas prices and a mild winter. The agency said the winter will be 2 percent warmer than normal but 6 percent colder than last year's extraordinarily balmy winter.

Natural gas prices have plummeted since last year because of the unusual warming trend, which caused a record buildup of stored gas at utilities. People who heat with propane also will see a 1.1 percent decline from last year's prices.

But oil prices are higher than last year, and electricity rates are up, so those who heat with electricity and heating oil will see increases of 7.4 percent and 6.3 percent, respectively, the agency said.

Bill Cooper, executive director of the Center for Liquefied Natural Gas, said he is concerned that consumers will be lulled into a false sense of energy security because of the break from high gas bills that is occurring largely because of abnormally warm weather. Gas prices, while down, are still double what they were five years ago.

DOJ_NMG_0078984

"We are at the mercy of the weather, and that's a dangerous place to be as we saw when Hurricanes Katrina and Rita knocked out much of the Gulf of Mexico's natural gas production and prices spiked" last year, he said. "To rely on one of the most unpredictable elements ... to determine whether we'll be able to heat our homes and power our industries -- that's no way to run a railroad."

Forecasts Call For Lower Home Heating Costs (CHIT)

By Robert Manor

Chicago Tribune, October 11, 2006

It is by no means a sure thing, but your heating bill this winter could be a bit more reasonable than last year.

Natural gas prices are down compared with last winter, and weather experts are forecasting a somewhat warmer-than-usual heating season, despite the blast of autumnal cold forecast for Thursday.

"It's likely that [residential] heating bills will be lower than last year," said Elizabeth Castro, spokeswoman for Peoples Energy Corp., noting that natural gas prices this month are half what they were a year ago.

The federal Energy Information Administration said in a report Tuesday that Midwest "households can expect to pay nearly 14 percent less in natural gas expenditures relative to last winter."

Meanwhile, the National Oceanic Atmospheric Administration is projecting this winter will be 2.1 percent warmer than normal in the lower 48 states.

Such long-term forecasts are notoriously unreliable.

But there is no denying that natural gas prices are down from last year, when Hurricanes Katrina and Rita disrupted production in the Gulf of Mexico, which provides much of the U.S. supply. As a result, last year's heating prices were far above normal.

This year, falling oil prices also have contributed to the decline of gas costs, as some industrial users can switch from one to the other.

"Nicor does expect natural gas prices to be considerably lower than last year," said spokeswoman Margi Schiemann. "But they still remain historically high."

The Citizens Utility Board tracks natural gas prices charged by utilities. In January, CUB said, Peoples Gas was charging a little more than $1.13 per therm, a standard measure of gas consumption. By historical standards that was a very high price.

This month Peoples Gas is charging a little more than 56 cents, CUB said. That is its lowest price since October 2003.

Nicor customers were charged $1.09 a therm in January. This month the price is 44 cents, Nicor's lowest price since October 2002, CUB said.

Gas sold for as little as 30 cents a therm during much of the 1990s. Increased use of natural gas to generate electricity has helped propel prices higher.

Peoples and Nicor earn no profit on the price of natural gas, which they provide to their customers at cost. They earn money through delivery fees. Neither company would predict how much overall bills would drop this year.

During the October-through-March heating season of 2005-06, the average Nicor customer spent $1,018 for gas, compared with $775 the previous year. For Peoples, the numbers were $1,257 and $979 a year earlier.

Of course, weather is fickle, and if this winter is bitterly cold, demand for gas will drive up the price and the amount consumers use.

Illinois residents got something of a break in January, which was unusually mild and held down consumption at a time when prices were high.

So if the predictions are right, consumers should have more money in their pockets. Might that give a boost to the economy, perhaps jolting retail sales during the holiday season?

Paul Kasriel, chief economist for Northern Trust, doesn't think so.

"If they don't spend as much on heating, there is income left over," he said. "The question is whether they might want to save it or go out to eat more?"

DOJ_NMG_0078985

His opinion is that consumers, squeezed by many months of spending more than they are earning, will be more likely to save or invest the money, or use it to pay essentials like a mortgage. Mortgage defaults have been increasing as variable rate mortgages reset to higher interest rates.

Diane Swonk, chief economist at Mesirow Financial, said higher-income households likely will spend the money. But households with less money are in a different situation.

"Middle- and low-income [families] have to unburden themselves of some debt they incurred when prices were higher," she said.

The Low Income Home Energy Assistance Program can help out with heating bills for households that qualify. Peoples Gas customers and Nicor customers should call 312-456-4100 or 800-252-8643 to inquire about the program. North Shore gas customers should call 847-249-4330.

Natural Gas Bills Far From A Bargain (HC)

By David Ivanovich

Houston Chronicle, October 11, 2006

WASHINGTON - Though American consumers are likely to get some relief in their heating bills this winter, they should still expect to pay substantially more than they did just two years ago.

In fact, if the government's energy forecasters are correct, ratepayers will still be paying nearly 30 percent more this winter than they did on average between 2000 and 2005, the Energy Information Administration said Tuesday.

"It's good news that prices are anticipated to be lower than last year," noted Kateri Callahan, president of the Washington-based Alliance to Save Energy, "but they were record-setting last year."

"The trajectory is definitely up," Callahan said.

A year ago, natural gas prices were high, as the energy industry struggled to restore gas production in the Gulf of Mexico that was knocked off line by hurricanes Katrina and Rita.

Back then, energy forecasters were predicting an extremely harsh winter for rate payers. But consumers were spared the worst, thanks to a very mild winter that featured the warmest January on record.

This year, the National Oceanic & Atmospheric Administration is calling for another mild winter, albeit slightly cooler than last year's balmy temperatures.

The typical American household can expect to save about $45 on its heating bill this winter compared with last year, the Energy Information Administration said.

"Natural gas prices are certainly the story," said Guy Caruso, the agency's administrator.

But that's not to say the winter heating will come cheap.

Consumers, using a variety of different sources of energy, will spend an average $902 on heating from October through March, the agency said. That's down nearly 5 percent from the $947 average total last year.

But back in the winter of 2004-2005, the typical household spent $786. And for the five-year period between 2000-2005, the average cost was $697.

More Americans heat their homes with natural gas than with any other fuel.

And with gas prices down dramatically from their highs last year, and storage levels poised to reach a record high, households heating with gas stand to save $119 on average this winter, the Energy Information Administration said.

Natural gas users are expected to spend $826 this winter, down from $945 a year ago, the agency said.

"While U.S. households using natural gas are expected to get a modest break on their winter heating bills relative to last year, this is cold comfort when costs are nearly double those of just five years ago," said Jack Gerard, president of the American Chemistry Council.

"Make no mistake, the natural gas crisis hasn't gone anywhere," Gerard added.

The Chemistry Council represents petrochemical makers, which were hard hit by the rise of natural gas prices.

In the nation's southern tier, which includes Texas, natural gas expenditures are expected to drop to $765, down from $887 last winter, the agency said.

DOJ_NMG_0078986

Officials at CenterPoint Energy have made no predictions about what Houstonians should expect in their heating bills this winter.

Houston customers saw their gas bills go down in February, August and again just last week because of lower natural gas costs. CenterPoint officials, at least at this point, do not contemplate any further adjustments before February.

A typical CenterPoint customer, using 2,000 cubic feet of gas, can expect to be billed for $29.08 this month, compared with $38.38 in October 2005.

Lower Heating Bills Expected This Winter (LAT)

The Los Angeles Times, October 11, 2006

Winter heating bills are expected to be lower for most families across the nation, with natural-gas customers getting the steepest reductions, the government said Tuesday.

In Southern California, the average monthly cost of home heating could drop as much as 18%, according to Southern California Gas Co., which serves 5.6 million customers. The average monthly bill will be about $80 to $85 this winter, compared with $98 a month last winter, said the utility, which is owned by San Diego-based Sempra Energy.

Families using natural gas — 58% of U.S. households — should expect to pay an average of $119 less during the coming winter compared with last year, a decrease of 13%, the Energy Department said.

The 30% of U.S. households that rely primarily on electricity for heat are expected to pay an average of $58 more, up 7.4% from last winter.

Those heating their homes with fuel oil — 7% of U.S. households — are likely to pay $91 more, a 6.4% jump. The 5% of homes that use propane for heat can expect to pay $15, or 1.2%, less.

Government officials cautioned that if parts of the country experienced an unusually cold winter, heating costs could be much higher than forecast.

The National Oceanic Atmospheric Administration projected Tuesday that most of the country would see above-normal winter temperatures, though slightly cooler than last year's.

Homes that use natural gas are expected to see their heating costs average $826 this winter, compared with $945 last winter. Electric households could pay an average of $839 for heat this winter, up from $781 last winter.

Homes using fuel oil are expected to pay $1,522 this winter, an increase from $1,431 last winter. Propane users should pay $1,265 this winter, compared with $1,280 last winter.

Gas Consumers To Pay Less For Heat This Winter, Government Says (BLOOM)

By Geoffrey Smith, Robert Tuttle

Bloomberg, October 10, 2006

Oct. 10 (Bloomberg) -- Homeowners in the U.S. can expect to pay an average 13 percent less for natural gas this winter than they did a year earlier, as prices have fallen and inventories surged, the government said in an annual winter-fuels report.

Natural gas consumers will spend $826 this winter to heat their homes, down from $945 last winter, the U.S. Energy Department estimated in its Short-Term Energy Outlook, released today in Washington.

Households that heat with gas will experience the greatest drop in fuel costs, the report from the department's Energy Information Administration showed. Natural gas is the most widely used heating fuel in the U.S., firing the furnaces in 58 percent of all U.S. households.

Consumers of heating oil and electricity can expect to pay more than last winter, the report showed. Households reliant primarily on heating oil will pay $1,522 this winter, a 6.4 percent increase, the department said. Those with electric heat can expect to pay $839, 7.4 percent more than last winter.

Weather that will be 5.9 percent colder than a year earlier will boost demand for all heating fuels, the department said, citing government forecasters at the National Oceanic and Atmospheric Administration. Benchmark natural-gas futures fell as much as 74 percent from a record $15.78 last December, easing the strain on households that rely on the fuel for heat.

Propane consumers will also pay less because of lower prices. Residential propane is expected to cost $1,265 per household, 1.2 percent lower than a year ago. Propane is used by 5 percent of U.S. households as a primary heating fuel.

DOJ_NMG_0078987

Natural gas inventories are 14 percent above last year and are headed toward a record, according to Energy Department data. Heating oil supplies are up 13 percent from the average and at their highest since 1999.

Far From Big City, Hidden Toll Of Homelessness (NYT)

By Randal C. Archibold

The New York Times, October 11, 2006

TRINIDAD, Colo. — As the Bush administration promotes a widely praised multibillion-dollar effort to end chronic homelessness in cities like Washington and San Francisco, a growing outcry is rising from rural areas that worsening problems far away from urban centers are being overlooked.

Rural homelessness has always taken a back seat to the more glaring problems in cities. Most studies estimate homeless people in small towns account for about 9 percent of the 600,000 or so homeless nationwide. But local officials and advocates for the homeless in small towns say that economic distress in recent years, including closing plants, failing farms, rising housing costs and other troubles, has left more people without homes and in greater need of help.

Real numbers are hard to come by because most rural areas, where homeless services often means ad-hoc help from church groups or volunteers, are far behind a parade of cities taking head counts.

"We are concerned that the focus on chronic homelessness may have the unintended consequence of shifting services away from families and rural communities," said John Parvensky, executive director of the Colorado Coalition for the Homeless, one of several groups pushing the federal government to turn more attention to rural areas.

Among the homeless here is John Lobato, who offered a tour of his surroundings — the abandoned shuttle bus where he sometimes sleeps, the makeshift assortment of pallets, mattresses and blankets where he and other men pass time, often drinking, and the Purgatoire River, where he bathes.

Sometimes he takes his medicine for schizophrenia, Mr. Lobato said, sometimes not. Sometimes he sobers up for a while, but then the bottle calls.

"I know I need help," he said, before embarking on a search for a liquor fix at midday in this isolated town 180 miles south of Denver. "But I don't know where to get it."

Until recently, many small towns like Trinidad coped with those who panhandled or set up makeshift encampments in the woods with what Lance Cheslock, director of La Puente, a shelter in Alamosa, near here, calls "Greyhound therapy." They handed out bus tickets.

"They just send them up to the cities and let them deal with the problem there," said Mr. Cheslock, among the advocates pushing for a new way to finance rural homeless programs.

The growing visibility of the problem has made some towns reconsider that attitude and push for local solutions, although they can be expensive and difficult.

Rural homelessness "doesn't get enough attention," said Philip Mangano, the executive director of the United States Interagency Council on Homelessness and the Bush administration's chief coordinator of homeless services. But Mr. Mangano said the problem had been difficult to assess because rural communities by and large had not chronicled their problems with the data-heavy planning documents the Housing and Urban Development Department and other federal agencies increasingly demand.

"Like any profile of the homeless, there is a lot of anecdote and hearsay, but you need data and research to create policy," Mr. Mangano said.

To confront the problem, he cited the examples of Washington and Michigan, where every county, many of them rural, has committed to writing a plan to end homelessness.

Here in Trinidad, a former old West coal town of 9,000 near the eastern slopes of the Sangre de Cristo mountains, people have long struggled through hard times. The downtown is pockmarked with shuttered storefronts, but new cafes and galleries have opened as the town tries to refashion itself as an artists' colony.

Interstate 25, dotted with motels of various quality and shopping centers, slices through Trinidad, leaving tidy Victorian homes rising on a hill on one side and modest ranches, several in disrepair, on the other.

DOJ_NMG_0078988

Sandi Espinoza, who directs the Open Door Soup Kitchen, in space borrowed from a church, said the organization was serving more meals than ever — families, veterans, men just released from prison and a wide assortment of people smelling of liquor before noon. Some 85 people come daily for lunch, double the number from a few years ago, Ms. Espinoza said.

"We need shelter here," said one wobbly man, who when asked where he sleeps, replied, "down under the bridges."

There is no homeless shelter, only a few drug, alcohol or mental illness treatment programs for the indigent, and a loose group of church pastors, volunteers and other concerned citizens striving to look after people who have no home.

"Pastor helps me out," Mr. Lobato said. "The soup kitchen helps me out and these guys" — he motioned to his disheveled companions — "help me, too."

A couple of weeks ago, officials here cheered the establishment of a "transitional housing unit," a single-family home leased from the government for $1 a year where a displaced family can live for a year or so until they get back on their feet, the first such project started here. The organizers say several families, doubled up with relatives or friends, need a place like that.

There is nothing for the men living in the tents and shacks that have popped up behind the Wal-Mart, near the river.

To seek more stable solutions, a small group was recently formed. With guidance from Becky Vanderslice, an organizer with Housing Justice, a group based in Denver, they gathered around a church conference table and discussed problems that included the need for rehabilitation programs and families unable to make ends meet.

Finally, said Cary T. Nelson, pastor at First Christian Church, the group decided to start with the single-family home. Churches and volunteers will subsidize the costs of running the house, a foreclosed property held by the local office of the federal Agriculture Department.

They called the house Haven of Hope and have begun searching for a family to occupy it. One applicant, Brenda Holguin, said she hoped to move in with at least two of her four children, who are living with her estranged husband. A domestic dispute has left her homeless, living in a nearby domestic violence shelter, and such a house would help set her on a steady path, Ms. Holguin said. "Having a house, my family in one place, would give me more self-esteem," she said.

Ms. Espinoza, who runs the soup kitchen, said she was hoping that local businesses or churches would step forward with donated space for an emergency shelter.

The National Coalition on Homelessness, an advocacy group, is considering mounting an effort to make the Agriculture Department, with its many field offices and staff members in rural areas, the lead agency for financing homeless programs outside urban areas. The task currently falls to the Department of Housing and Urban Development.

"It should be the department of housing and urban-only development," said Michael Stoops, the executive director of the coalition. "We should not give up on HUD, but we need to get other federal agencies involved."

Last year, he said, HUD provided $120 million for 700 projects in rural areas, an amount that has remained constant for several years, federal officials said.

This year, the federal government has increased direct spending on homeless programs to about $4 billion, up from $2.9 billion and double the spending of five years ago. About 10 percent of that has gone toward a new focus on ending chronic homelessness, Mr. Mangano said.

The approach has fired up hope in Denver, San Francisco, Washington and other cities that headway is being made, but it has dismayed advocates in rural areas, where grant-writing expertise and the Talmudic knowledge of federal regulations are lacking.

Small towns also lack the network of nonprofit organizations and corporations that often underwrite efforts.

"The government wants matching funds and the big city funders only fund the big cities," said Donna Haddow, a member of the Trinidad-Las Animas County Economic Development Board. "There's nothing left by the time we come knocking."

Ms. Vanderslice of Housing Justice said a prominent foundation would not finance the new housing program in Trinidad because it had decided to focus most of its resources on Denver.

"There is a lot of money to end homelessness in the state," she said. "But a lot is going to the Denver metro area because the mayor there has a 10-year plan."

Here, she added, "they are going on open faith."

DOJ_NMG_0078989

Defense Contractors Weigh Majority Leader Murtha (HILL)

By Roxana Tiron

The Hill, October 11, 2006

The defense industry is assessing the impact that Rep. John Murtha (D-Pa.) will have on its fortunes if the Democrats retake the House in the midterm election.

The sector has benefited from increased military spending in the past five years, but several lobbyists and industry insiders argue that long-term profits depend on steady defense budgets and predictable investment in next-generation weaponry.

And some within the industry believe that Murtha could be the man with whom to hedge their bets.

He is a longtime supporter of the industry and a hawk, but has emerged in the past year as his party's most vocal critic of the Iraq war — urging withdrawal of U.S. troops.

And despite heightened focus on curbing congressional pork-barrel spending, Murtha has opposed earmark reform.

He finds himself in an interesting position — a vehement critic of a war that has boosted defense contractors' coffers, but also a staunch supporter of a military and defense industry fed on big-ticket programs and well-placed earmarks.

"We are mortgaging our future on this war," said one lobbyist, who represents several major defense companies. "Most people want to see the war over to go to the next-generation weapons."

Military contractors benefited when Congress approved the $448 billion 2007 defense appropriations bill, which included $70 billion in emergency spending for Iraq and Afghanistan.

The Bush administration has spent about $507 billion on Iraq, Afghanistan and the rest of the war on terror since 2001.

Much of the emergency money is spent on troops and supplies, but lawmakers also made allocations for weapons programs.

"A lot of the money is spent replenishing systems," said the lobbyist. "War is not good for business. The industry wants to produce the new stuff rather than see the money go to the war."

Big-ticket defense items, such as the F-22 fighter, the multi-national Joint Strike Fighter, the Army Future Combat Systems and the Navy's next generation DD (X) destroyer and Littoral Combat ship, have nothing to do with the current war, said Steve Ellis, vice president for programs at watchdog organization Taxpayers for Common Sense.

Lucrative war business comes to those who produce counter-improvised explosive devices, armored vehicles, bullets and other personnel protection systems, said Ellis and other defense industry insiders.

"Part of the reason the defense industry has not rebelled as much is that the defense budget has grown and there's a lot of money to go around," said Ellis. "The money we spend on the defense industry is enormous and they have not felt the pressure."

But if tension builds between traditional defense spending and war spending, "then we would start hearing some mumbling in the defense industry."

Analysts expect the purse strings to tighten on defense in the coming years. For the first time since Sept. 11, 2001, President Bush did not receive his full budget defense request.

Murtha knows how to spread the wealth. "The defense industry wants someone who supports a healthy defense budget and who supports bringing new technology," said a defense lobbyist. "Most of the defense industry would want to see the war end tomorrow."

Murtha's support of a well-fed defense industry is paying off for him and his party. He is again the top recipient of defense industry money in Congress. The defense industry contributed $371,700 to Murtha's campaign.

In 2004, he ranked third only to presidential candidates Sen. John Kerry (D-Mass.) and George Bush, but in 2002 he was No. 1.

By comparison, Rep. Bill Young (R-Fla.), chairman of the defense appropriations panel, ranks as No. 18 with $99,000 in his coffers from the defense industry.

Young consistently has ranked towards the bottom of the top 20 recipients of defense money. But unlike Murtha, Young, a stalwart supporter of the military and the defense industry, is not an avid fundraiser and when he holds an event he is known not even to print a ticket price.

Not so Murtha, a leading Democratic fundraiser who has doled out money to the party.

DOJ_NMG_0078990

Because he has been a hawk and a supporter of the military, Murtha's criticism of the Iraq war and his call for troop "redeployment" gave Democrats political cover.

If the Democrats win back the House this year, Murtha is throwing his hat in for the Majority Leader position, banking on his close relationship with Minority Leader Nancy Pelosi (D-Calif.). Murtha faces staunch competition from Minority Whip Steny Hoyer (D-Md.).

Some in the defense industry hope Murtha becomes majority leader, while others say he would be better suited at the helm of the defense appropriations committee.

As a majority leader, Murtha would bring defense to the forefront and stave off cuts that the Democrats have traditionally made, some industry insiders say.

In such a position, Murtha would determine how the budget is put together and the amendments that would come to the floor, but he would lose the day-to-day touch on the appropriations committee, which to the defense industry is more important, said an industry source.

Hoyer would not be a bad bet for the defense industry as majority leader, because he has also been a strong supporter of the sector and is in close contact with the Pentagon and the military branches, said the source.

Sen. DeMint To Head-up Key Group (HILL)

By Jonathan Allen

The Hill, October 11, 2006

Sen. Jim DeMint (R-S.C.) is in line to take the reins of the Republican Steering Committee, a cabal that serves as the base for conservative activism in the upper chamber.

"That's where things are headed," said a Senate Republican aide familiar with discussions about a successor to Sen. Jeff Sessions (R-Ala.), whose term will expire at the end of the 109th Congress. The aide requested anonymity because DeMint's ascension will not be made official until the committee meets and confirms him after the November election.

The Steering Committee would play a much different role in the institution if Republicans are cast into the minority. The secretive committee now seeks to pressure GOP leaders to adopt more conservative policies, but it once served to block the liberal priorities of a Democratic majority.

DeMint, chosen for the job through an informal process, is a fierce partisan warrior who has one foot in leadership circles and the other in conservative circles. That combination could make him an effective leader whether Republicans retain control of the Senate or not.

A former market researcher, DeMint was tapped this year by party leaders to combat a quick-slinging Democratic communications operation on the floor of the Senate.

"He's always very aware of how things are perceived and he has a talent for how to sell the message without selling out on the policy," said an aide to a conservative Republican senator.

DeMint's unflinching conservatism on tax cuts and restructuring Social Security have won him praise from Republicans who view him as a principled leader. Like many of his contemporaries, he brought with him a taste for the House's bitter partisan warfare when he was elected to the Senate in 2004.

But even as he fights Democrats, DeMint straddles the Republican divide between conservative rabble-rousers and party leaders. That could be a double-edged sword under GOP rule, according to Republican aides.

He "fits in both worlds in a good and bad way," one aide said.

Even if DeMint drifts toward leadership, the Steering Committee has an anchor in Sen. Tom Coburn (R-Okla.). Aides say Coburn aggressively takes on conservatives' toughest battles on the floor.

When Republicans are in the majority, the Steering Committee's success is dependent upon its ability to affect policy without forcing its members, who generally feel allegiance both to conservative ideology and to the GOP's electoral fortunes, to openly defy Republican leaders at every turn.

DOJ_NMG_0078991

"It's very influential; it's quiet, though," said Brian Darling, head of Senate relations at the conservative Heritage Foundation and an attendee of off-the-record weekly meetings of conservative congressional aides, lobbyists and activists that are organized by the Steering Committee.

The Steering Committee and a series of affiliated staff-level organizations intentionally keep a low profile to avoid sabotaging their own work.

"Leadership would be very upset if it was perceived that a subgroup of the caucus were trying to drive policy," Darling said. "It is a challenge to leadership to have conservatives doing things that are inconsistent with some of the policies that the leadership is promoting."

In the minority, Steering Committee members have used every tool available to stand in the way of Democratic legislation, which explains why some conservative activists advised Republicans against exercising the "nuclear option" to circumvent filibusters and why there has been resistance to doing away with "holds."

Under Sessions, the Steering Committee has been a thorn in the side of establishment Republicans at times, particularly on spending and immigration.

Sessions pressured the White House to issue a veto threat against the Senate's $107 billion "emergency" spending bill in May by sending the president a letter endorsed by enough Republican senators to ensure a veto would be sustained. As support mounted, Majority Leader Bill Frist (R-Tenn.) and Majority Whip Mitch McConnell (R-Ky.) signed Sessions's letter, putting the top Senate leaders in the unusual position of begging the White House to veto legislation that their majority produced.

The letter was the culmination of weeks of below-the-radar plotting by senators and conservative aides who were determined to reverse a committee-level spending spree. The measure's price tag was subsequently pared back and Bush signed it into law.

Sessions also was a leader among conservatives in trying to amend and block the Senate's immigration bill, which in addition to border-security measures would have created a temporary-worker program and a means for illegal immigrants currently in the country to become citizens. The battle between Republican moderates and conservatives has stalled legislation that conservatives find anathema because they say it would grant amnesty to people who entered the country illegally.

The FAA Corrals Its Brand (WP)

By Al Kamen

The Washington Post, October 11, 2006

Federal Aviation Administration chief Marion C. Blakey worries that people have been confusing her agency with the Food and Drug Administration (FDA), or worse, the Federal Emergency Management Agency (FEMA).

So Blakey last month signed an order establishing the FAA "Branding Identity Program" (FAABIP) to clarify matters. The FAA does so many wonderful things, she notes in a cover message to the order, "but it has not received proper credit for all the good work it does in so many areas because it does not have a strong brand identity."

And why is this? Because "dozens if not hundreds of different" logos have been used "in materials of all kinds." Blakey said she's heard that if you collected business cards at an agency meeting, "you would never guess that they all work for the same agency."

No more. From now on, there will be rules and regs. We will have "a circular gold border, a blue background bearing the white letter near its outer rim the words 'Federal Aviation' at the top and 'Administration' at the bottom."

An agency newsletter the next day noted that there probably "will be messages from some who will ask if we don't have bigger things to think about than cosmetics." Apparently not.

"One of the hallmarks of a successful business or organization is a strong single brand," the newsletter explains, "not separate brands for various parts of the organization; BMW, IBM, Boeing, Airbus, McDonald's, to name just a few."

" Phyllis Preston , who is the branding guru," the newsletter says, "likes to use the example of McDonald's. She says you don't see a separate logo for French Fries, and another for the hamburgers, and still another for milk shakes."

Well, there you have it.News From the Front

DOJ_NMG_0078992

This just in from the Green Zone in Baghdad: The hot new polo shirt in the zone is white with a diplomatic security badge on it and stitching below that says "Resistance Is Futile."

Secretary of State Condoleezza Rice , stuck last week on a runway in Irbil, Kurdistan, because of engine trouble, was working trade sanctions to impose on Iran. A reporter offered her a bottle of a popular brand of water -- imported from Iran. Rice quipped she wasn't sure she could get it through customs.Phish Story

It is now clear there is no depth to which scam artists will not sink. The Congressional Budget Office sent out an e-mail recently warning that someone is using the CBO mailing list to get private information about those on the list.

"Several people have reported receiving an e-mail message that appears to have been sent from the Congressional Budget office," the e-mail said. "The message is actually Phish and appears to come from outside the U.S." (CBO stopped short of accusing our friend Madame Miriam Abacha from Nigeria.)

"We are not sure how many people received the message or how the address list was obtained [but] if you received an email message from: Budegt Office

" and using a subject line that says "The Budget and Economic Outlook Fiscal Years 2007 to 2016," then "please delete it. Also, DO NOT click on the link at the bottom of the message. It could possibly infect your computer with spyware or a virus."

Most folks surely didn't need the warning. A government document purporting to know the "economic outlook" in 2016? Obviously phony.The Bill That Keeps on Billing

The bills won't stop coming in from the 11-year-old independent counsel investigation of former housing secretary Henry G. Cisneros , who pleaded guilty in 1999 to a misdemeanor for understating the amount of money he had been giving his mistress.

The independent counsel, David M. Barrett , filed his final 474-page report in January, conceding he couldn't say for sure "whether any criminal laws were broken" by government officials when he went after Cisneros on tax charges. At that point, Barrett had billed the taxpayers $21 million.

Barrett's office closed May 3. His latest bills, according to a GAO report, totaled nearly $850,00 for the six months ending March 31. Personnel costs of $375,000 and utilities at $239,000 were the biggest items. Unclear whether there's another bill coming for April.

Communication Breakdown Cited In Failed Postal Legislation (WP)

By Stephen Barr

The Washington Post, October 11, 2006

It's no fun being on the hot seat.

"I feel badly," William H. Young , president of the National Association of Letter Carriers, said yesterday about blocking legislation to overhaul the U.S. Postal Service. But he emphasized that his union members were his highest priority, making it impossible for him to accept a provision that would single out injured postal employees for different worker compensation rules than other federal employees.

Young said that he was trying to contact Sen. Susan Collins (R), the chief sponsor of a compromise bill, who is traveling in her home state of Maine, "to determine where our communications failed."

Although the bill has drawn little public attention, it represented a decade-long effort to revamp Postal Service business operations.

Companies that rely on the post office to distribute products are eager for a restructuring that would make increases in mail rates more predictable. Congressional auditors, meanwhile, have warned that the Postal Service needs to rethink its business practices, in part because revenue is being lost as fewer first-class letters are mailed in the Internet age.

The bill pushed by Collins and others would have reshuffled multibillion-dollar pension and health-care costs to ease budgetary pressures on the Postal Service, a change initially opposed by the White House.

During negotiations on the bill, the NALC, which has 300,000 members, created the impression that it would be in Collins's corner. But as Collins tried to move the bill last month, in the hours before Congress recessed for the campaign season, Young announced his opposition.

DOJ_NMG_0078993

That earned him a round of finger-pointing by lobbyists in the mailing industry and congressional aides. It also raised questions about why the union would want to take credit for defying Collins, chairman of the Senate Homeland Security and Governmental Affairs Committee and a Republican who keeps her door open to federal employee groups.

"We are all left scratching our heads," the Alliance for Nonprofit Mailers said in an Oct. 4 newsletter. "Why did the National Association of Letter Carriers use a minor issue to bring down a bill that contained so much good for their members? They had beaten back every attempt to include provisions harmful to their members and won every important legislative battle. They had won the war. So why did they pull the plug?"

In a telephone interview, Young acknowledged that he had not tried to block an earlier version of the bill, which was approved by the Senate without debate, even though it contained the provision he opposes.

The provision would require a three-day waiting period before injured postal workers could begin accruing workers' compensation benefits. Under current practice, they do not face a break in pay when moving to the injury rolls. The proposed change, Young said, would adversely affect about 11,000 letter carriers who are injured every year.

By most accounts, the provision grew out of calls to cut postal labor costs and to mirror how the states provide such benefits. But, Young said, "if this is legislative reform and there is a reason it needs to be done, then it should be done to everyone in the federal workers' compensation program."

Young said he received signals from Postal Service headquarters and from mailers that they did not consider the benefits provision an essential part of the legislation. Postal Service executives were traveling yesterday and could not be reached for comment.

He also denied allegations by critics that he was fronting for postal executives who are uneasy about more rigorous oversight proposed in the bill or that he wanted to see if Democrats could regain power in the November elections and perhaps offer the union a better deal.

Young said he had repeatedly directed union lobbyists to inform members of Congress, including Collins, about NALC's concerns with the legislation. He hopes to figure out how communications broke down when he speaks with Collins, Young said.

Photos And A Fair Trial (NYT)

The New York Times, October 11, 2006

When Mathew Musladin went on trial for murder, members of the victim's family sat near the jury every day wearing buttons with the dead man's photograph. A federal appeals court held that those buttons in the courtroom deprived Mr. Musladin of a fair trial. The Supreme Court is hearing arguments in his case today. It should affirm the appeals court's ruling.

Mr. Musladin shot his estranged wife's fiancé in an altercation that he argued was justifiable self-defense. Before the trial began, Mr. Musladin's lawyer asked the judge to tell the family to remove the buttons. Mr. Musladin was convicted on all counts.

Mr. Musladin went to federal court to argue that he had been denied a fair trial. The San Francisco-based United States Court of Appeals for the Ninth Circuit agreed, holding that the jury's sympathies may have been unfairly swayed by the photos of the victim worn by his grieving relatives.

The court relied on a Supreme Court ruling that a defendant's right to a fair trial was denied when he was forced to wear prison garb and shackles in sight of the jury, with its subliminal message of guilt. It also relied on its own earlier decision that a defendant in a sexual assault case was denied a fair trial when courtroom spectators were allowed to wear buttons proclaiming "Women Against Rape."

As those cases recognized, physical materials in a courtroom that send a message run the risk of prejudicing the jury against the defendant.

At Mr. Musladin's trial, the key question was whether he or the man who died was the aggressor. As the appeals court recognized, the buttons were effectively an argument by the people who wore them that the dead man was the victim. The correct place for that argument to be made was on the witness stand, by competent and duly sworn witnesses. It should not have been allowed from the audience.

The most difficult legal issue in the case involves the standard that federal courts use in second-guessing state court convictions. Under the relevant federal statute, the state court's decision can be set aside only if it was an unreasonable

application of “clearly established” federal law. The government argues that the appeals court’s ruling that the photographs were prejudicial was not clearly established.

It is true the Supreme Court has not ruled directly on the issue of photographs worn by courtroom spectators. But the court’s decision in the prison garb case laid down a standard clear enough for the trial judge to have known that the buttons worn at Mr. Musladin’s trial denied him his constitutional rights.

Globalization And Schools (WP)

The Washington Post, October 11, 2006

BACK IN 1979, the average worker with a college degree earned 75 percent more than the average high school graduate. Because of technology and globalization, the gap has leapt to 130 percent. This rising "college premium" does much to explain the growth of inequality over the past generation, so any serious response to inequality must make access to college broader and fairer. It should be broader because a higher rate of college attendance would share the fruits of globalization more widely. It should be fairer because, if the prizes for attending college are growing, it's essential that everyone begin life with a decent shot at winning them.

Because education boosts economic growth, and because it threatens no powerful lobby, virtually everyone claims to support it. The question is how it should be improved. Some commentators, pointing to the fact that schools in low-income districts already spend more per pupil than schools in affluent ones do, argue that failures at poor schools reflect complacent management rather than a lack of resources. Signaling at least partial acceptance of that theory, the Bush administration has tried to improve schools by holding them accountable and subjecting them to competition. Choice and accountability are attractive in principle, but studies of voucher programs in New York City, Milwaukee and Cleveland have found negligible gains from them. Costlier interventions must also be part of the solution.

The first opportunity for extra investment in education comes when children are young. That's when they are most malleable and when poor children start to fall behind: Even at age 3, researchers find class-based differences in linguistic and emotional maturity. The federal Head Start program, bolstered by a variety of state preschool programs, has succeeded in reaching many poor 3- and 4-year-olds. In 2001, 49 percent of 4-year-olds whose mothers were high school dropouts attended some type of preschool program, up from 36 percent a decade earlier. But that participation was still way below the 70 percent rate for children of college graduates. And the quality of many preschool programs is poor.

Head Start requires that only half of its teachers have two-year college degrees. In contrast, a 1960s experiment in Michigan known as the Perry Preschool program provided a fully qualified teacher for every six or seven students, and teachers visited each child at home weekly. The program raised IQ test scores by eight to 10 times the increase achieved by Head Start. It also reduced the likelihood that a student would require special education (by 43 percent), drop out of high school (by 25 percent) or be arrested (by 50 percent). A range of other studies, including recent ones in Michigan and Chicago, confirms that high-quality programs have lasting effects on poor children. Upgrading the 900,000 children in Head Start programs to something like the Perry program might require around $2 billion a year, according to W. Steven Barnett of Rutgers University. But quality preschools reduce spending on special education, jails and welfare, saving money for society in the long term.

Early intervention would help schools from kindergarten through 12th grade do their job properly, since teachers would face fewer students who can't keep up. But it also makes sense to invest in K-12 education directly. Although it's true that low-income districts already spend more per pupil than do rich ones, this slight advantage is swamped by the challenge of teaching poor children, who on average have more discipline problems and require more remedial attention -- and will continue to do so even if preschool is improved. Because of the challenge of teaching poor children, the higher cost of special education and other factors, schools in low-income neighborhoods have less-experienced teachers and worse facilities than do schools in affluent ones, according to research by Cecilia Rouse of Princeton and Lisa Barrow of the Federal Reserve. These schools might spend more money per pupil, but they lack more money per pupil, too.

Which K-12 investments would be effective? Smaller classes are a leading candidate: A Tennessee experiment that divided pupils into classes of differing size in kindergarten and then returned them to regular-size classes in third grade found benefits from smaller classes that persisted to high school. Improving the quality of teachers is also likely to boost performance,

DOJ_NMG_0078995

though teacher quality is not necessarily linked to teacher certification. Publicly funded summer school could make a difference. The performance gap between privileged and poor children appears to be linked to the way they spend their summers, with the privileged attending enrichment programs while the poor are underoccupied.

Nearly 30 years ago, Martin Luther King Jr. declared that the challenge for schools is "to teach so well that family background is no longer an issue." By increasing the rewards for education, globalization has added urgency to King's argument, but globalization paradoxically creates a temptation to ignore him, too. By driving down the cost of tradable goods such as cars and DVD players, it leaves untradable ones such as education looking expensive. There's a tendency for policymakers to say that education spending is growing a bit faster than inflation -- isn't that generous enough? But inflation is low partly because globalization brings us goods from cheap foreign suppliers. The economic challenge posed by those cheap foreign suppliers is precisely the reason we should invest more in our children.

OTHER NEWS:

For Voters, Time To Check Wallets (CSM)

By Mark Trumbull

The Christian Science Monitor, October 11, 2006

As Election Day nears, the health of the economy is the subject of a major clash in which voters are hearing starkly different views.

The battle may be overshadowed in the news by the Iraq war, nuclear tensions in Asia, and a congressional scandal, but pocketbook issues are - as usual - very much on voters' minds.

"Today we got more good news," President Bush said Friday, citing lower unemployment, rising wages, and the creation of 6.6 million new jobs since August 2003.

"The Bush economy has been marked by falling wages and anemic job numbers that don't even keep up with population growth," the Democratic National Committee fired back in a statement.

Americans are accustomed to economic spin, but that makes it harder to sort out the underlying reality. Is this a good economy or not? Or, as Ronald Reagan once asked, "Are you better off" now than the last time Congress was up for election?

The numbers, shorn of partisan interpretation, point to an economy that is neither collapsing on its own weakness nor lifting all Americans to new heights of prosperity. In this climate, marked by the subsidence of an epic housing boom, personal debt may be the dividing line between those who are better off and those who are falling behind.

"Homeownership has increased, but through lots of leverage," says Mark Zandi, chief economist at Moody's Economy.com in West Chester, Pa. The economy is "certainly not bad," he says.

But it could be especially tough on people who stretched to buy a home. A cooling real estate market means that rising home values have stopped adding to families' net worth, for now. Meanwhile, their monthly payments can jump by several hundred dollars as adjustable loan rates reset.

"There are two distinct economies," Mr. Zandi says. Higher income households - say, the top 10 percent by income - have relatively low debt burdens and, often, a fixed-rate mortgage.

"The other is lower middle-income households, who have struggled," he says. For these households, a much larger group that Zandi reckons may include more than 1 in 3 Americans, incomes have been stagnant. They have debt and, often, an adjustable rate mortgage that's now adjusting higher.

Before Mr. Bush took office, consumer debt and mortgages in America totaled less than the sum of all personal income. Since then, that debt-to-income ratio has surged from below 100 percent to above 125 percent.

This election cycle, Democrats hope to capitalize on that edge of anxiety, the darker side of a housing-fueled economic expansion.

Republicans, struggling to maintain a majority in Congress and their governorships, are playing up brighter aspects of the economy, including a recent drop in energy prices.

DOJ_NMG_0078996

In polls, the economy ranks high among voter concerns - generally No. 2 or 3 after the Iraq war. Even the current furor over inappropriate e-mails sent by a Republican lawmaker to young congressional pages won't overshadow concerns like gasoline prices and mortgage rates.

In a new survey by the Pew Research Center, 22 percent of registered voters ranked the economy as their top issue, second to the situation in Iraq at 24 percent.

Against that backdrop, here are some benchmarks of whether the economy has slackened or perked up since Fall 2004, when voters last went to the polls, and Fall 2002, when Republicans regained full control of Congress:

Energy. Prices of oil, natural gas, and gasoline are up since recent elections - but down sharply in the past two months. July's $3-a-gallon gasoline has given way to hopes of a $2 pump price.

"Everybody benefits across all income groups," says Brian Bethune, US economist at Global Insight, a consulting firm in Lexington, Mass.

Jobs. Jobs are being created at a pace steady enough to keep the jobless rate below 5 percent. "If somebody wanted to change jobs right now, it would be actually a pretty good time," Mr. Bethune says.

That's what Deborah Dutcher did recently. A travel photographer, she left a job in San Francisco to move to Boston, and launched a freelance career. Her hope: that Boston's real estate market, priced a bit better than the Bay Area's, will fulfill her dream of homeownership. She feels better off in a place where dollars - and mortgage debt - will go a bit further.

Income. Wages - a long-time sore point for workers - have barely kept pace with inflation during Bush's presidency. But the picture isn't as bad as it may seem. A broader measure of income that's adjusted for inflation - real hourly compensation - is up 10 percent since Bush took office and 3.5 percent since 2002.

Housing. After soaring since 1999, home prices are in correction mode, retracing some of their heady gains. It's an economic trouble spot, especially if it makes consumers feel less able to spend. But many economists say the housing slowdown is manageable. Most homeowners don't have to sell in a weak market, and won't.

'Values' Decline As Issue In Ohio (WP)

By Michael A. Fletcher

The Washington Post, October 11, 2006

COLUMBUS, Ohio -- Two years ago, Ohio Secretary of State J. Kenneth Blackwell was a driving force in the triumphant campaign for a state constitutional amendment to outlaw same-sex marriage. That helped cause a surge in turnout of "values voters," who helped deliver this pivotal state to President Bush's successful reelection effort.

As the Republican candidate for governor, Blackwell has been counting on values voters to do for him this year what they did for the party in 2004. But the culture wars are being eclipsed as a voting issue by economic worries and Republican scandals that have altered the political dynamic here in striking ways. Several polls find Blackwell trailing his Democratic opponent, five-term Rep. Ted Strickland, by double digits with less than four weeks to go until the Nov. 7 midterm elections.

The difficulty Blackwell is experiencing winning support for his socially conservative message reflects the anxiety evident this year among voters in Ohio and elsewhere, some pollsters say.

"It is harder to run on wedge issues when voters have huge concerns on their minds regarding war in Iraq, economic issues and a Congress they perceive as doing little," said Michael Bocian, a vice president at Greenberg Quinlan Rosner, a Democratic polling firm in Washington.

Strickland, 65, an ordained but non-practicing minister, has built his lead by speaking about the economic distress of this manufacturing state and by painting his opponent as a loyal soldier of a scandal-plagued Ohio Republican Party. At the same time, he is directly challenging Blackwell for values voters in ways that many analysts believe Democratic presidential nominee John F. Kerry did not two years ago.

"What I call the bread-and-butter issues probably are more prominently on the minds of people today than two years ago," Strickland said in an interview. "I think a lot of Ohioans are feeling economically insecure. Consequently, they are less willing to be distracted by issues that don't involve the economic security of their families."

DOJ_NMG_0078997

His observation is borne out by a recent survey by the University of Cincinnati's Ohio Poll, which found that 63 percent of likely voters in the state are basing their choice of candidates on the "issues" rather than "character." The poll found that seven in 10 Strickland supporters were most concerned about "issues," including the economy and education; just over half of Blackwell supporters felt that way.

"Character can be everything from a voters' evaluation of a series of issues as a package, to notions as to whether they think a candidate agrees or disagrees with their values," said Eric W. Rademacher, co-director of the survey. Two years ago, exit polls found that "moral values" edged out the "economy and jobs" to top a list of concerns that Ohio voters said most influenced their Election Day choices. The exit polls found that at least a quarter of voters identified themselves as born-again Christians, and three-quarters of their votes went to Bush.

Leaders of the religious right here promised to build on that success to reshape Ohio's political landscape. They pledged to support candidates determined to "bring spiritual revival and moral reformation to the state," in the words of Reformation Ohio, an evangelical outreach effort.

No one better embodied that promise than Blackwell. An experienced and articulate politician, he is given to quoting Scripture on the campaign trail and is unambiguous about his opposition to abortion and same-sex marriage. "I don't know how many of you have a farming background, but I can tell you right now that notion even defies barnyard logic," Blackwell has said of same-sex marriage.

As in 2004, conservative religious leaders have been registering thousands of voters across the state, talking from the pulpit about the need to vote and leading rallies to drum up enthusiasm among values voters.

"Politicians in Ohio certainly are focusing more on economic issues, but our focus is on encouraging members of our church and the Center for Moral Clarity to support the candidates that best reflect their values on issues of righteousness and justice," said Rod Parsley, a Columbus televangelist. Parsley is pastor of World Harvest Church, which has 12,000 members, and leads Reformation Ohio and the Center for Moral Clarity, another outreach group.

Parsley, who faces an Internal Revenue Service investigation prompted by a complaint by a group of ideologically moderate ministers who allege he has crossed a line barring political advocacy from the pulpit, has not endorsed Blackwell. But he is quick to add: "I'm sure Ohioans will recall which candidates have stood with them in the past."

So far, it seems that the efforts of Parsley and other evangelical leaders are being overshadowed by this state's recent record of job losses and the resultant economic concern. The unemployment rate in Ohio is 5.7 percent -- a full point above the national figure. Meanwhile, the Ohio Poll found that 82 percent of Ohioans believe that the economy is in poor or fair shape, and two-thirds say things are getting worse.

For his part, Blackwell, 58, has offered a string of proposals that he says would revive Ohio's economy. He wants to do away with the graduated state income tax and implement a flat tax. He has proposed looking at ways to de-couple school financing from local property taxes and cap educational administrative costs, while allowing students greater freedom to attend schools of their choice. "I think the big issues in the campaign are jobs, education and health care and getting our economy growing again so we can break out of the growth deficit we've been in," Blackwell said.

John C. Green, a senior fellow at the Pew Forum on Religion & Public Life and a professor at the University of Akron, said that in this campaign Blackwell's biggest problem has not been his policy ideas but his arch-conservative profile. "Ohio leans to the right. But he is way to the right, and some Republicans are quite unhappy with his relationship with religious conservatives," Green said.

Strickland has advocated greater investment in public schools and has targeted state support for growing sectors of the Ohio economy. Meanwhile, he has brandished his own socially conservative credentials, including his support of gun ownership. Although he told the Dayton Daily News that he is now an occasional churchgoer, Strickland touts his background as a minister.

"When you have a candidate who is pretty conservative in Strickland, that makes drawing distinctions between the candidates difficult," Bocian said. Republicans control every statewide office in Ohio and both chambers of the legislature, but, given the voter pessimism this year, that is proving to be a political disadvantage. Then there are the scandals that have ensnared two of the leading Republicans in the state: Gov. Bob Taft was convicted of illegally accepting gifts, and Rep. Robert W. Ney admitted taking bribes in the Abramoff scandal and is not seeking reelection.

DOJ_NMG_0078998

Through the years, Blackwell has worked to cultivate an image of independence, opposing state tax increases and supporting the ban on same-sex marriage, which both Taft and Sen. Mike DeWine (R) opposed. Blackwell, an African American, served as state treasurer, mayor of Cincinnati and a deputy secretary of the federal Department of Housing and Urban Development before being elected Ohio's secretary of state in 1998. He was in charge of the problem-plagued 2004 election in Ohio, an issue of particular importance to some black voters who felt disenfranchised. But through multiple recounts and lawsuits, Blackwell has been cleared of playing a role in any irregularities.

He says that his support of values issues involves not just opposing same-sex marriage and abortion but also ensuring that the poor receive health care and educational opportunities -- positions he said are warmly received by black audiences. Also, as the campaign winds toward Election Day, Blackwell said he plans to close ground by sharpening his attacks on Strickland's record as a congressman, which earned him a ranking as one of the least influential members of the House from the nonpartisan Web site Congress.org.

Meanwhile, Strickland plans to challenge Blackwell among his base of values voters. During a recent debate, Strickland talked about how his community and church helped him become the first member of his family to go to college. Then he reminded the audience of another stop in his career path: "I've been able to be a minister in the United Methodist Church."

Fed Rethinks View Of Housing-led Slowdown (FT)

By Krishna Guha And Michael Mackenzie

Financial Times, October 11, 2006

Influential voices inside and outside the Federal Reserve are challenging the notion that the US economy is heading for a deepening housing-led slowdown, cheering equity investors and sending bears in the bond market into retreat.

The thesis, put forward by Fed vice-chairman Don Kohn last week, and endorsed by Alan Greenspan, the former Fed chairman on Friday, argues that the trough in housing market activity could be near, and that the economy should come through it in reasonable shape.

Fed officials have also sought to lower expectations that rate cuts are imminent.

With financial conditions more broadly strongly supportive, energy prices falling and unemployment touching a new low of 4.6 per cent, financial market economists are reviewing their calls. Morgan Stanley has upped its growth forecast and predicted a rate rise early next year. Goldman Sachs still expects rates to be cut by 125 basis points next year.

The argument between economists mirrors a tug-of-war between different financial markets on the outlook for growth.

“The bond market has appeared more bearish on the economic situation than the stock market and the credit markets,” says Peter Hooper, chief US economist at Deutsche Bank. “Credit spreads are narrower than you would expect if you thought we were going into a significant bout of economic weakness.”

For the moment, bears in the bond market have been forced into retreat. A week ago, the Fed funds futures market was pricing in a 50 per cent chance of a rate cut in January, and three quarter-point cuts in total by the end of next year.

After a sharp reappraisal of expectations, the market is now pricing in little chance of a rate cut in January and between one and two quarter-point cuts by the end of 2007. The debate, though, is far from resolved.

Mr Kohn argued that a sharp correction in construction activity and new home price inflation could soon bring down inventories and stabilise residential investment – which will subtract 1 percentage point from growth in the second half of this year. Mr Greenspan, meanwhile, cited the flattening out of new mortgage applications as a sign that “we are coming to the end of this downturn”.

Some housing market experts, though, are sceptical. David Berson, chief economist at Fannie Mae, the government-supported home finance institution, said inventories remained high, and there could be a significant decline in investor demand.

But the big question is what will happen to consumer spending as house price gains stabilise or even fall – reversing a positive wealth effect on consumption – and non-transaction related mortgage equity withdrawal diminishes.

Jan Hatzius, chief US economist at Goldman Sachs, says he estimates that the decline in mortgage equity withdrawal alone could push up the savings rate “by 1 to 2 percentage points over a period of one to two years”.

DOJ_NMG_0078999

By contrast, Dick Berner, chief US economist at Morgan Stanley, sees little effect from mortgage equity withdrawal and predicts real income will grow rapidly enough to support a modest rise in savings while keeping consumption reasonably strong. Since the data have not even begun to answer these questions, it would be premature to take a soft landing for granted. But it does seem that the risks are not only in one direction.

Home Is Where The Worry Is (WP)

By Robert J. Samuelson

The Washington Post, October 11, 2006

We are at the endgame for housing. Until recently our national motto has been "In real estate we trust." Just last week the Census Bureau reported that median home prices after inflation rose 32 percent from 2000 to 2005. In some places, the gains were huge: 127 percent in San Diego, 110 percent in Los Angeles and 79 percent in New York. But real estate -- which has acted as a national piggy bank, with homeowners borrowing and spending against rising house prices -- no longer looks so trustworthy. On this, more than on falling oil prices or a record Dow, hangs the economy's immediate fate.

The boom sowed its own destruction. Coupled with modestly higher interest rates, rising home values have priced more potential buyers out of the market. In 2003 a family with an income of $40,320 could buy the median-priced existing home of $180,200, estimates the National Association of Realtors (NAR). By August 2006 an income of $56,544 was required to buy the median-price home, now $225,700. (The assumptions: Purchasers make a 20 percent down payment and devote 25 percent of their income to mortgage payments at the prevailing interest rate.)

With fewer buyers, home construction, sales and prices have weakened. In August housing starts were 20 percent lower than a year earlier. Last year, sales of new and existing homes totaled almost 8.4 million; next year the NAR expects 7.4 million. Construction workers, real estate agents and mortgage bankers will lose jobs. Consumer spending will also suffer as the borrowing and buying against rising real estate values subsides. Indeed, the end of the cheap credit that fed the boom means that many borrowers will face higher monthly payments.

Adjustable-rate mortgages (ARMs) represent a quarter of the nearly $10 trillion in single-family mortgages, says economist Michael Fratantoni of the Mortgage Bankers Association. ARMs typically change rates annually and are 2 to 2.5 percentage points above, say, a one-year Treasury note. But "hybrid" ARMs made in 2003 and 2004 provided low fixed rates for three to five years; many of these rates are now rising. Consider a borrower with a 4 percent ARM of $200,000 lent in 2003. The monthly payment had been $955, says Fratantoni. Now the ARM would reset at 7.5 percent; the payment increases to $1,362. Switch to a 30-year fixed-rate loan and the rate would be 6.25 percent, with a monthly payment of $1,164.

To service their loans, some consumers will curb their shopping. Susan Sterne of Economic Analysis Associates says that debt payments will absorb a record 15.6 percent of personal disposable income in 2007. Sterne expects growth in consumer spending and the overall economy to weaken, though she's not predicting a recession. But some forecasters think one is possible.

Uncertainties abound. How much will falling oil prices cushion consumer spending? More important: How much do higher home prices reflect a temporary speculative "bubble"? Among experts, there's a wide range of views. Economist Richard Green of George Washington University thinks much of the run-up of home prices is permanent, reflecting lower long-term interest rates. As rates dropped, buyers could afford to pay more. I largely agree with this view. Growing confidence in low inflation has gradually reduced long-term rates. In 2005 rates on 30-year fixed-rate mortgages averaged about 6 percent, compared with 7.5 percent in 2000 and 8 percent in 1995. Restrictive zoning regulations have also pushed up prices in some areas, Green says. High demand pressed on a limited housing supply.

Still, evidence of speculation is undeniable. For a while, there was a buyers' panic. By one survey, about 40 percent of houses bought in 2005 were second homes (28 percent for "investment," 12 percent for "vacation"). Dubious new mortgages -- interest-only or less -- aimed to maximize what a buyer could afford. A survey by Global Insight and National City Corp. estimates whether home prices in 317 metro areas are reasonable. In early 2000, 63 metro areas were judged overvalued -- but by no more than 13 percent. In mid-2006, 236 were thought overvalued, 79 by more than 34 percent. The survey considers interest rates, local incomes and housing densities.

DOJ_NMG_0079000

Even a leveling of home prices suggests that Americans will save more from current income and spend less. Up to a point, that's okay, especially if the lost spending is offset by higher exports and business investment. But one recent survey shows a 1.7 percent year-over-year price decrease for existing homes. Moody's Economy.com forecasts falling prices in 100 metro areas and an average decline of 3.5 percent next year -- the first annual drop since the Great Depression, says chief economist Mark Zandi. There's the endgame's true danger: If prices drop too much or too persistently, the damage to confidence and spending won't be easily neutralized.

Dow Inches Higher To Another Record; Dollar Hits High For Year Against Yen (WSJ)

By Peter A. McKay

The Wall Street Journal, October 11, 2006

Stocks nudged higher, helped by cheaper crude oil but hobbled by falling bond prices.

The Dow Jones Industrial Average gained 9.36 points, or 0.1%, to finish at a new closing high of 11867.17, up 10.7% on the year. It was the fifth gain in six days.

As has often been the case in recent days, crude prices fluctuated amid shifting expectations about a possible production cut by the Organization of Petroleum Exporting Countries.

Traders increasingly suspected that Saudi Arabia, OPEC's largest producer, opposes a cut. Crude futures for November delivery plummeted $1.44, or 2.4%, to $58.52 a barrel, off 4.1% on the year at the New York Mercantile Exchange.

The decline in bond prices pushed yields higher. Such moves usually hurt stocks because they make bonds a more attractive investment compared to shares.

The broad Standard & Poor's 500-stock index rose 0.2%, or 2.76 points, to 1353.42, up 8.4% on the year. The technology-heavy Nasdaq Composite Index crept up 0.2%, or 3.66 points, to 2315.43, up 5% on the year.

The U.S. dollar hit its highest level against the yen this year, as worries about North Korea's reported test of a nuclear weapon pressured the Japanese currency (though Asian stock markets have held up well). The greenback rose to 119.73 yen, up from 119.12 yen Tuesday.

After the stock-market close, aluminum maker Alcoa, one of 30 components of the blue-chip Dow industrials, announced third-quarter profits that fell short of analysts' expectations, and the stock fell 6% in after-hours trading. Traditionally the first Dow stock to report third-quarter earnings, its announcement represented the kickoff of the broader earnings season on Wall Street.

For now, Wall Street's consensus expectation is that aggregate earnings of companies in the S&P 500 will grow 14% in the third quarter, according to Thomson Financial. However, Mike Thompson, research director at Thomson, predicts actual earnings growth will likely fall between 16% to 17%.

Before every earnings season, expectations tend to be low, because corporate chief executives often are overly cautious in their statements to investors and analysts.

Mr. Thompson said the performance of financial companies, whose earnings are expected to grow 29%, could translate into a boost for stock prices, since such companies constitute a large chunk of the market-capitalization-weighted S&P 500. "It's hard to have really solid earnings season without the financials doing well," said Mr. Thompson. In particular, he said, many insurers are poised to do well, based on comparisons to weak year-earlier earnings due to claims from Hurricane Katrina.

In major U.S. market action:

Stocks rose, and bond prices fell. The 10-year note fell 14/32 point, or $4.38 for each $1,000 invested, pushing the yield up to 4.756%. The 30-year bond fell 23/32 to yield 4.886%.

The dollar strengthened. In addition to dollar's rise on the yen, the euro fell against the dollar to $1.2537 compared with $1.2601.

History Of Foley Messages' Release Clarified By Players (WP)

By Jonathan Weisman

The Washington Post, October 11, 2006

Two of the news media's sources of Mark Foley's sexually explicit instant messages to former House pages said this week that they came forward to expose the Florida congressman's actions, not to help the Democrats in the midterm elections.

DOJ_NMG_0079001

But there are indications that Democrats spent months circulating five less insidious Foley e-mails to news organizations before they were finally published by ABC News late last month, which prompted the leaking of the more salacious instant messages. Harper's Magazine said yesterday that it obtained the five e-mails from a Democratic Party operative, albeit in May, long before the election season.

The genesis of the Foley story has become the subject of heated debate, as Republicans try to shift attention away from Foley's misconduct and the slow reaction of House Speaker J. Dennis Hastert's office to what they call a political hit just a head of the midterm elections.

"Are we saying that a 15-year-old child would've sat on e-mails that were XXX-rated for three years and suddenly spring them out right on the eve of an election? That's just a little bit too suspicious, even for Washington, D.C.," Rep. Jack Kingston (R-Ga.) said on "Fox News Sunday" last weekend. On the same day, Rep. Rahm Emanuel (Ill.), chairman of the Democratic Congressional Campaign Committee, said he "never saw" the e-mails. "What you guys want to do is take your dirty laundry and throw it over the fence and try to blame other people," he said.

But new information suggests that the story of the release of Foley's communications with male ex-pages is more complicated than either side asserts.

The most sexually explicit material -- the instant messages that forced Foley's abrupt resignation on Sept. 29 and turned his actions into a full-fledged scandal -- appears to be disconnected from politics. The two former pages who revealed the correspondence to ABC News and The Washington Post, however, may never have come forward had Democratic operatives not divulged the five more benign e-mails that Foley had sent to a Louisiana boy.'Over-Friendly' E-Mails

The communications that would eventually trigger the scandal were written by Foley in 2004. Foley's e-mails asked a former page from Louisiana for a picture and told him he had just finished a long bike ride and was going to the gym.

Those 2004 e-mails -- dubbed "over-friendly" by House Republican leaders -- originally leaked out of the office of Rep. Rodney Alexander (La.), a Republican. But, Republicans say, they still may have come from a Democrat on his staff. Alexander changed parties in 2004.

The timing of the e-mails' release appears to be more of a coincidence than an "October surprise," designed to affect the outcome of the elections. It took more than a year for the e-mails to be published because one publication after another decided not to print them.

The one media outlet that did, ABC News, took them public in late September only because the lead reporter, Brian Ross, had put the story on hold for more than a month as he pursued stories commemorating the anniversaries of the Sept. 11, 2001, attacks and Hurricane Katrina.

"There was never a plan to undermine the GOP or to destroy Hastert personally, as the speaker has vaingloriously suggested," Ken Silverstein, Washington editor for Harper's, said on the magazine's Web site yesterday. "I know this with absolute certainty because Harper's was offered the story almost five months ago."

Silverstein said his source was a "Democratic operative," the same source that had provided the e-mail exchanges to the St. Petersburg Times in November 2005. Both the magazine and the paper declined to publish a story. But the source "was not working in concert with the national Democratic Party," Silverstein added. "This person was genuinely disgusted by Foley's behavior, amazed that other publications had declined to publish stories about the emails, and concerned that Foley might still be seeking contact with pages."

A second source emerged, however, just last month, peddling the e-mails to several other publications, including The Post. And Ross of ABC News has stressed that his initial source was a Republican.More Explicit Messages

The instant messages between Foley and two former pages were much more sexually charged. Once ABC News obtained them and confronted the Florida Republican with the documents, Foley immediately resigned.

Two of the primary sources who delivered the instant messages came forward this week to clarify their motives. Both spoke on the condition of anonymity for fear that exposure would leave them open to harassment, especially from bloggers.

One of ABC News's sources, a former page, said he went public with his knowledge of the instant messages on Sept. 29 only after the network, the day before, published the questionable e-mails that Foley had sent to the Louisiana boy. The former

DOJ_NMG_0079002

page and current college student stressed that he is a "staunch Republican" who "wouldn't vote for a Democrat ever." He also said that he is not calling for the resignation of Hastert or any other Republican leader.

"I in no way knew or intended to have all the brouhaha about what the GOP leadership knew and when they knew it," he said in a detailed e-mail to The Post. "Truthfully, I am very troubled about what it seems has gone on behind the scenes, but that in no way affects my wish to have a continued GOP control of Congress. There are bad apples everywhere."

The Post subsequently received the instant messages from a Democratic college student who had served as a page with the two teenagers who had corresponded with Foley and had shared their instant messages.

Unlike the ABC News source, The Post's source conceded that he would like to see the Democrats seize control of the House in November, but when approached by a Post reporter about the instant messages, he was reluctant to provide them. Days later, he did so.

The two sources said they had conferred about the instant messages, which they had known about for months.

The Republican former page said he had decided it was up to the victims to come forward with them, but once ABC News published the e-mails, "I knew everything I had already known about Foley was finally going to come out. His attraction to young men. His sexual conversations with them, etc.'"Interests of Kids'

"I decided that it was in the best interests of kids in general, pages and my friends specifically that Foley be dealt with quickly and swiftly so that he couldn't hurt anyone else," the Republican student wrote in his e-mail. "We've seen how long the Justice department and every other government bureaucracy can take to deal with criminal issues and abuse. I knew the media would be the fastest way to get Foley the justice he deserved."

As for The Post's source, Foley's initial response to the disclosure of the e-mails finally persuaded him to share his information, he said.

"When the first e-mails came out, Foley's campaign came out saying it was all a well-timed Democratic smear. Those rumors were unfounded, and I knew that to be untrue," the Democratic former page said. Before the ABC News report, "we were reluctant to take on Congress as young politicos ourselves, but when first blows were made, there was no harm in coming forward," he added.

Democrats Gain From Republican Chaos (FT)

By Holly Yeager

Financial Times, October 11, 2006

Republican leaders scrambled on Tuesday to contain the fallout from a Capitol Hill ethics scandal amid growing evidence that the episode, and deepening dissatisfaction with the war in Iraq, will lead voters to support Democrats in the next month's midterm elections.

A Washington Post-ABC News poll on Tuesday showed registered voters favoured Democratic candidates over Republican candidates in House races by 54 per cent to 41 per cent, an advantage matched in several other new studies of public opinion.

Democrats need to pick up 15 seats in the House of Representatives on November 7 to take over the majority, and six seats in the Senate. While the national polls do not predict the outcome of individual races, they do reflect a growing sense of crisis facing Republicans.

Party officials had hoped to use the final month of campaigning to highlight Republicans' stance on national security. But the public appears to be increasingly displeased with President George W. Bush's handling of Iraq, with strong majorities saying the war was not worth fighting.

At the same time, Republicans have been in disarray for 10 days, plagued by questions about the handling of explicit electronic messages sent by Mark Foley, a member of the House from Florida, to teenage pages who worked on Capitol Hill.

Mr Foley resigned when confronted with the messages. But voters appear dissatisfied with the Republican leadership's handling of the episode.

A New York Times/CBS poll published on Tuesday found that 79 per cent of registered voters thought House Republican leaders were more concerned about their political standing than about the safety of the teenagers who work as congressional pages.

DOJ_NMG_0079003

Dennis Hastert, speaker of the House, has been under particular scrutiny, facing charges that he and his staff were aware of Mr Foley's advances towards the young men but failed to act. Some prominent conservative activists have called for his resignation and several Republican congressional candidates who had planned events with Mr Hastert have asked him to stay away.

"I don't think that anybody at any time in my office did anything wrong," Mr Hastert said on Tuesday in Illinois. But he vowed to investigate the matter thoroughly and fire anyone who helped to cover up the messages. "If anybody is found to have hidden information . . . they really should be gone," he said.

Tony Snow, White House spokesman, acknowledged the Foley scandal had "had an impact" on public opinion. It was too soon to gauge whether the North Korean nuclear test would help Republicans to remind voters about their traditional advantage in the public mind when it came to national security.

Polls show that advantage has eroded recently, and the tests could instead increase voters' anxieties about the Bush administration's conduct of foreign policy.

Republicans In Trouble A Month Before Elections: Polls (AFP-Y)

By Charlotte Raab

AFP, October 11, 2006

Polls out four weeks before US Election Day showed Democrats wielding a solid lead in the race to control the US Congress, sending Republicans who now control the legislature scrambling.

"Now is the time for all good men -- and women -- to come to the aid of the party," conservative commentator Bill Bennett told the National Review.

On the heels of a scandal involving a Republican lawmaker's lewd e-mails to underage congressional aides, and the response of Republican leaders, the party of US President George W. Bush is worried socially conservative voters may stay home.

"Don't do it. Please don't do it," Bennett implores followers on his website.

Democrats have opened their biggest lead over Republicans in 20 years this close to an election, amid public discontent with the Iraq war and Bush's handling of it, an ABC News/Washington Post poll found.

The scandal over Florida lawmaker Mark Foley's sexual overtures to teen aides has also taken its toll: 75 percent of those polled by CNN said Republicans mishandled the matter.

"A Capitol Hill sex scandal has reinforced public doubts about Republican leadership and pushed Democrats to a huge lead," USA Today concurred in coverage of its own USA Today/Gallup poll.

And Republicans have lost their edge on national security, a New York Times/CBS News poll showed. Asked which party "was more likely to make the right decisions when it comes to dealing with terrorism," 41 percent said Republicans, and 40 percent said Democrats.

All four polls gave Democrats a lead, ranging from 13 to 23 points, when voters were asked whether they planned to pick a Republican or a Democrat for Congress on November 7.

US voters will elect 33 of 100 senators, all 435 members of the lower House of Representatives and 36 of 50 state governors.

Democrats must win at least six seats to gain control of the Senate, and at least 15 seats to get control of the House. Capturing both could hobble the final two years of Bush's presidency.

The White House put on a brave face Tuesday, with spokesman Tony Snow confidently quipping: "We certainly look forward to working with a Republican House and Senate" after the vote.

But he acknowledged the challenge. "The Foley scandal certainly hasn't been a lift."

Snow said the White House will work over the next month to turn sentiment back in Republicans' favor. "What the White House is going to do is talk about what's important. We're going to talk about the issues."

Other Republicans were less sanguine.

DOJ_NMG_0079004

"This adds to a very difficult atmosphere for Republican candidates going into the last 30 days," said Virginia lawmaker Tom Davis.

The polls do not indicate how many districts the Democrats could win, but they are a gauge of the national political mood.

The 23-point lead in the USA Today/Gallup poll was "double the lead Republicans had a month before they seized control of Congress in 1994," the newspaper said.

Danny Diaz, a Republican Party spokesman, said the party was employing a very detailed database to target potential supporters.

"We're targeting voters from every walk of life. You can identify a Republican voter in the most liberal neighborhood," he said.

"It's something that we've only improved upon over the past two years and expect to continue to make more effective, and expect to make it an important part of retaining Republican majorities on November 7," Diaz added.

Republican lawmaker Ray LaHood said Sunday: "There's a very little window of opportunity, but it's closing on us fast."

In Minnesota, Voters Tune Out Scandals And Infighting To Focus On Issues (NYT)

By Lynette Clemetson

The New York Times, October 11, 2006

ANOKA, Minn. — Merrywayne Elvig is a registered Republican who voted twice for President Bush. But these days Ms. Elvig says she "has a lot of problems" with the president, his administration and Congress, most notably on Iraq. She now prefers to identify herself as a conservative rather than a Republican.

When she goes into the voting booth in November, Ms. Elvig said, she will be paying more attention to the candidates than their party affiliations. She said she would not consider voting Republican just to keep the party in power.

"Everything is about politics now rather than real issues," Ms. Elvig, a fourth-generation Anokan, said. "I think they need to clean house up there on a lot of things."

She is leaning toward the Republican running for Congress because of the candidate's understanding of housing issues that effect older Americans. But she is volunteering for a Democrat in a local City Council race because she believes that the candidate will address traffic congestion in this fast-growing area north of the Twin Cities.

For Ms. Elvig , 75, and roughly two dozen other residents interviewed here over two days at coffee shops and bars, schools and small businesses, on sidewalks and at kitchen tables, the topics that have had Washington hopping in the final weeks before the midterm elections — Congressional scandals, new books saying there was administration in-fighting over the war in Iraq — were little more than distant political chatter, best tuned out.

The conclusions drawn by Republicans and Democrats alike sounded a similar theme: People craved substance and not rhetoric, wanting to hear about the nuts and bolts of national issues like health care, local ones like a proposed light rail system and international concerns like a better strategy for the war in Iraq.

Anoka, which sits at the confluence of the Rum and Mississippi Rivers, is in the Sixth Congressional District, and voters here take their elections seriously. In 2004, 84 percent of eligible residents in the city voted, well above the national average. Its competitive House race between the Republican Michele Bachmann and the Democrat Patty Wetterling, as well as the United States Senate race between Mark Kennedy, a Republican, and Amy Klobuchar, a Democrat, factor heavily in both political parties' national strategies.

President Bush won 52 percent of the vote in Anoka County two years ago. But the county was also an important base of support for Jesse Ventura, who was elected governor as an independent in 1998. The political mix here, and more broadly across the state, led Republicans in September to select the Twin Cities for their 2008 national convention.

Randi Barbour is one of the independent-minded voters who have made the state fertile ground for both parties. A waitress at Billy's Bar and Grill and onetime supporter of Mr. Ventura, Ms. Barbour said she planned to vote Democratic in November because health care was her top concern. She voted for John Kerry, the Democrat, and Ralph Nader, the Green Party nominee, in the last two presidential races.

DOJ_NMG_0079005

Divorced with three adult children, Ms. Barbour, 51, lost her health insurance in 2003, when requirements were tightened for MinnesotaCare, the state insurance program for low-income workers. She said that she now put money away to pay for one comprehensive medical examination a year, and that she kept her fingers crossed for continued good health.

"Everybody wants lower taxes and that's all they care about, when what we really need to be doing is making sure Americans have insurance," Ms. Barbour said.

She said that she was disheartened that the Republican Party had chosen her state for their 2008 convention and that she planned to make a bumper sticker by then that read, "Save Our Blue State."

At Billy's, political views among the happy-hour crowd ran the gamut.

Doug Scanlon, 61, a Vietnam veteran and political independent who recently retired from a career laying floors, said he believed the state was going to lean Democratic in coming elections because of the quagmire in Iraq. Ron Langer, 65, a business owner, said he thought critics of the war had too quickly forgotten the Sept. 11 terrorist attacks.

"I'd rather see the war over there than over here," Mr. Langer said.

A short walk from Billy's in the old post office building on Main Street, Carol Thompson said she was thrilled that Republicans chose her state for their next convention. Next to the cash register in her educational supply store, Teacher's Pet, she keeps a picture of herself standing with President Bush.

It was taken in 2004 when Mr. Bush stopped for a chicken salad sandwich at the deli that shares basement space with her store. Without question, said Ms. Thompson, 53, she would vote Republican in next month's elections because she believes the party is uniquely committed to doing whatever it takes to protect the country.

She said she was paying little attention to the Congressional page scandal. But she said she was somewhat troubled that Republican leaders might have known about Representative Mark Foley's sexually graphic messages to pages and done nothing to remove him from office.

Ms. Thompson, a born-again Christian, said she could never support a gay politician or anyone who knowingly covered up his identity. But she would also never skip voting, she said. She trusted that her candidates in Minnesota were far removed from the taint of the scandal.

"I'll be praying a lot about it between now and the vote," she said. "If the party leaders tried to hide things about Mr. Foley, they will have to answer to the Lord."

Tom Kobelinski, 52, said that at times he felt like a member of a minority in Anoka. Mr. Kobelinski is a Roman Catholic and committed to social justice advocacy; his political philosophy can be easily gleaned from the assortment of books scattered across the dining room table of the modest three-bedroom Cape Cod where he and his wife, Christine, have raised four children.

In addition to "Homegrown Democrat" by Garrison Keillor, who was born in Anoka, there is a book commemorating the life of Paul Wellstone, the progressive Democratic senator from Minnesota who was killed in a plane crash in 2002.

Mr. Kobelinski, a physical education instructor for developmentally disabled children, said he supported Senator Mark Dayton, a Democrat who is retiring, because he pushed for increased educational spending for students with disabilities. He said he believed that Ms. Klobuchar would continue that commitment and work to bring balance to an educational system that now leans too heavily toward standardized testing.

"Not everything that counts can be counted, and not everything that can be counted counts," he said, paraphrasing a quote from Albert Einstein. "Testing alone is not enough."

Many Anokans find themselves somewhere in between Ms. Thompson and Mr. Kobelinski.

Vickie Wendel, 50, who has worked for the Anoka County Historical Society for 17 years, said she was intensely focused on state and local issues like a proposed new sales tax to finance construction of a stadium for the Minnesota Vikings in Anoka County. She is critical of the sales tax but supportive of a plan that would build a light rail system through the county, easing access to the Twin Cities.

Ms. Wendel said she had yet to make a decision in the governor's race, where the Republican incumbent, Tim Pawlenty, is in a close contest with his Democratic challenger, Mike Hatch, the state's attorney general. She is also undecided in the Senate race.

"I still am looking at the issues one by one," she said. "Honestly, I am looking for the box marked 'none of the above.' "

DOJ_NMG_0079006

People Like Foley Are Gays' Worst Nightmare (USAT)

By Steve Kluger

USA Today, October 11, 2006

Thirty years ago, singer, former beauty queen and human being Anita Bryant sat before Florida's Dade County Metro Commission and demanded the repeal of the recently passed ordinance that prohibited discrimination on the basis of sexual orientation.

"Homosexuals cannot reproduce, so they must recruit (our children)," she warned. With those few words, we lost our brand new civil rights — and it took us 20 years to get them back. What we really needed was somebody in the Sunshine State who was on our side.

Enter Mark Foley instead. Theoretically, it's easy to spot the politician whose mailing address is the closet. He's usually the one who's gleefully foaming over the most Draconian of anti-gay measures at the same time he's supporting, say, a jockstrap fetish, an itch to hang around truck stops, or a Calvin Klein model he's got stashed in a secret Brazilian love nest.

Foley was no different. From the day he was sworn in as the representative from Florida's 16th District, all he was missing was Bryant's hair. There was the matter of his very public Christianity, his endorsement of the so-called Defense of Marriage Act (which, incidentally, puts adult same-sex couples who wish to pledge lifelong fidelity into a category with national security threats), his authorship of numerous Internet restrictions to protect children from homosexuals and others online, and his repeated use of the word "revolting" to describe rumors that he's gay.

Then he became Bryant's worst nightmare. And ours, too.

Foley appears to be a sexual predator who exploited the adolescent thrall he engendered in House pages by pursuing teenage boys through explicit e-mails. He's also an unwitting poster boy for all gay men and lesbians who envision a career in politics: If you're ready to run for office, you'd better be ready to come out. And act like a responsible grown-up while you're at it. Spot Barney Frank in a gay bar onP Street and nobody's going to bat an eyelash. But if you're a married governor of New Jersey like Jim McGreevey who's discovered to have his clandestine male lover on the payroll, or gay-bashing Spokane Mayor James West who secretly prefers his male interns young and cute, you'd better start checking out Craigslist under "Employment Opportunities."

And yet, what else do you do when your entire career hinges on pretending you're something you're not? The religious fundamentalists and their political pod people might not always see eye-to-eye, but they seem to agree that the decline of Western civilization is due exclusively to gays and Bill Clinton. Indeed, if Foley's e-mails had been sent by a straight congressman to a 16-year-old girl — 16 being the age of consent in Washington, D.C. , and in many states, by the way — the TV anchors would have been sure to remind viewers that "the young lady was legally of age," and the word "pedophile" never would have flashed across cable news.

Yet Foley can't be let off that easily. When cornered with his fingers on the keyboard, he thinks it's enough to come clean. "OK, you caught me. I'm gay." But that's not what being gay is about. In fact, not only is Foley's behavior the excuse that has been used over and over again to deprive accountable gay adults of their human rights, his glib defense soils even his own community. "I'm also an alcoholic." "And a priest abused me." "The devil made me do it." Shame comes in many disguises. Foley has worn all of them.

"Being right-handed or left-handed doesn't dictate whether you punch or steal," says Jennifer Pizer, senior counsel at Lambda Legal, the nation's oldest gay-rights law firm. "Your behavior is your choice. There's nothing shameful about being gay. But abusing power to seduce teenagers is wrong whether they're male or female, and whether you're a lefty or a righty."

So who's really responsible for the Mark Foley mess? Foley himself? The Republicans? The religious right? The closets in capitol buildings across the country? All of the above? Ah, hell. Let's blame Florida. Again.

Rove Raises $12M In The 2006 Cycle (HILL)

By Alexander Bolton

The Hill, October 11, 2006

DOJ_NMG_0079007

White House politico Karl Rove, whose legacy as a strategist hinges on Republicans' fate at the polls on Nov. 7, has raised more than $12 million for GOP candidates this election cycle.

The total is remarkable for a White House staffer, more than any aide has been known to raise before, and confirms Rove's place among the most celebrated strategists in American political history.

And while Rove has raised the money to promote Republican policies by protecting the GOP majorities in Congress and building party infrastructure around the country, his personal stake in the upcoming election is undeniable.

If Republicans hang on to power, Rove's reputation as a political genius will be secure, say political observers. But if they lose, Republicans may look back at Rove's ambitious and unsuccessful efforts to reform Social Security and immigration policy with bitterness.

To be sure, Rove's contribution is a drop in the bucket of what White House officials have raised for Republicans in the past 21 months.

President Bush, Vice President Dick Che-ney and first lady Laura Bush have raised a combined $239 million since the start of Bush's second term, as of last week.

Just last week during a fundraising trip through Nevada, California, Arizona, and Colorado, Bush raised $2.36 million for four congressional candidates and one gubernatorial candidate and $1.3 million for the Republican National Committee (RNC). Also last week, Cheney raised $1.23 million for eight candidates during a swing through Wyoming, Montana, Texas, Michigan, Florida, and Virginia.

"I sure don't know of a staff person who's ever done it," said a Republican strategist Charles Black of Rove's fundraising total. "In the past some chiefs of staff did fundraisers but no one was as well-known or popular as Rove among the givers.

"He's got an incredible winning streak going — three major election wins since 2000," said Black, commenting on Rove's stake in November's outcome. "If the party were to hold both houses, he would have an unprecedented winning streak as a strategist."

Norm Ornstein, a scholar of politics at the American Enterprise Institute, said Rove has had more impact on politics than any White House aide in recent memory.

"I can't recall anyone who is in a staff position raising that much," said Ed Gillespie, who served as RNC chairman for the 2004 election. "I don't know of a cabinet secretary who has raised that much on behalf of candidates. It reflects the respect he commands in the party and reflects the Democrats' six-year effort to demonize him."

Adding to the personal pressure on Rove is his prediction in May that Republicans would be "just fine" in the fall.

Other political experts don't think the GOP's prospects are nearly so rosy.

"Rove has lost the golden touch: he didn't deliver on Social Security reform and the president's party has an uphill battle in this midterm. He's going to be lucky if this doesn't become a debacle for this party," said Darrell West, a political science professor at Brown University who said Rove's legacy is at stake. "If they lose control of one or both chambers, nobody is going to think Rove is such a genius."

Rove appears to have stepped up his fundraising appearances since special prosecutor Patrick Fitzgerald told his lawyer in June that he is no longer under investigation for leaking the name of CIA operative Valerie Plame to the press.

Rove's fundraising total also shows that despite Democrats' persistent efforts to demonize him, most recently by publicizing the number of contacts he had with convicted lobbyist Jack Abramoff, Rove remains very popular with rank-and-file conservatives.

White House officials have sought to keep Rove's campaign activity quiet in part because of a prevailing belief that staff should stay behind the scenes and not compete for attention with Bush and Cheney. And Rove, whom Bush has nicknamed "turd blossom," has carefully adopted a self-deprecating posture.

Rove has hit the fundraising circuit hard this election cycle, attending more events than Bush and his wife. But Bush remains by far the biggest fundraiser. He has raised more this election cycle than the Democratic Senatorial Campaign Committee (DSCC) and the Democratic Congressional Campaign Committee (DCCC) combined.

As of last week, he had raised $185.7 million at 77 events for Republican candidates this cycle, according to an RNC official. Rove, by comparison, has raised over $12 million at 92 events. Only Cheney has attended more events, 111. The first lady has appeared at 41.

DOJ_NMG_0079008

Rove has long been a lightening rod for criticism from Democrats and liberal activists. He has often been the subject of Democratic fundraising letters and stump speeches.

"Karl Rove is a key player in the Republican culture of corruption," said Karen Finney, spokeswoman for the Democratic National Committee, who noted that a recent House Government Reform Committee revealed frequent contacts between Rove and convicted lobbyist Jack Abramoff.

Last week a senior aide to Rove, Susan Ralston, resigned because of the report.

"He is the architect of their divisive campaign tactics," said Finney. "People are rejecting the politics of division. To a degree, the GOP, by continuing to send him out there, is trying that same old playbook. What they're not realizing is that Americans have seen it for what it is and are rejecting it."

But conservative Republicans don't seem to be among the people Finney is talking about.

"Karl Rove is still the guy who can excite the base," said West of Brown University. "When you're raising the money, that's the type of guy you want."

Congress As 'The Broken Branch' (WP)

The Washington Post, October 11, 2006

Even before the Mark Foley scandal broke, the 109th Congress was suffering from intense partisanship, legislative impasses and near-record-low public approval ratings. Incumbents are scrambling for reelection in the Nov. 7 general election, in which the Republican majorities in both houses are at risk. Regardless of the outcome, few lawmakers expect to rack up enough triumphs in the Nov. 13 lame-duck session to send the 109th Congress into the history books with high marks.

Two of the most knowledgeable congressional scholars are Thomas E. Mann of the Brookings Institution and Norman J. Ornstein of the American Enterprise Institute. Their new book is "The Broken Branch: How Congress Is Failing America and How to Get It Back on Track." They recently answered questions about their findings and views.

-- Charles Babington

Q Is the current Congress demonstrably more partisan than those in the past? Why does it matter?

MANN : Partisanship particularly increased after the 1994 elections and then the appearance of the first unified Republican government since the 1950s. Now it is tribal warfare. The consequences are deadly serious. Party and ideology routinely trump institutional interests and responsibilities. Regular order -- the set of rules, norms and traditions designed to ensure a fair and transparent process -- was the first casualty. The results: No serious deliberation. No meaningful oversight of the executive. A culture of corruption. And grievously flawed policy formulation and implementation.

Congress has been rocked by the Foley scandal. Was the House GOP leadership's response an example of reflexive partisanship? Are there larger lessons to learn from it?

ORNSTEIN : Part of the response to Foley was undoubtedly human nature -- lawmakers wanting to take Foley at his word that he wouldn't write any more improper e-mails. But it is hard to look at the responses of the collective majority leadership, including Speaker Dennis Hastert, GOP campaign chair Tom Reynolds and Page Board chair John Shimkus, without putting them into a context that makes it more damning.

The entire leadership team made sure that there was no significant ethics or lobbying reform in this Congress. They knew their majority was hanging in the balance, that the Duke Cunningham-Jack Abramoff-Tom DeLay scandal problem had not coalesced into an electoral catastrophe. The last thing they wanted was another embarrassing scandal. There is a lot to suggest that there was a systematic state of denial here, and an indifference to the possibility of a bigger problem that Foley might represent.

One party has controlled the White House, Senate and House for most of the past six years. Why have Republicans found it so hard to enact priorities such as comprehensive immigration changes, a Social Security overhaul, and even nuts-and-bolts legislation such as a budget bill?

ORNSTEIN : One answer is the small majorities that Republicans have had in both houses; it is hard to command perfect party unity in both houses for any length of time in our political system. But the Democrats had much larger margins for the first

DOJ_NMG_0079009

two years of Bill Clinton's presidency and also had immense difficulty making anything major happen. United government in an age of fierce partisanship and sharp ideological polarization between the parties does not work very well for very long. . . .

Congress is meant to check and balance the other branches, especially the executive. How have members' attitudes changed in recent years about Congress's institutional role?

MANN : It is striking, the extent to which the Republican majority in Congress deferred to the president in the face of one of the most aggressive and ambitious assertions of executive authority in American history. . . . They are now paying a political price for the policy consequences of their inattention. In Iraq, for example, it has meant flawed planning, poor implementation and no midcourse corrections. . . .

Few incumbents of either party face a serious risk of electoral defeat. How has this affected Congress's work? Does it make House members bolder, less inclined to blow with the political winds?

MANN : The last five congressional elections have produced fewer incumbent defeats and seats changing party hands than any comparable period in American history. Congressional districts have become safer for one party. . . . Those recruited, elected and reelected from such districts tend to reflect the ideological pole of their party rather than the center of public opinion.

Incumbency adds a layer of advantage on top of this party dominance. But rather than foster an environment in which members of Congress feel free to buck popular sentiment and wrestle seriously with the problems confronting the country, it reinforces the ideological divide between the parties. Incumbents are safe, but party majorities are not. This fosters symbolic votes, message politics and little serious legislating in Congress.

Don't voters deserve some blame -- maybe a lot -- for Congress's shortcomings? Do we get the government we deserve?

ORNSTEIN : Sure, voters -- and even more, non-voters -- deserve some of the blame. The low turnout we get exaggerates the power of the ideological activists who do turn out, skewing the system away from the middle.

But voters do not create the system that shapes the districts into noncompetitive ones, nor do they play a meaningful role in recruiting the candidates we get. . . . And we cannot expect voters to pay close attention to the ins and outs of the legislative process, until some crisis demands it.

It is the voters' surrogates, including the press, who have to alert them when something is seriously wrong. But ultimately, only a credible threat that the public is prepared to throw the rascals out will change the ways in which politicians in Washington operate.

Democrats Aim At The Red (LAT)

By Ronald Brownstein

The Los Angeles Times, October 11, 2006

KENNETT, Mo. — By her own admission, Claire McCaskill did not spend enough time campaigning in rural Missouri two years ago, when she narrowly lost the governorship to Republican Matt Blunt.

This year, as the Democratic nominee for U.S. Senate challenging GOP incumbent Jim Talent, McCaskill is making up for lost time. She's barnstorming down country roads in a bright blue RV, stopping in small towns such as this one, the birthplace of singer Sheryl Crow.

"A lot of it is sending a message to rural Missouri that … I want to try hard to get their support," McCaskill said after shaking hands with seemingly every moving object at the Delta Fair.

Her ability to win votes in rural Missouri may determine whether she topples Talent. More broadly, it probably will signal whether Democrats can overcome the principal obstacle in their drive for a Senate majority: the Republican dominance of Senate seats in states that President Bush carried in 2000 and 2004.

To gain the majority, Democrats must win at least four, and maybe more, GOP-held seats in red states such as Missouri. Recent polls have buoyed their hopes. Democrats are running about even with or slightly ahead of Republicans in each of the hotly contested red-state Senate races except Arizona's.

From disenchantment over the Iraq war to the sex scandal surrounding former Rep. Mark Foley (R-Fla.), a national tide may be gathering behind Democrats. But for Republicans, the red states loom as the sea wall against that force.

DOJ_NMG_0079010

Election day will decide whether discontent over the nation's direction overrides entrenched GOP advantages, especially among rural voters, in these culturally conservative states.

One of the most powerful trends in U.S. politics has been the growing alignment between the way states vote in presidential and Senate elections.

In the past, states often would support one party for president while sending members of the other party to Washington as one or both of their senators. But in a highly polarized era, more voters are supporting Senate candidates who are in the same party as their choice for president.

The GOP holds three-quarters of the Senate seats from the 29 states that twice voted for Bush for president. Democrats hold about three-quarters of the Senate seats from the 18 states that voted for Al Gore in 2000 and John F. Kerry in 2004.

Democrats need a net gain of six seats to win the Senate. Only two of their top targets this year are Republicans in states that the Democratic presidential candidates carried in 2000 and 2004: Sens. Lincoln Chafee of Rhode Island and Rick Santorum of Pennsylvania.

Red states are home to all of the other targets: Sens. Mike DeWine in Ohio, Conrad Burns in Montana, George Allen in Virginia and Jon Kyl in Arizona, as well as Talent in Missouri and a seat being vacated in Tennessee.

Amid the bad political news that has battered the GOP this year, Republican strategists take comfort that so many of the crucial Senate fights are being waged on what amounts to the GOP's home turf.

"I would much rather have a playing field that was predominantly red states than predominantly blue states," said Terry Nelson, field director for Bush's 2004 reelection campaign.

In most of these contests, Democrats express confidence that antipathy toward Bush will spark a large turnout by their core voters. They also believe that concern about the Iraq war — as well as anger over other matters, capped by the Foley scandal — will improve their showing among relatively well-off, socially moderate suburban voters.

But in all but one of the key red-state Senate races, rural voters constitute a larger share of the population than they do nationally (Arizona is the exception). And that means that to gain Senate seats, Democrats need to minimize the GOP edge among culturally conservative exurban and rural voters.

Missouri embodies this dynamic.

Talent, a smart, low-key politician, won his seat in 2002 by fewer than 22,000 votes over the Democratic incumbent, Jean Carnahan. (She had served the first two years of the term won by her late husband, Mel Carnahan, in 2000.)

McCaskill is an accomplished foe. A former county prosecutor in Kansas City and a former state legislator, she is now state auditor. She is gregarious and focused on the campaign trail as she delivers a sharp-edged populist message.

Experts in Missouri politics think McCaskill is likely to post strong showings in the Kansas City and St. Louis metropolitan areas, partly because she supports, and Talent opposes, a state ballot initiative to authorize stem cell research.

But in her 2004 gubernatorial race, McCaskill won only eight of the state's 109 rural and exurban counties, noted Kenneth Warren, a St. Louis University political scientist. To win this year, he said, McCaskill's main challenge "is to get more of the rural vote."

Both the opportunities and barriers in that effort were on display as McCaskill and Talent crossed campaign paths recently in rural southeastern counties, a region known as the Bootheel.

McCaskill's biggest obstacle, by far, is her liberal views on social issues: She supports abortion rights and opposed state amendments banning gay marriage and allowing residents to carry concealed weapons. Talent's campaign has run ads in rural markets highlighting these positions.

"It's a question of who believes in these heartland values and who doesn't, and that is a set of issues in the race," Talent said.

At the end of September, when McCaskill appeared at the 62nd annual Cotton Carnival Parade in Sikeston, several along the route said they did not need to know her opinions beyond abortion and gay rights to conclude they could not vote for her.

"I mostly vote Republican because of the Christian values side of it," said Jim Holt, a foreman at a trailer manufacturing company, as he leaned against his pickup truck.

DOJ_NMG_0079011

Holt said economic issues — what he called "the money side of it" — took a backseat to his other concerns. "I worry more about abortion and gay marriage and all that crazy stuff."

Joe Hester, an accountant, said he would vote for Talent because the incumbent "supports family values and I think McCaskill is too liberal for our state…. I'm a strong Christian, and I believe if you take care of the values, God will take care of the rest."

Several days later, Hester said the unfolding Foley scandal had not changed his view that "overall, Republicans are more in tune with my values."

McCaskill has sought to highlight her own faith and family — one day early this month she stopped at three churches before lunchtime, and she is running an ad in which her 78-year-old mother testifies to the candidate's "integrity, hard work [and] guts."

But mostly, McCaskill is trying to persuade more rural voters to consider "the money side" of the race. In the Bootheel's major counties, the poverty rate is substantially higher than the state average.

She spotlights her support for an increase in the minimum wage; denounces last year's energy bill for providing tax breaks to oil companies; and proposes new tax credits for college education, child care and first-time home buyers.

She's also unambiguous in her criticism of the Iraq war, urging the withdrawal of U.S. troops over the next two years.

Talent, meanwhile, is focusing on legislative measures requiring increased use of ethanol and cracking down on methamphetamine production.

"I'm not interested in being an international senator," he said. "I'm interested in making things better for my people."

But insulating the race from larger tides won't be easy.

During McCaskill's recent visit to the Bootheel, Dizer Capps interrupted her morning coffee at a restaurant in Caruthersville to say he would be voting for her. Capps, who runs a dry-cleaning business, voted for Bush in 2000 and 2004, and supported Talent in 2002. But he's lost faith in the president, largely because of the Iraq war.

"I voted for Bush because I thought he was a good man, but he ain't worth a damn," Capps told McCaskill. "I'm 76 years old and I've seen a lot of presidents, and this is the worst I've ever seen. He's worse than Jimmy Carter."

Such sentiments are welcome news for McCaskill. Yet Capps' comments also underscore the stakes in November's election.

If the Democrats can't loosen the GOP grip on enough culturally conservative voters to win the races in this climate, it's not clear when they will.

Democrats Veer To The Right In Fight For House (WT)

By Ralph Z. Hallow

The Washington Times, October 11, 2006

In North Carolina, former Washington Redskins quarterback Heath Shuler is running for a House seat, declaring himself a pro-life member of the pro-gun National Rifle Association, and accusing his opponent, Rep. Charles H. Taylor, of supporting amnesty for illegal aliens.

What's wrong with this picture? Mr. Taylor is a conservative Republican, and Mr. Shuler is the Democratic challenger trying to outflank him on the right -- a not uncommon move this election year, even before the Mark Foley scandal increased the midterm vulnerability of House Republicans.

It's happening across the South and Midwest, as Democratic congressional candidates from Illinois to Georgia are casting aside liberal loyalties to compete in conservative districts where they hope to gain the 15 seats needed for Democrats to take control of the House.

Democrats "have adopted a different kind of candidate, out of the traditional political sphere," said Charlie Gerow, a Pennsylvania-based Republican strategist.

"There are especially strong cases of 'blank slate' candidates with no voting records, trying to hedge on every issue -- in Pennsylvania, Illinois and Virginia, for example -- and other Democrats running like they're Republicans, in Georgia, Indiana and North Carolina," says National Republican Congressional Committee (NRCC) spokesman Jonathan Collegio.

DOJ_NMG_0079012

A few snapshots from the campaign trail:

•In Indiana, Vanderburgh County Sheriff Brad Ellsworth, running for a House seat, says flatly, "I'm pro-life. I believe in a traditional marriage and the Second Amendment." And, yes, Mr. Ellsworth is the Democrat in this race, challenging Republican Rep. John Hostettler.

•In Georgia, Rep. John Barrow has publicly denounced a "cut-and-run strategy" in Iraq. He favors a federal constitutional amendment to ban same-sex "marriage," and he opposes amnesty for illegal aliens. Mr. Barrow is also a Democrat -- being challenged by former Rep. Max Burns, the Republican he defeated to win the seat in 2004.

•Another Georgia Democrat, Rep. Jim Marshall, voted to block House Minority Leader Nancy Pelosi's motion last year to investigate possible prisoner abuses in the Iraq war and says he is pro-gun and mostly pro-life. Mr. Marshall is defending his redistricted seat against former Republican Rep. Mac Collins.

•In Kentucky, former Rep. Ken Lucas is yet another Democrat running like an all-out conservative in his challenge to Republican Rep. Geoff Davis.

The reasons for the plethora of rightward-running Democratic candidates? Polls show Democrats will have a hard time winning in strong Republican and swing districts if they spout traditional Democratic positions.

Democrats occupy seats in 41 congressional districts that voted for Mr. Bush in 2004, while Republicans hold 18 seats in districts that voted for John Kerry. That means that there are more than twice as many Democrats running in Bush-Republican districts than Republicans running in Kerry-Democrat districts.

To make a successful play for House control, Democrats have to win in Republican districts. But voter surveys consistently show that the national Democratic Party's liberal positions on taxes, abortion and other issues do not go down well in districts that supported Mr. Bush by 10 percentage points or more.

Therefore, the Democrats have recruited two types of candidates: those who often sound like their Republican opponents on abortion, guns, homeland security or taxes -- and those who simply don't talk much at all.

"It took 12 years in the minority for Democrats to realize that they couldn't win elections by running like Democrats -- so they've drafted candidates who either masquerade as conservatives or keep mum on the issues as long as politically possible," Mr. Collegio said.

Democrats' blank-slate candidates usually have not held public office, and thus have no voting record for their Republican opponents to use against them.

In Pennsylvania, for example, Republican Rep. Jim Gerlach faces challenger Lois Murphy. Though she is a former state director of NARAL Pro-Choice America, Mrs. Murphy has never been a legislator and thus has no voting record for Mr. Gerlach to challenge. The Democrat has hedged on issues ranging from taxes to Iraq to immigration.

In Virginia, Democratic challenger Phil Kellam is running in a district that went heavily for Mr. Bush two years ago. The tax commissioner in Virginia Beach, Mr. Kellam has avoided going on record on major issues and has turned down debates with the Republican incumbent, Rep. Thelma Drake.

Like many other Democrats, Mr. Kellam was quick to exploit the political opening afforded by the scandal surrounding Mr. Foley's reported involvement with teenage congressional pages. In an Oct. 3 statement, Mr. Kellam denounced House Republican leaders for failing to "act decisively" to "protect" pages.

In Illinois, Democratic candidate Tammy Duckworth, a disabled veteran of the Iraq war in her first bid at public office, straddles the line on major issues such as taxes, human cloning, same-sex "marriage," the USA Patriot Act and health care. To keep her policy slate blank, she has dodged debates four times with her Republican opponent.

There's not much Republicans can do about Democrats avoiding debates or appropriating basic Republican campaign themes, although the NRCC spokesman says the trend validates conservative arguments.

"If Democrats make headway this cycle, it's not because America has moved leftward, but because Democrat candidates have moved rightward," Mr. Collegio said.

As Election Nears, Groups Plan Negative Ads (NYT)

By John Broder

DOJ_NMG_0079013

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — A previously unknown group led by a Republican political consultant in Houston is financing television advertisements against nine Democratic House candidates from North Carolina to Arizona.

The group, Americans for Honesty on Issues, is spending more than $1 million on the advertisements, which accuse Democratic candidates of carpetbagging, coddling illegal immigrants, being soft on crime and advocating cutting off money for troops in Iraq.

The television spots appear to be the first wave of a boatload of negative political advertising that will appear in the weeks before the Nov. 7 election. Many of the advertisements will be produced by independent organizations known as 527 groups, after the provision in the tax code that allows such groups to spend virtually unlimited sums on political activity as long as it is not formally coordinated with parties or candidates.

The 527 groups had raised nearly $200 million as of June 30, much of which appears to be available to be spent on pre-election activities. And if past trends hold, the total raised and spent by the groups on this election will surpass $300 million, eclipsing the $258 million spent by such groups in the last midterm election, in 2002.

The increase is striking because the campaign finance law enacted in 2002 now forbids federal elected officials and candidates from operating their own 527 groups. In 2002, committees maintained by such officials raised about a third of the total dollars for the groups.

The leader of Americans for Honesty on Issues is Sue Walden, a close ally of Tom DeLay, the former House majority leader who left Congress amid questions on ethics and fund-raising. Ms. Walden has also raised money for President Bush and served as an adviser to Kenneth L. Lay, the former chief executive of Enron who died in July.

She referred a call seeking comment to Glenn M. Willard, a lawyer with Patton Boggs in Washington, who drew up the papers establishing the organization. Mr. Willard confirmed that Ms. Walden was the nominal head of the committee, but he declined to identify the group's donors or say how much it planned to spend.

The group's Web site does not give an address or phone number, nor does it list any of the officers or sponsors. It says only, "Americans for Honesty on Issues is organized to engage in political issue communications in compliance with federal and state laws."

Democrats, generously financed by labor unions and rich individuals like George Soros, dominated the 527 field in the presidential election of 2004, when such groups raised and spent more than $650 million. But Democratic groups have been relatively quiet this year, in part because big donors like Mr. Soros are giving much less money.

One Democratic 527 group, Majority Action, announced this week that it would run advertisements in four Congressional districts criticizing incumbent Republican House members for voting against federal financing for stem cell research.

The advertisements will focus on Representatives Chris Chocola of Indiana, Thelma Drake of Virginia, Don Sherwood of Pennsylvania and James T. Walsh of New York.

Total spending on the 60-second advertisements will be about $500,000, said Bill Buck, spokesman for Majority Action. The group's founders include Joe Andrew and Don Fowler, former chairmen of the Democratic National Committee.

Another Democratic 527 organization, the September Group, founded by the longtime party operative Harold M. Ickes, is planning a late burst of anti-Republican spending, said Howard Wolfson, a political consultant working with the group. But Mr. Wolfson would not say how much money the group had raised nor how it intended to spend it.

Emily's List, which supports Democratic candidates at the state and federal level, reported raising $3 million and spending nearly $2 million from July through September. Among its major donors are Linda Pritzker, a member of the family that owns the Hyatt hotel chain; Alida Messinger, a Rockefeller; Lee Fikes, a Texas oilman; and Mr. Soros.

Among the most active Republican 527 groups is the Economic Freedom Fund, which was formed this year and received a $5 million contribution from Bob J. Perry, a major Bush donor and an underwriter of the Swift boat veterans group in 2004. The fund is running advertisements on behalf of Republican candidates in Georgia, Indiana, Iowa, Oregon and West Virginia.

Dems Hunt For Drop-off Voters (HILL)

By Jonathan E. Kaplan

DOJ_NMG_0079014

The Hill, October 11, 2006

The clash between Democratic Party chairman Howard Dean and Rep. Rahm Emanuel (D-Ill.) over how much money the national party would spend to help congressional Democrats ended last month. But the heart of the disagreement, whether the national party has identified new and drop-off voters, could determine whether the Democrats retake the House and Senate in November.

Emanuel, chairman of the Democratic Congressional Campaign Committee, and Dean agreed last month that the Democratic National Committee would spend $2.6 million on GOTV efforts; Dean reportedly reached a deal Monday with Sen. Charles Schumer (D-N.Y.), chairman of the Democratic Senatorial Campaign Committee, to direct $5 million to state parties to help Democratic Senate candidates.

In the months preceding these agreements, the DSCC and DCCC set up their own field programs, which is something the DNC would have done in the past, said several Democratic strategists.

"Did they [the DNC] waste a year and a half not targeting drop-off voters? Yes," Emanuel said, referring to voters who cast ballots in presidential years but not in off-year elections. But he said House Democratic candidates would be fine, because, "It's not like we have slouches over there … they [the DCCC] know what they're doing."

Realizing that voter turnout could determine whether the Democrats control the House or spend another two years in the minority, Emanuel hired Michael Whouley and Jack Corrigan, longtime Democratic field operatives, to implement the DCCC's strategy. The committee has worked with 70 campaigns devising a field strategy; it is helping pay for field programs in several campaigns, said a senior Democratic aide.

Stacie Paxton, a DNC spokeswoman, said, "Unfortunately, the congressman is misinformed. We've been targeting drop-off voters for more than a year and we contacted three million drop-off voters this Saturday at the DNC's third national organizing day."

Turnout is especially crucial in midterm elections. In 2000 and 2004, for example, 55 percent and 61 percent of eligible voters, respectively, cast ballots. In 1998 and 2002, just 39 percent of eligible voters participated, according to the U.S. Elections Project at George Mason University. Those who don't show up to vote in an off-year election are known as "drop-off" voters. They are the midterm swing voters.

Still smarting from their losses in 2002 and 2004, Democrats have worked to match the Republican Party's successful get-out-the-vote operations. Republicans used technology to identify new Republican voters based on lifestyle choices, a practice known as microtargeting.

"Just because microtargeting was used in 2004 to find new voters doesn't mean that's its only use," said Jano Cabrera, a Democratic strategist who is advising Democrats on microtargeting efforts, "The same techniques are being used to identify base and drop-off voters during this midterm cycle, the two core groups that will determine the makeup of the next Congress."

But party strategists said in interviews that the Democratic Party has spent too much money rebuilding the party in red states and has not made any real inroads mining new voters. Democratic allies such as MoveOn.org, America Votes, and EMILY's List, have made the most progress in mining new Democratic voters, they said.

The Republican National Committee's (RNC) get-out-the-vote efforts, known in campaign jargon as GOTV or field, proved effective this year in California and Rhode Island. The National Republican Congressional Committee's (NRCC) $5 million effort helped former Rep. Brian Bilbray (R-Calif.) succeed Duke Cunningham (R-Calif.), who is now in prison. In Rhode Island, the RNC and National Republican Senatorial Committee (NRSC) rescued Sen. Lincoln Chafee (R) in his competitive primary.

While Democratic field ops are undertaken by the DCCC, DSCC and state parties, the Republicans have centralized their efforts. The RNC abruptly assumed control of the NRSC's field program this week. The NRCC turned its field program over to the RNC this summer.

Meanwhile, the DSCC had invested $10 million in field ops as of Aug. 30 and expects to spend $10 million to $20 million more this fall, said another senior Democratic aide. That money is in addition to what the state parties and DNC will spend.

The DSCC also has sought "to identify and court Republican voters in rural and exurban areas, places that we have all too often ignored (at our own peril) in recent elections," Schumer wrote last May in a memo to his colleagues.

DOJ_NMG_0079015

Schumer and several candidates in states with large rural populations are targeting potential voters in "micropolitan" areas, or small clusters of population in rural areas, wrote Schumer, adding that he would analyze the demographic composition of "drop-off voters who usually fail to vote in midterm elections but in 2004 mostly supported George Bush."

In races where the DCCC is not spending money, House Democratic candidates will piggyback on what is called a coordinated campaign, or the collective resources of the DNC, DSCC and state party to get voters to the polls.

In Nebraska, for example, the DNC and DSCC have kicked in several million dollars to augment the Nebraska Democratic Party's and Sen. Ben Nelson's (D-Neb.) voter-contact program. Nelson is running for reelection against Pete Ricketts, a multimillionaire businessman.

Although the DCCC placed former Lt. Gov. Maxine Moul (D-Neb.) on its "Emerging Races" list, indicating that Emanuel believes Moul has an outside shot of winning in a heavily Republican congressional district, Emanuel has not spent money on the race.

"The DCCC has been noticeably absent in spite of all their chest pounding," said Barry Rubin, the executive director of the Nebraska Democratic Party.

Democratic Senate Group Backs Webb In A Big Way (VAPILOT)

By Tony Germanotta

Hampton Roads Virginian-Pilot, October 11, 2006

It's official: Virginia's Senate seat is in play.

Forget about the polls, what really sends a message is money, and on Tuesday the Democratic Senate Caucus' political arm bought in big-time with an anti-George Allen ad.

It's the first time the national party has ponied up on behalf of Democratic hopeful Jim Webb, and his is one of only six races nationwide that the committee is currently targeting, according to Democratic Senatorial Campaign Committee spokesman Phil Singer.

Singer declined to give details on where and when the commercial will run.

"It's up on the air," he said Tuesday afternoon. "We don't like to advertise our advertising."

As for how much ad support the committee is offering to Webb?

"I've seen people report $1 million," Singer said, adding, "I won't deny it, and I won't state it on the record."

Webb started his race well behind incumbent Allen in fundraising. At the last official reporting deadline this summer, Allen had $6 million in the bank, compared with Webb's $424,000.

But last week, Webb reported raising nearly $3.5 million during July, August and September.

That left him with about $2.7 million on hand at the start of October, his campaign said. Webb and Allen are expected to spend a combined total of well more than $1 million per week on television advertising before the Nov. 7 election. That does not count the money spent by other groups such as the Democratic Senatorial Campaign Committee.

The 30-second ad lumps together a number of anti-Allen charges.

"George Allen, scandals, slurs and insults," it begins, with references to Allen's calling a Webb campaign worker of Indian descent "macaca," a term for a monkey that is used as a racial slur in some cultures, as well as citations of stories that have emerged during the campaign about Allen not reporting stock options and of having used racial slurs while in college.

Last week, Allen bought two minutes of airtime statewide to ask that the campaign focus on issues instead of attacks.

"Now after Allen's dark side is exposed, he wants the race to be 'decided on the issues,' " the ad's narrator intones. "Well here's his record."

What follows is an old-fashioned political parsing of votes and contributions.

Allen's campaign issued a retort Tuesday afternoon to what it called "the deceitful DSCC attack ad, funded through Hillary Clinton's latest $1 million donation."

Webb was on the campaign trail in Richmond on Tuesday to accept the endorsement of the Virginia Education Association, the state's largest teachers' group.

He said he had not seen the ad but welcomed the party's support.

DOJ_NMG_0079016

"Since Day One, we've been vastly outspent," he said. "I was outspent 3-to-1 in the primary. And I'm grateful that we're going to get some help here."

He said he had no role in the ad and didn't know how much the committee would spend.

"We are legally precluded from cooperating in any way with the DSCC," he noted.

The Democratic committee also is targeting races in Ohio, Montana, Missouri, Rhode Island and Tennessee, Singer said.

Democrats need a net gain of six seats to take control of the Senate.

National Dem Group Airs Independent Ads Attacking Allen (DPHR/AP)

By Bob Lewis

Daily Press, October 11, 2006

RICHMOND, Va. -- With the first major national cash infusion into Virginia's pivotal, closely contested Senate race, a Democratic group launched a major round of television ads across Virginia Tuesday lashing Republican Sen. George Allen.

Democrat Jim Webb also continued rebutting claims Allen had pressed in their Monday night debate that Webb would reinstate federal taxes that have been cut, including the estate tax and the so-called marriage penalty.

The Democratic Senatorial Campaign Committee ad, on a nine-day, $950,000 run, attacks Allen on issues as diverse as his "macaca" moment and new reports that he failed for five years to disclose stock options to Congress as required by ethics rules.

The ad, run independently from but in support of Democrat Jim Webb, is among the largest yet in a race the latest polls indicate is tied or very close.

Allen's campaign quickly labeled the DSCC's ad as "deceitful" and immediately sought to tie it to national Democrats, particularly New York Sen. Hillary Clinton, whom Allen's conservative Virginia voting base detests.

The ad opens mocking Allen's appeal last week for restoring the campaign to issues--an appeal he made even as he launched a second ad attacking Webb for a 1979 magazine article in which he questioned the fitness of women to lead men in combat and lamented their admission to U.S. service academies.

In rapid succession, the ad references Allen's applying the obscure racial slur "macaca" to a man of Indian descent in August, allegations by former college football teammates that he used a six-letter epithet for black people and a report that Allen did not report stock options he got for his service as a director of a high-tech corporation on his personal financial disclosure forms as Senate rules direct.

It accuses him of voting against body armor for U.S. troops, favoring tax breaks for energy companies that gave his campaign $322,000, and voting to boost his own salary while opposing increases in the minimum wage.

Allen's campaign released a list of rebuttals to each point, particularly the claim he opposed body armor for American troops. The ad accurately notes a party-line vote on Oct. 2, 2003, in which Allen and the GOP majority tabled a Democratic amendment to provide $322 million in spending on new battlefield equipment. However, it ignores several other votes Allen subsequently cast on funding for military equipment, including his concurrence in a near unanimous Senate vote on Aug. 2 to appropriate $6.7 billion the effort in Iraq.

At a news conference Tuesday where Webb received the endorsement of an organization representing Virginia's 63,000 public school teachers, he battled back on Allen's claims from Monday's debate that Webb wants to reinstate taxes on about 3 million Virginians.

"I would be opposed to raising taxes in any of the situations that affect the broad swath of Americans. So, programs like the marriage penalty, ... I've not talked about going after that," Webb said.

Simultaneously, Webb began airing a new ad that opens with the claim that "George Allen is lying again" about Webb's tax record. The ad is airing for a week in rotation with another 30-second Webb spot on Iraq policy at a cost of about $728,000.

On the tax applied posthumously to the estates of wealthy people, Webb said there should be some sort of tax on the largest of estates, but supported exempting smaller ones.

Webb accused Allen of increasing the tax burden on the poor and middle class while protecting tax breaks for corporations and the wealthy. He said Allen supported ending the tuition tax credit for families with college students.

DOJ_NMG_0079017

"Quite frankly, with a Republican-controlled government, the benefits that go to corporate America, I think, are beyond fairness," he said.

Allen, meanwhile, began airing a radio ad making his strongest link yet to groups supporting a referendum on the Nov. 7 statewide ballot that would write a ban on same-sex marriages or anything resembling it into the Virginia Constitution's Bill of Rights.

"There are those who would like to change the definition of marriage. Jim Webb is one of those people," an announcer says as the ad opens. "This Election Day you'll have an opportunity to stand up to the Jim Webbs of the world, to the people who want to weaken marriage."

The ad, in rotation with an ad blasting Webb on taxes, is running in rural areas, Norfolk and Roanoke at a cost of about $60,000. Allen, who supports the amendment, expects a substantial turnout boost from religious conservatives also drawn to the polls in large numbers to support the measure.

Webb is clear that he opposes the amendment, but on the same grounds as Gov. Timothy M. Kaine, a fellow Democrat. Both say marriage should be limited to one man and one woman, but they contend that in its zeal to outlaw any legal arrangement approximating marriage, the amendment could endanger the right of people to enter into personal contracts.

Taxes Take Center Stage (WP)

By Michael D. Shear And Tim Craig

The Washington Post, October 11, 2006

RICHMOND, Oct. 10 -- Taxes have moved to the forefront of Virginia's Senate race, with Republican Sen. George Allen accusing Democrat James Webb of plotting to raise taxes on millions of Virginians.

Allen made the allegations at the candidates' final debate Monday and is repeating them in a statewide television commercial. But the accusations are based almost entirely on Webb's support from national Democratic leaders and on two vague statements by Webb questioning whether Congress should make federal tax cuts permanent.

Webb, who has never run for public office or cast a vote on taxes, has angrily denied the charge and on Tuesday began airing a commercial defending his views. The Democrat's ad also examines Allen's voting history to accuse him of raising taxes on retirement savings, increasing the cost of tuition and giving tax breaks to oil companies. Webb also told reporters which tax cuts he would keep and what tax loopholes he would consider closing.

"This is one more chapter in this ongoing saga about taxes in Virginia now," said Virginia Commonwealth University professor Robert D. Holsworth. "What the senator is doing is to paint Webb as a knee-jerk, liberal tax-and-spender. What Webb wants to suggest is that his position is far more nuanced."

Taxes have been at the heart of political struggles in Virginia since 2000. The issue has divided the state's Republican Party as its members struggle to finance government operations and road-building. And it has dominated most of the statewide elections.

But it has not always been successful for the state's Republicans. Former attorney general Jerry W. Kilgore (R) opened his first gubernatorial debate with Democrat Timothy M. Kaine last year by warning voters, "You can take to the bank what he's going to do: He's going to raise your taxes." Kilgore lost.

In the current campaign, Allen is hoping to do better, putting Webb on the defensive with an ad that says Webb will "bring back the death tax, the marriage penalty tax and cut the child tax credit from $1,000 to $500."

Those charges are based on comments Webb made about the tax cut package enacted during President Bush's first term, including tax breaks for parents, married couples, investors and many businesses. During an interview with George Stephanopoulos on ABC's "This Week" program, Webb said he would seek to roll back "some" of the Bush tax cuts for the wealthy but didn't elaborate. In a blog interview, with http://MyDD.com , he questioned the wisdom of cutting taxes while paying for a costly war and wrote that "the tax cuts that come up for renewal in '08 -- I would want to take a very hard look at that."

Allen campaign aides Tuesday stood by their charges against Webb, saying that they are fair extrapolations from Webb's comments and his links to such national Democratic leaders as Sen. Hillary Rodham Clinton (D-N.Y.), whom they described as favoring higher taxes. Allen declined to be interviewed.

DOJ_NMG_0079018

"When [Webb] goes out and talks about taxes, he attacks the tax relief plan," said Allen spokesman Dan Allen, who is not related to the senator. "When you're talking about rolling back tax cuts . . . you are talking about a tax increase."

In a meeting with reporters yesterday, Webb accused Allen of misrepresenting his view on taxes. "What they have done in those ads is taken a statement or statements I made in a general way, saying the extensions of the Bush tax cut should be looked at, and [Allen's campaign] applied them to every single tax," Webb said.

Webb also said he opposes raising taxes "that affect a broad swath of Americans," including proposals to reverse efforts to close the so-called marriage penalty.

"I have not talked about going after them," he said.

Webb said he also supports President Bush's plan to reduce taxes on small and middle-sized estates, but he thinks it is all right to tax multimillion-dollar estates. But Webb, who frequently rails against the size of the federal budget deficit, conceded that "more revenues" are needed to finance the war in Iraq and pay down the debt.

"The area I would strongly focus on right now -- and I feel very strongly on this -- is the corporate tax structure," Webb said. "Not to raise rates, per se, but to examine all the loopholes built into the corporate tax code -- and there are a lot of them."

Webb has embraced a populist economic philosophy that includes bridging the gap between the rich and the working class. On Tuesday, he referenced a report by the Citizens for Tax Justice that states 46 of the Fortune 500 companies pay no taxes.

"In terms of how you begin to fix the problems of the tax structure, there are loopholes that exist that will throw billions of dollars of income back in before we have to look at anything else," said Webb, who added that some companies receive tax breaks when they relocate jobs overseas.

Holsworth said Webb has invited some of the Allen attacks by adopting a more populist tone than many of the state's recently successful Democrats. Kaine and former governor Mark R. Warner (D) often talked more about personal responsibility than economic justice.

"On economics, Jim Webb sounds more like [former vice presidential candidate] John Edwards than Mark Warner," Holsworth said.

But like Kaine and Warner, Webb walks a careful line when it comes to taxes. At the news conference, Webb declined to be boxed into a "no-new tax" pledge, saying he isn't ruling anything out if he is elected.

Webb's accusations about Allen in the commercial that aired Tuesday are based on votes Allen took in the past six years in the Senate and on comments he has made in newspaper articles while a public official.

Dan Allen, the senator's spokesman, offered specific rebuttals to Webb's ad: He cited numerous votes Allen made to increase tuition assistance, pass the Pension Protection Act of 2005 and vote for bipartisan tax breaks to encourage production of renewable fuels.

Allen described Webb's ad as a "baseless attack" that will not work with voters. "George Allen has a past record. Everyone knows he helped lower taxes as governor," Allen said. "It's going to fall on deaf ears."

Allen Allies Urge A Focus On Taxes (WT)

By Christina Bellantoni

The Washington Times, October 11, 2006

RICHMOND -- Virginia conservatives say an unrelenting focus on taxes will give U.S. Sen. George Allen a win over Democratic challenger James H. Webb Jr. in next month's election.

During a debate Monday night, Mr. Allen, a Republican, hammered Mr. Webb on taxes and yesterday kept up the attack. The Allen campaign Web site yesterday declared: "Hillary Clinton gave James Webb Jr. 1,000,000 reasons to raise taxes on 3 million hard-working Virginians."

"He showed he was the conservative choice and that it would be too dangerous to let the Democrats get control of the Senate," said Steve Rossie of Richmond, who yesterday attended a meeting of the anti-tax Tuesday Morning Group.

Conservatives irritated with national Republicans on fiscal issues say Mr. Allen finally has landed on a winning strategy in the final weeks of the race, one of the hottest in the nation with the major candidates nearly tied in the polls.

DOJ_NMG_0079019

The charge that Mr. Webb opposes making President Bush's tax cuts permanent echoes the theme of an Allen attack ad that features images of Mrs. Clinton and Democratic Sens. John Kerry and Edward M. Kennedy of Massachusetts, all of whom support Mr. Webb.

During the debate, Mr. Webb called corporate-tax loopholes unfair and noted that Mr. Allen allowed the tuition tax credit to die, costing families $4,000 per year.

"We have huge deficits, we kid ourselves if we don't say that we need more revenues," he said.

Mr. Webb released an ad responding to Mr. Allen's tax accusations, calling them lies and saying that his plan would cut taxes for the middle class and veterans.

"Virginians have a choice: George Allen's political sewage or Jim Webb's new direction," the ad concludes.

The tax theme will continue through Election Day because "when you've got a Republican versus a Democrat debating on taxes, we win the issue," Allen adviser Chris LaCivita said.

Mr. Allen today is expected to receive the endorsement of several anti-tax groups, including the National Federation of Independent Business and the American Family Business Institute.

Mr. Webb, who was endorsed by the Virginia Education Association yesterday, also got a boost when the Democratic Senatorial Campaign Committee announced a $1 million television ad buy in Virginia.

The DSCC ad features a clip of Mr. Allen calling an Indian-American Webb volunteer "macaca" and says that Mr. Allen's "scandals, slurs and insults" have exposed his "dark side."

"He wants the race to be decided on issues ... here's his record," the announcer says, going on to tell voters that Mr. Allen took campaign contributions from big oil companies and then gave them tax breaks.

It also states he voted against raising the minimum wage.

"George Allen is wrong on the issues, too," the announcer says.

Both men could claim victories after Monday's televised debate, the last face-to-face meeting of the campaign.

Political observers said Mr. Webb performed solidly by touting his military credentials that make him a better choice to lead the nation out of Iraq.

Mr. Webb, a decorated Vietnam veteran and former Republican who served as President Reagan's secretary of the Navy in 1987 to '88, told voters that Mr. Allen is "one of the administration's blindest supporters" and votes with the president 100 percent of the time on foreign affairs.

Mr. Webb said the election is a chance for disaffected Republicans who aren't comfortable with the majority party's position on social justice and economic fairness to vote for a Democrat.

"Just remember that the Republican Party has lost its way in the area of national security," he said. "I would hope that many of you would decide to come home."

Social conservatives applauded Mr. Allen's response to a debate question on the congressional page scandal -- saying that as a father he finds the situation "deplorable."

"If ... anybody put politics ahead of the protection of these children, then they should not be in a position of leadership and ... no taxpayer should be paying for the pensions of anyone so dishonorably discharged from Congress," Mr. Allen said.

Kevin Rollins of Woodbridge, a libertarian and former Republican, said he will vote for Mr. Webb because the majority party should be taught a lesson on Nov. 7.

"Giving the Republicans another victory won't reduce the size of government," he said.

A Contest Of Character (WP)

By Robert Barnes

The Washington Post, October 11, 2006

If Virginia voters want to pick their next U.S. senator based on issues, Democratic challenger James Webb and Republican incumbent George Allen give them plenty to work with. They disagree on taxes, the war in Iraq, support for the Bush administration, the deficit, how the government should fight terrorism, and a constitutional amendment aimed at same-sex marriage.

DOJ_NMG_0079020

If Allen had ever heard of them, they might also disagree about what Webb thinks is the vitally important subject of the Senkaku Islands.

But if the character of the candidate is the deciding factor, Virginians are entering murkier territory in the four weeks before they decide one of the nation's most competitive and high-stakes Senate contests. Will they choose Webb, a man they're still getting to know, or Allen, a man they're having trouble recognizing?

Some Democrats privately worry that Webb -- war hero, military expert, noted novelist, a former Republican who broke with his party over the war in Iraq -- is still an attractive résumé in search of a campaign persona. His appearances on stage with Allen have been described by party professionals as feisty but chilly. And, strapped for cash, he was not able to introduce himself to voters on television before Allen put him on the defensive, especially with women, key voters for any Democratic candidate.

As for Allen, his campaign for reelection is unlike the "insurgencies" he ran as an underdog to become governor in 1993 and turn out Sen. Charles S. Robb (D) in 2000. "I don't recognize this George Allen," said Virginia Tech political scientist Robert Denton.

The gregarious, self-described "rebel" has not looked comfortable defending his lead, which polls show may be down to almost nothing. "Oh, the campaign got off on other things that were not issues, that were not ideas," Allen said with a sigh when Monday night's debate moderator asked what had happened to his lead. "Some of it I brought on myself; some of it was just smears in the campaign."

Allen was caught flat-footed by Webb's Senkaku debate question, payback for when Allen had stumped him in a previous debate.

Allen, who had counted on the conservative base to be key to his presidential ambitions, is now talking about different mentors.

On Monday night, he neglected to mention his record of loyal support to President Bush. But he intoned the endorsement of Virginia's senior Republican, Sen. John W. Warner, who more regularly bucks his party's leadership, at least three times.

How Virginians decide between Allen and Webb is likely to be complicated, influenced by national politics, great demographic changes in the commonwealth and a souring mood about the direction of the country. And although both sides profess a longing to talk about the "issues," they also have made it clear in their advertising and campaign strategies that character will be just as important.

So it is that the Democratic Senate Campaign Committee began a nearly $1 million TV blitz yesterday to revive the moment when Allen turned on a dark-skinned volunteer for the Webb campaign and uttered the campaign-altering word "macaca." (Democratic consultants in Virginia and Washington must have smacked their foreheads when Webb declined, during Monday night's debate, an invitation to address Allen's alleged insult, saying it had been "discussed ad nauseam.")

Allen has had as difficult a time as any Senate incumbent this year. The campaign was thrown off track by the macaca incident, reacted awkwardly to reports of his unacknowledged Jewish heritage and was roiled by allegations that Allen, while a student at the University of Virginia in the early to mid-1970s, routinely used an insulting epithet for blacks.

At the debate, Allen called the charges "baseless allegations." Asked whether the acquaintances and former teammates who have made the charges are lying, Allen responded: "What I've said is, I don't recall using that word. But the stories were portraying it as if that word were part of my vocabulary, which it was not, and that was what's inaccurate."

Webb's own past, especially his prolific writings on everything from military strategy to the Clinton administration, has been a gold mine for opposition research. The Allen campaign has spent more than $1 million on two ads that show female military officers denouncing a 1979 article in which Webb objected in inflammatory language to the idea of women in combat and their presence at the U.S. Naval Academy.

He has apologized for some of the language -- his description of a dormitory as a "horny woman's dream" is fast becoming part of the campaign lexicon -- but not for contributing to the "debate" about the role of women in the military.

"I think most voters have a basic threshold question of whether something [from the past] is relevant today," said Scott Reed, a Republican strategist who managed former senator Bob Dole's 1996 presidential campaign. If the past behavior seems relatable to voters' current views of a candidate, he said, it becomes a problem.

"The repetition really starts to take its toll," he said. "That's the death by a thousand cuts."

DOJ_NMG_0079021

Webb's response has been to point to what he says are thousands of Navy assignments he opened to women when he was secretary of the Navy under President Ronald Reagan and to a crackdown he instituted on sexual harassment. He has countered Allen's ads with ones that have other female military officers making his case, and one radio ad warns, "If George Allen thinks this election is about something someone said 30 years ago, he's the one that has a lot of explaining to do."

Allen has answered the charges that he's racially insensitive by pointing to the civil rights pilgrimages that he has taken as a senator, his support for historically black colleges and universities, and several endorsements from African American Democrats.

How voters will weigh all of that is a mystery. "Character is always a factor in how people make up their minds," said Vic Fazio, a former California congressman and Democratic strategist. He added that voters are forgiving of past actions they might not have liked, as long as the candidate has "atoned."

Tenn. Senate Candidates Trade Barbs (CCT)

By Beth Rucker

The Contra Costa Times, October 11, 2006

CHATTANOOGA, Tenn. - Tennessee's U.S. Senate candidates traded caricatures during a debate Tuesday night that painted a grim choice for voters: rubber stamp or political insider.

"If you want a rubber stamp, don't vote for me," said Democrat Harold Ford Jr., suggesting his opponent would lock step with the Bush administration.

Counterpunching, Republican Bob Corker accused the Memphis congressman of being a Washington insider who benefited from the "machine-style" politics of his politically connected family.

The candidates' second debate came in a neck-and-neck race that could help determine whether Democrats gain control of the Senate.

If elected, Ford would be the first black U.S. Senator from the South since Reconstruction.

Corker, a former Chattanooga mayor, questioned the work of Ford's father, former U.S. Rep. Harold Ford Sr., as a lobbyist for Fannie Mae while Ford Jr. sat on the House committee overseeing its activities.

Ford said no one in his family has ever lobbied him on congressional issues and he would refuse them if they did.

"I work for the people of the 9th District," he told the audience at the University of Tennessee at Chattanooga.

Ford attacked his opponent's support for the Bush administration's "stay the course" policy in Iraq.

"If you want to stay the course, I'm not your guy," Ford said. "If you believe America is better than what they've given us this past six years, then I ask for your vote."

Ford said reducing dependence on foreign oil would help keep the country from getting caught up in foreign conflicts and said his opponent was an advocate for "big oil."

Corker said "new strategies" are needed in the war but he disagreed with Ford's suggestion to divide Iraq by ethnic and religious lines.

"That's something European countries did after World War II," Corker said.

Ford blamed the Republicans for not doing anything to rein in federal spending during their 12 years of power in Congress. He also said he supported going to a two-year budget cycle.

Corker said his experience as a business executive, state finance commissioner and mayor would help him during budget discussions.

I've lived a Tennessee life, my opponent has lived a Washington life," Corker said. "Our world views couldn't be any more different."

Poll: Lieberman Leads Lamont (HARTC)

By Mark Pazniokas

The Hartford Courant, October 11, 2006

Sen. Joseph I. Lieberman leads Ned Lamont by eight percentage points in the Senate race, although a majority of voters agree with Lamont on the war in Iraq and the need for change in Washington, a Courant/University of Connecticut poll says.

DOJ_NMG_0079022

Lieberman leads Lamont among likely voters 48-40 percent, with 8 percent undecided and roughly 15 percent of both candidates' supporters saying they still could change their minds before Nov. 7.

The poll by the Center for Survey Research and Analysis found that 60 percent of voters believe going to war was wrong, and a slim majority favors a deadline for withdrawal, issues Lamont used to defeat Lieberman in the Democratic primary.

But Lieberman, who stayed in the race as a petitioning candidate, enjoys a 57 percent approval rating and has managed to capture 67 percent of Republican vote, while keeping 35 percent of Democrats in his camp. Unaffiliated voters prefer him over Lamont 45-37 percent.

With the GOP leadership tacitly backing Lieberman, Republican Alan Schlesinger is favored by only 4 percent of voters. Also in the race are Ralph Ferrucci of the Green Party and Timothy Knibbs of the Concerned Citizens party.

"Lieberman has managed to do exactly what he set out to do after his primary loss. His goal was to finesse the party issue by appealing to independents and Republicans without completely alienating Democratic voters," said Monika L. McDermott, the research director at the center. "He's pulled it off so far."

After screening for likely voters, the telephone poll of 637 registered voters found Lieberman favored, 46-39 percent. When undecided voters were asked toward whom they lean, Lieberman's lead grew to 48-40 percent. Schlesinger's number rose from 3 percent to 4 percent.

The survey was conducted Oct. 4-9 and has a margin of error of plus or minus 3.9 percentage points.

The poll strongly suggests that the war is not enough for Lamont to win the general election, since Lieberman is supported by nearly one-third of anti-war voters and 70 percent of those who supported the invasion.

"The Iraq war should be Lamont's area of strength, given its unpopularity in Connecticut, Lieberman's staunch support of it and its importance relative to other issues," McDermott said. "The problem for his campaign, however, is that convincing general-election voters to turn on Lieberman because of Iraq is much harder than convincing Democratic primary voters."

McDermott said Lieberman is enjoying the benefits of being seen in some quarters as the de facto Republican candidate, without suffering the animosity voters are expressing toward the GOP majority in Congress.

"He has managed to walk this fine line of attracting support on all sides," she said.

The poll suggests a potential upside for Lamont, a cable-television entrepreneur who has been arguing that an outsider's willingness to fight for change in Washington outweighs Lieberman's experience as an 18-year incumbent.

By a margin of 53-29 percent, voters said they generally favored challengers and the promise of change over incumbents and experience.

"I think, overall, what the poll shows is that voters clearly are for Ned's message for change in Washington," said Tom Swan, Lamont's campaign manager. "Our challenge is to make sure that between our superior organization and our public messages, that we get these differences out there."

The poll also found that voters, by 2-1 ratios, prefer a legislator who does what the public wants, even if the action goes against the lawmaker's personal beliefs, and a candidate who believes in a distinct separation of religion and government.

By 47-42 percent, voters dislike the No Child Left Behind Act, which was supported by Lieberman. But 53 percent were unaware of Lieberman's position, despite Lamont frequently raising the issue in campaign speeches.

Favoring Lieberman, who has downplayed party affiliation to emphasize his ability to work across party lines, is a voter preference for a willingness to compromise: 70 percent said they hoped their party would compromise with the other party.

"We are pleasantly surprised by these results," said Dan Gerstein, Lieberman's communication director. "We fully expected the race to tighten over the last few weeks with all the negative attack ads that Ned has been running."

The poll found that 41 percent of voters preferred a candidate whose campaign is financed mostly with money from individuals, lobbyists and PACs, compared with 34 percent who preferred a self-funded candidate who avoids special interest money.

Lieberman and Lamont have clashed repeatedly over the source of their campaign finances -- Lamont is largely self-financed, while Lieberman accepts money from lobbyists and political action committees. (On Tuesday, Lamont contributed another $2 million to his campaign, bringing his personal total to $8.7 million.)

DOJ_NMG_0079023

Richard Foley, the campaign manager for Schlesinger, said his candidate will outperform the polls -- all of which show Schlesinger mired in single digits.

"It's not going to happen that way," Foley said. "I am not questioning anybody's methodology or anybody's sanity, but I will tell you there is almost no situation I envision where Alan Schlesinger gets less than 15 or 20 percent. That is the minimum vote."

Schlesinger's profile will rise as the result of three televised debates, beginning Monday; he also is expected to benefit from being on the top line of the ballot next to Gov. M. Jodi Rell, while Lieberman will be no higher than the 5th line.

The new poll is generally consistent with recent Quinnipiac University polls, though it shows weaker support for Lieberman among unaffiliated voters.

Lamont Writes $2 Million Check To Own Campaign (NSDY/AP)

By Andrew Miga

Long Island Newsday, October 11, 2006

HARTFORD, Conn.(AP) _ Wealthy Democratic businessman Ned Lamont is pumping another $2 million of his personal fortune into his bid to unseat three-term Sen. Joe Lieberman, whom he trails in a recent statewide poll.

Lamont wrote the check Tuesday, his campaign confirmed. With less than a month left before the Nov. 7 election, Lamont has personally contributed $8,751,500 to his campaign.

Lamont's personal wealth has been estimated at between $90 million and $300 million, according to his campaign. Lieberman launched an independent bid to keep his seat after losing the August primary.

Results of the Courant/University of Connecticut Poll, released Tuesday night on The Hartford Courant's Web site show Lieberman leads by 8 percentage points. Among likely voters, Lieberman had a 48-40 percent edge, with 8 percent undecided. About 15 percent of supporters for both candidates said they could still change their minds before Nov. 7.

Alan Schlesinger, the Republican candidate, garnered 4 percent.

"Lieberman has managed to do exactly what he set out to do after his primary loss. His goal was to finesse the party issue by appealing to independents and Republicans without completely alienating Democratic voters," Monika L. McDermott, the research director at the center told the Courant. "He's pulled it off so far."

The survey was a telephone poll of 637 registered voters conducted Oct. 4-9 and has a margin of error of plus or minus 3.9 percentage points.

A majority of respondents _ 60 percent _ agreed with Lamont that going to war with Iraq was wrong. But the poll suggests the war is not a big enough issue for Lamont, with Lieberman winning support from nearly one-third of anti-war voters and 70 percent of those who supported the invasion.

In last month's Quinnipiac poll, Lieberman led by 10 percentage points.

Both Lieberman and Lamont are spending heavily for TV ad campaigns as the fall race intensifies. Lamont has criticized Lieberman for missing Senate votes in a new commercial. One Lieberman ad receiving heavy air play accuses the Greenwich millionaire of lacking the experience to be an effective senator.

"Ned is not going to let Senator Lieberman's negative allegations and lobbyist-financed attacks go unanswered," said Lamont spokeswoman Liz Dupont-Diehl.

The Lieberman camp brushed aside the charges, insisting Lamont was planning more attacks on the incumbent.

"This is just another indicator that Ned Lamont is gearing up to continue and intensify his barrage of negative and misleading attacks against Joe Lieberman's record of results," Lieberman spokeswoman Tammy Sun said.

Lamont aides said he is self-financing much of his campaign because Lieberman is taking money from special interest groups and political action committees. Lamont has called for public financing of campaigns and lobbying reform.

Lieberman, who was the Democrats' vice presidential nominee in 2000 and ran for president in 2004, has built a national fundraising base. Some prominent Republicans are helping him raise money.

Lamont, a cable executive and great-grandson of the former chairman of JP Morgan & Co., estimates he is worth $90 million to $300 million. His firm, Lamont Digital Systems, wires college campuses for cable television.

$5 Million Pledged To Texas Democrat (WT)

DOJ_NMG_0079024

By Hugh Aynesworth

The Washington Times, October 11, 2006

DALLAS -- A Houston trial lawyer's huge political contribution may tighten the Texas gubernatorial race in the final weeks.

John O'Quinn, 65, said yesterday he had donated $1 million and would give or raise an additional $4 million toward the campaign of Chris Bell, a Democrat challenging Gov. Rick Perry in the Nov. 7 election. The $5 million would be the largest single donation ever in a state race.

Texas does not limit individual donations to statewide candidates.

"Chris is not going to lose because he doesn't have the money," Mr. O'Quinn said.

Mr. Perry, a Republican, and independent challenger Carole Keeton Strayhorn have been spending heavily on television ads. Mr. Bell and independent candidate Kinky Friedman have not had the campaign money to keep up the pace.

Most polls show Mr. Perry leading by several points, receiving the support of 36 percent to 38 percent of those surveyed. He needs only a plurality of votes to win the election.

Mr. Bell, a former congressman who represented Houston, had been struggling to get out his message with little money.

The O'Quinn injection immediately energized the Bell campaign. Spokeswoman Heather Guntert said the Democrat already had placed more television ads in Houston and planned to buy heavily in other major markets this week.

Mr. Bell is revising his schedule so he can create new ads, his media chief said.

Even with Mr. O'Quinn's largess, Mr. Bell still trails Mr. Perry and Mrs. Strayhorn in funding.

Campaign finance reports filed yesterday showed Mr. Perry with $9.2 million in cash on hand and Mrs. Strayhorn with more than $5 million.

Fort Worth lawyer Hedley Cochran said Mr. O'Quinn's support for Mr. Bell is a jab at the governor.

"[Mr. O'Quinn] is just trying to get back for the needed tort reform Perry and the other Republicans pushed for in recent years," he said. "They're all incensed at Perry."

Mr. O'Quinn is said to be a billionaire. In 1998, he was one of six lawyers who won a $17.3 billion verdict for Texas from tobacco companies.

He has endowed millions of dollars to hospitals and libraries and reportedly has collected more than 600 classic cars, worth more than $100 million. He bought former Pope Paul VI's 1975 Ford Escort at auction for $680,000.

Mr. O'Quinn did not return phone calls seeking comment yesterday, but he told the Austin American-Statesman he would ask nothing of Mr. Bell if he won the election.

"There will not be a piece of legislation introduced to benefit me or my business," he said. "The facts are the facts. Abraham Lincoln could not be elected president today if he didn't have a bunch of money."

Bell Calls On Kinky To Drop Out (DMN)

By Robert T. Garrett And Gromer Jeffers Jr.

The Dallas Morning News, October 11, 2006

Democratic nominee Chris Bell is trying to persuade independent Kinky Friedman to quit the race for governor, but Mr. Friedman insisted Tuesday that he's in to stay.

Mr. Bell left a voice mail message on Mr. Friedman's personal cellphone Tuesday, asking for a meeting at the mystery writer and former bandleader's ranch near Kerrville, Mr. Friedman said.

Mr. Bell later confirmed he sought a meeting so he could try to talk Mr. Friedman into dropping out of the four-way race, which is in its home stretch. The election is Nov. 7.

More Elections 2006

"I had hoped to talk to Kinky privately, but now that it's been reported by the Dallas Morning News, I'm going to ask him publicly: Please join me in defeating Rick Perry," Mr. Bell said in a statement his campaign issued late Tuesday.

DOJ_NMG_0079025

"Kinky and I agree on some very important issues and our supporters all have a lot in common: they want change."

Mr. Bell credited Mr. Friedman with energizing voters but made it clear he thinks only he has a chance to win.

"Now is the time for us all to unite," he said. "So I'm asking for Kinky to join me."

Bell campaign aides said that Mr. Friedman performed poorly in Friday night's candidate debate and that Friedman supporters have told the Democrat that they'd support him if he could persuade Mr. Friedman to step aside.

Interviewed as he headed to evening campaign events in Dallas, Mr. Bell acknowledged that Mr. Friedman is siphoning votes away from him and Republican Gov. Rick Perry.

"He's taking from both," Mr. Bell said. "But he's taking more from me."

Mr. Friedman, campaigning in Brownsville, said of Mr. Bell and his advisers: "They're desperate and scrambling."

Asked whether he would consider the Democrat's request to step aside, Mr. Friedman said: "No. You're kidding ... for Chris Bell? What do you take me for?"

Mr. Bell, Mr. Friedman and independent Carole Keeton Strayhorn each trail far behind Mr. Perry, according to a recent Dallas Morning News poll of likely voters. But Mr. Bell's debate performance has won generally strong reviews, giving the Democrat hope he can emerge as the main challenger to Mr. Perry.

Mr. Friedman, who acknowledged he "didn't bring my A game" to Friday's debate, insisted he still finds strong support everywhere he travels this week. And he believes he can win a plurality of votes – all that is needed to win – if the anti-incumbent mood he sees sweeping the nation lifts voter turnout in Texas.

To drop out is unthinkable, he said: "I'd be letting a lot of people down."

But he took delight in Mr. Bell's message that the independent is taking a toll. "What can it possibly mean other than that we're killing him?" Mr. Friedman said. "We're getting all of the liberals. We're getting all of the conservatives."

Inside Politics (WT)

The Washington Times, October 11, 2006

A list ignored

" 'I just deleted it,' says an official at a Washington-based social-conservative organization. 'It looked like junk e-mail.'

" 'It' is what has become known as The List, a document naming allegedly gay Republican congressional staffers that has been e-mailed to a number of conservative groups in the last few days," Byron York writes at National Review Online (www.nationalreview.com).

"According to a report by David Corn, a writer for the left-wing magazine the Nation, anti-Republican 'gay politicos' sent the list to several social-conservative organizations -- among them Focus on the Family, the Family Research Council, and the Southern Baptist Convention -- in hopes of setting off 'a civil war within the GOP, to turn the anti-gay social cons against the GOP's Velvet Mafia.'

"As it turned out, at least two organizations apparently deleted the e-mail, either as part of routine file upkeep or because they weren't interested in its contents. Others didn't open the attachment -- the list was included as a separate file -- fearing that it contained a virus. And some opened it up and didn't see much that was new. 'We work on the Hill,' says one conservative activist. 'There weren't a lot of surprises on the list.' So far, the much hoped-for civil war doesn't seem to be happening," Mr. York said.

"But the campaign to spread The List is accomplishing something. It is offering clues about who is behind it.

"The version of The List sent to at least some of the conservative organizations originated from the e-mail address hprf@yahoo.com. That is the address of a California-based group, the Health Policy and Research Foundation, an organization devoted mostly to work involving AIDS, that is run by a businessman and former Democratic National Committee staffer named Rick Reidy."

McCain vs. Clintons

Sen. John McCain, Arizona Republican, yesterday accused former President Bill Clinton of failing to act in the 1990s to stop North Korea from developing nuclear weapons.

DOJ_NMG_0079026

"I would remind Senator Hillary Rodham Clinton and other Democrats critical of the Bush administration's policies that the framework agreement her husband's administration negotiated was a failure," Mr. McCain said at a press conference in Southfield, Mich., after a campaign appearance for Republican Senate candidate Mike Bouchard.

"The Koreans received millions and millions in energy assistance. They've diverted millions of dollars of food assistance to their military," he said.

Mr. McCain also called on China to "step up to the plate" and vote for sanctions and reject calls for one-on-one talks between the United States and North Korea, the Associated Press reports.

"The worst thing we could do is to accede to North Korea's demand for bilateral talks," Mr. McCain said. "When has rewarding North Korea's bad behavior ever gotten us anything more than worse behavior?"

Angry Sharpton

The Rev. Al Sharpton accused Sen. Joe Lieberman of Connecticut of "flagrant race baiting" for highlighting his support of rival Ned Lamont as "remarkable," the New York Post reports.

"The charges came in a letter after Mr. Lieberman, at a Manhattan fundraiser last week, reportedly called it a 'remarkable moment' when Mr. Sharpton appeared onstage with Mr. Lamont after his Democratic primary victory as he questioned Mr. Lamont's commitment to Israel," the paper reported.

"It is your open and flagrant race baiting and your risking black-Jewish relations ... that is most troubling to me," Mr. Sharpton wrote.

Lieberman spokeswoman Tammy Sun criticized the "baseless, extreme and divisive [attack] from one of Ned Lamont's closest advisers."

Big lead

Florida Attorney General Charlie Crist has a commanding lead over Democratic nominee Rep. Jim Davis in their race to replace Gov. Jeb Bush, a new poll shows.

Mr. Crist was backed by 53 percent of likely voters, compared with 43 percent who said they favored the Democratic congressman from Tampa, with 3 percent undecided.

The random telephone survey of 783 likely voters was taken between Oct. 3 and 8 by Quinnipiac (Conn.) University Polling Institute. Mr. Crist was favored by 50 percent to Mr. Davis' 39 percent in a larger sampling of 968 registered voters.

The margin of error was 3.5 percentage points in the sampling of likely voters and 3.2 percentage points among registered voters.

Mr. Bush, a Republican, is prohibited from seeking a third term.

On the road again

Officials will gather today in Atlanta for the sixth federally funded AIDS conference in the past six months -- "not counting the International AIDS Conference held in August that was attended by 78 Health and Human Services Department employees," says a Senate investigator who has chronicled the travel habits of HHS bureaucrats.

Despite the proliferation of AIDS-related travel opportunities, the three-day HIV/STD Educator/Trainer Network (ETN) Meeting in Atlanta bills itself as "the only meeting of its kind."

Meeting at the Crowne Plaza hotel in Atlanta's upscale Buckhead district, the taxpayer-funded conference coincides with the annual Taste of Atlanta food festival Saturday at Lenox Square Mall in Buckhead.

A roller coaster

"The ups and downs of this roller-coaster campaign year are starting to make my stomach queasy, but then again it may just be all of the airline food I've been eating lately," political analyst Charlie Cook writes at www.nationaljournal.com.

"The combination of the worsening situation in Iraq and the Foleygate scandal have effectively crowded terrorism, national security and falling gasoline prices out of the public eye, shifting the venue of this campaign away from three things that had, albeit briefly, advantaged Republicans," Mr. Cook said.

"Still, with four weeks to go, the nuclear test in North Korea should serve as a reminder that events could shift this spotlight yet again to more favorable -- or at least less unfavorable -- terms for the GOP. We will be watching the situation with North Korea to see if it gives Republicans any traction."

Washington Wire (WSJ)

WSJ Online's "Washington Wire", October 9, 2006

October 8, 2006, 1:30 pm Go Ahead and Talk

Former Secretary of State James Baker nudges the Bush administration to talk directly with North Korea, joining a growing chorus calling for reopening diplomatic ties with Iran or engaging in high-level talks with Syria. "You don't give away anything, but, in my view, it's not appeasement to talk to your enemies," Mr. Baker said on ABC's "This Week" television show.

Scholars at the conservative Hoover Institution at Stanford University recently issued a detailed paper urging the administration to offer full diplomatic relations with Iran as part of a bid to get Tehran to give up parts of its nuclear program. The U.S. cut off diplomatic ties with Iran 26 years ago, while the Bush administration has refused to engage in bilateral talks with North Korea, saying that all negotiations should occur within the setting of the six-country talks, which also include Russia, China, Japan and South Korea.

North Korea has long held out for bilateral talks with Washington, portraying its pursuit of nuclear weapons as a means of defense against what it sees as U.S. threats.

"I don't think you restrict your conversations to your friends. At the same time, it's got to be hard-nosed. It's got to be determined," said Mr. Baker, who was former President George H. W. Bush's top diplomat in the early 1990s. – Neil King Jr.

October 7, 2006, 1:06 pm A Convoy in Indiana

In his fight to wrest a congressional seat from House Veterans Affairs Committee Chairman Stephen Buyer (R., Ind.), Democratic challenger David Sanders has found support from a small army of veterans. First, a number of local vets fell in behind him, and he won the backing of former Sen. Max Cleland, a Georgia Democrat and a disabled Vietnam vet, who recently joined Sanders on the campaign trail.

Now, he has the support of a convoy. On Monday, Sanders is accompanying a day-long road trip around Indiana organized by No Vets Left Behind to protest cuts in veterans' benefits, from higher health-care copays to reduced eligibility to redefining post traumatic stress.

Still, the odds are long for the Purdue University scientist. Buyer, running for his eighth term, picked up 70% of the vote in 2004 – when he also faced Sanders. –Mary Lu Carnevale

October 7, 2006, 12:30 pm Peggy Noonan on Woodward's 'State of Denial'

Peggy Noonan writes in today's Journal: Thirty-two years into his career as a writer of books, Bob Woodward has won a reputation as slipshod ("Wired"), slippery ("All the President's Men," "The Final Days"), opportunistic ("Veil"; everything) and generally unaware of the implications even of those facts he's offered that have gone unchallenged. … Mr. Woodward has been that amazing thing, the boring fabulist.

The Bush White House has spent the past five years thinking they could manage him. Talk about a state of denial.

Now he has thwarted me. I bought "State of Denial" thinking I might have a merry time bashing it and a satisfying time defending the innocent injured.

But it is a good book. It may be a great one. It is serious, densely, even exhaustively, reported, and a real contribution to history in that it gives history what it most requires, first-person testimony. (It is well documented, with copious notes.) What is most striking is that Mr. Woodward seems to try very hard to be fair, not in a phony "Armitage, however, denies it" way, but in a way that — it will seem too much to say this — reminded me of Jean Renoir: "The real hell of life is that everyone has his reasons." Read the full column.

Bringing It Home Seat In Congress Helps Mr. Taylor Help His Business (WSJ)

By John R. Wilke

The Wall Street Journal, October 11, 2006

ASHEVILLE, N.C. -- Charles Taylor, wealthy businessman and banker, owns at least 14,000 acres of prime land in western North Carolina. He's also the local congressman. So when he steers federal dollars to his district, sometimes he helps himself, too.

DOJ_NMG_0079028

Last year, Mr. Taylor added $11.4 million to a big federal transportation bill to widen U.S. Highway 19, the main road through Maggie Valley, a rural resort town in the Great Smoky Mountains. His companies own thousands of acres near the highway there and had already developed a subdivision called Maggie Valley Leisure Estates.

Mr. Taylor also got $3.8 million in federal funds for a park now being built in downtown Asheville with fountains, tree-shaded terraces and an open-air stage. It's directly in front of the Blue Ridge Savings Bank, flagship of his financial empire. He is among the richest congressmen with assets of at least $72 million, records show.

The Republican lawmaker is one of at least a half-dozen House members whose public actions in directing special-interest spending known as earmarks have also benefited their private interests or those of business partners, according to congressional, corporate and real-estate records. Among them is a senior Democrat, Rep. Alan Mollohan of West Virginia.

The lawmakers say they're working to help their districts, not themselves. "I fight for the priorities set by our local governments, universities and economic development organizations, not based on what will be of benefit to me," Mr. Taylor says.

But the growth of earmarks and the secrecy that shrouds the practice inevitably raises questions of self-dealing. Earmarking has been at the center of the influence-peddling and corruption probes that have shaken public confidence in Congress this year. The practice also played a central role in the case against former Rep. Randy "Duke" Cunningham. The California Republican was imprisoned after pleading guilty to accepting $2.4 million in bribes from defense firms in exchange for earmarks and other favors.

The growth of earmarking points to a shift in the way Congress works. Most federal spending originates in requests by departments and agencies. The Transportation Department might seek funds to build a highway interchange, for example, or the Pentagon might ask for new tanks. The spending proposals are then put into legislation which must win approval by Congress.

Earmarks are different because lawmakers can directly insert them into spending bills, often without public scrutiny. Many lobbyists and corporations have discovered in recent years that one of the fastest ways to get the spending they desire is to approach an individual lawmaker of either party on the House or Senate appropriation panel about an earmark. That has fed the growth in earmarks to an estimated $47.4 billion last year from $19.5 billion a decade earlier, according to the Congressional Research Service.

Earmarks range from pet projects -- such as Mr. Taylor's $500,000 earmark to help build a Teapot Museum in Sparta, N.C. -- to billion-dollar cargo-aircraft contracts that weren't sought by the Pentagon but are funded to keep jobs in a lawmaker's district. In California, Rep. Gary Miller steered $1.28 million to widen a road near an upscale shopping center he helped develop. The center is expected to include a Target store and 120 residential units. His business partner was Lewis Group, one of the nation's largest builders and a big contributor to his political campaign.

Federal prosecutors in Washington, Los Angeles and San Diego are looking closely at earmarking in the wake of the Cunningham case. At least four congressmen, including Rep. Jerry Lewis, a Republican from California who is chairman of the House Appropriations Committee, are being investigated for their role in earmarking or ties to lobbyists specializing in earmarks, people close to the inquiries say. Each lawmaker has denied impropriety. Mr. Taylor isn't known to be a target of any investigation.

Prosecuting these cases will be difficult because an earmark only becomes illegal if the legislator is clearly acting in exchange for money or to promote his private business interests. Under the prevailing interpretation of the constitutional separation of powers, most congressional correspondence and deliberations are out of reach of prosecutors.

Mr. Taylor, 65 years old, grew up in Brevard, N.C., where he still lives. He has long had an interest in real estate. He tells friends that he saved his pay as a grocery bagger in high school to buy his first piece of land. He was elected to the North Carolina General Assembly right out of law school and served there from 1966 to 1972. He then went into the family business, running Blue Ridge Savings, and continued to buy up land.

Mr. Taylor was elected to the U.S. House of Representatives in 1990 and focused on winning a seat on the Appropriations Committee because, he said, the local Veterans Administration hospital was in poor shape and needed federal help. He now chairs the powerful subcommittee on the interior, which approves tens of billions of dollars in federal spending every year. One

DOJ_NMG_0079029

wall of his House office is covered with framed political cartoons attacking his record on the environment and his support for logging. He boasts of being the only registered forester in Congress.

This fall, Mr. Taylor is battling to hold on to his seat against Democrat Heath Shuler, a former Washington Redskins quarterback. Mr. Shuler has advocated fiscal responsibility and attacked Mr. Taylor's "irresponsible" earmarking. His campaign has also questioned why some of Mr. Taylor's earmarks funded Russian exchange students or lower-priority highway projects.

Mr. Taylor says using his clout to bring federal money to his district is nothing to apologize for. He warns that the largess might dry up if Mr. Shuler, a political novice, is elected. "Before I won a seat on the Appropriations Committee, folks in our region had spent decades being ignored by their own federal and state government. We're not going back to that," he says through a spokesman. "A freshman isn't at the table, he isn't in the room, he doesn't even know where the room is where decisions are made."

Among those receiving funding from earmarks sponsored by Mr. Taylor are nonprofit groups that he helped create and that are run by business partners and supporters. The largest of these, the Education and Research Consortium of the Western Carolinas, has received more than $30 million from Mr. Taylor's earmarks in recent years, according to the consortium's Web site. The consortium is run by a former top executive of his bank, who is Mr. Taylor's nephew. Several of the nonprofits list addresses in the Art Deco tower in Asheville's central Pack Square, where Mr. Taylor's own business ventures are based. Mr. Taylor's aides say the consortium has helped draw businesses to Asheville by funding high-speed Internet access for schools and industry.

In Maggie Valley, where Mr. Taylor earmarked funds for highway improvement, his companies own thousands of acres of mountain land bounded by U.S. Highway 19 and the famed Blue Ridge Parkway, which he has also supported with earmarks for guardrails and acquisition of buffer land. Earlier this year, he helped secure a $6.75 million federally guaranteed rural-development loan to reopen a mountaintop amusement park there called Ghost Town in the Sky. The park's owners were longtime campaign contributors to Mr. Taylor. He says he got the loan to create jobs in the valley.

Another Taylor earmark in last year's transportation bill steers $4.8 million to widen parts of U.S. Highway 64, a winding mountain road that runs near tracts of timberland that Mr. Taylor's companies own in Transylvania County, near the South Carolina state line.

"Every one of Congressman Taylor's earmarks in the last transportation bill was for a project near property that either he or one of his companies owns," says Erich Zimmermann, who studied the bill's special-interest spending for the nonpartisan Washington group Taxpayers for Common Sense. "The pattern is pretty clear."

Mr. Taylor doesn't agree. "The millions in highway-improvement funding I've been successful in bringing to western North Carolina are for the benefit of our region -- period," he says. While spending on mountain roads "may be grist for the attack mill," he says, it is what people in the state really need -- not "mega-roads" built by bureaucrats.

Nevertheless, Mr. Taylor's earmarks have made some Republicans wary. The North Carolina Conservative, a monthly publication based in Linville, N.C., has run a series of columns critical of the congressman by Ann Ryder, of Mars Hill, N.C. She and a neighbor, Wanda Bradley, both longtime Republicans, have scoured county courthouses for deeds and tax records to describe the labyrinth of companies Mr. Taylor created for his landholdings.

County tax records show that Mr. Taylor, his family and various holding companies and partnerships own more than 14,337 acres in six counties, making him one of the state's largest landholders. He also is involved in commercial development projects and owned an Asheville site that became a shopping center anchored by a Wal-Mart.

Mr. Taylor and his partners also are investors in a mountaintop resort called Wolf Ridge, where hundreds of ski chalets are being built for sale to wealthy second-home buyers. Out-of-staters are drawn by breathtaking views, a heated pool, a steakhouse and the convenience of a nearby airport with a 3,500-foot runway suitable for private jets. Construction crews are carving the runway out of a ridge, their dynamite blasts echoing across the valley.

Mr. Taylor wrote a letter to the North Carolina Department of Natural Resources asking that the agency approve a sewage waste-water permit for Wolf Ridge and sister projects. He clipped his congressional business card to the letter. Mr. Taylor says he wrote it because of the many new jobs the project would bring.

DOJ_NMG_0079030

Mr. Taylor has a role in many other commercial projects through Blue Ridge Savings Bank. He also owns a majority stake in Russia's Bank Ivanovo, where his partner is a former KGB officer.

While many House and Senate members invest in real estate or have business interests, few have such extensive holdings in their home district. House ethics rules say that being a congressman should be a full-time job, and they warn against any appearance of using one's public position to benefit personal business interests.

Real-estate investing has made other lawmakers wealthy in recent years as well. Rep. Mollohan, the West Virginia Democrat whose earmarks are now under federal investigation, has become a multimillionaire in recent years through real-estate investments. As reported in page-one stories in The Wall Street Journal on April 7 and April 25, Mr. Mollohan's partners in these deals included earmark recipients and a former federal contractor.

Rep. Miller, the Southern California Republican who steered earmarks to the road next to a shopping center in which he had an interest, is an active buyer and seller of real estate in and around his district. He has sold property worth at least $11 million in the past year, according to his disclosure forms, and his net worth is estimated to be twice that. (Lawmakers are required to disclose only ranges of income and assets, so precise figures aren't usually available.)

Rep. Miller also inserted a provision in a transportation bill forcing the closure of the Rialto, Calif., municipal airport, over the objections of the Federal Aviation Administration. The airport, a vast expanse of cracked blacktop and scrubland that is home to a flying school and forest-fire-watch patrols, boasts spectacular views of snowcapped mountains in the distance and direct access to a new interstate highway. The Lewis Group, Rep. Miller's business partner, is negotiating to buy the site and build 2,000 luxury homes there, as reported by the Hill, a Capitol Hill newspaper.

Rep. Miller defends his business ties and 30-year friendship with the Lewis family and says there was "no quid pro quo" in the campaign contributions. An aide to the congressman says local governments were "very supportive" of the airport closure. As for the road next to the shopping center, he says in a news release that he supported its improvement because it will cut congestion. An aide said yesterday that his ownership interest in the project ended before the road construction began.

Congress has done little to police itself, although lawmakers enacted an internal rule last month requiring members to sign their names to some earmarks. Mr. Taylor voted in favor of the measure, saying members should be willing to stand up for earmarks. He called such spending "absolutely essential" to rural areas of the country.

Mr. Taylor also said that eliminating earmarks entirely wouldn't save money. "The same tax dollars would be spent," he said through a spokesman. "The decisions about where and how much would just be left to unelected bureaucrats."

The measure has big loopholes and exempts appropriations bills the House already has passed this year. Because it is an internal House rule, not a law, it will expire when the current congressional session ends in a few weeks.

Philanthropy From The Heart Of America (NYT)

By David Leonhardt

The New York Times, October 11, 2006

Valley County, not far from the center of Nebraska, seemed to be one of those Great Plains communities that was dying. From World War II to 2000 it had lost almost half its population, and the decline was gathering speed at the end of the century. The I.G.A. and Jack & Jill grocery stores closed, as did most mom and pop gas stations and the local dairy processing plant.

In the last five years, though, something utterly unexpected has happened. The decline has stopped. More people are moving to Ord, the county seat, than leaving, and the county's population is likely to show its first increase this decade since the 1920's.

The economics of rural America have not really changed. If anything, the advantages that Chicago, Dallas, New York and other big cities have over Nebraska have only continued to grow. But Ord has finally figured out how to fight back.

It has hired a "business coach" to help teach local stores how to sell their goods over the Internet and to match up retiring shop owners with aspiring ones. Schoolchildren learn how to start their own little businesses — like the sixth-grade girl who made a video of the town's history and sells it at school reunions — so they will not grow up to think the only job opportunities are at big companies in Omaha or St. Louis. Graduates of Ord High School who have moved elsewhere receive mailings telling them about job opportunities back in town.

DOJ_NMG_0079031

None of this happens naturally in a free-market economy, because the efforts cost money that will never be fully recouped. But it has happened nonetheless thanks to one of the few advantages that Ord does have over Chicago, Dallas and New York: it is in a state with some of the most generous wealthy people in the country.

In San Francisco, a retired money manager named Claude Rosenberg has founded a small organization called New Tithin g Group. It tries to persuade Americans to base their charitable giving on their assets as well as their income , given how many now have substantial assets. And using tax returns, NewTithing has put together a devilish ranking of the 50 states.

It began by estimating the liquid assets of households with more than $200,000 in annual income, counting cash, stocks, bonds and the like, but not houses or retirement accounts. Then, with the same federal tax data, it calculated what percentage of those assets the households have given to charity, on average, in recent years.

Nebraska ranked third, with its affluent residents giving away just over 1 percent of their assets each year. That does not include the state's most famous donation, Warren E. Buffett's huge gift to the Bill and Melinda Gates Foundation this year, which came too late to be counted in the ranking. But it does include many smaller gifts to local charities like the Nebraska Community Foundation, which is trying to resuscitate Ord and other towns.

What is striking about the top of NewTithing's list is that it is dominated by a group of states that run from the Rockies through the Plains and down into the Southeast. The only ones ahead of Nebraska were Utah (where the Mormon Church asks members to donate 10 percent of their incomes) and Oklahoma, while Minnesota and Georgia came next.

As Emmett D. Carson, president of the Minneapolis Foundation, points out, these are places that do not have many beaches, famous cultural institutions or other obvious ways to attract residents. "So how do you build a community that is a destination?" Mr. Carson asked. "You have to be a lot more intentional about it."

The states with beaches and museums, those that have been winning a growing share of the nation's economic pie, generally failed to crack the top 20 in the ranking. The average affluent resident of New York (23rd on the list) or Florida (41st) owns about one-third more assets than the average affluent Nebraskan, but the Nebraskan still gives away a bigger pile of money. Also lagging are California (21st), Virginia (25th), Massachusetts (32nd), Texas (34th) and Washington (35th).

No single list, of course, can fully capture how generous a state's residents are. Through federal taxes, wealthy states like California and New York transfer a significant amount of money to poorer states every year. The NewTithing ranking, by its nature, also fails to count donations that are not tax-deductible, like informal gifts and time spent on community service.

But the ranking makes an important point. The middle of the country has developed a culture of philanthropy that the coasts and the Southwest, for all their wealth, do not yet have. Ord is never going to turn into anything resembling New York, no matter what it does. But New York could become a little more like Ord and, in the process, blunt some of the rough edges of inequali ty that have come with prosperity.

There is even a bit of evidence that some people on the coasts are starting to catch on. Next week, Mr. Carson will be leaving the Minneapolis foundation he has run for 12 years to take over the Silicon Valley Community Founda tion. Part of his mandate, he said, is to transplant some of Minnesota's culture to the donors of Northern California.

"They have the wealth," he said. "They want to capitalize on it and build a community."

Rice Asserts U.S. Plans No Attack On North Korea (NYT)

By Thom Shanker And Warren Hoge

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — Secretary of State Condoleezza Rice said Tuesday that the United States did not intend to invade or attack North Korea, but she warned the North's leaders that they now risked sanctions "unlike anything that they ha ve faced before."

Even China, North Korea's most important ally, said Tuesday that tough measures were in order, though its representatives said the punishments might not necessarily be the harsh ones that Washington was proposing.

"For China, we need to have a firm, constructive, appropriate, but prudent, response," said Wang Guangya, the country's ambassador to the United Nations. "There have to be some punitive actions, but also I think these actions have to be appropriate."

DOJ_NMG_0079032

The United States, Britain and France all want a resolution drafted under Chapter VII of the United Nations Charter, which makes sanctions mandatory and poses the possibility of military enforcement.

While both China and Russia have spoken of the importance of taking serious action against North Korea's reported nuclear test, they are traditionally against invoking Chapter VII and have not indicated whether they would end their opposition.

The United States wants agreement on sanctions this week. But even as the administration sought to push tough language into a Security Council resolution, the White House expressed doubts about the capacity of North Korea's nuclear program, based on evidence that the reported test had a smaller yield than expected. [Page A10.]

Sanctions sought by the United States include international inspections of all cargo moving in and out of North Korea to detect weapons-related material. But that might prove difficult for China and Russia to accept, in part because their coastlines and borders would be affected.

The diplomatic moves came a day after administration officials responded with shock and outrage to an official announcement from North Korea that it had detonated a nuclear device.

In an interview on CNN, one of a series of television appearances, Secretary Rice stressed that "the diplomatic path is open" for the North, and that giving up its nuclear program would "lead to all kinds of benefits for North Korea."

But she said the North's decision to pursue its nuclear program meant that it would face "international condemnation and international sanctions unlike anything that they have faced before."

The United States has imposed economic curbs on North Korea since the opening of the Korean War in 1950, though President Clinton lifted a few of them toward the end of his time in office, when relations seemed to be thawing.

Now, in its bid to tighten sanctions, Bush administration officials say, the United States is pursuing a two-track approach: trying at the United Nations to persuade other countries to cut off economic ties with the North, and using American banking laws to punish banks overseas that deal with North Korean companies.

At the United Nations on Tuesday, Britain, China, France, Russia and the United States, plus Japan, met twice to work out differences on the sanctions proposed Monday by the United States. John R. Bolton, the American ambassador, reported the group was making headway and would meet again Wednesday.

"I think there is convergence on many issues, more than I would have predicted perhaps a day or two ago," Mr. Bolton said. "That's not to say we're there by any stretch of the imagination, but I'm pleased by the positive nature of the discussions and look forward to more progress tomorrow."

Mr. Bolton said he had discussed the proposal for North Korean ports separately with Mr. Wang, the Chinese envoy.

As for Russia, Mr. Bolton began the day complaining that Vitaly I. Churkin, the country's ambassador, had arrived at the morning session with no instructions from his government. He said it had left "a hole" in the conversations.

But after the afternoon session, he said Mr. Churkin had heard from Moscow and was able to take part in the debate. "We'll have some areas to discuss there and he raised some issues we had not thought of entirely, but by and large his comments were supportive," Mr. Bolton said.

Mr. Churkin left without making any comment.

Mr. Bolton declined to discuss specifics of the talks but said one amendment suggested by Japan — a ban on travel by members of the North Korean government — had attracted particular support.

Asked if he would limit the American demands in the interests of speeding the process of drafting a resolution, he said: "We want firmness and swiftness, and I think we can have both. That's our objective."

In television interviews and briefings for reporters, Secretary Rice and other officials reiterated past assurances that the United States was not moving toward occupying North Korea or toppling its government.

She said the administration's policy was still that the diplomatic path would be multilateral, through the stalled six-party talks, and not the two-way dialogue that North Korea has sought with the United States.

But even as the administration sought to unify its international allies, there were signs of fissures among Republicans over whether Washington should negotiate directly with North Korea.

Representative Heather Wilson, a New Mexico Republican and former Air Force officer who has played a leading role on national security issues, advocated bilateral negotiations, within the context of the six-party talks. "The idea here is to open a path

DOJ_NMG_0079033

for this rogue regime to walk back from the edge of the ledge," she said. "I don't think there's anything wrong with straight, tough talk with countries that are not our friends."

In the administration's quest for tough sanctions, much of the effort is focused on China, Japan and especially South Korea, which supply most of North Korea's imports and investments. Indeed, South Korea has invested heavily in the Kaesong Industrial Park, an economic enclave in the North that employs thousands in factories that produce shoes, cosmetics and other export goods.

The United States has tried, without much success, to get South Korea to limit its involvement in the enclave, arguing that North Korean financial institutions that are involved in it are also involved in illicit activities. In the wake of North Korea's latest nuclear steps, persuading South Korea may be easier, American officials say.

The unilateral drive by the United States is likely to expand on existing efforts that American officials maintain have already had a damaging effect on North. Indeed, the sanctions may have propelled North Korea to walk away from negotiations on its nuclear program and test a weapon, some experts say.

Now, with the enactment of American laws and executive orders after Sept. 11, 2001, new tools have become available, and they are likely to be expanded in coming weeks.

Under the U.S.A. Patriot Act, signed into law shortly after the 2001 attacks, the United States labeled a bank in Macao, Banco Delta Asia, as a "primary money-laundering concern" and declared that any bank doing business on American soil — virtually every big bank in the world — could not do business with it.

Administration officials say the ban on Banco Delta Asia badly disrupted North Korean activities, effectively froze the personal accounts of North Korean leaders and sent a message throughout the international financial system that the United States was prepared to do more.

Backing up that threat, President Bush has accused several North Korean trading corporations of being involved in nuclear proliferation and missile activities, often in conjunction with Syria, Iran and Pakistan. American officials have also visited banks in Europe, Asia and the Middle East to tell them that dealings with those entities could jeopardize ties with American banks.

The aim, according to Stuart Levey, under secretary of the treasury for terrorism and financial intelligence, is to put the international community "on notice about a particular threat" and get them to voluntarily end their dealings with North Korean entities.

Analysis: Should U.S. Talk To N. Korea? (AP)

By Anne Gearan

AP, October 11, 2006

North Korea's apparent nuclear weapons test may bear out the warnings of Bush administration hard-liners that the reclusive regime can never be trusted, but it also forces an examination of whether the silent treatment those same hard-liners have given North Korea for years has backfired.

Convinced that the Clinton administration got conned when it offered carrots to the North Koreans, the Bush administration has offered mostly sticks. The White House has firmly withheld the biggest carrot of all — direct, one-on-one talks between Washington and Pyongyang.

The United States is the power North Korea most fears and is the foil for the propaganda that helps keep the communist regime afloat. The North says it needs nuclear weapons, and missiles to deliver them, to counter U.S. aggression.

The United States is also the nation the North would most like to talk to, for both the prestige that direct talks could bring the regime and the security promises the talks might produce.

One interpretation of this week's test holds that it is North Korea's latest and most alarming attempt to get Washington's attention.

But the United States has insisted on talking to North Korea only with four other nations at the table, including China and South Korea, the two countries that Pyongyang relies on most for its economic survival. That, the U.S. argues, makes it harder for the North to walk away from negotiations.

DOJ_NMG_0079034

"The United States tried direct dialogue with the North Koreans in the '90s, and that resulted in the North Koreans signing onto agreements that they then didn't keep," Secretary of State Condoleezza Rice said during an interview Tuesday on CNN.

The White House contends that North Korea wants to set up a confrontation with the United States and direct talks would play to that hand. By insisting on talks only in the awkward company of four other nations, the argument goes, the United States deprives the North of the chance to play David to the U.S. Goliath. Instead, the North also has South Korea, Japan, China and Russia to answer to.

"The North Koreans would like to make this about the United States, and I prefer that the Chinese and the South Koreans and the Japanese are saying the same thing to the North Koreans today that we are saying," said Assistant Secretary of State Christopher Hill, Rice's top negotiator for North Korea.

The six-nation talks have been stalled for more than a year, but Hill and other U.S. officials refuse to declare them dead.

For now, U.S. officials are pushing for tough sanctions at the U.N. Security Council, and the United States hasn't ruled out taking other steps on its own, such as intercepting ships entering or leaving North Korean ports.

Contrast that with the situation six years ago, when then-Secretary of State Madeleine Albright became the first ranking U.S. official to meet with North Korean dictator Kim Jong Il. Albright even gave a delighted Kim a basketball autographed by Michael Jordan.

When Bush took office, the North's nuclear reactor was frozen under a 1994 Clinton pact that conservatives disliked. Many in the new Republican White House were skeptical of the deal's offer to give the North reactors for nuclear energy, and when then-Secretary of State Colin Powell expressed support for the Clinton approach in early 2001 the White House pulled him up short.

The conservative skepticism was partly proved right when it became clear that the North had cheated almost from the start of the Clinton-era deal.

Frosty relations got even worse in 2002, when Bush included North Korea in an "axis of evil" with Iran and Iraq. The North pressed on with its nuclear program and may now have enough material for up to a dozen weapons.

Now the Bush administration is under growing bipartisan pressure to try a version of the Clinton approach and engage North Korea directly. Some U.S. allies have also suggested that the United States has little to lose and potentially much to gain from sitting down alone with the North.

Rep. Heather Wilson, R-N.M., a senior member of the House Intelligence Committee and a retired Air Force officer, broke Republican ranks Tuesday.

"I feel strongly that there is nothing wrong with straight, tough talk with countries that are not our friends," said Wilson, R-N.M. "I think that there is an argument that says doing this in a bilateral way sends a much stronger message."

"Bilateral talks" is State Department speak for old-fashioned one-on-one diplomacy, and it is a plum that the Bush White House has recently withheld not only from North Korea but also from what it considers thuggish regimes in Iran and Syria.

Drawing a bright line against engagement with bad guys has the value of purity. But it also leaves little room to negotiate — there is no fallback position and any shifting of position, as the U.S. did earlier this year on Iran, risks being painted as capitulation.

James A. Baker III, the former secretary of state who has long served Republican presidents, has questioned the approach at least with respect to Iran and Syria.

"I don't think you restrict your conversations to your friends," Baker said Sunday on ABC's "This Week."

"It's got to be determined," Baker said. "You don't give away anything, but in my view it is not appeasement to talk to your enemies."

White House Rejects North Korea Talks (AP-Y)

By Deb Riechmann

AP-Yahoo, October 11, 2006

DOJ_NMG_0079035

The Bush administration rejected anew Tuesday direct talks with North Korea and said it would not be intimidated by a reported threat from Pyongyang that it could fire a nuclear-tipped missile unless the U.S. acts to resolve the standoff.

"This is the way North Korea typically negotiates by threat and intimidation," said U.S. Ambassador John Bolton. "It's worked for them before. It won't work for them now."

The White House said, meanwhile, there is a "remote possibility" that the world never will be able to fully determine whether North Korea succeeded in conducting a nuclear test Monday. While acknowledging that the action was provocative, White House press secretary Tony Snow suggested that it's possible that the test was something less than it appeared.

"You could have something that is very old and off-the-shelf here, as well, in which case they've dusted off something that is old and dormant," he said. The comment appeared to indicate that the White House was attempting to downplay the significance of the test, but Snow said later that he was merely posing a hypothetical question.

While Democrats claimed the test was evidence of a failed U.S. policy, Snow argued that the test has left the nations involved in the six-party negotiations with the communist regime more unified and determined to convince Pyongyang incentives to give up its nuclear weapons ambitions. He also denied that the demands of the war in Iraq hampered the Bush administration's ability to dissuade North Korea from developing nuclear weapons.

"The Chinese, the South Koreans, the Japanese — they all have more direct leverage over the North Koreans than we do," Snow said. "The people who have the greatest ability to influence behavior are now fully invested in equal partners in a process to deal with the government of North Korea."

North Korea stepped up its threats, saying it could fire a nuclear nuclear-tipped missile unless the U.S. acts, the Yonhap news agency reported Tuesday from Beijing. But even if Pyongyang is confirmed to have nuclear weapons, experts say it's unlikely the North has a bomb design small and light enough to be mounted atop a missile.

Asked about the Yonhap report, Bolton said, "Well, I think it's been perfectly obvious for quite some time that North Korea has been seeking a delivery capability for its nuclear weapons. It's one reason why as far back as 2001, President Bush led the effort to get the United States out from under the restrictions of the Anti-Ballistic Missile Treaty, so we could build missile defense against precisely this kind of threat."

In response to North Korea's purported nuclear test, the United States is pressing at the United Nations for stringent sanctions on Pyongyang, including a trade ban on military and luxury items, the power to inspect all cargo entering or leaving the country, and freezing assets connected with its weapons programs.

Meanwhile, Democratic New Mexico Gov. Bill Richardson, a former U.S. ambassador who has visited North Korea, said the Bush administration should abandon its long-standing refusal to engage in direct talks with North Korea. He said President Bush was right to seek sanctions against North Korea in the U.N., but should next move to direct talks with the reclusive nation.

In taking that stance, Richardson echoed the message that former Secretary of State James A. Baker III said Sunday, as Baker urged the administration to talk directly to adversaries around the world.

The administration has been attempting for years to get more countries to join its anti-proliferation initiative, aimed at stopping countries like North Korea from selling nuclear weaponry and missiles. But it has refused one of North Korea's key demands: that the United States engage in direct one-on-one talks. Instead the administration insists on sticking to the so-called six-party format, where Russia, China, South Korea and Japan have joined the United States in talking to North Korea.

Bolton, interviewed on CNN and on CBS' "The Early Show," said that if North Korea wanted to talk with the U.S., it needed to rejoin the six-party talks.

"If they want to talk to us, all they have to do is buy a plane ticket to Beijing," where the talks have been stalled for months, Bolton said. "The North Koreans can talk to us anytime they want on a bilateral basis if they come back to the six-party talks, which they have been boycotting."

Bolton cast the standoff with Pyongyang as one "between North Korea and the rest of the world" that will result in sanctions or more if the rogue nation does not restart talks with the international community.

Asked about the possibility of U.S. military action against North Korea, including a possible naval blockade, Bolton said, "Well, we're not at that point yet."

DOJ_NMG_0079036

"We keep the military option on the table because North Korea needs to know that, but President Bush has been very clear he wants this resolved peacefully and diplomatically," Bolton said.

Bush Administration Rejects Talks With North Korea (MCT)

By Warren P. Strobel

McClatchy Newspapers, October 11, 2006

WASHINGTON - The Bush administration, under fire for policies that have failed to stop North Korea from advancing its nuclear weapons arsenal, on Tuesday ruled out direct talks with Pyongyang in the aftermath of its apparent nuclear test.

Instead, the United States and other world powers began discussing tough U.N. sanctions on North Korea that would authorize inspection of cargo going to or coming from the country to halt weapons-related transfers.

In a significant development, China, which is North Korea's principal ally, said for the first time that it would agree to sanctions on the government of North Korean leader Kim Jong Il.

"I think there has to be some punitive actions," said Wang Guangya, China's ambassador to the United Nations. "We need to have a firm, constructive, appropriate but prudent response to North Korea's nuclear threat," he said, without being more specific.

China, which has led diplomatic efforts to engage Pyongyang, was deeply embarrassed by North Korea's action. But Beijing is wary of destabilizing North Korea because a collapse of the regime could flood China with millions of extremely poor refugees. It's unclear how far it will go in curtailing crucial food and energy supplies or other trade.

"I think they're going to do some sanctions that will sting, but not ultimately paralyze North Korea. The only thing they worry more about than a nuclear weapon is the collapse of North Korea," said Kurt Campbell, a former top Pentagon official on Asia policy who's now at the Center for Strategic and International Studies, a national-security research center.

Officials from the United States and other Western governments privately echoed that analysis.

North Korea's claimed nuclear test - U.S. intelligence agencies still hadn't confirmed it Tuesday - has brought wide condemnation and given new impetus to the U.S. drive for further sanctions.

But the White House also found itself on the defensive Tuesday against critics who said President Bush's policy of refusing to engage North Korea in direct, one-on-one talks had backfired.

Bush said in May 2003 that the United States wouldn't tolerate a nuclear-armed North Korea. Since that time, Pyongyang is thought to have expanded its stockpile of nuclear weapons, has broken a self-imposed moratorium on test-firing ballistic missiles and on Monday apparently conducted its first underground nuclear-weapons test.

Campbell, who served during the Clinton administration, gave the Bush administration high marks for its muscular response to the crisis this week. But he said the administration should have tried a different approach earlier.

"The biggest problem has been a reluctance to engage (North Korea) diplomatically," he said. The administration, he said, seems to "worry that by talking to them at a very high level, that we are somehow blessing . . . a reprehensible regime."

Secretary of State Condoleezza Rice and other Bush aides ruled out direct talks, arguing that the Clinton administration had tried it and that it failed.

"The United States tried direct dialogue with the North Koreans in the `90s. And that resulted in the North Koreans signing on to agreements that they then didn't keep," Rice said in an interview on CNN.

She referred to a 1994 deal known as the Agreed Framework, under which North Korea's known nuclear program, involving plutonium, was frozen. The United States charges that Pyongyang cheated on the deal by pursuing a second, covert program based on uranium enrichment.

Rice argued that the United States is now in a stronger position to deal with North Korea because Japan, South Korea and, especially, China are prepared to take united action against the country.

The Bush administration has been riven by internal disputes over dealing with North Korea almost from the moment it took office.

Then-Secretary of State Colin Powell announced in 2001 that Bush would continue Clinton's policy of talking to the North Koreans, but an unhappy White House forced him to retract the remarks.

DOJ_NMG_0079037

Even today, Vice President Dick Cheney and his allies in government are thought to favor putting so much pressure on Kim's regime that it collapses.

Many State Department experts argue that the tough approach plays right into Kim's hands and further isolation is unlikely to matter to the world's most isolated country.

The U.S.-proposed sanctions would bar imports and exports of arms, nuclear- and missile-related material and luxury goods to North Korea and would authorize inspections of inbound and outbound cargo by third countries.

Japan, which has historical enmity with North Korea, has proposed even tougher measures, including broad trade sanctions, refusing to allow North Korean ships and planes to enter other countries and banning travel by top North Korean government officials.

China is unlikely to go that far. China and North Korea have had close relations as communist neighbors, and Kim has visited China to learn about its economic reforms.

Intelligence officials said Tuesday that they were still analyzing the underground blast that occurred Monday morning local time in North Korea.

U.S. Air Force monitoring aircraft haven't yet picked up the signs of radiation usually associated with such a test. The blast itself is thought to have had less than a kiloton of force, perhaps significantly less, leading experts to question whether the test was only partially successful.

U.S. Fears Export Of Technology (LAT)

By Peter Spiegel And Greg Miller, Times Staff Writers

The Los Angeles Times, October 11, 2006

Preventing North Korea from selling nuclear materials would depend on China and Russia.

WASHINGTON — The sanctions demanded by U.S. officials in response to North Korea's announcement this week that it had tested a nuclear device would focus on closing pathways to proliferation of weapons technology.

But U.S. officials say any such effort would have to focus on the air and land routes through China and Russia that the government in Pyongyang has used in response to American monitoring on the high seas.

Since the 1990s, the Pentagon has used naval ships and aircraft to track and even intercept weapons shipments coming out of North Korea.

"Our folks pay very close attention to the vessels they are using and where they go; we stay on top of this one," Adm. William J. Fallon, the U.S. military's top officer in the Pacific, said last month. "One thing we can't do anything about is the air movement, because it goes over Chinese or Russian airspace. It's up to those countries to do things."

The new United Nations sanctions resolution proposed by the United States would direct all members "to undertake and facilitate inspection of cargo to or from" North Korea. In effect, it would require China to help close the gap in American efforts.

It's a challenge unlike any yet faced by U.S. diplomats and military officials. Until now, nations that have developed a nuclear capability have not viewed their new weapons as potential export commodities, as many believe Pyongyang does.

U.S. intelligence officials said Tuesday that they were still collecting data on Monday's declared blast, and knew little about the device involved. One military official said the Pentagon was awaiting data from its lone WC-135 "sniffer" aircraft, which was stationed at Kadena Air Base in Japan at the time of the North Korean test.

At the U.N., Chinese and Russian diplomats resisted tougher proposals by the Americans and Japanese, and U.S. Ambassador John R. Bolton dismissed a North Korean threat to launch a nuclear-tipped missile if Washington refused direct talks. Diplomats hope for a vote on a response to North Korea by Friday.

Past international efforts to block exports and enforce embargoes have had limited and short-lived success. But North Korea's use of Chinese routes for conventional weapons exports raises the concern that it may attempt to use similar means to transship nuclear technologies.

"In the early days, it is absolutely true that the North Koreans sent both missiles and missile fuel and components to the Iranians and the Syrians by sea," said David Kay, a former U.N. weapons inspector who specialized in nuclear proliferation issues. "But they now know that's not a good way to do it, so most of it goes overland via China."

DOJ_NMG_0079038

Kay said that, from China, the weaponry probably is flown to places such as Iran and Syria. North Korea also has sold missile technology to Yemen and Pakistan.

The Bush administration has complained repeatedly that Beijing has not lived up to agreements to stop North Korea's shipments of weapons technologies. In testimony last month before a U.S. government commission, State Department officials said they "remain deeply concerned" over China's lack of commitment to its nonproliferation promises.

Thus far, however, U.S. proliferation concerns have centered on Pyongyang's trade in parts for long- and medium-range missiles. By some estimates, North Korea is the world's dominant exporter of ballistic missiles. An evaluation by the London-based International Institute for Strategic Studies estimated that missile sales had earned the North Korean government hundreds of millions of dollars, making it a significant source for hard currency.

But deliveries of missile components have begun to shrink in recent years as North Korea's traditional customers, particularly Iran, have developed their own capabilities. Experts fear that Pyongyang will view nuclear technology, and nuclear material such as plutonium, as a replacement revenue source.

"The thing that worries most people is actually the export of fissile material itself," Kay said.

"I don't think people are worried at this stage about North Korea sending weapons to Iranians or terrorists," Kay added, "although there is virtually nothing on the face of the Earth that the North Koreans have gotten their hands on that they haven't been willing to sell."

China has let North Korea ship missile parts through its territory and airspace and has exported missile systems to rogue governments itself. But U.S. officials consider Beijing less likely to tolerate North Korean nuclear shipments because such exports could undermine China's status as the only nuclear power in East Asia.

"North Korea is China's neighbor, so they, in a sense, have a more proximate cause for worry than even the United States," State Department spokesman Sean McCormack said.

Nonetheless, enforcing any tightened counter-proliferation regime, even with Chinese cooperation, would be challenging, U.S. officials and arms experts said. The Pentagon can track ships, but it is nearly impossible to determine precise cargoes.

"The ability to recognize every single thing that's on every ship is a challenge," Adm. Fallon said.

The administration's proposed U.N. resolution would essentially establish an international agreement to allow the boarding of ships suspected of carrying prohibited items to or from North Korea.

Pentagon officials, however, said that any large-scale effort would be many times more complicated than tracking the vessels, and would require the participation of other countries. As a result, tactical planning has not begun for a U.S. blockade of North Korea, a Defense Department official said.

"The presumption is this would have to be an international effort," said the official, who spoke on condition of anonymity because of the sensitivity of the issue. "You can't willy-nilly stop every ship; you need to search methodically."

Similarly, China's ability to monitor North Korean deliveries across its border may be limited. Beijing polices the border, but experts say the frontier remains somewhat porous and that China may not be employing the most modern sensors and other detection equipment.

"It's like moving drugs into the United States from Mexico," Kay said. "The Chinese could do a far better technical job than they've been doing. Radiation detectors along the Yalu River" — between North Korea and China — "would be a good thing, but they can be beaten."

UN Resolution Focuses On Naval Searches (FT)

By Stephen Fidler

Financial Times, October 11, 2006

DOJ_NMG_0079039

North Korea has earned over the past two decades a reputation for peddling its missile capabilities around the world. Many governments are worried not so much that it will use the bomb as that it will shop its nuclear expertise around, to earn foreign exchange for its stricken economy.

"The real risk, as we and others see it, is of onward proliferation from North Korea to other countries of concern," said a British official on Tuesday.

A US draft of a United Nations Security Council resolution, circulated on Tuesday, calls upon member states "to undertake and facilitate inspection of cargo to and from [North Korea]" to ensure that no arms, nuclear or missile-related items or luxury goods could be shipped there.

That paragraph, if agreed by the rest of the Security Council, raises many practical and legal questions about how such inspections would be carried out. To work, it would almost certainly need the backing of China, not only in the Security Council but also as a practical matter because many of the sea lanes out of North Korea pass close to China.

"Chinese co-operation would be essential to any such measure," said Mark Fitzpatrick, a former State Department official at the International Institute for Strategic Studies. Even if China did not board North Korean ships, it would ease the practical difficulties of enforcing the policy if it made its ports available for inspections, he said.

Chinese officials have indicated that Beijing would contemplate punitive measures against Pyongyang, but it was not clear on Tuesday whether they would back such an embargo.

As interpreted by most countries, the law of the sea prevents the boarding of ships on the high seas unless permission is given by the master of the vessel or by the government of the country whose flag it is flying.

The US usually permits itself a liberal interpretation of that law and any Chapter 7 Security Council resolution would presumably be deemed to give it and other countries the right to board North Korean vessels.

Though it is early for any such move, some thought may be given to the development of an international patrol similar to those deployed in the Gulf and off the Horn of Africa. Though both are dominated by the US Navy, the presence of other nations' vessels confers international legitimacy to the patrols.

Still, the likelihood is that any attempt to board a North Korean cargo ship would be refused and the interdiction force would have to contemplate shooting across the ship's bows and mounting an opposed boarding.

Such an event would probably be interpreted by North Korea as a hostile act, potentially leading to a significant further escalation of tensions in the region.

The Bush administration has led the formation of a coalition of countries, now numbering more than 70, aimed at preventing their waters or ships from being used to transport weapons of mass destruction.

Yet the Proliferation Security Initiative has no explicit basis in international law. It operates mainly in the coastal waters of its members and on vessels sailing under the flags of members.

A number of bilateral boarding agreements also permit the legal boarding of ships flying flags of convenience, such as Liberia.

"The PSI is a method of handling this kind of thing and could be adapted, if needed, to the North Korean case," said a former US official.

China Says It Will Back Sanctions On N. Korea (WP)

By Colum Lynch And Maureen Fan

The Washington Post, October 11, 2006

Beijing Stresses Limits on U.N. Action Against Ally

UNITED NATIONS, Oct. 10 -- China on Tuesday expressed a rare willingness to support U.N. sanctions against its ally North Korea, but it said any punitive action would have to be narrowly targeted at the country's ballistic missile and nuclear weapons programs.

The United States and Japan continued to press the U.N. Security Council to support far stronger economic and trade measures that would permit international inspections of all North Korean cargo to search for weapons and to strangle Pyongyang's ability to finance its nuclear program.

DOJ_NMG_0079040

Varied responses to the nuclear test that North Korea apparently conducted early Monday emerged as the Bush administration sought to assuage fresh worries by its foreign counterparts that the tough strategy may cause hardship for the country's impoverished population or topple the government. France, for instance, voiced concern that a Japanese proposal to ban all North Korean exports could fuel a humanitarian crisis.

John R. Bolton, the U.S. ambassador to the United Nations, insisted that the U.S. sanctions plan calls for the exemption of food, medicine and other humanitarian goods for civilians. State Department spokesman Sean McCormack, meanwhile, specifically ruled out any attempt at regime change. "We have made it very clear that the United States has no intention to attack North Korea. That element of our policy still stands," he told reporters. "What we have sought is a change in the behavior of the North Korean regime."

China's tougher stance against North Korea came as officials in Beijing faced criticism at home over their diplomatic strategy, which relies primarily on the now-stalled six-nation talks to contain North Korea's nuclear program.

The talks have been "a total failure," said Zhang Liankui, a professor at the influential Central Party School's Institute for International Strategic Studies. "North Korea's reaction is a challenge to the whole world. Every country should have a clear and definite attitude, including China.

"If peaceful means can't stop North Korea from conducting a nuclear test, then there should be other means," Zhang added. "The appeasement policy was very popular in the international community, and I think that's very dangerous. Within 10 years, people will suffer from this attitude."

Chinese Foreign Ministry spokesman Liu Jianchao acknowledged that North Korea's action "will undoubtedly exert negative impact" on the two countries' relations. But he said the six-party talks remain "the best and practical way and effective way to resolve this issue, so I don't think it's a failure of China's diplomacy."

Still, Wang Guangya, China's U.N. ambassador, conceded that the council would have to impose "some punitive actions" on Pyongyang to persuade it to heed international demands. He added, however, that "these actions have to be appropriate" and "more specifically targeted toward the nuclear- and missile-related areas."

U.S. officials welcomed China's willingness to consider punishing a traditional ally and a neighbor that it has shielded from international pressure for decades. White House spokesman Tony Snow said China's announcement suggested that North Korea's ability to use "bluff and bravado" to obtain concessions may have ended.

Secretary of State Condoleezza Rice told CNN that "I've never seen universal condemnation of the kind that North Korea is now facing, and condemnation, by the way, not just from the United States and Europe and Japan but from its closest supporters, those who are the ones who give them assistance."

The United States has told the North Koreans "that there is no intention to invade or attack them," Rice added. "So they have that guarantee." The president "never takes any of his options off the table," she said. "But the United States, somehow, in a provocative way, trying to invade North Korea? It's just not the case."

But other U.S. officials made it clear that they think tougher measures are required to ensure that North Korea will not ignore another unenforceable council dictate. They note that a U.N. measure that was passed in July, Resolution 1695, already bans international trade in ballistic missiles and nuclear technology with North Korea. But it lacks any enforcement provision.

The United States supports a resolution under Chapter 7 of the U.N. Charter, which can be enforced by sanctions or military action.

The U.S. draft resolution calls for imposing stringent financial penalties on North Korea and providing broad powers to foreign governments to inspect all trucks, trains, vessels and planes traveling in and out of the country. The U.S. text would also confront North Korea with a 30-day deadline to reverse course or face further penalties.

Japan has introduced a series of amendments that would ban North Korean exports and prohibit the arrival of North Korean ships or planes in foreign countries.

China opposes any deadlines or trade restrictions that would undercut North Korea's struggling economy.

It also insists that any resolution must exclude the possibility, however remote, that force could be used against North Korea. China proposed that a sanctions resolution refer simply to a provision in Chapter 7, known as Article 41, that would authorize only the imposition of sanctions.

DOJ_NMG_0079041

"We have not reached agreement -- do not misunderstand me," Bolton told reporters after meetings with China and other major council powers. "I know when you're making progress and I know when you're not making progress, and I'm still pleased with the directions things are going."

China Calls For Punitive Actions On N Korea (FT)

By Caroline Daniel, Stephen Fidler, Anna Fifield, Richard Mcgregor, David Pilling And Mark Turner

Financial Times, October 11, 2006

China said yesterday that North Korea should suffer "punitive actions" for its claimed nuclear test, in an apparent retreat from its long-standing opposition to international sanctions against Pyongyang.

The extent of sanctions favoured by Beijing was still unclear but Wang Guangya, China's ambassador to the United Nations, said a 13-point US proposal - which included inspections of cargo ships entering and leaving North Korea - provided a "good basis for working". He added: "There has to be some punitive actions, but these actions have to be appropriate."

A US draft resolution circulating yesterday would compel governments to prevent the transfer of arms, missiles or nuclear items - or luxury goods - to or from North Korea. Additional proposals from Japan, which chairs the security council, would bar North Korean ships and aircraft, and high-ranking officials, from member states.

John Bolton, US ambassador to the UN, said after meeting Mr Wang: "There were substantial areas of agreement. There is a strong view to move as quickly as we can . . . a strong resolution and a swift response."

The Russian position was unclear since the delegation had no instructions from Moscow.

Sergei Ivanov, Russian defence minister, said the reported test was a "colossal blow" but any UN resolution would not involve the use of force.

China's reaction is critical to the passage of an effective resolution and its policing. Pyongyang's decision to carry out missile and nuclear bomb tests in spite of strong Chinese opposition has been seen in China as a demonstration of the failure of Beijing's strategy of playing a moderating role between North Korea, regional neighbours and the US.

In Seoul, the "sunshine policy" of economic engagement with North Korea is being questioned after Pyongyang's decision to go ahead with the test showed how little sway South Korea had over its neighbour. "The government sees it is unavoidable to make certain changes to its policies as we are in a situation where adjustments to inter-Korean relations are inevitable," said Lee Jong-seok, South Korea's unification minister. "But I believe the government must be careful when taking any measures that would raise tension or make our people feel uneasy."

Tony Snow, White House spokesman, said the US had less ability to influence Pyongyang than countries in the region.

Shinzo Abe, Japan's prime minister, has called for "harsher measures" against Pyongyang, a position echoed by Koji Omi, his finance minister, who said Japan was considering additional financial sanctions.

China Supports Sanctions Against N. Korea (USAT)

By Calum Macleod

USA Today, October 11, 2006

BEIJING — China signaled support Tuesday for tough sanctions against its longtime communist ally North Korea, a reflection of its anger over Pyongyang's apparent nuclear test.

China's strong disapproval echoed a chorus of global concern. Chinese Foreign Ministry spokesman Liu Jianchao said the test was carried out “flagrantly” and “will undoubtedly exert a negative impact on our relations.”

At the United Nations, Chinese Ambassador Wang Guangya said the Security Council must deliver “punitive actions” against North Korea, but the response should be “appropriate.”

Wang spoke before the five permanent council members — Britain, China, France, Russia and the United States — met to discuss U.S. proposed sanctions, including a ban on imports of military goods to North Korea.

DOJ_NMG_0079042

China historically has been cool to sanctions against North Korea. China supplies much of the regime's food and oil. It fears a refugee exodus across its borders if sanctions destabilize the North Korean government.

The council session ended with no decision. Another session was scheduled for today. U.S. Ambassador John Bolton sounded upbeat about the prospects for agreement.

“We don't have complete agreement on this yet, that's hardly a news flash, but we're making progress,” Bolton said.

North Korea showed no remorse for conducting the test. In Brussels, Ri Jong Hyok, a visiting North Korean official, said the test was a result of pressure and threats by the United States toward North Korea. “We have to take these measures so that we have a nuclear deterrent against the Americans,” he said.

In Washington, Secretary of State Condoleezza Rice said the United States had no intention to attack North Korea, rejecting a suggestion that Pyongyang may have felt it needed to test a nuclear weapon for security.

Bolton rejected holding direct talks with North Korea. “North Korea has had a successful history of intimidating other countries … but they're not going to be successful with us this time” he said on CBS' Early Show.

North Korea has refused for a year to attend six-nation international talks aimed at coaxing it into giving up its nuclear program. Pyongyang has called for direct talks with Washington and for the United States to drop sanctions it imposed to punish North Korea for alleged counterfeiting.

The United States has yet to confirm North Korea's claim that it exploded a nuclear device. White House spokesman Tony Snow said there was a “remote possibility” the world will never know what happened.

China: N.Korea Must Be Punished For Test (AP)

By Nick Wadhams

AP, October 11, 2006

The North Korean nuclear crisis settled into diplomatic debate Tuesday, with China agreeing to punishment but not the severe U.S.-backed sanctions that it said would be too crushing for its impoverished communist ally.

Scientists and other governments, meanwhile, suggested that Monday's underground test was a partial failure, producing a smaller blast than planned.

The Bush administration asked the U.N. Security Council to impose a partial trade embargo including strict limits on Korea's profitable weapons exports and freezing of related financial assets. All imports would be inspected too, to filter out materials that could be made into nuclear, chemical or biological weapons.

The United States reiterated that it would not talk with the North Koreans one-on-one, but Secretary of State Condoleezza Rice assured the North that the U.S. would not attack.

Rice rejected a suggestion that Pyongyang may feel it needs nuclear weapons to stave off an Iraq-style U.S. invasion. President Bush, she told CNN, has told "the North Koreans that there is no intention to invade or attack them. So they have that guarantee. ... I don't know what more they want."

U.S. Ambassador John Bolton sounded upbeat after Tuesday's round of talks at the Security Council, but said differences remained in advance of Wednesday's meeting.

"Look, we don't have complete agreement on this yet, that's hardly a news flash, but we're making progress and we're I think at a point we can try and narrow some of the differences we do have," Bolton said.

China, which reacted to Monday's blast with a strong condemnation but considers North Korea a useful buffer against U.S. forces stationed in South Korea, said it envisioned only a limited package of sanctions — not what the United States and especially Japan were demanding.

China and Russia object to plans to interdict shipments and block financial transactions. They also oppose a new suggestion that Japan proposed Tuesday — to include mention of the North's abduction of Japanese citizens in the 1970s and '80s.

"We certainly understand that Japan is close to the country. But I think you cannot ask by this resolution to kill a country," China's U.N. Ambassador Wang Guangya told The Associated Press. He said the Security Council must impose "punitive actions" but that they have to "be appropriate."

DOJ_NMG_0079043

Though far less than what the Americans and Japanese seek, even calling for some punishment was significant for China, which usually opposes sanctions, particularly against an ally such as North Korea.

Pyongyang again demanded one-on-one talks with Washington and threatened to launch a nuclear-tipped missile if the U.S. doesn't help resolve the standoff. Bolton dismissed the demand, saying the North should instead "buy a ticket to Beijing," and rejoin stalled six-nation talks over its nuclear and missile programs.

The war of words suggested tough negotiations before the U.N. takes any action against North Korea. In the meantime, scientists and governments tried to determine what exactly happened early Monday, deep below the earth in North Korea's northeast mountains. The North Korean government has released few details.

A South Korean newspaper quoted a North Korean diplomat, whom it did not name, saying that the blast was "smaller in scale than expected.

"But the success in a small-scale (test) means a large-scale (test) is also possible," he said in comments posted on the Web site of the liberal newspaper Hankyoreh, which has good ties with the communist nation.

The diplomat also said the North could take "additional measures" and that it doesn't fear sanctions.

Philip Coyle, at the Center for Defense Information in Washington, a nongovernment think tank, expressed a growing view that "they got a partial result" and not the full-power explosion that they sought. Several Western estimates said the blast was less than a tenth the size of the bomb that the United States dropped on Hiroshima in 1945; the force of the Hiroshima bomb was equivalent to 15,000 tons of TNT.

But "for them it was enough ... to say that it was a success. It helps them to claim that they are a nuclear power, and that the world should take them seriously, which is what they want. But I wouldn't be surprised if after several months they don't try again."

The White House said there is a "remote possibility" that the world never will be able to fully determine whether North Korea succeeded in conducting a nuclear test Monday.

Democrats said the test was evidence of a failed Bush administration policy, which White House press secretary Tony Snow denied.

"The Chinese, the South Koreans, the Japanese — they all have more direct leverage over the North Koreans than we do," Snow said. "The people who have the greatest ability to influence behavior are now fully invested in equal partners in a process to deal with the government of North Korea."

Sen. John McCain, R-Ariz., said President Clinton was to blame for his 1990s program to entice the North Koreans toward more cooperation. "The Koreans received millions and millions in energy assistance. They've diverted millions of dollars of food assistance to their military," he said.

After the reclusive regime announced it had set off an underground atomic explosion, the Security Council quickly condemned North Korea's decision to flout a U.N. appeal to cancel the test. The 15-nation council urged Pyongyang to return to stalled talks, refrain from further tests and keep its pledge to scrap its clandestine weapons program.

Diplomats said Tuesday there was a general agreement that the Security Council must pass a sanctions resolution in the next few days. The council's image suffered badly the last time it deadlocked over a major crisis, over the summer when it needed a month to pass a resolution on ending the war between Israel and Hezbollah.

"All I can say is that we are having a very good discussion, trying to identify what really we are going to be able to achieve, and i think there is general understanding also about the need to get our act together, and fast," Japan's U.N. Ambassador Kenzo Oshima said. "On that we agree."

Despite the positive assessment, familiar fault lines that have plagued past negotiations over North Korea already began to appear.

Japan, which holds the presidency of the Security Council for October, demanded the toughest sanctions of all, possibly including a blanket air and naval blockade of North Korea, as well as a ban on senior North Korean diplomats traveling abroad. In Tokyo, Japan's leader said the country could slap sanctions on North Korea without waiting for confirmation that it did indeed test a nuclear weapon.

Yet China, traditionally an opponent of Security Council sanctions, warned that the world must not focus too much on punishment. China can use its veto power in the council to block any move, and would likely have the support of Russia.

DOJ_NMG_0079044

"Instead, the international community and the United Nations should take positive and appropriate measures that will help the process of de-nuclearization on the Korean peninsula," Foreign Ministry spokesman Liu Jianchao said.

One worry for Beijing is that too much pressure could cause economically unsteady North Korea to collapse, sending North Koreans streaming across the border into northeast China and inviting intervention by the American military.

Nonetheless, China was clearly rattled that the North went ahead with the test. Liu vented China's anger against its communist ally over the test for a second day.

"The nuclear test will undoubtedly exert a negative impact on our relations," Liu said. He said Monday's test was done "flagrantly, and in disregard of the international community's shared opposition."

The North warned that it would soon be able to put a nuclear warhead on one of its missiles.

"We hope the situation will be resolved before an unfortunate incident of us firing a nuclear missile comes," Yonhap, the South Korean news agency, quoted an unidentified North Korean official as saying. "That depends on how the U.S. will act." Yonhap did not say how or where it contacted the official, or why no name was given.

The news agency quoted the official as saying the nuclear test was "an expression of our intention to face the United States across the negotiating table."

China Ready To Slap Sanctions On N. Korea Over Nuclear Test (AFP)

By Gerard Aziakou

AFP, October 11, 2006

China signaled readiness to join other major UN powers in slapping sanctions on neighboring North Korea over its nuclear test as a defiant Pyongyang reportedly threatened to fire a nuclear-armed missile unless it secures US concessions.

"I think there has to be some punitive actions but also these actions have to be appropriate," Chinese Ambassador to the UN Wang Guangya told reporters.

The key question is how far China and Russia, which despite their traditional close ties with Pyongyang have condemned the nuclear test, will be willing to go in backing tough sanctions pushed by the United States and Japan in a draft resolution invoking Chapter Seven of the UN Charter.

Chapter Seven, invoked in cases "of threat to international peace and security" authorizes tough sanctions or even as a last resort the use of force to ensure compliance with Security Council resolutions.

"We want to see some elements from Chapter Seven," Wang told reporters after a second round of private consultations with his British, French, Japanese, Russian and US counterparts.

US Ambassador John Bolton described Wang's comment as "significant" although he conceded that "We don't have complete agreement on this."

Beijing is by far the most important provider of aid and trade to the cash-strapped regime of North Korean leader Kim Jong-Il.

US Secretary of State Condoleezza Rice voiced confidence that China would back tough action, noting that Beijing had used unusually harsh rhetoric in calling North Korea's announced nuclear test "brazen" -- a term she said Beijing had used diplomatically "only four or five times in decades."

Envoys of the five veto-wielding members of the Security Council -- Britain, China, France, Russia and the United States -- plus Japan met twice privately Tuesday to try to narrow differences on the sanctions and agreed to meet again Wednesday.

Experts of the 15-member council also met Tuesday and were to meet again Wednesday to craft an acceptable draft resolution.

The draft is based on US proposals for a raft of punitive measures under Chapter Seven, including international inspection of all cargo to and from North Korea, new financial curbs targeting Pyongyang's nuclear and missile programs, and restrictions on exports of goods with military uses and sales of luxury items.

DOJ_NMG_0079045

Japan put forward even tougher measures such as bans on North Korean ships and aircraft from entering or landing in member states' territories and on all North Korean products as well as a travel ban targeting senior North Korean government officials.

But a defiant North Korea threatened to fire a nuclear-tipped missile unless the United States makes concessions in the standoff over Pyongyang's nuclear weapons program.

"We hope the situation will be settled before an unhappy incident of us firing a nuclear missile occurs," South Korea's Yonhap news agency quoted an unidentified North Korean official in Beijing as saying.

The Stalinist state has repeatedly argued it needs nuclear weapons to deter any attack from the United States, which it fears will try to topple one of the last pure Communist regimes in the world.

Pyongyang said it was willing to return to six-party nuclear disarmament talks it has boycotted since last November, but "only if the United States takes corresponding measures." No further details were given.

In Washington, Rice warned Pyongyang that launching a nuclear-armed missile "would not be good for North Korea's security".

"The North Koreans are not confused about what would happen," she said.

South Korea, which is not a Security Council member, made it clear it opposed any UN resolution involving military action.

"We support a UN resolution, but our position is that the resolution must not include any military measures because of its possible impact on the Korean peninsula," South Korean Prime Minister Han Myung-Sook told parliament.

Rice also reaffirmed that Washington was not considering military action against North Korea, a possibility the communist regime has frequently cited as a justification for its nuclear arms program.

In Moscow, Russian Defense Minister Sergei Ivanov said Pyongyang had now become the "de facto" ninth world nuclear power and had dealt a "colossal blow" to non-proliferation efforts.

Japan said Tuesday that its monitoring aircraft had detected no unusual radiation levels in dust samples collected over the major Japanese islands of Kyushu, Honshu and Hokkaido.

"It is hard to say," if there has been a successful nuclear test, Japan's Prime Minister Shinzo Abe said in parliament.

White House spokesman Tony Snow also said the United States did not have confirmation of a nuclear test. "There is a remote possibility that we'll never be able to determine fully," Snow said.

After North Korea's Bomb Test, China Ponders A Problematic Friendship (CSM)

By Simon Montlake

The Christian Science Monitor, October 11, 2006

BEIJING

North Korea's reported nuclear test and the ensuing diplomatic fallout come as China calibrates its role as a rising global power. How a newly emboldened China decides to handle its erratic ally - after what has widely been seen as a slap in the face for Beijing's negotiating track - could also shape China's foreign policy on other fronts, analysts say.

China strongly condemned Monday's test, which may have upended its status as the only confirmed nuclear power in East Asia. Foreign Ministry Spokesman Liu Jianchao said Tuesday that North Korea's test had damaged bilateral relations, and that China wanted to see "appropriate action" from the United Nations Security Council.

But behind China's stern rebuke is a reluctance to use multilateral sanctions or military force to bring Kim Jong Il's regime to heel - tactics that Beijing would see as unwelcome precedents with potentially destabilizing effects on the region.

Instead, China has historically put its stock in dialogue and negotiations with North Korea while propping up its neighbor with fuel and food. The apparent failure of that policy to keep the Korean peninsula nuclear-free, and to avert an international crisis, is a setback that will weigh heavily on the shoulders of China's leadership, say analysts.

"What the test has shown is that the road to Pyongyang doesn't necessarily run through Beijing. There's got to be another path," says Russell Moses, a Beijing-based political analyst.

"So there's a conflict in the [Chinese] leadership: Do we find some way to show we're a major power, or wash our hands of it and hand it over to the US?" Mr. Moses says.

DOJ_NMG_0079046

Chinese diplomacy puts economic cooperation and political stability on a pedestal that leaves little room for the niceties of democracy and human rights - such as in its dealings with Sudan or Zimbabwe. At the same time, China is increasingly aware of its international image and the prestige and power of joining its peers.

As the convener of the six-party talks that brought together North Korea, Japan, the US, Russia, and South Korea, China grasped an opportunity to play mediator and promote peaceful negotiations. By testing a bomb, North Korea has scuttled the talks and prompted the UN Security Council to consider much tougher action than was imaginable a week ago. China eyes its next move

Now the question for China is whether it can stay on the sidelines of UN actions and still claim to be engaged in finding a solution to the North Korean crisis. Analysts say Beijing may go along with demands for limited sanctions, while arguing that it's counterproductive to isolate the regime further.

China may also impose bilateral sanctions on North Korea in order to bring it back to the negotiating table.

Some analysts argue that China could emerge as a powerbroker between the US and North Korea, even if Beijing doesn't see eye to eye with the Bush administration.

"China should play a bigger role in Northeast Asia as a coordinator," says Huang Dahui, associate professor of international studies at People's University in Beijing. "This would show that China is a responsible power. The US may come to rely even more on China."

But elevating its diplomatic profile would require Beijing to stop coddling North Korea, its former comrade-at-arms. North Korea relies on its giant neighbor for economic support, and its latest defiance may be reason enough to rethink the relationship, says Niu Jun, a historian of the Chinese Communist Party at Peking University.

"The old policy is too rigid and China has an opportunity to shift its foreign policy. Even before the nuclear test, China had realized that something is wrong with this relationship," says Mr. Niu. But, he adds, "Chinese leaders don't have a clear idea on how to deal with North Korea."

Such a policy shift would bring China closer in line with Japan. A successful summit last weekend between President Hu Jintao and newly appointed Prime Minister Shinzo Abe had already signaled a partial détente between the two nations.

South Korea is grappling with its own dilemma on whether to punish the North or continue its own "Sunshine Policy" of economic engagement. China's leverage

The North Korean nuclear crisis comes during China's annual Communist Party policy meeting, where political heavyweights are jostling for influence after a recent purge of Shanghai's top leadership.

While analysts differ on how much leverage China has over North Korea - which is driven as much by internal politics as rational self-interest - China has taken harsh measures previously against its neighbor, such as halting energy supplies in order to jolt Pyongyang into action.

China has also sought to persuade Mr. Kim to adopt the market reforms that have wedded Beijing's brand of authoritarian rule to a sustained economic boom.

Yet even tough action by Beijing may not tame a regime that cherishes self-reliance above all, says Peter Beck, director of International Crisis Group's office in South Korea.

"Pyongyang took the calculated gamble that it would not be forsaken by Beijing or Seoul," Mr. Beck says. "But they also made the calculation that even if they are, they can stick it out."

China Hints Agreement On N. Korea (WT)

By Betsy Pisik, The

The Washington Times, October 11, 2006

NEW YORK -- The U.N. Security Council edged yesterday toward passing broad sanctions against North Korea, with the Chinese delegation, stung by Monday's reported test of a nuclear device, showing more willingness than ever before to penalize its communist neighbor.

DOJ_NMG_0079047

John R. Bolton, U.S. ambassador to the United Nations, said the diplomats had made "substantial progress" but declined to say how soon the issue might be brought to a vote. Emyr Jones Parry, Britain's ambassador to the United Nations, told the British Broadcasting Corp. that he expected the resolution within a week, and possibly as soon as Friday.

Shock waves from Pyongyang's claim to have conducted a nuclear test reverberated far beyond the Security Council, with South Korean President Roh Moo-hyun saying his government was reconsidering it's "sunshine policy" toward the North and the Chinese foreign ministry calling a nuclear test "unimaginable."

North Korean leader Kim Jong-il "has clearly gotten the attention of everybody in this," Secretary of State Condoleezza Rice said in one of a series of broadcast interviews last night.

"I've never seen universal condemnation of the kind that North Korea is now facing, and condemnation, by the way, not just from the United States and Europe and Japan, but from its closest supporters, those who are the ones who give them assistance."

In Washington, a White House spokesman said it was still not clear whether the sub-megaton explosion monitored in North Korea on Monday was indeed a successful nuclear blast, and that there was a "remote possibility" it would never be known.

"You could have something that is very old and off-the-shelf here, as well, in which case they've dusted off something that is old and dormant," said Tony Snow, White House press secretary.

The five permanent Security Council members and Japan met through most of the day to discuss a U.S. draft resolution that would stop all military and luxury goods and nuclear materials from entering North Korea; ban international travel by North Korea's senior officials; and freeze its assets connected with money laundering, counterfeiting and narcotics.

Outside the chamber, the Japanese delegation also proposed that North Korea's ships and planes be turned away from international ports.

The draft specifically exempts resources "necessary for basic expenses, including payment of foodstuffs," debts, medical supplies and other legitimate expenses. The text also demands that Pyongyang return to six-party talks with the United States and North Korea's neighbors -- China, South Korea, Russia and Japan.

"I see that many of the elements in the 13-point proposal provide a good basis for working," said Wang Guangya, U.N. ambassador for China, which has never voted in favor of U.N. sanctions against any country, much less North Korea.

Separately, Mr. Wang said Beijing could accept some elements of the draft being passed under Chapter 7 of the U.N. Charter, which would make them legally binding upon all member states. He was quoted earlier saying the Security Council must impose "punitive actions" but that they have to "be appropriate."

U.S. diplomats met privately on the sidelines of the council talks with representatives from China, one of the few nations thought to have any influence with Pyongyang.

"We continue to move ahead," Mr. Bolton told reporters late in the afternoon. "There is convergence on many issues, but that's not to say we're there yet by any stretch of the imagination."

Reports from the region quoted North Korean officials saying they had conducted a nuclear test in hopes of prompting direct negotiations with the United States, and threatening to attack America with nuclear-armed missiles if talks were not successful.

"I think the North Koreans know that firing a nuclear missile would not be good for North Korea's security," said Miss Rice. "The North Koreans are not confused about what would happen."

In Brussels, a North Korean legislator yesterday defended his country's announced nuclear test, saying it had been facing sanctions and threats from the United States for more than 60 years and had to defend itself.

He said North Korea would be ready to resume international talks about its nuclear program if financial sanctions are lifted.

Ri Jong-hyok, a member of North Korea's Supreme People's Assembly, spoke on a rare visit by a North Korean to the European Parliament, where he took part in an exchange of views with parliamentarians from the European Union.

Bush administration officials insisted they would not change their policy of refusing to talk to the North Koreans except in the context of six-party talks in Beijing, which have been stalled since the United States froze Pyongyang's overseas bank accounts in September 2005.

DOJ_NMG_0079048

"If they want to talk to us, all they have to do is buy a plane ticket to Beijing," Mr. Bolton said in a television interview. "The North Koreans can talk to us any time they want on a bilateral basis if they come back to the six-party talks, which they have been boycotting."

North-South Relations Suffer A Sudden Chill (WP)

By Anthony Faiola And Joohee Cho

The Washington Post, October 11, 2006

As 'Sunshine Policy' Dims, So Does Hope for Families

SEOUL, Oct. 10 -- Like so many other South Koreans, Lee Won Son, a gaunt 97-year-old watchmaker, will remember Monday's professed nuclear test by North Korea as the day night began to fall on the "sunshine policy."

The policy, launched by Seoul, had since the late 1990s provided the impoverished North with financial benefits and a road map for national reunification. It had also offered tens of thousands of South Koreans the prospect of reuniting with their loved ones, relatives in the North who had been completely shut off from the world in the aftermath of the 1950-53 Korean War. For Lee, who in 1949 had left his family in the North to prepare for the new life they hoped for in the South, there was no greater prize the Pyongyang government could have offered.

But Monday's reported test cast a sudden chill on North-South relations, stalling Seoul's financial incentives to the North and indefinitely ending nearly eight years of emotive family reunions. Though about 13,000 families have briefly come together under the watchful eyes of North Korean guards, Lee's turn to glimpse the sons and daughters he last saw sleeping in their beds nearly 60 years ago had yet to come up. Aging and ailing, he said he now fears it never will.

"The joy I felt when I first signed up for the reunions was indescribable -- such elation at the thought of seeing even one of my children again," he said, slipping a bony finger under his watchmaker's monocle to dry his tears. "But the North Koreans have robbed me of my chance. They have tricked us and deceived us, using our hearts to open our wallets. All they wanted was South Korean money, and now they've tested this thing, this bomb. They have what they wanted and I've lost hope of ever seeing my family again."

Lee's views echo the changing sentiments across South Korea in the wake of Monday's purported test, which was something of a national wake-up call in a country where the perception of a North Korean threat had all but evaporated after years of detente.

For North-South relations, the biggest potential casualty of the announced test appears to be the sunshine policy itself -- a concept fashioned by Kim Dae Jung, then South Korean president, in a historic bid to end Cold War tensions on the peninsula. Kim received the Nobel Peace Prize in 2000.

South Korean officials say it is too early to declare that detente is dead, noting that it may take as long as two weeks to determine whether the explosion detected in North Korea was indeed a nuclear test or merely a bizarre bluff using massive amounts of nonnuclear explosives. Officials also are waiting for the lead of the U.N. Security Council, which is considering sanctions against the North.

But for now, the South Korean government is taking the North's claim at face value, leaving many of the leading voices for detente here to express a profound sense of shock and betrayal. A number of them are calling for a complete review of the policy they had long held up as the cornerstone of Korea's eventual reunification. Many are advocating an accelerated policy of disengagement, which had already begun in the aftermath of the Pyongyang government's July 4 ballistic missile tests.

In the most significant step to date, President Roh Moo Hyun -- who had become South Korea's leading voice for engagement -- effectively acknowledged on Monday that the sunshine policy had failed.

"The South Korean government at this point cannot continue to say that this engagement policy is effective," Roh said in a nationally televised news conference after the North announced a test. "Ultimately, it is not something we should give up on, but objectively speaking the situation has changed. Being patient and accepting whatever North Korea does is no longer acceptable."

DOJ_NMG_0079049

Following the July missile launches, South Korea suspended regular humanitarian aid shipments to the North -- an act that led the North Koreans to halt the North-South family reunions. Construction ceased on a multimillion-dollar pavilion meant to host the reunions.

Now, South Korean government sources say, Seoul is reviewing whether to suspend the two biggest pillars of the sunshine policy -- the massive Kaesong industrial park and the Kumgang Mountain tourism resort on the northern side of the border. Those facilities were built and managed by South Koreans and employ thousands of North Koreans.

The three-year-old industrial park, a major source of hard currency for the North Koreans, currently houses more than a dozen South Korean factories, which have helped account for the dramatic boost in inter-Korean trade, from $425 million in 2000 to more than $1 billion last year. A suspension of the project would mark a huge step for South Korea and is still strongly opposed by some leaders members of Roh's ruling Uri Party, as well as by the South Korean companies that have invested millions of dollars to set up shop in the North. Its suspension would also amount to a painful financial hit for North Korea, which collects nearly $700,000 a month from salaries, rent and fees there.

"The test proved how incompetent our government has been with North Korea," said Na Kyung Won, spokesman for the opposition Grand National Party. "The Kaesong and Mount Kumgang projects are a direct cash route for the North Koreans, and we should immediately abandon these projects that give them much-needed cash."

In a sign that the Roh administration is increasingly serious about dimming the lights on the sunshine policy, the semiofficial agency in charge of Kaesong's expansion said on Tuesday that it would indefinitely suspend the approval process for new companies seeking to open factories there.

That marks a radical shift in thinking in South Korea, where public opinion had dramatically swung in favor of North Korea in recent years, even as anti-Americanism rose to record levels.

"Everything changed on Monday," said Ko Gi Gwan, a 58-year-old street vendor in Seoul's sprawling Great South Gate market who said he had supported the sunshine policy for years. "The North Koreans showed us their true faces. We gave them gifts of rice and money, but now look what they have given us -- something we never wanted, nuclear weapons on the Korean Peninsula."

Even if dusk falls only temporarily on the sunshine policy, those like Lee, the watchmaker, may not last long enough to see its resumption. Tens of thousands of people remain on a waiting list for family reunions.

"All I wanted was a chance to look my children in the eye and tell them how sorry I am -- sorry that I left them too early, and that they got stuck in North Korea," Lee said, his voice trembling. "Not a day goes by without my thinking of the conditions they grew up in. I just wish I could have given them a deep bow of apology before I go."

Clouds Over Seoul's 'sunshine Policy' (FT)

By Anna Fifield

Financial Times, October 11, 2006

For almost a decade South Korea has tried to embrace its errant northern neighbour, sending to Pyongyang everything from concrete and rice to trucks and violins so as to prove that being part of the international community is more fruitful than being outside it.

This "sunshine policy", pioneered by former president Kim Dae-jung in 1997, has also been intended to mitigate the economic catastrophe that would result from any sudden collapse of the North. Like China, South Korea's primary preoccupation has been maintaining stability on the Korean peninsula.

Seoul resolutely adhered to the policy despite a string of brazen actions from Pyongyang – including withdrawing from the nuclear non-proliferation treaty, its declaration that it had become a nuclear power and July's missile launches – but with Monday's provocative nuclear test it has become patently clear that South Korea has gained next to nothing for its efforts.

"I think this [nuclear test] will give the administration the incentive to rethink this policy," said Chung Jae-ho, of Seoul National University. "I was in full support of this policy at the start because no one has pushed this approach before. The basic goal was to change North Korea's behaviour . . . but we do not have anything to show for the past eight years."

DOJ_NMG_0079050

Many South Koreans agree. "North Korea broke its promise, which is very upsetting," said Kim Yang-bu, a coffee shop owner. "The engagement policy is . . . counterproductive. We need a stronger policy."

Indeed the patience of president Roh Moo-hyun's administration now appears to be wearing thin.

"It is true that North Korea's nuclear test has -created a situation where we have to reconsider our engagement policy," the president said on Tuesday after meeting ruling and opposition party leaders in Seoul. "But I would like to suggest that we take time to figure out the causal relationship between the engagement policy and the nuclear test."

Although the government suspended humanitarian aid to the North after July's missile tests, it continued to pump cash into the regime through the Mount Kumgang tourist resort and Kaesong industrial park projects on the northern side of the border.

Business was carrying on as usual on Tuesday at the shoe and plastics factories in Kaesong, where North Korean labourers work under South Korean managers. "Regular businesses in Kaesong haven't halted [because of the nuclear test]," Kim Ki-mun, chairman of South Korean watchmaker Romanson, told Yonhap news. But Lee Jong-seok, unification minister, told the National Assembly that Seoul might reduce or suspend its economic exchanges and co-operation, a move supported by opposition parties.

"Regarding the issue of [halting] the Mount Kumgang tours and Kaesong industrial complex development projects, the government will take measures that correspond with measures put out by the international community," Mr Lee said.

Nearly 400,000 South Koreans visit Mount Kumgang each year, with the South Korean operator Hyundai Asan paying undisclosed royalties direct to Pyongyang.

Some analysts, however, doubt South Korea will jeopardise its primary goal of maintaining stability. "The bottom line is that neither China nor South Korea want any sudden change on the peninsula," said Peter Beck of the International Crisis Group.

Some say, though, that Seoul has little to lose from wielding a bigger stick. "The most important aspect of -stability has been broken," said Mr Chung. "So the -question now is how does South Korea co-operate with Japan, China and the US to bring stability back to the peninsula?"

Word Of Test Confirms Stances In 2 Nations (NYT)

By Norimitsu Onishi And Martin Fackler

The New York Times, October 11, 2006

SEOUL, South Korea, Oct. 10 — In the suburbs north of here, the thaw between the Koreas has led South Korea to dismantle highway barricades meant to slow down an invasion of North Korean tanks. Japan, meanwhile, has begun investing billions of dollars in erecting a high-tech shield against North Korean missiles.

South Korea and Japan, America's two major allies in this region, have grown increasingly apart in their attitudes and policies toward North Korea, even though President Roh Moo-hyun said Monday that the North's announcement of a nuclear test had put him on the same page as Japan's prime minister, Shinzo Abe.

Still, despite the gravity of an reported nuclear test, the calculations and interests that have led each country on its respective path have changed little. What's more, random interviews with South Koreans and Japanese on Tuesday suggested that the test, rather than changing public opinion, has merely reinforced it.

South Koreans interviewed, while expressing anger and disappointment, said they did not support the economic sanctions and other punitive measures sought by the United States and Japan, but called for continuing to engage the North, though with more sticks. Japanese were decisively hawkish.

"The North Koreans are so greedy," said Moon Won-tae, 69, who like most South Koreans of his generation was once fiercely anti-Communist. "They want more and more from us. They keep transferring the aid we give them into weapons."

Mr. Moon was chatting on a street corner with Jung Soon-ni, 74, who blurted out, "Why does our government keep supporting North Korea?"

But when pressed, both men said they still backed the engagement policy, though with a firmer hand than Mr. Roh's and more concessions from North Korea. "Putting a stop to engagement also creates problems," Mr. Moon said, adding that he considered South and North Koreans to be one people.

DOJ_NMG_0079051

A 28-year-old mother, Bae Soo-jung, walking in downtown Seoul with her daughter and mother-in-law, said word of the test had made her feel "nervous." But she was even more nervous about isolating the North even further.

"If we impose economic sanctions," she said, "that will push North Korea to the edge. We need to keep engaging it."

In Japan, people interviewed agreed that the country should take a firmer stance, both in punishing North Korea and in strengthening its own military. While all said that Japan should maintain its defense alliance with the United States, their comments showed that many here now accept a level of rearming that would have been considered radical just a decade ago.

"Of course there should be economic sanctions," said Shoko Fukuzawa, a 61-year-old hairdresser shopping in downtown Tokyo. "Whatever Japan can do, it should do."

And that includes rearming, she added. "Every country is building its defenses. But we don't need nuclear weapons."

Mr. Abe affirmed to a parliamentary committee on Tuesday that Tokyo had "no intention" of possessing nuclear weapons.

Public opinion toward North Korea has been crafted, in great part, by the governments in Seoul and Tokyo.

In South Korea, decades of cold war confrontation gave way in the late 1990's to the "sunshine policy" of former President Kim Dae-jung, who won a Nobel Peace Prize for his work on a rapprochement with the North.

Lim Doo-hyuk, 24, a college student at Kwangwun University here, said that in elementary school, he once won a prize for writing the best anti-North propaganda: "Be careful of North Korea all the time — while awake and asleep."

But by high school, with the sunshine policy, North Koreans were no longer regarded as enemies. "My teachers began teaching me that they were our brothers and we should live with them," Mr. Lim said. "So people of my generation, including myself, have a positive image of North Korea.

"Roh Moo-hyun has been too weak — he keeps giving to the North but receives nothing. Engagement shouldn't be unilateral. But we should have an effective engagement policy."

Until about 1997, most Japanese had little interest in North Korea, which at the time appeared to be a quirky but harmless neighbor. Japan's North Korea policy was largely controlled by pro-North Korea Japanese of Korean descent, who were originally brought to Japan as forced laborers and maintained strong ties of identity with their homeland.

In the late 1990's, public attitudes started to harden, as major news media and politicians began to take more seriously claims that dozens of Japanese missing since the late 1970's had actually been abducted by North Korean spies. The image of North Korea as an unpredictable threat was reinforced in 1998 when it test-launched a Taepodong missile over Japan.

But the big turning point came in 2002, when North Korea admitted to abducting citizens and returned five survivors. The image of agents snatching people from Japanese shores turned public opinion decisively against North Korea, analysts said, even more so than missiles or Monday's reported nuclear test.

"The abduction issue is much bigger in Japan than the nuclear issue," said Masao Okonogi, the dean of the law faculty and a specialist on Korean politics at Keio University in Tokyo. "It forms the basis of Japan's current view of North Korea."

The issue was also seized by Liberal Democrat hard-liners, led by Mr. Abe, who rose to political stardom by advocating a tough line on North Korea. They brandished the perceived North Korean threat to argue for long-cherished conservative goals, including revising the American-imposed peace Constitution and remaking Japan's defense forces into a full-fledged military.

"At this point, I think Abe is good," said Eiji Noguchi, 33, an office worker in Tokyo. "The firm stance toward North Korea is good."

Mr. Okonogi said Japan and South Korea's perceptions of the North would keep heading in opposite directions, adding, "And the gap will just keep growing after this nuclear test."

U.S. Seeks Data On North Korea's Nuclear Test Claim (WSJ)

By Robert Block

The Wall Street Journal, October 11, 2006

WASHINGTON -- The U.S. has marshaled a network of military aircraft, ships, seismic-listening posts, spy satellites and intelligence agents to glean as much as possible about North Korea's claim that it tested a nuclear device, and officials say they may have a good idea about what took place as soon as today.

DOJ_NMG_0079052

The objective is to detect radioactive isotopes and gases released in the atmosphere, usually within 72 hours, after such a test. The presence or absence of these indicators will tell analysts if the device detonated underground Sunday was a nuclear weapon.

According to Matthew Godsey, a researcher at the Wisconsin Project on Nuclear Arms Control here, radiation leakage from a test site is almost inevitable. He said a smaller bomb -- as may have been detonated, based on the limited seismic activity -- is more likely to vent xenon gasses and isotopes, such as krypton and cesium, into the air than a large device, which can melt rock and seal the site.

Although North Korea's claims have angered both foes as well as friends, there is no clear consensus about the detonation. Mr. Godsey said the size of the explosion was more likely to indicate a failed nuclear detonation than a conventional bomb. Until the scientific data and intelligence are analyzed, it is impossible to say.

The Air Force Technical Applications Center, based at Patrick Air Force Base, Fla., has the leading role in tracking down the scientific data with a global network of nuclear-detection sensors. The Air Force was given the job of monitoring nuclear tests early in the U.S. nuclear-weapons program, and though tests moved underground in 1963, the Air Force kept the mission.

The Air Force has hydroacoustic monitors to listen for explosions underwater. The Air Force also gathers data from ground-based monitors and from airborne samples. If the Aftac system senses a disturbance underground, underwater, in space or in the atmosphere, it is analyzed for nuclear identification and the findings are reported to National Command authorities through Air Force headquarters.

Within hours of the detonation, the center ordered special aircraft to fly downwind from the test site near the Chinese border to try to catch any radioactive material that might have been vented into the atmosphere. These samples would allow the national weapons laboratories to determine whether Pyongyang used plutonium or uranium in the blast.

The U.S. also activated a special Air Force detachment located at South Korea's seismic-listening post in Wonju, close to the border with North Korea, officials said.

Small Blast, Or 'Big Deal'? U.S. Experts Look For Clues (NYT)

By David E. Sanger And William J. Broad

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — The White House seized on further evidence on Tuesday that North Korea's proclaimed nuclear test had resulted in a surprisingly small blast, questioning at one point whether the test was, in the end, "a big deal event."

The White House spokesman, Tony Snow, appeared to backtrack from that assessment later in the day, as he turned from mounting a defense of the administration's troubled history with North Korea to arguing that the only logical response to the test was to impose harsh sanctions.

The statements came as American intelligence analysts developed their first theories of what might have gone wrong in the barren mountains of North Korea's northeast provinces to have produced an explosion much smaller than even North Korea had apparently expected.

The officials said that their current assessment was that North Korea had in fact detonated a nuclear device, and that they were discounting some reports that North Korea had staged a hoax, trying to disguise a large conventional explosion as a nuclear blast.

"The working assumption is that this was a nuclear explosion of some kind," one intelligence official said, speaking on condition of anonymity. "The conventional explosion theory doesn't make a hell of a lot of sense, even for the North Koreans."

But that left the mystery of why the explosion appeared to be so small, less than a kiloton, or a fraction of the explosions at Hiroshima and Nagasaki in 1945.

Theories ranged from the possibility that North Korea had used old, polluted plutonium to the possibility that it had manufactured imprecise nuclear triggers. But at this point, intelligence officials said, they were just taking educated guesses, and would need hard evidence, or the testimony of spies or defectors, to figure out exactly what happened. The officials agreed to speak about the classified intelligence assessments only on condition of anonymity.

DOJ_NMG_0079053

Intelligence officials said they had yet to determine the exact size of the weapon, or whether it was a plutonium bomb, the most likely scenario, given North Korea's stockpile of spent nuclear fuel.

The Pentagon said it had dispatched planes carrying sensitive atmospheric sensors into international airspace along the North Korean coast, in hope of picking up a whiff of radiation vented from the test site. But so far, they said, none has been detected.

Mr. Snow contributed to some of the speculation at a morning meeting with reporters when he noted that North Korea began reprocessing nuclear fuel only two years ago — it was actually closer to three years, the North Koreans say — asking reporters, "Do you seriously believe that they have actually done everything within two years?"

"You could have something that's very old and off the shelf here as well, in which case they've dusted off something that was old and dormant," he added. "I don't know."

Mr. Snow later said "that was just me talking." But he seemed to be suggesting that the North Koreans reached for plutonium believed to be produced in the late 1980's or early 1990's.

That first batch of North Korean plutonium is widely suspected by experts to have been contaminated with a high amount of plutonium 240, which can cause a chain reaction to start prematurely and end in a fizzle.

Thomas B. Cochran, a senior scientist at the Natural Resources Defense Council in Washington, a private group that tracks nuclear arms, said the plutonium 240 contamination problem was well known, and probably understood by the North Koreans.

More likely, he said, they had difficulty getting timers, detonators and explosives to work in the perfectly choreographed manner that was needed to compress the fuel uniformly — one of the technical requirements of building a plutonium bomb.

Philip E. Coyle III, a former head of weapons testing at the Pentagon and a senior adviser to the Center for Defense Information, a private group in Washington, said other explanations might be reasonable.

"Maybe they were trying to be sophisticated, and trimmed back on the amount of fuel" in trying to perfect a small warhead for missiles, he said. "Maybe they wanted a Ferrari the first time out of the box, and got a Model T instead."

So, was it a big deal after all? Mr. Snow, reconsidering his original question, told reporters it was a "big deal in the sense that the North Koreans have, in defiance of the international community and their neighbors, said that they were going to test, and they have claimed to have tested a nuclear weapon. That is an important deal."

U.S. Waits For Firm Information On Nature And Success Of Device (WP)

By Dafna Linzer And Thomas E. Ricks

The Washington Post, October 11, 2006

The White House yesterday played down North Korea's nuclear capability as government scientists and intelligence analysts waited for additional data to confirm whether Pyongyang had conducted a successful nuclear test.

Intelligence and administration officials said they were still working under the assumption that North Korea had managed to detonate an atomic device, but they said they needed additional environmental sampling before they could formally rule out other possibilities, such as the blast being caused solely by conventional explosives. Intelligence officials were concerned that North Korea could conduct another test, either to improve upon the first test or to prove its capabilities.

A U.S. military RC-135, an electronic monitoring aircraft, flew around the Sea of Japan yesterday in an effort to detect nuclear radiation, two intelligence sources said. The same aircraft, based in Okinawa, Japan, was used in July after North Korea carried out a set of ballistic missile tests. The sources cautioned that it could take several days before winds push radioactive particles toward an area where they can be clearly detected.

"Over time, whenever the prevailing winds blow out over the Gulf of Japan, it will be more likely that we get some detection," one intelligence official said yesterday, requesting anonymity because the effort involves classified information.

Pentagon spokesman Bryan Whitman said officials would use a variety of means besides seismic data to try to draw a conclusion about the explosion, including some he would not discuss. "There is a possibility that particulate fallout is detectable, and then there's a variety of other intelligence means to determine the veracity of the allegation of the tests that they conducted," he said.

DOJ_NMG_0079054

North Korea announced Monday that it had carried out its first nuclear test, and seismic readings suggested a blast inside a mountain in the country's north from the equivalent of 500 tons of explosives.

"We ourselves are operating under the assumption that, yes, in fact it was" a nuclear test, State Department spokesman Sean McCormack said yesterday. "But I can't confirm that."

The aircraft and monitoring stations on the ground are seeking to detect particulate data that would indicate that a nuclear explosion had taken place. But those efforts will not necessarily determine the nature of the blast, a Defense Department official noted, because the explosion was relatively small and the North Korean government said it was contained.

"There are multiple ways" the U.S. government will seek to verify North Korea's claim that it detonated a nuclear device, the official said. But there is no hard information yet, the official said. Intelligence analysts are also reviewing intercepted communications and other data.

The official declined to be quoted by name, saying that the Pentagon is not playing a lead role in the U.S. response and that he wanted to defer to the White House.

White House press secretary Tony Snow said there is a "remote possibility" that U.S. intelligence will be unable to fully determine whether the test succeeded. Several nuclear tests conducted by other countries, including a number of Pakistani tests in 1998, have never been fully understood by U.S. intelligence. Many intelligence analysts believe a 1979 flash in the waters off the southern tip of Africa was caused by a nuclear test carried out by Israel, with South African help. But it has never been confirmed and remains a mystery.

Snow suggested yesterday that it is possible that the test was conducted with an older weapon from before President Bush's time in office.

"You could have something that is very old and off the shelf here, as well, in which case they've dusted off something that is old and dormant," he said.

North Korea's arsenal is estimated by U.S. intelligence to have grown substantially during Bush's presidency.

At the end of George H.W. Bush's time in office in January 1993, North Korea was presumed to have enough plutonium for one to two nuclear devices. But in 2002, Pyongyang announced that it had begun to reprocess additional plutonium for weapons. It could now have plutonium for as many as a dozen devices, depending on their size and sophistication.

Nuclear experts said there was little possibility that the explosion could have been the result of a chemical blast or a radioactive "dirty" bomb masked as a nuclear explosion.

"It would be much more difficult to mimic the radioactive isotopes you get from a nuclear blast" than to conduct an actual nuclear test, said Charles D. Ferguson, a nuclear expert at the Council on Foreign Relations. "A dirty bomb uses one type of radioactive isotope, whereas a nuclear explosion would give off dozens of different ones," he said.

Ferguson agreed with government nuclear scientists that the most likely reason North Korea's blast was relatively small was that only a fraction of the plutonium detonated during the test.

Officials believe the low yield probably resulted from the poor design of the device. To create the kind of plutonium-based blast that North Korea claims, it would have needed to simultaneously set off a series of conventional explosives around a plutonium core. The force of the simultaneous blast produces a shock wave that causes the material to compress into the center and implode.

If any of those steps is imperfect and only part of the plutonium is imploded, the result is a low yield, such as the one produced by the North Korean test Monday. A low yield, deep underground, is more difficult to detect.

A government scientist who was not authorized to speak publicly said that in addition to radiation in the air, ground sensors may be able to pick up seepage that emerges through the soil, sometimes months after a test.

Michael Green, who was the senior director for Asia at the National Security Council during President Bush's first term, said the North Koreans have always made good on nuclear and missile plans they announced ahead of time, leaving him confident that they had in fact conducted a nuclear test.

"They have always telegraphed what they were up to on the plutonium side," he said.

White House Suggests Weapon Was Old (WT)

DOJ_NMG_0079055

By Joseph Curl

The Washington Times, October 11, 2006

The White House yesterday said the purported nuclear device detonated by North Korea on Monday might have been a "very old and off-the-shelf" weapon, but would not confirm that it was nuclear and could not explain why the blast was so small.

Bush spokesman Tony Snow said there is a "remote possibility" that the world never will be able to determine whether North Korea succeeded in conducting a nuclear test Monday.

Mr. Snow said the test appears be on a smaller scale than claimed by North Korea.

"You could have something that is very old and off-the-shelf here as well, in which case they've dusted off something that is old and dormant," he said.

Asked when the administration would know what was detonated, Mr. Snow said: "That's really up to the scientists. They're really trying to take a look at all the seismic and other evidence to figure out whether it was a nuclear device.

"They do know that there was a seismic event, presumably an explosion. But at this point, the analysts are being extremely careful. They want to make sure they don't outrun the facts, and they continue to assess it."

The Washington Times reported yesterday that U.S. intelligence agencies surmised from preliminary indications that North Korea did not conduct its first nuclear blast as Pyongyang had claimed. The officials said seismic readings show that the conventional high explosives used to create a chain reaction in a plutonium-based device were triggered, but that the blast's readings fell shy of a typical nuclear detonation.

"There was a seismic event that registered about 4 on the Richter scale, but it still isn't clear if it was a nuclear test. You can get that kind of seismic reading from high explosives," one official said.

Mr. Snow said, "There's a possibility that [scientists] will never be able to say to a complete certainly exactly what did occur."

What the explosive was matters little, he said, "because you still have a deliberate act of provocation that has the aim of … either trying to frighten or destabilize the region."

U.S. intelligence officials said yesterday that the working assumption is that it was some type of nuclear test.

"At this point, we can't confirm it was a nuclear test but more than likely the North Koreans set off some type of nuclear device," one official said.

Other data based on nuclear-particle collecting aircraft could not be analyzed in the region and had to be sent back to a laboratory in the United States. If it shows that radioactive matter was released near the site of the test, it would provide more detail on the nature of the device, U.S. officials said.

Meanwhile, Russia's defense minister yesterday stood by Moscow's estimate of the strength of North Korea's nuclear test, putting the blast level at 5 to 15 kilotons. South Korea said the explosion was about 0.8 kilotons, France said it was about 0.5 kilotons and the United States said it was less than 1 kiloton.

At the upper end of Mr. Ivanov's estimate, it exceeded the 12.5-kiloton strength of the U.S. atomic bomb that destroyed Hiroshima during World War II.

"One can explain this difference of judgment in terms of political reasons. Some want this test to be more powerful, others less powerful," Mr. Ivanov said.

The minister refused to elaborate on his remarks or on how Russia came to its assessment, saying: "It's a secret method, and I won't tell you."

Even A Small Nuke Poses Big Threat (USAT)

By Dan Vergano

USA Today, October 11, 2006

A dud, a fake or something else? Experts are dubious about the success of North Korea's underground nuclear test Monday.

DOJ_NMG_0079056

Clearly, there was an explosion, a magnitude-4.2 blast from a near-surface location 40 miles north of Kimchaek, the U.S. Geological Survey says. But an estimate of the blast's strength, equivalent to 500-2,000 tons of TNT, makes it a pipsqueak as nuclear explosions go, says physicist Terry Wallace of Los Alamos National Laboratory in New Mexico.

Even so, the test had officials in other countries on edge. A magnitude-5.8 earthquake shook northern Japan today, and the Associated Press, quoting unnamed sources in the Japanese Foreign Ministry, reported that Japan suspected North Korea had conducted a second nuclear test. South Korean and U.S. monitors said they had detected no seismic activity in North Korea, and Japanese Prime Minister Shinzo Abe told the parliament he had no confirmation of a new blast.

Monday's blast had the abrupt beginning of a nuclear explosion, not the slow, rumbling start of an earthquake or the drawn-out TNT blasts seen in mine explosions, says seismologist Paul Richards of Columbia University. International monitors are waiting for confirmation in the form of measurements of airborne radioactivity, which usually spike after a test, he says.

"Most likely they tried to get a larger yield and things went wrong," says physicist Wolfgang Panofsky, a veteran of the Manhattan Project, which developed the first atomic bombs six decades ago.

In a plutonium atomic bomb, which North Korea is suspected of building, the radioactive material is compressed by precisely timed TNT blasts. A nuclear chain reaction produces an instantaneous explosion, Panofsky says. Mistiming or other imperfections can cause the chain reaction to fizzle.

"It could even be a fake — conventional explosives masquerading as a nuke," nuclear proliferation reporter Richard Stone of Science magazine, says by e-mail. Richards says, however, that timing 500 or more tons of TNT to ignite simultaneously — and getting the explosives to the test site without being detected by satellites — seems "not very credible."

Some analysts, such as physicist David Albright of the Institute for Science and International Security, suggest that the North Koreans may have miniaturized a bomb to arm missile warheads.

Panofsky says that even the smallest possible plutonium bomb should produce an explosion the size of that at Hiroshima in Japan in World War II. That blast had an explosive force equivalent to about 15,000 tons of TNT.

"But the main thing is the cat is out of the bag," Richards says. "Even if this is quite small by nuclear standards, something like this set off in a city would be an enormous disaster."

Quake Raises Fears Of 2nd N. Korea Test (AP)

By Carl Freire

AP, October 11, 2006

A strong earthquake in northern Japan on Wednesday may have led the Tokyo government to suspect that North Korea had conducted a second nuclear test.

In Washington, White House spokesman Blair Jones said U.S. officials had not detected any evidence of additional North Korea testing.

"Japanese officials are now saying that this occurrence may be related to an earthquake in northern Japan," Jones said.

The reaction to the earthquake underscored the jitters in Asia over reports that North Korea planned a second test after it announced Monday it had conducted its first nuclear test. Some analysts expect the regime to conduct more tests amid suspicion the first, relatively small explosion might have partially failed.

"We have very real concerns that they may conduct another nuclear test and that they may do so very soon," Australian Foreign Minister Alexander Downer told reporters on Wednesday, a day after he met with North Korean Ambassador Chon Jae-hong to condemn the atomic program.

A senior State Department official said the U.S. would not be surprised if there were multiple tests, but so far there is no sign of one. The official spoke on condition of anonymity because of the sensitivity of the situation.

Alarm was triggered when Japanese media reported early Wednesday that the government had detected tremors in North Korea, leading it to suspect Pyongyang had conducted a second nuclear test.

Japanese Prime Minister Shinzo Abe's spokesman confirmed the government was checking whether the North had tested another nuclear device.

DOJ_NMG_0079057

Shortly after that, the Japanese meteorological agency said a strong earthquake with a preliminary magnitude of 6.0 shook northern Japan.

The quake, which struck at 8:58 a.m., was centered off the coast of Fukushima, 149 miles northeast of Tokyo at a depth of about 19 miles. The agency said that the tremor was a genuine quake and had nothing to do North Korean nuclear testing.

The U.S. Geological Survey in Golden, Colo., said Japanese broadcaster NHK called the USGS to check on seismic activity in the region at about 7:40 a.m. local time, more than an hour before the earthquake.

Later Wednesday morning, Abe said he had no information to confirm North Korea had conducted a second nuclear test.

"I have had not received information about any indications ... that a test has taken place," the prime minister said at a parliamentary budget meeting.

U.S. and South Korean monitors said they had not detected any new seismic activity Wednesday in North Korea.

The U.S. Geological Survey said it had detected an earthquake in Japan but not in North Korea.

"Either it was very small, or it didn't happen at all," USGS official Bruce Presgrave said of the reports on North Korea. "If the event would have been 2.5 or bigger, we would have seen something."

The North Korean nuclear test on Monday registered the same force as a magnitude-4.2 earthquake.

The head of South Korean seismic monitoring station said no activity has been detected in North Korea that could indicate a possible second North Korea nuclear test.

"There's no signal from North Korea, even no small event," Chi Heon-cheol, director of the South's Korea Earthquake Research Center, told AP.

The earthquake off Japan's coast was centered approximately 780 miles from the site where North Korea conducted its nuclear test. It occurred about 740 miles from the closest point on the North Korean coast.

There were no reports of damage or injuries.

Japan To Keep Prohibition On Nukes (WT)

By David R. Sands

The Washington Times, October 11, 2006

Japanese Prime Minister Shinzo Abe said yesterday that North Korea's claim it conducted a nuclear test will not affect his country's constitutional ban on developing nuclear weapons, but all of the North's neighbors face fundamental military and foreign policy questions in the wake of the test.

Mr. Abe, a hard-liner who has long pushed for a more assertive Japanese defense, told a parliamentary committee that fears in the region that Japan will seek a nuclear deterrent in response to North Korea's test are unfounded.

"We have no intention of changing our policy that possessing nuclear weapons is not our option," Mr. Abe said. "There will be no change in our nonnuclear arms principles."

Security analysts said new pressure to rewrite Japan's post-World War II pacifist constitution is just one potential result of Pyongyang's test. A Japanese military buildup, they warn, could spur China to bolster its own arsenal, and set off a regional arms race.

"Given that some people perceive that Japan's new leadership might wish to reconsider Japan's nuclear policy, it is vitally important that the United States lead an intense and sustained effort with Japan, South Korea and China to clarify each other's intentions and policies in ways that avoid any nuclear competition," according to George Perkovich, a nuclear proliferation specialist at the Carnegie Endowment for International Peace.

South Korean President Roh Moo-hyun has already conceded that Seoul faces a fundamental review of its decadelong "sunshine policy" of economic and political engagement with the North, in light of the purported nuclear test.

China, for its part, had found North Korea's combative regime a useful tool in tying down U.S. military assets in the region and preventing the emergence of a pro-U.S. united Korea on its border. Pyongyang's suspected nuclear test Monday, in the face of repeated warnings by China, presents Beijing with a dilemma of how hard to punish its nominal ally.

Even North Korea faces a new diplomatic headache as a result of its test.

DOJ_NMG_0079058

Pyongyang's tactic of playing its neighbors off one another has been undercut as Mr. Abe, Mr. Roh and Chinese President Hu Jintao have presented a united front in meetings over the past week against Pyongyang's nuclear ambitions. The three leaders recently had been sharply at odds over such issues as Japan's World War II record and territorial claims.

Despite Mr. Abe's assurances, many in East Asia are nervously watching Japan's internal debate over defense and nuclear policy.

Former Australian Prime Minister Paul Keating, according to the Australian newspaper, said at a financial conference in Sydney, "My great concern is that Japan may use the [North Korean test] to move into nuclear weapons itself, eschewing the nuclear protection provided to it by the United States under its umbrella."

Taiwanese Foreign Ministry spokesman Michael Lu said Taipei "fears the nuclear test might trigger an arms race and the proliferation of nuclear weapons, thus undermining the security and welfare of people in the Northeast Asian region."

Former Japanese Prime Minister Yasuhiro Nakasone, who served in the mid-1980s, this past summer issued a report saying Japan should study the nuclear military option because it could not count forever on U.S. protection from its neighbors.

"There are countries with nuclear weapons in Japan's vicinity," Mr. Nakasone said at the time. "We are currently dependent on U.S. nuclear weapons as a deterrent, but it is not necessarily known whether the U.S. attitude will continue."

The Scramble For A Way To Stop Nukes (CSM)

By Peter Grier

The Christian Science Monitor, October 11, 2006

WASHINGTON

North Korea's apparent test of a nuclear device could have a devastating effect on the world's long struggle to contain the spread of the most powerful military weapon known to man.

Experts have long worried that if the Pyongyang regime flaunted its atomic hardware, Asia might be drawn into an arms race reminiscent of the early days of the cold war. The spiral could develop like this: Threatened, Japan and South Korea start their own weapons programs. China piles up bombs to protect its regional superpower status. India strives to catch China, and then Pakistan tries to counter India, and then....

But this nightmare scenario is far from inevitable, point out experts. Everything depends on what the US and other interested governments do to try to repair a nonproliferation system that, despite its faults, has served the globe well for decades.

"Now is the time for farsighted, collaborative, and smart policies to prevent the further spread and use of nuclear weapons," concludes George Perkovich, a nuclear strategy and nonproliferation expert at the Carnegie Endowment for International Peace in Washington.

Tuesday North Korea took its nuclear bluster to a new level, saying it could fire a nuclear-tipped missile unless the US agreed to bilateral negotiations.

Monday's nuclear test was "an expression of our intention to face the United States across the negotiating table," an unnamed North Korea official told South Korea's Yonhap news agency.

Most experts in and outside the US government doubt that Pyongyang has the expertise to produce a nuclear warhead small enough to fit on an intercontinental ballistic missile. North Korea was simply trying to negotiate with threats and intimidation, said John Bolton, US ambassador to the UN.

"It's worked for them before. It's not going to work this time," Mr. Bolton said.

At the United Nations Security Council, discussions resumed concerning sanctions proposed by the US. The sanctions package could include everything from international inspection of all cargo leaving or entering North Korea to a prohibition on any military trade with the reclusive Pyongyang regime.

As US officials noted, even North Korea's claim that it had exploded a nuclear device represented the crossing of a fateful threshold. If nothing else, Pyongyang had called Washington's bluff, some experts pointed out. President Bush, among others, has said in the past that the US would not "tolerate" an overtly nuclear North Korea.

Given the military difficulties of attacking a nuclear-weapon state, and of destroying stockpiles of fissile material, "tolerate" may no longer be the operative word.

DOJ_NMG_0079059

"Any US statements that North Korea cannot be allowed to acquire nuclear weapons are meaningless bluster," writes Anthony Cordesman, a military expert at the Center for Strategic and International Studies, in an analysis of the meaning of the North Korean test.

At the same time, the test shows that current US policies aimed at curbing North Korea's nuclear ambitions haven't worked, says Daryl Kimball, executive director of the Arms Control Association in Washington. A new, more energetic diplomatic approach is needed - and fast, he says.

North Korea's actions could "have devastating effects on the struggle against proliferation," says Mr. Kimball.

Even before the test, current six-party talks on North Korea were stalled due to inflexibility on the part of both Washington and Pyongyang.

The US has indicated that a face-to-face meeting with North Korea might be possible in the context of these six-party negotiations. That offer should remain on the table, say some experts, despite North Korea's provocative actions.

However, in the short term, the US probably faces a period of tension and harsh words in its dealings with the unpredictable North Korean regime, says Jim Walsh, a proliferation expert at the Security Studies Program at the Massachusetts Institute of Technology in Cambridge.

Mr. Walsh, who visited North Korea last year, says that officials there continually told him that their ultimate goal is a denuclearized Korean peninsula - but that they would get nuclear weapons first, on the path toward that goal.

Thus a quick reversal of course on the part of the North Koreans may be unlikely.

"In the near term, this is not going to be undone," says Walsh.

But there are nuclear programs that have been rolled back, he notes. South Africa, among others, decided that atomic weapons were not in its national security interest.

North Korea - or, more specifically, the small cadre that runs the nation - does not so much want to be a nuclear power as to survive, says Walsh. Right now, it sees an atomic arsenal as a means to that end.

"What they really want is normalized relations," says Walsh.

Meanwhile, US policy has been inconsistent, veering back and forth between officials who want to negotiate with North Korea and those who want to squeeze it.

For now, the nuclear test is likely to strengthen the hand of US hard-liners.

"This will clarify US policy, but in a direction unlikely to yield results," says Walsh.

Asia Weighs Risk Of Sanctions (WSJ)

By Gordon Fairclough In Shanghai, Evan Ramstad In Seoul, South Korea, And Jay Solomon In Washington

The Wall Street Journal, October 11, 2006

North Korea's Neighbors Fear Pressure May Breed Regional Chaos

As the United Nations Security Council mulls sanctions against North Korea, it must consider one question that could affect the stability of North Asia for years to come: Would the collapse of Kim Jong Il's government prove more dangerous than leaving him in charge of a nuclear-armed state?

The prospect of regime change in Pyongyang may cheer many in Washington who view Mr. Kim as running a militarist regime that has tortured and starved its own people and traded missiles to Pakistan, Iran, Syria and others. But turmoil in North Korea could damage the economies of China and South Korea, set off a refugee crisis and lead to military conflict.

How the U.S. and Asia assess these risks could influence the outcome of Security Council meetings to decide how to respond to Pyongyang's announcement Monday that it detonated a nuclear device. The Bush administration is seeking to isolate North Korea, choking off money flow to its elite and preventing it from trading in materials used in weapons systems. It remains to be seen how long the regime would survive under strict sanctions.

Yesterday, China's U.N. Ambassador Wang Guangya told reporters China is willing to back "some punitive actions" but said those actions "have to be appropriate."

Still, the U.S. push for comprehensive sanctions that could topple the Kim regime is likely to be resisted by China and South Korea. "China won't agree to very stern sanctions," said Tao Wenzhao, a researcher at the Chinese Academy of Social Sciences

DOJ_NMG_0079060

in Beijing. A collapse of the North Korean regime would cause "serious economic and social problems for China" and "be bad for stability in Northeast Asia," he said.

The Bush administration has never formally tied itself to a policy of regime change, but instead it continues to hold open the possibility of negotiating with North Korea to eradicate its weapons programs. At the same time, Washington has ratcheted up financial pressure on Pyongyang over the past two years. That has made it increasingly difficult for North Korea to access outside funds. The U.S. has also, along with Japan, largely stopped food-aid shipments to North Korea. Both countries provided large amounts of such aid to the country in the 1990s.

Many North Korean officials view U.S. policies as wholly focused on removing Kim Jong Il, say people who recently visited. "No doubt that's how they see it," said Selig Harrison, an American researcher who met with senior North Korean officials last month.

Some U.S. officials who have worked on North Korea policy in recent years argue Washington has only limited understanding of the fallout from a potential regime change. They say the Bush administration's approach has largely been driven by what they describe as President Bush's hatred of Mr. Kim, and not a comprehensive strategy.

"I'm sure at times there are people who look at the odds of collapse and there are all sorts of contingency plans," said David Straub, who headed the State Department's Office of Korean Affairs from 2002 to 2004. "But no one really knows if and when there'd be an institutional collapse."

In South Korea, the approach taken by President Roh Moo Hyun -- trying to engage the North with economic incentives -- has meant regime change was rarely discussed in public. In the wake of the claimed nuclear test, some opposition lawmakers are starting to raise the topic.

"The nuclear test changes the circumstance," said Chung Mun Hun, a legislator who belongs to the conservative Grand National Party.

One concern among Chinese and South Korean policy makers is who would take over if Mr. Kim were deposed.

"The alternatives could easily be worse," said Peter Beck, a Korea expert at the nonprofit International Crisis Group. "The most likely thing would be a military junta. That's the best-case scenario."

Another possibility is civil war, with factions within the army and other parts of the elite struggling for control. Such a scenario could prompt China, South Korea or other players to intervene, either to back favored successors or to attempt to quell violence.

U.S. military experts say they expect Chinese troops would move into North Korea to establish a buffer zone and prevent refugee flows across the border. The U.S. military's top priority would be securing North Korea's nuclear material and other suspected weapons of mass destruction.

South Korea's army would likely try to restore order and extend Seoul's U.S.-backed administration over the northern half of the Korean peninsula -- resulting in a possible struggle for influence with China, analysts said.

A collapse of the Kim regime would also likely spark economic dislocation. South Korean government planners predict more than two million North Koreans, out of a population of 23 million, would flee south across the demilitarized zone, overwhelming social services. The planners say financial markets would swoon and inflation would jump. Crisis-management costs alone could total $6.5 billion.

Marcus Noland, a Korea expert at the Institute for International Economics in Washington, estimates the cost of unifying North and South Korea would be about $600 billion over the first decade the two states merged.

Many Chinese fret over the costs of a potential refugee exodus to China's economy. "We worry it will damage China's golden opportunity for development," which needs "a nice stable environment," said Shen Shishun, a researcher at the Chinese Institute of International Studies.

Backers of fast change in North Korea's regime argue that supporting gradual transformation of the North will be far more expensive than a sudden break with the past. They say rebuilding the North Korean economy would be much more efficient with the old regime and its centrally planned economic system out of the way, and both North and South would derive a significant peace dividend by demobilizing their militaries.

DOJ_NMG_0079061

Ralph Cossa, president of the Pacific Forum CSIS think tank in Honolulu, an arm of the Center for Strategic and International Studies, said other countries have tolerated North Korea because the cost of ousting Mr. Kim and rebuilding the country has been perceived to be too high.

"But if the cost of not having regime change is having it as a demonstrated nuclear state, then maybe that cost is too high," he said. "It's got to be the Chinese and South Koreans who say enough is enough."

Deep Insecurity Led Kim To Build Nuclear Program, Experts Say (NYT)

By Donald Greenlees, International Herald Tribune

The New York Times, October 11, 2006

HONG KONG, Oct. 10 — The military in North Korea is by far the largest consumer of the country's scarce resources. But even so, its combat jet pilots get only about two hours of flying time a month, its soldiers sometimes have to grow their own food, and much of its equipment is old and outclassed by that of its neighbors. According to South Korean and Western experts, if a conventional war breaks out on the Korean Peninsula, the best the North Korean military could manage would be to fight to a bloody stalemate.

It is the deep insecurity born of these shortcomings, the experts say, and not any desire to grab attention or gain leverage, that drove President Kim Jong-il's decision to defy international warnings and declare this week that his country had tested a nuclear weapon.

"I think North Korea wants an effective deterrent against the U.S. in case of war on the Korean peninsula," said Park Yong Ok, a former lieutenant general in the South Korean army who served as vice minister for defense in the late 1990's. "Kim Jong Il wants a nuclear weapon at hand. It's not a bargaining chip."

Although the North has an active army of more than one million soldiers — an immense number for a country of 23 million people — its poor and outdated equipment and huge difficulties in maintaining combat readiness mean it is outgunned by the smaller forces of South Korea and the United States troops stationed in the South.

Until now, North Korea's main deterrent against attack has been the 8,000 artillery pieces and 2,000 tanks it has positioned close to the demilitarized zone that separates North and South. Many of the guns have ranges long enough to reach Seoul, a city of 10.3 million people, and can fire chemical-weapon shells.

But military officials and analysts interviewed today said that the North closely watched conflicts elsewhere in the world, particularly the invasions of Iraq in 1991 and 2003, and saw that masses of tanks and artillery could be neutralized with ease by superior American military technology. So, methodically but with growing nervousness, the Communist regime sought a new trump card to maintain the security standoff on the peninsula.

"It's a large army, but the equipment is old," said a Western military attaché based in Seoul, who did not want to be quoted by name because he was not authorized to speak for his government on the matter. "I think the caliber of the army is not that great anymore. Kim has to look at other means for protection."

The attaché said it was unlikely that the Mr. Kim would now bargain his nuclear arms away. "He might talk, but not to hand over that capability," he said. "It's his security blanket."

To many outsiders, North Korea's pursuit of nuclear weapons, in defiance of global opinion, is irrational because it is further isolating the country and attracting increasing pressure on the regime.

But Michael Breen, author of a 2004 book, "Kim Jong-Il: North Korea's Dear Leader," said that it was a mistake to regard the North's nuclear program as an erratic dictator's bargaining ploy.

"He is not trying to make foreigners dance to his tune," Mr. Breen said of Mr. Kim. "In many ways, the foreigners are irrelevant. He decided many years ago that he has no friends, and he needs a nuclear weapon in order to survive."

DOJ_NMG_0079062

He also recognizes, Mr. Breen said, that his country is falling behind in conventional strength and that his country's "military first" policy was an enormous drain on its resources. "Nuclear weapons are quite economically attractive," compared to the cost of arming and training an immense army, Mr. Breen said.

Still, the nuclear test that the North claims to have conducted on Monday is only one step on the path to achieving a battlefield nuclear deterrent. Beyond building a workable device and setting it off in a test, the Northfaces the considerable technical challenge of making it small enough to fit in a missile warhead, aerial bomb or artillery shell so that it can be used against an enemy.

The consensus among analysts is that the North Koreans are not there yet. "They need to reduce the size of the nuclear weapon," Mr. Park, the former South Korean vice minister for defense, said in a telephone interview from Seoul. "But I think it is only a matter of time before they have the technological capacity to enable a nuclear warhead to be put on a missile."

North Korea has a variety of short- and medium-range missiles that are capable of threatening the immediate region, including Japan, but they are apparently not yet able to hit targets more than a few hundred miles away.

A test of the country's longest-range missile so far, the Taepodong-2, failed in July when the vehicle blew up shortly after launch. In theory, the Taepodong-2 would have a range of 9,320 miles, enough to reach the West Coast of the United States, if it worked properly.

Still, the North's apparent progress on both the bomb and the delivery system should prompt the South Korean government of Roh Moo-hyun to rethink its recent policy of seeking greater military autonomy within the country's alliance with the United States, according to Mr. Park.

South Korea, he said, cannot contemplate pursuing its own nuclear weapons program, he said, so "the issue now is how to make the alliance as strong as it was in the past."

Iran Distances Itself From N Korean Crisis (FT)

By Gareth Smyth

Financial Times, October 11, 2006

Iran on Tuesday distanced its own nuclear dispute from the North Korean crisis, reiterating its claim that it opposes nuclear weapons.

While analysts abroad speculated that Tehran could be emboldened by North Korea's defiance, comments from officials and the media put the emphasis on the different paths taken by the two countries.

Tehran, they stressed, remained committed to the Nuclear non-Proliferation Treaty.

North Korea's claim that it had conducted a nuclear test comes as western powers grapple with policy towards Tehran, which has repeatedly resisted international demands for a suspension of uranium enrichment tests, the most sensitive part of its nuclear programme.

Tehran insists its nuclear experiments are designed for the production of energy but western governments suspect the Islamic Republic is intent on developing nuclear weapons.

The US and European governments are now seeking to raise the pressure on Iran through gradual sanctions at the UN Security Council.

But in the Iranian press on Tuesday some commentators warned that undue US pressure on North Korea had backfired.

Jam-e Jam, a conservative daily, blamed Washington's "unilateral, expansionist military policies" for the collapse of the six-party talks over Pyongyang's atomic programme.

The reformist paper Etemad-e Melli said the "west should have known intimidation and threats would be not only inefficient but would also push a country's resources towards an end with little benefit for its people."

Gholam-Hossein Elham, the government spokesman, argued "big powers with hegemonic ambitions" - terminology often applied to the US - should begin nuclear disarmament and that Israel should give up its atomic arsenal.

But there have also been calls for the US to engage with Pyongyang as a means to defuse the crisis. Iran has had intermittent co-operation with North Korea over developing missiles, and Iranian exiled groups opposed to the Islamic Republic have alleged there has also been swapping of nuclear technology.

DOJ_NMG_0079063

In January 2002 US president George W Bush lumped both Iran and North Korea alongside Iraq as “an axis of evil” that was “arming to threaten the peace of the world by seeking weapons of mass destruction.”

Aftab, a website close to Hassan Rowhani, a leading conservative pragmatist, suggested Iran could be either the biggest winner or the biggest loser of the “gambling” by Kim Jong-il. Making the “threat of Korea into a chance for Iran” required a “dispassionate analysis” of the international situation, a commentary on the site said. In April, Mr Rowhani, the former top security official, demanded that the government of president Mahmoud Ahmadi-Nejad showed “more reason, and less emotion” over the nuclear crisis.

Iran Blames U.S. For N. Korea Nuke Test (AP)

By Ali Akbar Dareini

AP, October 11, 2006

Iran took a tough line on its nuclear program Tuesday, blaming Washington for North Korea's reported test blast and vowing to keep developing its own suspect atomic program.

Iran appeared emboldened by North Korea's defiance as its hardline Islamic leaders pledged not to bow to international demands that Tehran suspend uranium enrichment.

"The Iranian nation will continue its path of dignity based on resistance, wisdom and without fear," President Mahmoud Ahmadinejad was quoted as saying on state-run television.

Iran also stood apart Tuesday from the widespread international condemnation of North Korea.

Government spokesman Gholam Hossein Elham told reporters that Iran opposed "any use of weapons of mass destruction, especially nuclear weapons." But he did not criticize North Korea and instead faulted the United States for the test.

"The root cause of this should be sought in the policy, behavior and method adopted by the rulers of the United States," Elham said.

The U.N. Security Council has demanded Iran suspend uranium enrichment because of suspicions Tehran is trying to develop atomic weapons in violation of its treaty commitments. Iran ignored the council's Aug. 31 deadline despite a threat of sanctions.

Though the Security Council is giving precedence to considering sanctions against North Korea, a State Department spokesman said Tuesday that senior officials of the United States and five other countries planned to confer by video Wednesday on possible U.N. sanctions against Iran.

Enriched uranium is a key component for nuclear bombs. But it also can be used to fuel nuclear reactors that generate electricity, and oil-rich Iran insists that is the sole goal of their program.

Israeli officials said Tuesday they feared the North Korean test would set a dangerous precedent and the communist country would transfer materials and technology for the development of nuclear weapons to Iran, whose president has said the Jewish state should be wiped off the map.

"Nuclear capability in the hands of irresponsible, undemocratic regimes is a world problem," said Miri Eisin, spokeswoman for Israeli Prime Minister Ehud Olmert.

Iran has long refused to comment on its close relationship with North Korea. Western intelligence agencies have reported that Iran's Shahab-3 missile, which is capable of carrying a nuclear warhead, is based on a North Korean rocket. But Iran denies this.

Many Iranian newspapers voiced sympathy Tuesday for the North Korean regime. The hardline Resalat newspaper said in an editorial that Washington's "expansionist policies make the world such a dangerous place, it is to be expected that countries seek such weapons as a deterrence."

But the moderate independent newspaper Hambastegi criticized North Korea. The paper ran a cartoon showing that country's leader, Kim Jong Il, holding a bomb in one hand and saying to the world: "Why can't we be friends? Give me your wallet."

Amir Rafati, who writes for the financial paper Jahan-e-Eghtesad, said North Korea's test was "both a chance and a threat for Iran."

DOJ_NMG_0079064

"It is a chance because it will reduce the pressure on Iran," Rafati told The Associated Press. "It is a threat because it may make things worse for Iran in the long run."

Feelings about North Korea were mixed in the streets of Iran's capital, Tehran.

"I think this nuclear test could be a very good example for Iranian people to see that despite pressure from America, wide sanctions and several problems, North Korea tried and was successful," said Reza Tavassoli, a government employee.

But university student Arash Navidkia condemned the communist nation. "North Korea's nuclear tests are a big danger to the entire world, to global peace and security. No country should do such tests," he said.

Bomb Test May Scupper Indo-US Nuclear Deal (FT)

By Jo Johnson

Financial Times, October 11, 2006

North Korea's nuclear test will reduce the chances of the Indo-US civilian nuclear energy agreement being passed by a lame duck session of the Senate in November and strengthen the non-proliferation lobby in the US, Indian security analysts warned on Tuesday.

US President George W. Bush is expected to face renewed criticism that he is rewarding bad behaviour by allowing a resumption of civil nuclear trade and co-operation with India, despite its 1998 nuclear test and refusal to join the nuclear non-proliferation treaty.

Critics of the deal have argued that US support for a normalisation of nuclear relations with India, long subject to a grinding technology-denial regime, will encourage other countries with nuclear ambitions to test the strength of the non-proliferation system.

"The non-proliferation lobby will again raise a hue and cry, as it will seem as though India is being singled out for special treatment," said Harinder Sekhon, senior fellow at the Observer Research Foundation, a New Delhi think-tank.

"It will be hotly debated [when the Senate reconvenes in November]. There won't be a rubber stamp," said Daryl Kimball, executive director of the independent Arms Control Association and a critic of the proposed agreement with India.

"The North Korean situation shows that when the international community, and particularly the United States, forgives and forgets states that have violated non-proliferation standards, it gives greater licence to future proliferators to bend or break the rules."

The Indo-US pact is already in trouble in the US Congress, and if the Senate does not take up the enabling legislation for the deal in the brief caretaker session that follows next month's congressional elections, the legislative process must start again from scratch next year.

Under such circumstances, Indian Prime Minister Manmohan Singh would be likely to come under renewed domestic pressure to harden his negotiating stance from coalition allies opposed to what they see as his pro-US foreign policy tilt.

"The non-proliferation issue in this debate will assume greater significance, but the US Congress is by and large still overwhelmingly supportive," said Major-General Dipankar Bannerjee of the Institute for Peace and Conflict Studies.

The Indian government, which has condemned the North Korean test, is redoubling its lobbying efforts in Washington in an attempt to stress its own "impeccable non-proliferation record" and no-first-use policy with respect to nuclear weapons.

"India tested, no doubt about it, but we have a strong no-first-use policy and had never joined the Nuclear Non-Proliferation Treaty, whereas North Korea has never given such assurances and opted out of the NPT," said Mrs Sekhon.

The Hindu, perhaps India's most influential newspaper, said New Delhi's criticism of Pyongyang's "adventurism" smacked of "double standards" and "hypocrisy".

Additional reporting by Guy Dinmore in Washington

A Blink, A Nod, A Bomb (WSJ)

By Henry Sokolski

The Wall Street Journal, October 11, 2006

As if the Bush administration wasn't busy enough with Iraq and Iran, now it must face the immediate policy fallout from Pyongyang's weekend nuclear test. U.S. diplomats filed a United Nations resolution condemning the test and calling for the naval

DOJ_NMG_0079065

interdiction of North Korean vessels and the freezing of the outlaw state's financial assets. It's unclear if this will fly with the other members of the Security Council. But with critics of the administration already blaming the test on the White House's unwillingness to talk directly with Kim Jong Il, action of some sort is certain.

What's less clear, however, is whether any of these measures will keep other states from following Pyongyang's model misbehavior. A Security Council resolution, however "tough," may fail to dissuade other would-be proliferators, especially Iran, if it does not clearly link sanctions with North Korea's longstanding violations of the nuclear rules.

North Korea is an exceptional proliferator, to be sure. It not only signed and defied the Nuclear Non-Proliferation Treaty (NPT), which prohibits acquiring bombs, it formally withdrew and tested a nuclear device. In contrast, India, Israel, and Pakistan never signed, and Iran and Iraq never tested. But precisely because Pyongyang so brazenly violated the NPT, it's critical that any sanctioning or punishment be tied to this crime.

Then there is the matter of avoiding ever repeating our feckless policies toward North Korea. For more than two decades, the U.S. and its allies blinked at the regime's nuclear-weapons activities, even when they clearly violated international treaties Pyongyang had signed; bent the nuclear rules to accommodate North Korea's misbehavior; and groveled more than once before Pyongyang and Beijing to keep this duplicitous diplomacy afloat.

The U.S. first blinked almost as soon as it discovered Pyongyang's construction of a military production reactor at Yongbyong in 1984. The reactor had no hook-up with any portion of North Korea's electrical grid, yet we decided to act as if it did. In 1985, with Soviet help, we got Pyongyang to sign the NPT. The treaty requires that new members complete an agreement with the International Atomic Energy Agency (IAEA) within 18 months. When Pyongyang failed to do this, we again blinked (this time several times, for more than six full years). To get Pyongyang to sign, George H.W. Bush finally acceded in l991 to North Korean demands that the U.S. first remove its tactical nuclear weapons from South Korea and allow North Korea to inspect South Korean military bases -- arguably our first grovel.

On the plus side, Washington got Pyongyang and Seoul to agree not to reprocess or enrich uranium or to acquire nuclear weapons. There was only one problem: Pyongyang was in violation of this agreement almost before the ink was dry. The IAEA confirmed this point after their first inspections revealed Pyongyang had reprocessed some of its spent fuel. After Pyongyang refused IAEA requests for further inspections, the IAEA referred the matter to the United Nations Security Council, which was ready to impose sanctions against North Korea.

What happened next resulted in a major bending of the rules. Bill Clinton blocked U.N.-sanctions action with a generous offer of energy assistance, including a promise of two large light water reactors along with a suspension of routine IAEA inspections. In exchange, all Pyongyang was asked to do was promise eventually to come back into compliance with its NPT and IAEA obligations. For nearly a decade Pyongyang did no such thing. When the Bush administration finally discovered Pyongyang was cheating on its pledge not to make nuclear weapons-usable fuel, the White House suspended further energy assistance and the IAEA again referred North Korea's case to the Security Council.

Then, we blinked again. Rather than back the IAEA's complaint against North Korea for violating its NPT obligation to permit routine IAEA nuclear inspections, the U.S. called for multilateral talks with North Korea, Japan, South Korea, Russia and China to get Pyongyang to voluntarily disarm. In this, the U.S. had to plead with North Korea and China to cooperate (Pyongyang to come and Beijing to pressure Pyongyang to behave). Ultimately, neither did. Yet, in an attempt to get both on board, the U.S. again caved by agreeing to a set of negotiation principles that included respecting North Korea's right to peaceful uses of nuclear energy and the need to discuss at the appropriate time the subject of provision of a light-water reactor to the DPRK.

None of this history makes for very good reading. It certainly suggests that any attempt at partisan blame-gaming is rather foolish. Here everyone -- Democrat and Republican -- is culpable (although the Clinton administration deserves special mention). It also suggests that whatever our stated purpose is for sanctioning North Korea, it ought to include getting our practice of blinking and bending -- i.e., at the NPT, the IAEA safeguards and the Korean denuclearization statement of 1991 -- behind us.

Indeed, this might be the most important reason to sanction Pyongyang. It certainly seems improbable that we can pressure it to surrender its nuclear weapons. It also will take a good deal more than any U.N.-sanctions resolution to put Kim Jong Il out to pasture. Instead, the U.S. and its allies should use the occasion of sanctioning North Korea to pursue two sets of objectives. The first should be regional -- to frustrate Pyongyang's designs to parley its nuclear gains to unify Korea on terms

DOJ_NMG_0079066

favorable to the North, to reassure Japan and keep it from going nuclear, and to undermine the North Korean regime. Here it would be useful to recall North and South Korea's NPT pledges not to acquire nuclear weapons and hold both of them to their binding 1991 pledge not to make nuclear fuel. It is also an opportune time to get the South Koreans to reconsider their failed policies to pacify the North and revitalize security ties with their democratic neighbors.

The remaining objectives are global. First, we must prevent Iran and other would-be bomb makers from thinking they can violate the NPT and withdraw with impunity as Pyongyang did. Here it would make sense to explain the reasons for the U.N. to sanction Pyongyang. The most important of these is that its test "proves" Pyongyang was necessarily violating the NPT before it left the treaty in 2003 (in order to make the device it tested). Offering this explanation now would also be helpful in lending support to long-standing, sensible French proposals for U.N. consideration that would hold NPT violators -- including those that withdraw -- automatically accountable.

Second, we should keep others from testing. This point is particularly salient in the case of India, with whom the U.S. is currently seeking a civilian nuclear-cooperation agreement. One of the sticking points is whether the U.S. will demand, as it has with other states, that all nuclear cooperation will cease if the recipient tests nuclear weapons. Congress should insist on binding language on this point while making it clear that the same condition must also apply to U.S. nuclear assistance to China as well.

Finally, sanctioning North Korea should be used to help keep friendly nations who are hedging their security bets with "peaceful" nuclear energy programs of their own (e.g., Egypt, Turkey, Algeria, Indonesia and others) from thinking that they can proceed even if their programs are dangerous and make no economic sense. The NPT is clear that its aim is to share the "benefits of peaceful nuclear energy." What Iran and North Korea developed was neither beneficial nor peaceful. It's high time that we clarify what is. Here, America's current binge of subsidizing nuclear power and backing nuclear fuel-making projects deserves a second look, as do the all-too-minimal requirements to safeguard these facilities against military diversions.

All of this will take time. But North Korea's nuclear test and our response to it is the right place to begin. The alternative -- more nuclear tests by more states -- should certainly give the U.S. and its allies more than enough incentive to try.

Mr. Sokolski, executive director of the Nonproliferation Policy Education Center, is editor of "Taming the Next Set of Strategic Weapons Threats" (Institute of Strategic Studies, 2006).

The Bus Is Waiting (NYT)

By Thomas L. Friedman

The New York Times, October 11, 2006

As eras go, the post-cold war has been a pretty good one. The collapse of communism, the spread of free-market democracies and the general reign of stability bought and paid for by U.S. power all combined to create a world in which China and India have been able to rise peacefully, America has prospered, and Europe has become whole and free. Yes, there's been 9/11, Bosnia, the rise of the petro-dictators and African wars — which are hardly trivial. But all in all, compared with the vast repression and nuclear standoff that characterized the cold war, the post-cold-war era has been much better for a lot of humanity.

Too bad it's probably over.

Yes, one day historians may argue that the post-cold war started on 11/9 and ended on 10/9.

The Berlin Wall fell on 11/9 — Nov. 9, 1989, which ushered in the post-cold-war world. The apparent North Korean nuclear test went up on Oct. 9, 2006, which, may have ushered out the post-cold-war world and ushered in a much more problematic era — the post-post-cold-war world.

This post-post-cold-war era will be defined by three new features — if things continue as they are. First is a nuclear Asia, triggered by North Korea's flaunting of its nuclear weapons. How long will Japan, Taiwan and South Korea remain nonnuclear with Kim Jong-il brandishing his bomb? Second is a nuclear Middle East. Iran is almost certain to follow North Korea's lead, and once the Shiite Persians in Iran have the bomb, how long will it be before the Sunni Arabs in Saudi Arabia, Egypt, even Syria have one too? Third is a disintegrating Iraq in the heart of the Arab world, with its destabilizing impact on oil prices and terrorism.

Together these will add up to a much more dangerous and volatile post-post-cold-war world — unless ...

Unless, what? Unless China and Russia get their act together and understand that the post-post-cold-war world is a much bigger threat to their prosperity than a post-cold-war world in which U.S. power is pre-eminent. You read me right — the post-

DOJ_NMG_0079067

cold-war world can be preserved only if Russia and China get over their ambivalence about U.S. power and if the Bush team gets over its ambivalence about Iran and North Korea.

How so? The U.S. is sanctioned out when it comes to Iran and North Korea. We don't have any more unilateral sanctions with which to pressure either regime to halt its nuclear adventure. The only countries that could have an impact on North Korea and Iran are China and Russia.

If China told North Korea that unless it dismantled its nuclear program and put its facilities under U.N. inspection, Beijing would cut off its energy and food, Kim Jong-il would relent. He is not suicidal. Anything less than such an explicit Chinese threat will mean a nuclear North Korea and eventually a nuclear Asia — which will certainly not be good for China's growth prospects.

And if China and Russia told Iran that they would join in the toughest possible U.N. economic sanctions on Tehran if it persisted in its nuclear program, the ayatollahs would also back down. Because then the Europeans would have the spine to join in sanctions and Tehran would face a united front.

To be sure, both moves would be greatly helped by a declaration from the Bush team that it had overcome its infighting and decided to pursue changes in behavior instead of changes in regimes in North Korea and Iran, and would be prepared to give explicit security guarantees to both if they verifiably ended their nuclear programs. When an administration can't make up its mind between regime change and change of behavior, it gets neither. And that is what the Bush team has gotten.

So, thanks to North Korea's nuclear test, we've come to a moment of truth. Yes, we have to make up our minds, but so, too, must Moscow and Beijing. They constantly advocate "multilateral" solutions. Well, will they sign up for the kind of biting multilateral sanctions that would work vis-à-vis Iran and North Korea and make "unilateral" U.S. military options unnecessary? If Russia and China want to see the post-cold-war world continue, they can't be free riders anymore — opposing both U.S. unilateralism and effective multilateralism that requires them to do something hard. They've got to start paying a price to preserve this world.

If they do, this relatively benign post-cold-war world might continue. If they don't, if they keep trying to be free riders on our bus, we'll all stall — because America can't keep this bus moving alone any longer, especially when the road gets this dangerous.

The bus stops here.

We Need A New Deterrent (WP)

By David Ignatius

The Washington Post, October 11, 2006

"Present at the Creation" was the title Dean Acheson gave to his memoir about the founding of the post-World War II order. Now, with North Korea claiming to have tested a nuclear weapon in defiance of the international community, and Iran seemingly on the way, Harvard professor Graham Allison argues that we are present at the unraveling.

The North Korean bomb test is a seismic event for the world community. It tells us that the structure created to maintain global security is failing. The five permanent members of the U.N. Security Council -- the United States, Russia, China, Britain and France -- all warned North Korea against taking this step. Yet the leaders in Pyongyang ignored these signals and in the process blew open the nuclear Non-Proliferation Treaty.

The North Korean leadership, puny in everything but weapons technology, has been marching toward this moment since the 1950s. It's unrealistic to think that, having brazened their way to detonating what they say is a nuclear bomb, the North Koreans will now give it up. The proliferation machine isn't going to run in reverse. In that sense, the question is less how to repair the old architecture of nonproliferation -- practically speaking, it's a wreck -- and more how to build a new structure that can stop the worst threats.

What are the right cornerstones of this new security structure? I put that question to Allison, who is a national resource when it comes to matters of nuclear proliferation and deterrence. He wrote the definitive book, "Essence of Decision," on the Cuban missile crisis, the world's closest brush with all-out nuclear war. In recent years he has been studying the danger of nuclear terrorism, and he edited a prescient discussion of the implications of a North Korean breakout that appears in the September issue of the Annals of the American Academy of Political and Social Science.

DOJ_NMG_0079068

Allison believes that the world must focus on what he calls "the principle of nuclear accountability." The biggest danger posed by North Korea isn't that it would launch a nuclear missile but that this desperately poor country would sell a bomb to al-Qaeda or another terrorist group. Accountability, in Allison's terms, means that if a bomb explodes in Manhattan that contains North Korean fissile material, the United States will act as if the strike came from North Korea itself -- and retaliate accordingly, with devastating force. To make this accountability principle work, the United States needs a crash program to create the "nuclear forensics" that can identify the signature of fissile material of every potential nuclear state. Arms control expert Robert Gallucci describes this approach as "expanded deterrence" in his article in the September Annals.

President Bush seemed to be drawing this red line of accountability when he warned Monday: "The transfer of nuclear weapons or material by North Korea to states or non-state entities would be considered a grave threat to the United States, and we would hold North Korea fully accountable for the consequences of such action."

Tough words, but are they credible? That's why the second essential pillar of a new security regime is a restoration of deterrence. The Bush administration warned North Korea over and over that it would face severe consequences if it tested a nuclear weapon. So did China and Russia, but Kim Jong Il went ahead anyway. Iranian leaders are similarly unimpressed by Bush's saber rattling, viewing America as a weakened nation bogged down by an unwinnable war in Iraq. To restore deterrence, the West needs to stop making threats it can't carry out. And the United States must salvage its strategic position in Iraq -- either by winning or organizing the most stable plan for withdrawal.

After the Cuban missile crisis, President John F. Kennedy got serious about preventing nuclear war. He installed a "hotline" so the White House and the Kremlin could talk when crises arose; he negotiated the 1963 test ban treaty; and he began the discussions that led to the 1968 Non-Proliferation Treaty. That treaty worked adequately for almost four decades. Instead of the 20 nuclear states that Kennedy feared would exist by 1975, we had just eight, until last weekend. But the North Korean test threatens to begin what a 2004 U.N. commission warned would be "a cascade of proliferation" that could spread to Japan, South Korea, Iran, Egypt and Saudi Arabia.

We are present at the unraveling. We must "think about the unthinkable" with new urgency. The United States and its allies must begin constructing a system that can succeed where the Non-Proliferation Treaty has failed. A terrorist nuclear bomb in Manhattan or Washington isn't a thriller writer's fantasy; it's a probability, unless America and its allies establish new rules for nuclear accountability that are clear and credible.

McCain Targets Both Clintons (WP)

By Charles Babington

The Washington Post, October 11, 2006

In what sounded to many Washington ears yesterday like an early shot in the 2008 presidential campaign, Sen. John McCain (R-Ariz.) singled out Sen. Hillary Rodham Clinton (D-N.Y.) as he denounced the Clinton administration's policies toward North Korea.

"I would remind Senator Clinton and other Democrats critical of Bush administration policies that the framework agreement her husband's administration negotiated was a failure," McCain said in a speech near Detroit, where he was campaigning for a Republican Senate candidate. "Every single time the Clinton administration warned the Koreans not to do something -- not to kick out the IAEA inspectors, not to remove the fuel rods from their reactor -- they did it. And they were rewarded every single time by the Clinton administration with further talks."

Aides said McCain was responding to Hillary Clinton's comments Monday, when she criticized North Korea for its announcement of having tested a nuclear weapon and added: "Some of the reasons we are facing this dangerous situation is because of the failed policies of the Bush administration. I regret deeply their failure to deal with the threat posed by North Korea. And I hope that the administration will now adopt a much more effective response than what they have up until now."

The comments, made in response to reporters' questions during a Columbus Day Parade in New York City, drew modest attention on Monday. But McCain pounced on them before the cameras yesterday in Michigan, and other Republicans were soon distributing his remarks.

DOJ_NMG_0079069

The two senators are considered serious contenders for the 2008 presidential nominations. McCain's comments seemed designed to highlight his foreign policy differences with Hillary Clinton and to link her to aspects of her husband's presidency that some Republicans feel can be successfully attacked.

Philippe Reines, spokesman for Hillary Clinton, said of McCain's remarks: "Now is not the time to play politics of the most dangerous kind. . . . President Bush has been in charge of North Korea policy for six years, and two days ago we saw the brazen result."

He said the New York senator "supports an approach that protects us from the threat of North Korean nuclear weapons, as the Clinton administration successfully did for eight years."

In his speech, McCain said North Korea is testing the resolve of South Korea, Japan, China, Russia and the United States, which have pressed the isolated country to refrain from developing a nuclear weapons program. He said Bush is right to call on the U.N. Security Council "to impose a military arms embargo, financial and trade sanctions, and, most importantly, the right to interdict and inspect all cargo in and out of North Korea."

Under the Clinton presidency, McCain said, "We had a carrots-and-no-sticks policy that only encouraged bad behavior."

McCain's remarks echo those made by Bush administration officials in early 2003. Abandoning a previous insistence that only North Korea was to blame for the brewing nuclear crisis, Bush allies then began arguing it was the predictable result of a flawed 1994 agreement between the Clinton administration and Pyongyang. The pact, they contended, granted benefits to North Korea while leaving until later the threat of sanctions.

Allies of the Clintons have hit back, and Reines continued the defense yesterday. He said Bush "has allowed the 'Axis of Evil' to spin out of control. Our Iraq policy is a failure. Iran is going nuclear and North Korea is testing nuclear weapons." Bush policies, he said, "have made America less safe, not more so, and it is time for a new direction."

Reines later distributed an eight-point memo on actions that Hillary Clinton has taken regarding North Korea since early 2004.

McCain and fellow Republicans left little doubt that his remarks were made with an eye on presidential politics, which will move to center stage after the Nov. 7 midterm elections. McCain political adviser John Weaver fielded reporters' calls, and Republicans including House Majority Leader John A. Boehner of Ohio disseminated highlights of the Michigan speech.

McCain "is absolutely right," Boehner said in a statement. Congressional Democrats, he said, "haven't learned a thing from the mistakes the Clinton administration made with respect to North Korea."

McCain Criticizes Clinton On N. Korea (AP)

By Sarah Karush

AP, October 11, 2006

Republican Sen. John McCain on Tuesday accused former President Clinton, the husband of his potential 2008 White House rival, of failing to act in the 1990s to stop North Korea from developing nuclear weapons.

"I would remind Senator (Hillary) Clinton and other Democrats critical of the Bush administration's policies that the framework agreement her husband's administration negotiated was a failure," McCain said at a news conference after a campaign appearance for Republican Senate candidate Mike Bouchard.

"The Koreans received millions and millions in energy assistance. They've diverted millions of dollars of food assistance to their military," he said.

Democrats have argued President Clinton presented his successor with a framework for dealing with North Korea and the Republican fumbled the opportunity. In October 2000, Secretary of State Madeleine Albright made a groundbreaking visit to Pyongyang to explore a missile deal with Chairman Kim Jong Il. There was even talk of a visit by President Clinton.

Reports this week suggesting North Korea tested a nuclear device prompted a number of Democrats to criticize Bush, arguing that he focused on Iraq, a country without weapons of mass destruction, while ignoring legitimate threats from Pyongyang.

DOJ_NMG_0079070

The criticism took a presidential campaign turn on Tuesday as McCain, the Arizona senator considered the Republican front-runner for the party nod, assailed Clinton's husband and mentioned her by name. The New York senator is considered her party's leading candidate in 2008.

Sen. Clinton's spokesman dismissed McCain's criticism and argued that it was time for a new policy from the president.

"Now is not the time to play politics of the most dangerous kind — with our policy on North Korea," Philippe Reines, spokesman for Clinton, said in a statement. "History is clear that nothing the Bush administration has done has stopped the North Koreans from openly testing a nuclear weapon and presenting a new danger to the region of the world."

Five years after the Sept. 11 terrorist attacks, Bush "has allowed the 'axis of evil' to spin out of control. Our Iraq policy is a failure. Iran is going nuclear and North Korea is testing nuclear weapons," the statement said.

McCain's criticism also elicited a strong response from Democratic Sen. John Kerry, the 2004 presidential nominee and a potential 2008 candidate.

"He must be trying to burnish his credentials for the nomination process," said Kerry, who labeled McCain's comments "flat politics and incorrect."

"The truth is the Clinton administration knew full well they didn't have a perfect agreement. But at least they were talking. At least we had inspectors going in and we knew where the (nuclear fuel) rods were. This way, we don't know where the rods are, the rods are gone. There are no inspectors. Ask any American which way is better," Kerry said.

The Massachusetts senator made the remarks in Nevada during a campaign appearance with Elizabeth Carter, wife of Democratic Senate candidate Jack Carter.

In U.S.-North Korea relations, the initial breakthrough occurred in October 1994 when U.S. negotiators persuaded North Korea to freeze its nuclear program, with onsite monitoring by U.N. inspectors. In exchange, the United States, with input from South Korea and Japan, promised major steps to ease North Korea's acute energy shortage.

These commitments were inherited by the Bush administration, which made clear almost from the outset that it believed the Clinton policy ignored key elements of North Korea's activities, especially the threat posed by the hundreds of thousands of troops on permanent duty along the Demilitarized Zone with South Korea.

McCain, a member of the Senate Armed Services Committee, said he backed tough U.N. sanctions against North Korea in response to the reported test. The measures, he said, should include a military embargo, financial and trade sanctions and the right to inspect all cargo in and out of North Korea.

McCain also called on China to "step up to the plate" and vote for sanctions and rejected calls for one-on-one talks between the United States and North Korea.

"The worst thing we could do is to accede to North Korea's demand for bilateral talks," McCain said. "When has rewarding North Korea's bad behavior ever gotten us anything more than worse behavior?"

Test Byproduct: Quick Scramble To Point Fingers (NYT)

By Sheryl Gay Stolberg

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — North Korea's claim that it detonated a nuclear device rippled through American politics on Tuesday, nowhere more so than at a Shriner's hall in Michigan, where Senator John McCain, the Arizona Republican, sought to place the blame on former President Bill Clinton.

"I would remind Senator Clinton and other Democrats critical of the Bush administration's policies that the framework agreement her husband's administration negotiated was a failure," Mr. McCain said, referring to his potential rival for the presidency in 2008, Senator Hillary Rodham Clinton of New York.

Mr. McCain's attack was part of an increasingly bitter partisan row over who was responsible for allowing North Korea to achieve nuclear ability.

Republicans sought to focus attention on what they said was a misguided and naïve policy of negotiating with North Korea during the 1990's. Democrats pressed the argument that North Korea's claimed advance was a byproduct of President Bush's

DOJ_NMG_0079071

decision to wage war against Iraq, which proved not to have any banned weapons, while doing too little to confront a real threat developing in North Korea.

"I have been very adamant that we are not safer since 9/11, and my opponent takes the opposite position," Claire McCaskill, the Democratic candidate for Senate in Missouri, said in an interview on Tuesday morning, harking back to a speech she gave about Iraq and North Korea in May. "I think North Korea doing this certainly comes down on my side of the equation."

With polls showing Republicans having difficulty holding on to their traditional strength when it comes to which party is better suited to keeping Americans safe, the candidates and parties have moved quickly to take political advantage of the crisis.

At first blush, a nuclear test by North Korea is just the kind of development that would ordinarily work well for Republicans late in a campaign: a potential national security threat that highlights the dangers facing the United States and spotlights the president's role as commander in chief. But with polls showing deep dissatisfaction with the war in Iraq, candidates and strategists in both parties said the news from North Korea could cut both ways.

Democrats like Ms. McCaskill, the Missouri state auditor who is in a tight Senate race with the incumbent Republican, Jim Talent, have spent months saying Mr. Bush paid too much attention to Iraq, while ignoring threats like North Korea. Now, Democrats are now busy saying "I told you so" to voters.

But Republicans like Mike McGavick, the Senate candidate in Washington State, are offering up an "I told you so" of their own, by spotlighting Democratic opposition to a missile defense system that is strongly backed by Mr. Bush.

Democrats, including Mr. McGavick's opponent, Senator Maria Cantwell, say they would support a missile defense program if one were proven effective. But Republicans say Democrats cannot have it both ways, voting against the system while criticizing the president.

"I think this makes it even clearer why missile defense is part of an overall strategy to protect America from an unsafe world," Mr. McGavick said. "It reminds us that we live in an extremely dangerous world."

Republicans say that any time national security is front and center, it is good news for them. They are hoping the test will push the Mark Foley sex scandal off the front pages and the cable news programs, although Mr. Foley's case was all over television again on Tuesday.

"To the extent it resonates for Democrats, the resonance will be in the eye off the ball argument: too much focus on Iraq, look what's happening in North Korea now," said T .J. Pempel, a political scientist at the University of California who is an expert in East Asian studies. "But I think it could resonate almost equally as well for Republicans if they say: 'The world is a scary place. There are all sorts of dangers out there. Osama bin Laden is one, Kim Jong-il is another.' "

Indeed, Mr. Kim, the North Korean leader, seems to have become the latest bogeyman in Republican political imagery. On Tuesday, the Republican National Committee circulated a photograph of Madeleine K. Albright, Mr. Clinton's secretary of state, clinking glasses with Mr. Kim.

The picture was taken during talks in 2000 that were aimed at persuading the North to limit its nuclear program. Ken Mehlman, the Republican National Committee chairman, said in an interview that voters might be seeing more such images in the coming weeks — accompanied by a reminder that Ms. Albright had presented Mr. Kim a basketball autographed by Michael Jordan.

His committee coined a phrase for it — "basketball diplomacy" — which Mr. Mehlman sprinkled through his remarks.

Under an agreement Mr. Clinton struck with North Korea in 1994, the North agreed to "freeze" its production of plutonium at its main nuclear plant at Yongbyon, in return for energy aid. North Korea abided by the freeze.

But starting around 1997, the North Koreans took steps to start a second, secret nuclear program, one based on enriching uranium. South Korean and American intelligence agencies did not find conclusive evidence of that program until the summer of 2002, and that fall the Bush administration confronted the North Koreans with its evidence.

Now, under attack by Republicans like Mr. McCain, Democrats, including Mrs. Clinton, are firing back. The Senate Democratic leader, Harry Reid of Nevada, has called on Mr. Bush to appoint a senior official to conduct a thorough review of his "failed North Korea policy," while a spokesman for Mrs. Clinton issued a stinging response to Senator McCain.

"President Bush has allowed the axis of evil to spin out of control," said the spokesman, Philippe Reines.

DOJ_NMG_0079072

One candidate who hopes to turn this week's developments to his advantage is Mike Bouchard, a Republican who is running against Debbie Stabenow, an incumbent Democrat, for the Senate seat in Michigan. Mr. McCain made his remarks about North Korea in Southfield, Mich., with Mr. Bouchard, a county sheriff who has been emphasizing national security, by his side.

"It's becoming increasingly clear that we live in a dangerous world that includes rogue nations, Mr. Bouchard said in a telephone interview afterward. "I would much prefer that we were in a completely peaceful moment, but without question, a dangerous world is certainly a more apparent pointer to my credentials."

White House Rejects Criticism Over North Korean Test (AFP)

By Laurent Lozano

AFP, October 11, 2006

The White House rebuffed criticism that failed US diplomacy led to North Korea's nuclear test, while downplaying the significance of Pyongyang's blast, which rattled the world.

White House spokesman Tony Snow branded criticism faulting the US approach for failing to bridge differences with North Korea, Iran and Iraq and leading to the world-stunning test announced by Pyongyang Monday as "back-seat generalship".

"What you have is the fact that the United States has been engaged actively on all three problems ... We are continuing to work aggressively on diplomacy with the Iranians and with the North Koreans," Snow said.

Snow responded to comments especially from opposition Democrats that the administration of President George W. Bush had taken the wrong approach to dealing with perceived global threats, as signified by the North Korean nuclear test, which came after years of attempts to convince Pyongyang to not develop a bomb.

"What it tells you is that we started at the wrong end of the axis of evil," said former Democratic senator Sam Nunn, referring to Bush's designation for Iraq, Iran and North Korea.

And North Korean specialist Selig Harrison, writing in the Washington Post, said US sanctions on North Korea have "given the initiative to hardliners in Pyongyang."

The criticism appeared to put the White House on the defensive, coming as it did exactly four weeks before legislative elections. Pollsters say Democrats may have a chance to possibly end Republican control of Congress due to voter discontent over the Iraq war and other security issues.

"Diplomacy had run its course when it came to Iraq," Snow said.

"We are still hopeful that diplomacy is in fact going to yield the desired results when it does come to North Korea and Iran."

US State Department spokesman Sean McCormack also rejected the idea that the US policy can be blamed for Pyongyang's first nuclear weapons test.

"The North Korean regime has been developing a nuclear weapon for decades," he said.

Snow meanwhile downplayed the significance of the test, despite the strong international reaction.

"A massive event?" Snow said in response to a question at a White House briefing. "A big-deal event? There was an event... The earth moved, we can say that," he said.

He added that the United States did not have confirmation of a nuclear weapon test.

"This may take some time. It's a complex undertaking, and it involves questions like, was there venting or was there not," Snow said. "There is a remote possibility that we'll never be able to determine fully."

But he added: "It does not change our view that this is an act of provocation, nor does it change the view, more importantly, of our partners in the neighborhood, who view it much the same way."

Snow spoke of a "new sense of resolution" among US partners in dealing with North Korea, especially China and South Korea, who have joined the US, Russia, Japan in six-way talks with Pyongyang over halting its nuclear program.

"Everybody is on the same page in terms of talking about sanctions," Snow declared.

Earlier he brushed off calls by some analysts to accept North Korea's request for bilateral talks on its nuclear program.

"If we're to deal one-on-one, we'd be playing a weaker hand, and the president is not going to play a weaker hand. Because the notion of dealing on one-on-one, again, gives the North Koreans a chance to try to split a united coalition.

DOJ_NMG_0079073

"We have less leverage than these guys (the Chinese and South Koreans) do. We have now brought into the diplomatic process the people who can make a difference.

"The most significant factor from a diplomatic standpoint is that you got a lot more diplomatic muscle than you've ever had on either of these problems."

McCormack also rejected bilateral talks with Pyongyang.

"In a bilateral discussion with North Korea, all of a sudden all the pressure is on the United States to make concessions," McCormack said. "It's not a strong hand from which to start."

He said that former president Bill Clinton's administration negotiated with North Korea to little effect.

"They negotiated an agreement with them. And the North Koreans were cheating on it almost as soon as the ink was dry on the thing," he said.

Kerry Blasts Bush NKorea Policy At Nevada Campaign Stop (AP)

By Kathleen Hennessey

AP, October 11, 2006

BOULDER CITY, Nev. --Sen. John Kerry said Tuesday that a nuclear test in North Korea is evidence of the Bush administration's "failed policies," and called for the U.S. to engage in direct talks with Pyongyang.

"The president attacks the place that has no weapons of mass destruction and does nothing about the place that does," Kerry told reporters at a campaign stop for Democratic U.S. Senate candidate Jack Carter. "For five years, I have been calling for the United States to engage in direct talk with North Korea. ... Instead, for five years this administration has ignored them. They fundamentally left this to other people."

Kerry made the comments one day after North Korea claimed to have successfully tested a nuclear device.

The Bush administration has been trying for years to get engage more countries in its anti-proliferation efforts, aimed at stopping nations such as North Korea from developing and selling nuclear weaponry and missiles. But it has refused one of North Korea's key demands: that the United States engage in one-on-one talks. Instead the administration pushed for a so-called six-party format, in which Russia, China, South Korea and Japan would join in the discussions.

"The six-party talks are a cover for the administration to avoid direct discussion," Kerry said.

The Massachusetts senator reacted strongly to comments from his Republican colleague, Arizona Sen. John McCain, who in a speech earlier in the day put the blame for North Korea's developing nuclear program on the Clinton administration. McCain said a 1994 agreement allowing United Nations inspectors into the country was a "failure."

Kerry, speaking at a veteran's home about 30 miles south of Las Vegas, called McCain's comments "flat politics and incorrect."

"He must be trying to burnish his credentials for the (presidential) nomination process," said Kerry, the 2004 presidential nominee and a potential 2008 candidate whose appearance in Nevada comes less than two months after the state was picked for an early Democratic caucus.

McCain and New York Sen. Hillary Clinton are considered their party's front-runners for 2008.

"The truth is the Clinton administration knew full well they didn't have a perfect agreement." Kerry said. "But at least they were talking. At least we had inspectors going in and we knew where the (nuclear fuel) rods were. This way, we don't know where the rods are, the rods are gone. There are no inspectors. Ask any American which way is better."

Kerry said he would support sanctions imposed by the United Nations.

The senator appeared with Carter's wife, Elizabeth Carter. Carter is running against Republican incumbent Sen. John Ensign for Nevada's second Senate seat.

In Search Of A North Korea Policy (WP)

By William J. Perry

The Washington Post, October 11, 2006

North Korea's declared nuclear bomb test program will increase the incentives for other nations to go nuclear, will endanger security in the region and could ultimately result in nuclear terrorism. While this test is the culmination of North Korea's

DOJ_NMG_0079074

long-held aspiration to become a nuclear power, it also demonstrates the total failure of the Bush administration's policy toward that country. For almost six years this policy has been a strange combination of harsh rhetoric and inaction.

President Bush, early in his first term, dubbed North Korea a member of the "axis of evil" and made disparaging remarks about Kim Jong Il. He said he would not tolerate a North Korean nuclear weapons program, but he set no bounds on North Korean actions.

The most important such limit would have been on reprocessing spent fuel from North Korea's reactor to make plutonium. The Clinton administration declared in 1994 that if North Korea reprocessed, it would be crossing a "red line," and it threatened military action if that line was crossed. The North Koreans responded to that pressure and began negotiations that led to the Agreed Framework. The Agreed Framework did not end North Korea's aspirations for nuclear weapons, but it did result in a major delay. For more than eight years, under the Agreed Framework, the spent fuel was kept in a storage pond under international supervision.

Then in 2002, the Bush administration discovered the existence of a covert program in uranium, evidently an attempt to evade the Agreed Framework. This program, while potentially serious, would have led to a bomb at a very slow rate, compared with the more mature plutonium program. Nevertheless, the administration unwisely stopped compliance with the Agreed Framework. In response the North Koreans sent the inspectors home and announced their intention to reprocess. The administration deplored the action but set no "red line." North Korea made the plutonium.

The administration also said early this summer that a North Korean test of long-range missiles was unacceptable. North Korea conducted a multiple-launch test of missiles on July 4. Most recently, the administration said a North Korean test of a nuclear bomb would be unacceptable. A week later North Korea conducted its first test.

It appears that the administration is deeply divided on how to deal with North Korea, with some favoring negotiation and others economic and political pressure to force a regime change. As a result, while the administration was willing to send a representative to the six-party talks organized by the Chinese in 2003, it had no apparent strategy for dealing with North Korea there or for providing leadership to the other parties. In the meantime, it increased economic pressure on Pyongyang. Certainly an argument can be made for such pressure, but it would be naive to think it could succeed without the support of the Chinese and South Korean governments, neither of which backs such action. North Korea, sensing the administration's paralysis, has moved ahead with an aggressive and dangerous nuclear program.

So what can be done now that might have a constructive influence on North Korea's behavior? The attractive alternatives are behind us. There should and will be a U.N. resolution condemning the test. The United Nations may respond to calls from the United States and Japan for strong sanctions to isolate North Korea and cut off trade with it. But North Korea is already the most isolated nation in the world, and its government uses this isolation to its advantage. Stronger sanctions on materials that might be of use to the nuclear program are reasonable, but the horse is already out of the barn. Economic sanctions to squeeze North Korea would increase the suffering of its people but would have little effect on the elite. In any event, they would be effective only if China and South Korea fully participated, and they have shown no inclination to do so.

There will be calls to accelerate our national missile defense program. But the greatest danger to the United States from this program is not that North Korea would be willing to commit suicide by firing a missile at the United States, even if it did develop one of sufficient range. Rather, it is the possibility that the North Koreans will sell one of the bombs or some of their plutonium to a terrorist group. The president has warned North Korea not to transfer any materials from its nuclear program. But the warnings we have sent to North Korea these past six years have gone unheeded and its acts unpunished. It is not clear that this latest one will have any greater effect. If a warning is to have a chance of influencing North Korea's behavior it has to be much more specific. It would have to promise retaliation against North Korea if a terrorist detonated a nuclear bomb in one of our cities. It must be backed by a meaningful forensics program that can identify the source of a nuclear bomb.

This test will certainly send an undesirable message to Iran, and that damage has already been done. But it is important to try to keep this action from precipitating a nuclear arms race in the Asia-Pacific region. Both Japan and South Korea have the capability to move quickly to full nuclear-weapon status but have not done so because they have had confidence in our nuclear umbrella. They may now reevaluate their decision. We should consult closely with Japan and South Korea to reassure them that

DOJ_NMG_0079075

they are still under our umbrella and that we have the will and the capability to regard an attack on them as an attack on the United States. This may be necessary to discourage them from moving forward with nuclear deterrence of their own.

Our government's inattention has allowed North Korea to establish a new and dangerous threat to the Asia-Pacific region. It is probably too late to reverse that damage, but serious attention to this problem can still limit the extent of the damage.

Poisoning The Water's Edge (WSJ)

The Wall Street Journal, October 11, 2006

North Korea's apparent test Sunday of a nuclear device raises large questions with which the United States and the world must now grapple in the months and years ahead. But it may also have finally settled the question of how much time this and future Administrations will have available to deal with genuine foreign policy crises before they become merely political. The answer, it seems, can be measured in milliseconds.

Sen. Bob Menendez was not formerly known as an expert on nuclear proliferation or the politics of Northeast Asia. But there was the New Jersey Democrat on Monday delivering the view that Kim Jong-Il's latest demonstration of aggressive intent "illustrates just how much the Bush Administration's incompetence has endangered our nation." Not to be outdone, Majority Leader-in-waiting Harry Reid insisted the Administration appoint a "senior official to conduct a full review of [its] failed North Korea policy." Mr. Reid performed the rare feat of making Nancy Pelosi sound statesmanlike. Ms. Pelosi at least acknowledged that countries such as China might have played a negative role here.

As best as we can tell, the critique of the Bush Administration boils down to three points. First, as former Sen. Sam Nunn told the New York Times, "we started at the wrong end of the 'axis of evil,'" his point being the Administration should have somehow "dealt with" Pyongyang first and Baghdad later.

Next, say the critics, the Bush Administration has wrongly tried to engage North Korea diplomatically through the "six party" framework, when only the bilateral talks demanded by Kim Jong-Il will do. "Bush aided and abetted the outsourcing of American jobs," says Democratic Party chairman Howard Dean in one of his cheaper jabs, "and now he's outsourced our diplomacy as well." Finally, the President is said to have actually provoked North Korea into building a bomb by naming it to the axis of evil.

But since when does the Democratic Party, to say nothing of Dr. Dean, advocate U.S. unilateralism when unending multilateral approaches are available? And how does Mr. Nunn's suggestion that President Bush should have dealt with North Korea first among the axis of evil square with the idea that it was terribly bad form to describe such an "axis" in the first place?

In fact, the more closely one examines these claims the more disingenuous they become. The CIA strongly suspected North Korea had developed nuclear weapons as far back as the early 1990s. Gordon Corera, the security correspondent for BBC News, has amassed significant evidence that North Korea may have already tested a nuclear device -- in 1998, as the sixth in a set of Pakistani tests that year.

As for the idea that direct talks between Washington and Pyongyang might open the way toward a settlement, this flatly ignores North Korea's cheating on the last such settlement, the so-called "Yongbyong Agreed Framework" of 1994. American diplomats have never lacked for opportunities to talk to the North Koreans, formally or privately. What they lack are interlocutors who can be trusted to honor their commitments or cajoled into abandoning their weapons.

It is not necessary to defend every jot and tittle of the Administration's North Korean diplomacy. But the Democrats' instant, soundbite criticism is unserious to the point that it calls into question their sincerity in contributing to a solution. Are Messrs. Reid, Dean, Menendez et al. concerned about nuclear weapons getting into terrorist hands and U.S. ports? They tell us they are. Then perhaps they might publicly call on China and Russia to join the Proliferation Security Initiative, the most successful effort yet to interdict the transfer of illicit weapons.

Are they seriously interested in bringing about North Korea's internal collapse? It would be good to see the kind of rhetorical energy the Democrats invested in Darfur go into publicizing the plight of North Korean refugees. Would they like to see the U.N. contribute positively to managing the crisis? Then send a message of solidarity to our adversaries by confirming as U.N. ambassador John Bolton, one of the world's leading experts on proliferation.

None of these steps alone is going to resolve a crisis in which U.S. options are limited or problematic. But it would help if just once public discourse on the subject did not instantly degrade into an exercise in cynical political point-scoring. Fat chance.

DOJ_NMG_0079076

Republicans Couldn't Change The Subject — But Korea Did It For Them (HILL)

The Hill, October 11, 2006

In one deadly moment, North Korea has succeeded in doing what no amount of backtracking by Speaker Dennis Hastert or his beleaguered Republicans could do: It has changed the subject of the national debate. With nuclear weapons in the hands of the most deranged regime in the world, e-mails to pages will have to fade from the forefront of the public's attention.

Will Bush be able to deal with the North Korean crisis? This is truly the moment for a test of his leadership. If he is able to lead a strong global effort to face down the renegade nation and can set in motion a demonstrable process that could lead to a reversal of Pyongyang's nuclear ambitions, he will have pulled off a coup akin to JFK's in the Cuban missile crisis and rescued his party from midterm election defeat in 2006 as surely as Kennedy saved it in 1962.

The key, of course, is China. Can Beijing be made to take the crisis seriously enough to turn off the spigot of fuel and food that permits the North Korean regime to survive from day to day?

China has one major fear: a regional nuclear competition with Japan. With Japanese technological prowess and the mangled history between the two nations, Beijing cannot react impassively to the nuclear arming of Tokyo.

Do we dare encourage our World War II rival to acquire nuclear weapons? We must. It is really only the "Japan card" that can bring China to heel and force her to ratchet up the pressure on North Korea.

Let's not allow nuclear nonproliferation to become an international equivalent of gun control, a system that seems to keep weapons out of the hands of the innocent while allowing the guilty, who break the law anyway, to have all the weapons they need. If North Korea has defied the world and acquired nuclear weapons, why should we not permit peace-loving countries like Japan and South Korea to develop nuclear weapons to defend themselves?

Ultimately, the case of arming Japan with atomic weapons is as good as that for France developing its own bomb. French leader Charles de Gaulle always asked whether an American president was willing to trade New York for Paris. Would a Soviet attack that leveled the French capital lead to American retaliation that would doubtless provoke a Soviet response against major U.S. cities? And so Abe, the new Japanese Prime Minister, is entitled to ask if an American president is willing to trade Tokyo for New York.

In the grim logic of nuclear deterrent, only weapons in the hands of the nation actually under potential threat can constitute a real deterrence to aggression, particularly on a peninsula that has already seen one major war.

There is nothing like a national security crisis to force Americans to realize the consequences of paralyzing a presidency by sending to Washington a Congress with which he cannot work. We fell into just that trap in the final years of the Clinton presidency and we would do so now at our peril.

But Bush has to produce and has to do it in the next five weeks. Just like JFK did in 1962.

Morris, a former political adviser to Sen. Trent Lott (R-Miss.) and President Bill Clinton, is the author of "Condi vs. Hillary: The Next Great Presidential Race."

Solving The Korean Stalemate, One Step At A Time (NYT)

By Jimmy Carter

The New York Times, October 11, 2006

ATLANTA

IN 1994 the North Koreans expelled inspectors of the International Atomic Energy Agency and were threatening to process spent nuclear fuel into plutonium, giving them the ability to produce nuclear weapons.

With the risk of war on the Korean Peninsula, there was a consensus that the forces of South Korea and the United States could overwhelmingly defeat North Korea. But it was also known that North Korea could quickly launch more than 20,000 shells and missiles into nearby Seoul. The American commander in South Korea, Gen. Gary Luck, estimated that total casualties would far exceed those of the Korean War.

Responding to an invitation from President Kim Il-sung of North Korea, and with the approval of President Bill Clinton, I went to Pyongyang and negotiated an agreement under which North Korea would cease its nuclear program at Yongbyon and permit

DOJ_NMG_0079077

inspectors from the atomic agency to return to the site to assure that the spent fuel was not reprocessed. It was also agreed that direct talks would be held between the two Koreas.

The spent fuel (estimated to be adequate for a half-dozen bombs) continued to be monitored, and extensive bilateral discussions were held. The United States assured the North Koreans that there would be no military threat to them, that it would supply fuel oil to replace the lost nuclear power and that it would help build two modern atomic power plants, with their fuel rods and operation to be monitored by international inspectors. The summit talks resulted in South Korean President Kim Dae-jung earning the 2000 Nobel Peace Prize for his successful efforts to ease tensions on the peninsula.

But beginning in 2002, the United States branded North Korea as part of an axis of evil, threatened military action, ended the shipments of fuel oil and the construction of nuclear power plants and refused to consider further bilateral talks. In their discussions with me at this time, North Korean spokesmen seemed convinced that the American positions posed a serious danger to their country and to its political regime.

Responding in its ill-advised but predictable way, Pyongyang withdrew from the Nuclear Nonproliferation Treaty, expelled atomic energy agency inspectors, resumed processing fuel rods and began developing nuclear explosive devices.

Six-nation talks finally concluded in an agreement last September that called for North Korea to abandon all nuclear weapons and existing nuclear programs and for the United States and North Korea to respect each other's sovereignty, exist peacefully together and take steps to normalize relations. Each side subsequently claimed that the other had violated the agreement. The United States imposed severe financial sanctions and Pyongyang adopted the deeply troubling nuclear option.

The current military situation is similar but worse than it was a decade ago: we can still destroy North Korea's army, but if we do it is likely to result in many more than a million South Korean and American casualties.

If and when it is confirmed that the recent explosion in North Korea was nuclear, the international community will once again be faced with difficult choices.

One option, the most likely one, is to try to force Pyongyang's leaders to abandon their nuclear program with military threats and a further tightening of the embargoes, increasing the suffering of its already starving people. Two important facts must be faced: Kim Jong-il and his military leaders have proven themselves almost impervious to outside pressure, and both China and South Korea have shown that they are reluctant to destabilize the regime. This approach is also more likely to stimulate further nuclear weapons activity.

The other option is to make an effort to put into effect the September denuclearization agreement, which the North Koreans still maintain is feasible. The simple framework for a step-by-step agreement exists, with the United States giving a firm and direct statement of no hostile intent, and moving toward normal relations if North Korea forgoes any further nuclear weapons program and remains at peace with its neighbors. Each element would have to be confirmed by mutual actions combined with unimpeded international inspections.

Although a small nuclear test is a far cry from even a crude deliverable bomb, this second option has become even more difficult now, but it is unlikely that the North Koreans will back down unless the United States meets this basic demand. Washington's pledge of no direct talks could be finessed through secret discussions with a trusted emissary like former Secretary of State Jim Baker, who earlier this week said, "It's not appeasement to talk to your enemies."

What must be avoided is to leave a beleaguered nuclear nation convinced that it is permanently excluded from the international community, its existence threatened, its people suffering horrible deprivation and its hard-liners in total control of military and political policy.

6-nation Meeting Set On Iran Sanctions (AP)

By Barry Schweid

AP, October 11, 2006

Senior officials of the United States and five other nations plan to confer Wednesday on possible U.N. sanctions against Iran for processing uranium as part of its disputed nuclear program.

Undersecretary of State Nicholas Burns and his counterparts in Britain, France, Germany, Russia and China will confer by video about what should be on a U.N. sanctions list, State Department spokesman Sean McCormack said Tuesday.

DOJ_NMG_0079078

The U.N. Security Council is giving precedence to considering sanctions against North Korea, which announced Monday that it had detonated a nuclear device. That resolution "would almost certainly move at a quicker pace than the Iran resolution," McCormack said.

Russia has suggested the best approach to the standoff with Iran is more diplomacy. The United States is leading the move for sanctions, arguing that they are part of diplomacy and the council had already warned Iran of the consequences when it did not observe an Aug. 31 edict to stop enriching uranium.

Adoption of U.N. Security Council sanctions can be blocked by a veto cast by any of the five permanent council members, the United States, Russia, China, Britain or France.

To get unanimity, the first round of sanctions is likely to be mild, such as imposing restrictions on trade in technology that could be used in an Iranian weapons program.

Olmert: Syria Peace Overtures Are A Ploy (AP)

By Ravi Nessman

AP, October 11, 2006

Israel has brushed off the Syrian president's recent calls to restart peace talks as a ploy by Bashar Assad to deflect international pressure from his increasingly isolated regime. But some in Israel say Prime Minister Ehud Olmert may be making a major mistake in ignoring even a slim chance to pursue peace with one of his country's most implacable enemies.

"Olmert could have gone down in history as Menachem Begin, who gave Sinai back to Egypt," journalist Tom Segev wrote in the Haaretz daily Tuesday. "Instead, he is reacting to Syria's offers of peace with contempt, loathing and threats."

Israeli Vice Premier Shimon Peres, meanwhile, invited the Syrian leader to come to Jerusalem.

"What would happen if Assad said he is coming to the Knesset (the Israeli parliament)?" Peres said. "He must get up and say, 'I want to talk peace directly with Israel.' That's all," Peres told Israel TV in an interview aired Tuesday.

Israeli-Syrian peace talks broke down in 2000, with Syria demanding assurances it would get back all of the Golan Heights, which Israel captured in the 1967 Mideast War and later annexed. Israel wanted slight modifications to the pre-1967 line, conforming to the international frontier, and insisted that issues of security and normalization be spelled out first.

Assad has sporadically called for new talks, but his appeals grew more intense following this summer's war between Israel and Lebanon's Hezbollah guerrillas, which Syria backed. The fighting increased international criticism of Assad's regime, already hit by accusations it was involved in the murder of former Lebanese Prime Minister Rafik Hariri and was letting militants use Syria as a transit point into neighboring Iraq.

"We want to make peace — peace with Israel," Assad told the German magazine Der Spiegel last month. In an interview with the British Broadcasting Corp. broadcast Monday, Assad said it remained to be seen whether Israel had the will to make peace.

Olmert has rejected talks with Syria, accusing it of harboring terrorists and saying he will not relinquish the Golan.

"As long as I am prime minister, the Golan Heights will remain in our hands," he was quoted as telling the ultra-Orthodox weekly Mishpaha last month.

Syria's support for Hezbollah and its refusal to force top Palestinian militants to close their offices in Damascus has also angered Israel.

Assad has hoped to use those issues to strengthen his position in future peace talks, but Olmert's spokeswoman Miri Eisin said Tuesday that they are obstacles to even starting those talks.

"Israel would love to start peace talks with a Syrian government that doesn't arm Hezbollah, that doesn't have a foreign minister who sides with Hezbollah, with a government that doesn't promote and provide a sanctuary for the head terrorists of Hamas and Islamic Jihad and others," she said.

Israeli analysts say Assad is using the possibility of peace with Israel to blunt international criticism.

"He is isolated. He is beleaguered. He is controversial, internationally speaking. He hopes to reap dividends from adopting a peaceful posture," said Itamar Rabinovich, Israel's former chief negotiator with Syria.

DOJ_NMG_0079079

Those imputed motives wouldn't mean that Assad is not serious about pursuing new talks to get back the Golan — a perennial Syrian demand that would strengthen Assad domestically — in exchange for a peace deal that would benefit him internationally, Israeli analysts said.

But Olmert has less incentive to head into negotiations.

He is already under fire for his government's conduct of the Lebanon war, and talks with Syria would fan the flames, adding the media savvy Israelis living in the Golan to his list of critics.

"I think that Olmert either doesn't want to pay the price — and the price is known to everyone, the price is the Golan Heights — or he thinks that he is too weak to pay the price," said Shlomo Brom, a Syria expert at Tel Aviv University.

Gilad Sher, a former Israeli peace negotiator, said Syria's continuing support of terrorism should not close off diplomatic channels to solving the conflict.

"Israel must not reject Assad's hints outright, but rather it must begin a cautious, measured and pragmatic process in which Assad's willingness is analyzed," he wrote in the Yediot Ahronot daily. "If it is all merely a ruse, we will know as much very quickly. If not, and negotiations over a peace arrangement are begun, that will do nothing to detract from Israel's power of deterrence."

"After all, one can always say, 'no,'" he wrote.

A New Fence Is Added To A Border Town Already Split (NYT)

By Hassan M. Fattah

The New York Times, October 11, 2006

THE FENCE AT GHAJAR, Lebanon, Oct. 9 — Little more than a week after Israeli troops withdrew from Lebanon, the shiny new fence around the northern portion of this village is a reminder of the possible flash points that remain as Lebanon and Israel continue working to quell tensions across their border.

To the Lebanese, the fence, erected over the past several weeks to separate the northern side of the village from the rest of Lebanon, amounts to a new occupation of their territory, potentially worsening tensions over the disputed Shabaa Farms area nearby. To Israel, which says the fence is only temporary, it is a means of ensuring that Hezbollah fighters do not enter the village, which straddles the border, and attack Israelis.

[On Tuesday, the United Nations continued trying to broker an agreement ensuring that Israel would withdraw its troops from the northern section of the village and place it under United Nations control. But even if that happens, the fence itself might remain for some time, said a United Nations official who spoke on condition of anonymity because he was not authorized to speak with reporters.]

With its pastel-colored homes and scenic views, Ghajar is an old problem sprung from the often complex calculus of the Middle East. In 1932 the residents of Ghajar, most of them from the Alawite sect, were given the option of choosing their nationality and overwhelmingly chose to be a part of Syria, which has a sizable Alawite minority.

When Israel conquered the Golan Heights in the Arab-Israeli war of 1967, the town fell under Israeli control. Many residents were given permits to work in Israel and were eventually granted Israeli citizenship. When Israel invaded Lebanon in 1978, the town began growing northward into Lebanese territory.

The town's future grew more complicated when Israel withdrew from southern Lebanon in 2000, leaving two-fifths of the town in Israel and the rest on Lebanese soil, across the so-called Blue Line demarcating the borders between the countries.

Each side sought to keep the village whole, said Amin Hotait, a retired Lebanese Army general and the leader of a committee that helped confirm Israel's pullout in 2000.

Neither side, however, could agree on who would maintain control over the village. So after weeks of wrangling, they agreed to divide the town into a northern Lebanese side and a southern Israeli side.

"We did not accept that the whole village be under the occupation, and they did not accept that it be liberated," General Hotait said. "The only result we could arrive at was to split the town in two."

As a result, a fence was built dividing the village, which has about 2,500 residents, with crossing points in between for residents to get back and forth. Although there were Israeli guards posted on the southern side of the fence at the gates, passing from one side to the other was relatively easy. The Israelis were there to guard against Hezbollah fighters.

DOJ_NMG_0079080

Yet the village has also been center of confrontations between Israel and Hezbollah. Most recently, in 2005, Hezbollah guerrillas launched a rocket attack on the village and infiltrated it, but were repelled by the Israelis and withdrew.

The latest fence separating the village from Lebanon was put up this summer, after the cease-fire. The Israelis have now posted troops within the northern section of the village.

Lebanese officials say the continued presence of Israeli soldiers on Lebanese soil is a violation of United Nations Resolution 1701, which settled this summer's conflict.

"Whether they're occupying one meter or 2,000, it is still Lebanese land, and we want to free our land," said Fawzi Salloukh, Lebanon's foreign minister. "This is a time bomb that is ticking."

A reporter who traveled to the fence at the northern section of the village tried to speak to residents through the fence, but none would respond. However, United Nations officials in the area said the villagers have sought to be a part of Israel. The dispute appears to be limited to one between countries.

Lebanese officials have said that if the villagers want to be Israelis, they should move to the other side of the border. Residents of the Lebanese villages surrounding Ghajar, still struggling to rebuild their lives after the war, say they fear that the fence may become a recipe for further violence between Israel and Hezbollah.

"This is certainly going to be a big problem, and you shouldn't expect anything less," said Ahmed al-Muhammad, the mayor of the town of Al Wazzan, near Ghajar. "They must have bad intentions for this area, or they would have pulled out completely."

He said his town had had almost no contact with Ghajar's villagers for years. He said the people of Ghajar were mainly interested in their contacts with Israel. The town's growing affluence compared with that of its neighbors is evident in the ongoing construction and modern finished architecture.

Hezbollah officials, who have held up Israel's occupation of Shebaa Farms as a reason to not disarm, have remained mute on the issue of Ghajar, opting to allow the government to negotiate a diplomatic solution. Still, one Hezbollah representative noted, patience is growing thin.

"Like Shabaa Farms, this proves there is an ongoing Israeli occupation and it must leave," said the representative, Hussein Haj Hassan. "We will be patient with the negotiations, but will not wait very long."

Hamas Rejects Plan For Unity Government (USAT)

USA Today, October 11, 2006

Qatar's attempt to mediate a growing crisis in the Palestinian territories took a blow Tuesday when Hamas rejected demands that it recognize Israel and renounce violence as a prerequisite for forming a unity government with the Fatah Party.

It was the latest setback in efforts to moderate the Islamic militant group Hamas and restore much-needed international aid to the Palestinians. Fatah declared the Qatari initiative for a coalition government a failure and blamed Hamas for the breakdown in negotiations.

Ghazi Hamad, spokesman for the Hamas-led government, said the group differentiates between armed "resistance (to Israel) and terrorism," He said Hamas is ready to continue talks: "The way is not blocked."

Six people killed whenbomb blasts hit Philippines

At least six people were killed and more than 30 wounded when two bombs exploded in the insurgency-torn southern Philippines. One blast occurred in a stall selling alcohol during a festival in the town of Makilala on Mindanao island, North Cotabato provincial Police Chief Federico Dulay said. Six people were killed and at least 29 were injured. The town was celebrating its 52nd anniversary.

"Clearly this is a terrorist act," Dulay said.

The second bomb went off in a market in Tacurong city in another part of the island, wounding five people, army Col. Felipe Tabas said.

The U.S., Australian and British embassies issued warnings against travel to Mindanao and said the threat of imminent attacks or kidnappings is high across the archipelago, specifically in places frequented by foreigners.

The Philippines, a largely Catholic nation, is fighting Muslim and communist insurgencies on its southern islands.

Latest ban on child labortakes effect in India

DOJ_NMG_0079081

India's new ban on hiring children under age 14 as servants in homes or as workers in restaurants, tea shops, hotels and spas took effect Tuesday. “This will be a bad blow. I really don't know what I'll do,” said Dinesh Kumar, 12, who has been doing odd jobs in New Delhi for three years.

The children of India's tens of millions of poor families are expected to work, and in many cases they are the sole breadwinners. The law is intended to take them out of the workplace and put them in school.

Prime Minister Manmohan Singh vowed firm enforcement. Employers who violate the law face up to a year in prison and a $217 fine. It already is illegal to use children in hazardous industries such as glassmaking.

Protesters disrupt Taiwanleader's National Day talk

Taiwanese President Chen Shui-bian called for unity as an opposition lawmaker scuffled with security guards while trying to confront the leader during a National Day speech in Taipei.

Chen spoke as protesters gathered outside the Presidential Office building, demanding that he step down over alleged corruption. Police estimated there were 125,000 protesters.

Security men scuffled with lawmaker Lee Ching-hua of the opposition Nationalist Party after Lee attempted to break through a partition separating Chen from guests on a makeshift stage.

Chen has been on the defensive against allegations that his family and members of his inner circle used their proximity to him for personal financial gain. Chen says he is innocent and will complete his remaining 19 months in office.

Intransigent Hamas (WP)

The Washington Post, October 11, 2006

STIRRING BUT thoughtless appeals for a Middle East peace settlement continue to ring out around the world. Just last week a new one appeared, signed by 135 "global leaders," that called for "a new international conference, ideally held as soon as possible." Most of the sponsoring statesmen live far from the region -- in Europe, Latin America, Africa, Australia. Their statement asserted that "the injection of new political will" from "the international community" was what is needed to break the impasse between Israel and the Palestinians.

In fact, the problem is a lot more specific, and a lot tougher. That's why it was helpful that the foreign minister of Egypt decided to publicly speak his mind on the subject the other day. Ahmed Aboul Gheit -- who has spent the past several months immersed in a failing effort to restore the broken connections between the Palestinian Authority and its international donors, as well as Israel -- placed the blame exactly where it belongs: on the Palestinian political leadership. "The Palestinian situation is marred by sharp divisions and battling; it is a misery and shameful for any Arab and any Palestinian," the minister told the government newspaper al-Ahram.

The Egyptian frustration is understandable. Negotiations between the Palestinians and Israel, and Western aid to the Palestinian government, can't go forward because the governing Hamas movement refuses to recognize Israel or previous Israeli-Palestinian accords. It also won't renounce the use of violence against Israeli soldiers or civilians, or release the soldier its militants abducted from inside Israel in June. Egyptian negotiators have won Israeli agreement to release up to 1,000 Palestinian prisoners in exchange for the hostage, but Hamas won't go along.

Palestinian President Mahmoud Abbas, from the competing Fatah movement, has tried repeatedly to win Hamas's agreement on a new unity government that would indirectly recognize Israel, a half-step that might lure back some desperately needed European aid. No deal. This week the government of Qatar intervened, sending its foreign minister shuttling around Gaza with a six-point plan under which Hamas and Fatah would unite on the platform of a two-state solution. Once again Hamas said no.

In case there was any doubt, Palestinian Prime Minister Ismail Haniyeh spelled out Hamas's position at a rally last weekend: "I tell you with all honesty, we will not recognize Israel, we will not recognize Israel, we will not recognize Israel." Mr. Abbas responded by threatening, as he has before, to dissolve the Palestinian government or order a referendum. But he lacks the legal authority either to remove Hamas from power or to schedule a vote of any kind.

It's easy enough for global leaders to issue flowery appeals for action on the Middle East or to imply that progress would be possible if only the United States used its leverage with Israel. The stubborn reality is that there can be no movement toward

DOJ_NMG_0079082

peace until a Palestinian leadership appears that is ready to accept a two-state solution. That's why there need to be fewer manifestos and more frank messages such as the one delivered by Mr. Aboul Gheit: "Those leaders and the Palestinian people will find out that they are losing a chance."

Bush Assures Peru's President He Will Work On Passing Free Trade Accord (AP)

AP, October 11, 2006

WASHINGTON President George W. Bush on Tuesday assured Peruvian President Alan Garcia that he would work with U.S. lawmakers to try to quickly push through a free trade agreement between the two countries.

"The central issue facing us right now is the passage of a free trade agreement," Bush told reporters after his meeting with Garcia. "I assured the president that I will work with Congress as soon as possible to get this agreement passed."

Garcia expressed satisfaction with Bush's assurance. A successful free trade accord, he said, would ease poverty and social divisions and help achieve stronger democratic institutions in Peru.

Peru is pushing for ratification of the agreement by the U.S. Congress before the end of the year, when trade preferences created to help counter the cocaine trade are set to expire.

"We are looking for an agreement that does not just focus on the most modern or the most significant economic groups in the country," Garcia said through an interpreter. "We are also looking to have a free trade agreement that is focused internally and that will benefit our entire population, all our productive sectors, including the less advantaged sectors, so that they may export to the world and to the United States in particular."

The two leaders also discussed the need to fight the illegal drug trade.

Garcia's visit here is occurring t just 10 weeks after his inauguration. The White House invitation is a demonstration of administration support for the moderate policies Garcia espouses in contrast to leftist sentiment evident elsewhere on the continent.

American officials were relieved when Garcia prevailed in a June runoff election over Ollanta Humala, who had the backing of Venezuela's radical president, Hugo Chavez.

Garcia had served as president from 1985-90, a period marked by hyperinflation and an upsurge in violence by left-wing guerrillas. He says he learned a lot from his first-term mistakes.

After his meeting with Bush, Garcia addressed the pro-free trade International Institute of Economics.

He said free trade policies traditionally have benefited the elites while bypassing the 80 percent poor population in developing countries.

His policy of "free trade inside Peru," he said, would knock down barriers to the country's internal markets in much the same way that international free trade does with respect to cross-border commerce.

He said legal reforms are essential to level Peru's playing field internally. "The rich have succeeded because they have access to the legal system," Garcia said. That right should be extended to all Peruvians," he said.

Peru's Path To Prosperity (LAT)

The Los Angeles Times, October 11, 2006

NEARLY HALF A CENTURY AGO, President Kennedy launched one of this country's more ambitious foreign-aid experiments, a program to develop Latin America called the Alliance for Progress. Like most aid efforts during the Cold War, it was less an attack on poverty than on communism, though the one was seen as a precursor to the other. Although the United States spent more than $20 billion, the effort fizzled out with few accomplishments.

The program is seldom mentioned anymore in this country, but its name was invoked Tuesday by Peruvian President Alan Garcia during a news conference at the White House with President Bush.

"What could have been done almost 50 years ago with the Alliance for Progress is something that we can do now," Garcia said. His point was that the things the aid program failed to do in the 1960s, free trade could do today.

Garcia is anxious over a free-trade pact that both the U.S. and Peru have signed but that has yet to be ratified by Congress. An existing trade agreement between the U.S. and four Andean nations expires at the end of the year, and if the new pact isn't in

DOJ_NMG_0079083

place by then, thousands of Peruvian products will lose duty-free access to the U.S. market, which accounts for about 30% of Peru's exports.

Ratifying the agreement shouldn't be a tough decision by Congress, yet leaders have held up a vote until after the Nov. 7 election. Democrats fret that its labor provisions are too weak, ignoring the fact that an end to Peru's preferential trade status would render a large number of impoverished Peruvians jobless. Meanwhile, Republicans from textile states fear that it will hurt the domestic industry — a quaint notion in an era of globalized competition.

A failure to seal the trade deal would be a disaster on many fronts. The original Andean agreement was intended to help build diversified economies in the region so that the four countries — Peru, Ecuador, Bolivia and Colombia — could lessen their reliance on coca, the raw material for cocaine. Letting it expire with nothing else in place would deal a heavy blow to the U.S. war on drugs. If Congress turns its back on these Andean countries, it will be playing into the hands of Venezuelan President Hugo Chavez and others trying to encourage the spread of anti-Americanism in the region.

The Alliance for Progress was a bust for a lot of reasons; U.S. planners underestimated the amount of money it would take to develop an entire continent, and Latin American governments didn't impose necessary reforms. Today, Peru's economy is growing 5% annually, but half its people still live on $2 or less a day. Engagement with the global economy, as neighboring Chile has shown, is the best path to prosperity, and American consumers also benefit from a lowering of barriers. Election-year politics should not be allowed to hijack this important trade deal.

Fed Task Force To Enforce Cuba Sanctions (AP)

By Curt Anderson

AP-Yahoo, October 11, 2006

The federal government on Tuesday announced the formation of a new law enforcement task force that will aggressively pursue violators of the U.S. trade and travel sanctions that have been in effect against Cuba for more than four decades.

Miami-based U.S. Attorney R. Alexander Acosta said the task force will focus on prosecuting violators of laws governing such things as commercial business with Cuba, currency reporting requirements, money laundering and travel to the island.

The task force's formation comes about a month before U.S. elections in which Cuban-American voters in South Florida — most of them fervently anti-Castro — form an important Republican Party constituency.

It also comes as Cuba faces political uncertainty due to the illness of President Fidel Castro, who in July temporarily ceded power to his brother, Raul.

Acosta, however, would say only this is "an appropriate time" to announce the task force to put people on notice that "we intend to enforce these laws aggressively."

"The purpose of the sanctions is to isolate the Castro regime economically and deprive the Castro regime of the U.S. dollars it so desperately seeks," Acosta told reporters.

The task force includes the Treasury Department, FBI, and departments of Homeland Security and Commerce.

The group, to be coordinated by two senior prosecutors in Acosta's office, will bring greater emphasis to existing Cuba sanction enforcement efforts that are scattered among several federal agencies, he said.

It is the latest move by the Bush administration to tighten restrictions that were first imposed in the early 1960s and expanded frequently since. In 2004, for example, President Bush limited family travel to Cuba to once every three years instead of annually and imposed new limits on the flow of currency to the island.

Violators of the Cuba sanctions can face up to 10 years in prison, $1 million in corporate fines and $250,000 in individual fines. The government can also seek up to $55,000 per violation in civil penalties.

Under U.S. law, the sanctions will remain in place until multiparty Cuban elections are planned, political prisoners are released and both Castro brothers are out of power.

U.S. Treasury Aide On China Resigns (WSJ)

By Michael M. Phillips

The Wall Street Journal, October 11, 2006

DOJ_NMG_0079084

WASHINGTON -- Treasury Secretary Henry Paulson's top China hand quit just a month after coming aboard to run the Bush administration's new economic dialogue with Beijing.

Deborah Lehr, a former National Security Council official, resigned for "personal reasons," not because of any disagreement over how the U.S. should approach China, according to a Treasury spokeswoman.

Her departure leaves a hole in Mr. Paulson's team. The secretary -- a former Goldman Sachs chief executive -- arrived at Treasury in July and quickly took charge of the administration's China economic policy.

During his first official trip to China last month, Mr. Paulson announced a "strategic dialogue" to help improve U.S.-Chinese economic relations, which have frayed in recent years over issues such as exchange rates and copyright piracy. He designated Ms. Lehr -- one of his advisers at Goldman Sachs -- as his special envoy to help organize and set the agenda for the twice-yearly meetings.

When Mr. Paulson met with top Chinese officials, he had Ms. Lehr close by his side as a signal of her stature at Treasury and in the new two-way financial diplomacy. "The key to working with the Chinese is being able to get access to all the right people at whatever level," Mr. Paulson said at the time.

After Ms. Lehr presented her letter of resignation last week, Treasury officials informed their Chinese counterparts of her departure.

Mr. Paulson will still travel to China before the end of the year for the first round of talks, the Treasury spokeswoman said.

With Ms. Lehr's departure, the task of organizing the strategic dialogue falls to Undersecretary for International Affairs Timothy Adams, who had been running Treasury's China policy before Mr. Paulson's arrival, and to former State Department aide Taiya Smith, the secretary's deputy chief of staff, according to a Treasury official.

"There are plenty of capable people to carry on," said John Frisbie, president of the U.S.-China Business Council, an association representing more than 250 American companies that do business with China.

Ms. Lehr is married to John F.W. Rogers, chief of staff at Goldman Sachs. They have two young children, and people familiar with Ms. Lehr's thinking said the long hours and extensive travel required for the position played a definitive role in her decision to quit.

U.S. Group Reaches Deal To Provide Laptops To All Libyan Schoolchildren (NYT)

By John Markoff

The New York Times, October 11, 2006

SAN FRANCISCO, Oct. 10 — The government of Libya reached an agreement on Tuesday with One Laptop Per Child, a nonprofit United States group developing an inexpensive, educational laptop computer, with the goal of supplying machines to all 1.2 million Libyan schoolchildren by June of 2008.

The project, which is intended to supply computers broadly to children in developing nations, was conceived in 2005 by a computer researcher at the Massachusetts Institute of Technology, Nicholas Negroponte. His goal is to design a wireless-connected laptop that will cost about $100 after the machines go into mass production next year.

To date, Mr. Negroponte, the brother of the United States intelligence director, John D. Negroponte, has reached tentative purchase agreements with Brazil, Argentina, Nigeria and Thailand, and has struck a manufacturing deal with Quanta Computer Inc., a Taiwanese computer maker.

Mr. Negroponte, who was in Tripoli this week to meet with Libyan officials, said he discussed the project extensively with the Libyan leader, Col. Muammar el-Qaddafi, in August.

“When I met with Qaddafi, it had all the mystique and trimmings expected: middle of the desert, in a tent, 50 degrees C. etc.,” Mr. Negroponte, who was traveling to Asia on Tuesday, wrote in an e-mail message. “It took him very little time to find O.L.P.C. appealing as an idea.”

The idea appealed to the Libyan leader, according to Mr. Negroponte, because it fit into his political agenda of creating a more open Libya and becoming an African leader. The two men also discussed the possibility of Libya’s financing the purchase of laptops for a group of poorer African nations like Chad, Niger and Rwanda.

It is possible, Mr. Negroponte said, that Libya will become the first nation in the world where all school-age children are connected to the Internet through educational computers. "The U.S. and Singapore are not even close," he said.

To date, One Laptop Per Child has received mixed support from the American computer industry. Test units currently use a low-power microprocessor manufactured by Advanced Micro Devices. However, both Intel and Microsoft have been publicly skeptical about the idea and have proposed competing low-cost educational computer projects. At the World Economic Forum in Davos, Switzerland, in January, Bill Gates, Microsoft's chairman, suggested that the next generation of cellphones might be a better way to reach across the so-called digital divide.

Mr. Negroponte said Microsoft refused to sell its Windows software to the project at a price that would make it possible to include in his system. As a result, his laptops will come with the freely available Linux operating system, which is becoming increasingly popular in the developing world.

The idea of a laptop for every schoolchild grew out of Mr. Negroponte's experience in giving children Internet-connected laptops in rural Cambodia. He said the first English word out of the mouths of the Cambodian students was "Google."

Discussions between the One Laptop project and the Libyan government began as part of work being done by the Monitor Group, an international consulting firm co-founded by the economist Michael E. Porter, which is now helping the Libyans develop a national economic plan.

Diplomatic relations between the United States and Libya have warmed recently, since Tripoli settled the Pan Am 103 bombing case and agreed to renounce its pursuit of nuclear weapons. Washington lifted a trade embargo two years ago, and the State Department rescinded Libya's designation as a state sponsor of terrorism last June.

For its $250 million investment, Libya will receive 1.2 million computers, one server per school, a team of technical advisers to help set up the system, satellite internet service and other infrastructure.

The first test models will be distributed to the five participating countries companies at the end of this November, according to Mr. Negroponte, and mass production is planned for June or July of 2007.

The computers come with a wireless connection, a built-in video camera, an eight-hour battery and a hand crank for recharging batteries. They will initially be priced below $150, and the price is expected to decline when they are manufactured in large numbers.

Uganda's Plight Pressed On Capitol Hill (WP)

By Nora Boustany

The Washington Post, October 11, 2006

Activists Call for U.S. Role in Negotiating Peace for Nation's War-Torn North

Donning yellow and orange T-shirts, 700 activists from across the country pressed legislators and Capitol Hill staffers yesterday on the need for high-level American involvement to bring peace to northern Uganda, a region that has experienced wartime atrocities, abductions of children and widespread displacement for more than 20 years.

Among the participants was Grace Akallo, 25, a former Ugandan child soldier, kidnapped from her dormitory by rebels along with 139 other girls 10 years ago. Yesterday, she recalled her ordeal.

"They crashed the dorm windows with rifle butts and threatened to hurl a bomb at us," she said. "We first hid under our beds, pretending not to be there. They could see us, they said, and forced their way in with their guns. Tied together with rope, the girls marched all night."

Akallo said she was held for seven months by the followers of Joseph Kony, the messianic and charismatic founder of the Lord's Resistance Army. During that time, she was forced to walk for miles, subsisting on leaves and sorghum. At a rebel base in southern Sudan, she was trained to handle guns and was ordered to steal food at gunpoint. "We were raped, all of us," she said. Five of her friends were killed and two are still there, she said, adding, "I don't know if they are alive."

Akallo escaped when Ugandan troops attacked, and she returned home the following April. She went on to study at a university in Kampala and then transferred last year to Gordon College, in Wenham, Mass., as a communications senior.

DOJ_NMG_0079086

"As a major donor country, the U.S. has a responsibility to take part in the peace talks so the signatories of any agreement are held responsible," Akallo said of a fragile truce negotiated in July, followed by talks involving the rebels and the Sudanese and Ugandan governments. "If left alone, I am not so sure they will honor the agreement," she said.

A number of nonprofit civic groups participated in the two-day gathering in Washington, which included a symposium Monday. The participants included Physicians for Human Rights, Africa Faith and World Vision, as well as policy experts from the International Crisis Group, mediation specialists from the Carter Center, and policy advisers from Oxfam America, Refugees International, the International Rescue Committee, the Brookings Institution and Mercy Corps.

"The peace process is held by a very thin thread," said Julian Atim, 26, a physician working on health care in northern Uganda.

"The United States is a house of power. The warring sides keep threatening to quit the talks and keep holding up conditions," she said. "The rebels have caused suffering. We are sick of them," added Atim, who lost both parents to AIDS.

She said she returned to the 100-bed hospital in Anaka, which she had first visited as a student, because of what she saw there -- patients forced to walk for a day to reach medical care, others dying in refugee camps, and a facility with intermittent water and electricity that lacked basic equipment.

"I think a deal is possible, but it won't happen unless the U.S. engages," said John Prendergast, a senior adviser to the International Crisis Group who has served in past U.S. administrations. "It is very important to send an envoy to Juba to bring U.S. leverage to the process," he said, referring to the town in southern Sudan where the talks are being held. He said Ugandan President Yoweri Museveni "needs a partner for peace and the only partner he finds desirable is the United States."

"The absence of the Bush administration from the talks is condemning millions of northern Ugandans to a fate little better than death in the endless IDP [internally displaced persons] camps," Prendergast said. "For a few pennies and a little diplomatic energy, the Bush administration could help bring peace to northern Uganda."

Rep. Christopher H. Smith (R-N.J.) said he was going to call Secretary of State Condoleezza Rice to ask her to send an envoy to the Uganda peace talks. Smith has also introduced legislation that would impose sanctions against governments and rebel groups that use child soldiers. It also would provide more psychological services for children recovering from forced soldiering.

Kony and four of his top lieutenants are wanted by the International Criminal Court in The Hague. They are charged with war crimes and crimes against humanity committed during a dark and vicious 20-year conflict in which rebels hacked off the lips, ears and breasts of their victims. About 25,000 children were abducted and forced to become child soldiers or sex slaves, while 2 million people remain displaced.

On Monday, speaking on his country's 44th anniversary of independence from the British, Museveni charged that Kony and his lieutenants were dragging their feet in the peace process talks in Juba to avoid the war crimes tribunal. Earlier this year, the tribunal urged Uganda, Sudan and Congo to turn over rebel suspects.

Across Europe, Worries On Islam Spread To Center (NYT)

By Dan Bilefsky And Ian Fisher

The New York Times, October 11, 2006

BRUSSELS, Oct. 10 — Europe appears to be crossing an invisible line regarding its Muslim minorities: more people in the political mainstream are arguing that Islam cannot be reconciled with European values.

“You saw what happened with the pope,” said Patrick Gonman, 43, the owner of Raga, a funky wine bar in downtown Antwerp, 25 miles from here. “He said Islam is an aggressive religion. And the next day they kill a nun somewhere and make his point.

“Rationality is gone.”

Mr. Gonman is hardly an extremist. In fact, he organized a protest last week in which 20 bars and restaurants closed on the night when a far-right party with an anti-Muslim message held a rally nearby.

His worry is shared by centrists across Europe angry at terror attacks in the name of religion on a continent that has largely abandoned it, and disturbed that any criticism of Islam or Muslim immigration provokes threats of violence.

DOJ_NMG_0079087

For years those who raised their voices were mostly on the far right. Now those normally seen as moderates — ordinary people as well as politicians — are asking whether once unquestioned values of tolerance and multiculturalism should have limits.

Former Foreign Secretary Jack Straw of Britain, a prominent Labor politician, seemed to sum up the moment when he wrote last week that he felt uncomfortable addressing women whose faces were covered with a veil. The veil, he wrote, is a "visible statement of separation and difference."

When Pope Benedict XVI made the speech last month that included a quotation calling aspects of Islam "evil and inhuman," it seemed to unleash such feelings. Muslims berated him for stigmatizing their culture, while non-Muslims applauded him for bravely speaking a hard truth.

The line between open criticism of another group or religion and bigotry can be a thin one, and many Muslims worry that it is being crossed more and more.

Whatever the motivations, "the reality is that views on both sides are becoming more extreme," said Imam Wahid Pedersen, a prominent Dane who is a convert to Islam. "It has become politically correct to attack Islam, and this is making it hard for moderates on both sides to remain reasonable." Mr. Pedersen fears that onetime moderates are baiting Muslims, the very people they say should integrate into Europe.

The worries about extremism are real. The Belgian far-right party, Vlaams Belang, took 20.5 percent of the vote in city elections last Sunday, five percentage points higher than in 2000. In Antwerp, its base, though, its performance improved barely, suggesting to some experts that its power might be peaking.

In Austria this month, right-wing parties also polled well, on a campaign promise that had rarely been made openly: that Austria should start to deport its immigrants. Vlaams Belang, too, has suggested "repatriation" for immigrants who do not made greater efforts to integrate.

The idea is unthinkable to mainstream leaders, but many Muslims still fear that the day — or at least a debate on the topic — may be a terror attack away.

"I think the time will come," said Amir Shafe, 34, a Pakistani who earns a good living selling clothes at a market in Antwerp. He deplores terrorism and said he himself did not sense hostility in Belgium. But he said, "We are now thinking of going back to our country, before that time comes."

Many experts note that there is a deep and troubled history between Islam and Europe, with the Crusaders and the Ottoman Empire jostling each other for centuries and bloodily defining the boundaries of Christianity and Islam. A sense of guilt over Europe's colonial past and then World War II, when intolerance exploded into mass murder, allowed a large migration to occur without any uncomfortable debates over the real differences between migrant and host.

Then the terror attacks of Sept. 11, 2001, jolted Europe into new awareness and worry.

The subsequent bombings in Madrid and London, and the murder of the Dutch filmmaker Theo van Gogh by a Dutch-born Moroccan stand as examples of the extreme. But many Europeans — even those who generally support immigration — have begun talking more bluntly about cultural differences, specifically about Muslims' deep religious beliefs and social values, which are far more conservative than those of most Europeans on issues like women's rights and homosexuality.

"A lot of people, progressive ones — we are not talking about nationalists or the extreme right — are saying, 'Now we have this religion, it plays a role and it challenges our assumptions about what we learned in the 60's and 70's,' " said Joost Lagendik, a Dutch member of the European Parliament for the Green Left Party, who is active on Muslim issues.

"So there is this fear," he said, "that we are being transported back in a time machine where we have to explain to our immigrants that there is equality between men and women, and gays should be treated properly. Now there is the idea we have to do it again."

Now Europeans are discussing the limits of tolerance, the right with increasing stridency and the left with trepidation.

Austrians in their recent election complained about public schools in Vienna being nearly full with Muslim students and blamed the successive governments that allowed it to happen.

Some Dutch Muslims have expressed support for insurgents in Iraq over Dutch peacekeepers there, on the theory that their prime loyalty is to a Muslim country under invasion.

DOJ_NMG_0079088

So strong is the fear that Dutch values of tolerance are under siege that the government last winter introduced a primer on those values for prospective newcomers to Dutch life: a DVD briefly showing topless women and two men kissing. The film does not explicitly mention Muslims, but its target audience is as clear as its message: embrace our culture or leave.

Perhaps most wrenching has been the issue of free speech and expression, and the growing fear that any criticism of Islam could provoke violence.

In France last month, a high school teacher went into hiding after receiving death threats for writing an article calling the Prophet Muhammad "a merciless warlord, a looter, a mass murderer of Jews and a polygamist." In Germany a Mozart opera with a scene of Muhammad's severed head was canceled because of security fears.

With each incident, mainstream leaders are speaking more plainly. "Self-censorship does not help us against people who want to practice violence in the name of Islam," Chancellor Angela Merkel of Germany said in criticizing the opera's cancellation. "It makes no sense to retreat."

The backlash is revealing itself in other ways. Last month the British home secretary, John Reid, called on Muslim parents to keep a close watch on their children. "There's no nice way of saying this," he told a Muslim group in East London. "These fanatics are looking to groom and brainwash children, including your children, for suicide bombing, grooming them to kill themselves to murder others."

Many Muslims say this new mood is suddenly imposing expectations that never existed before that Muslims be exactly like their European hosts.

Dyab Abou Jahjah, a Lebanese-born activist here in Belgium, said that for years Europeans had emphasized "citizenship and human rights," the notion that Muslim immigrants had the responsibility to obey the law but could otherwise live with their traditions.

Then someone comes and says it's different than that," said Mr. Jahjah, who opposes assimilation. "You have to dump your culture and religion. It's a different deal now."

Lianne Duinberke, 34, who works at a market in the racially mixed northern section of Antwerp, said: "Before I was very eager to tell people I was married to a Muslim. Now I hesitate." She has been with her husband, a Tunisian, for 12 years, and they have three children.

Many Europeans, she said, have not been accepting of Muslims, especially since 9/11. On the other hand, she said, Muslims truly are different culturally: No amount of explanation about free speech could convince her husband that the publication of cartoons lampooning Muhammad in a Danish newspaper was in any way justified.

When asked if she was optimistic or pessimistic about the future of Muslim immigration in Europe , she found it hard to answer. She finally gave a defeated smile. "I am trying to be optimistic," she said. "But if you see the global problems before the people, then you really can't be."

News To Bridge The Divide (USAT)

By Souheila Al-jadda

USA Today, October 11, 2006

Many Arab TV news media criticized Secretary of State Condoleezza Rice's visit last week to the Middle East, questioning her intentions and recent U.S. policies in the region.

Perhaps Rice's latest diplomatic overtures were met with suspicion from Arab readers and viewers as well. Still fresh in their minds are the images of the tragic Lebanese-Israeli conflict, which unfolded right before their eyes on Arab satellite TV with scenes of death and destruction. These poignant images coupled with adroit news writing are shaping Arab public opinion, which has become increasingly anti-American and anti-Western in recent years.

On a recent visit to Syria, I saw the wide array of satellite TV news broadcasts offered in the Middle East. Most people seem to watch Al-Jazeera (mainly Qatar-funded), Al-Arabiya (Saudi-backed) or Al-Manar (Hezbollah-supported).

But a new trend is emerging, with Western and Middle East news outlets planning to reach out to the other side and build bridges of understanding between their nations and people.

In Europe alone, several countries are launching Arabic-language satellite news broadcasts:

DOJ_NMG_0079089

•The British Broadcasting Corporation World Service is creating a $35 million, Arabic version of its channel.

•France is launching all-news Arabic programming next year.

•Deutsch Welle, a German public broadcast company, airs three hours of Arabic programming, which will expand to 24 hours next year.

In turn, Al-Jazeera, the most influential Arab network, plans to launch an English-language channel later this year to give Western audiences the Arab point of view. Al-Jazeera is primarily funded by Qatar, a U.S. ally. Yet some U.S. officials accuse Al-Jazeera of inciting violence by airing videos from terrorists. Shortly after the9/11 terrorist attacks, Defense Secretary Donald Rumsfeld said Al-Jazeera "has a pattern of putting out al-Qaeda propaganda." Al-Qaeda often first airs messages via Al-Jazeera.

Are U.S. networks that aired the same footage guilty of inciting violence, too? Whether the news comes from Al-Jazeera or Fox News, people should hear different sides of a story and engage in an honest discussion.

But there is a fine line between news coverage and propaganda. In February 2004, Washington started broadcasting the Arabic-language Alhurra (Arabic for "The Free One"), to tell "the people in the Middle East the truth about the values and the policies of the United States," according to President Bush. It turned out to be a multimillion-dollar failure. A Zogby International poll last year revealed that 45% of viewers in five Arab countries watched Al-Jazeera and less than 1% watched Alhurra.

As Marwan Bishara, a political analyst for Abu Dhabi TV, explained in an op-ed piece in the International Herald Tribune, "People will not trust the message if they don't trust the messenger." To avoid being perceived as government propaganda, European stations will need to emphasize their reputations for being truly independent news organizations.

Five years have passed since 9/11, and many Americans are still asking, "Why do they hate us?" But people in the Middle East don't hate us; in fact, most like our Western culture and its values. What they hate is our foreign policy.

Arab respondents to a 2004 University of Maryland/Zogby International poll were asked whether their attitudes toward the USA were "based more on American values or on U.S. policy in the Middle East." A majority cited U.S. policy. To win the confidence of people in the Arab world and have them accept Western values, U.S. foreign policy must reflect these values.

Palestinians held historic parliamentary elections this year at the behest of Western nations, voting the Islamic movement Hamas into power. But because the European Union, Israel and the United States designate Hamas as a terrorist organization for targeting Israeli civilians, they punished the Palestinians with sanctions. Little consideration was given to the Arab view that Hamas was a legitimate movement, defending against Israeli occupation and attacks on Palestinian civilians.

Arabs daily see the tragic results of the Iraq war. They've seen images of prisoner abuse in Abu Ghraib, heard tales of slaughter and are now witnessing a budding civil war.

During talks to end the Israeli-Lebanese conflict this summer, the United States delayed a United Nations cease-fire resolution with the aim of creating a democratic "new Middle East." Washington, in effect, gave Tel Aviv the green light to continue bombing. Over 34 days, the world watched U.S. policy in action as at least 800 civilians were killed and Lebanon's infrastructure and economy were left in shambles. If this is what U.S. democracy looks like, it would be understandable if Arabs reject it.

To spare future generations further conflicts and wars, the world must support these modest attempts to bring differing opinions to new audiences. Ultimately, though, the will to engage in a global dialogue must be backed by a will to understand and a desire to change.

Souheila Al-Jadda is associate producer of a Peabody award-winning show, Mosaic: World News from the Middle East, on Link TV, and a member of USA TODAY's board of contributors.

Support Freedom In The Arab World (WP)

By Radwan A. Masmoudi And Amr Hamzawy

The Washington Post, October 11, 2006

As Arab and Muslim intellectuals and activists concerned about the promotion of democracy in our region, we call on America and its president to reaffirm -- in words and actions -- its commitment to sustained democratic reform in the Arab world.

We have been heartened by the strong commitment to liberty that President Bush expressed in his November 2003 speech at the National Endowment for Democracy and then in his second inaugural address, when he said: "All who live in tyranny and

DOJ_NMG_0079090

hopelessness can know: The United States will not ignore your oppression or excuse your oppressors. When you stand for your liberty, we will stand with you."

Despite some initial skepticism, those statements nurtured hope in our region. We realize that democracy is not easily attained and must ultimately come from within. But it can receive encouragement and support, both of which it badly needs today in Arab countries.

We know that some in the United States, worried by recent Islamist gains among voters in Palestine and Egypt, are having doubts about the wisdom of pushing for freedom and democracy in the Middle East. These worries are exploited by despots in the region to perpetuate the untenable status quo. But there is no way to advance liberty without inclusion of all elements that are willing to abide by democratic rules and reject violence.

Democratic participation is the only way to combat extremism and pressure all groups, including Islamists, to moderate their stance in order to maximize their share of the vote. The United States should continue to press for an end to repression by governing regimes of democratically minded liberal and Islamist groups, and it should emphatically distance itself from such repression and condemn it in the strongest terms whenever and wherever it occurs. We are confident that if Arab citizens are able to have their choice, they will choose democracy, freedom, peace and progress.

Perhaps emboldened by the impression that America is wavering in its support for democracy, some autocrats have recently intensified repression. This makes the need for sustained U.S. and international support and pressure more urgent than ever. The region needs to hear again that the course of freedom and democracy is the only course that America, guided by both interest and principle, will support.

To mention but one case where U.S. influence might do much good: Egypt has experienced a regime crackdown lately on opposition activists. In February the government postponed municipal elections and renewed the emergency law. The regime has not even spared Egypt's venerable judiciary, which has steadfastly proclaimed its independence in recent months. And liberal opposition politician Ayman Nour, who was allowed to run in last year's presidential election and won 8 percent of the popular vote, behind only President Hosni Mubarak, was arrested and sentenced in a murky process to five years in jail.

The health of Ayman Nour, a dear friend and colleague of many of us, continues to deteriorate. We pray that President Bush will take Nour's case to heart and tell the Egyptian regime of his concerns. Hundreds of other activists (including doctors, university professors, journalists and those in civil society) whose only crime was to express their desire for freedom continue to languish in jail and suffer torture and police brutality.

We entreat America to do all it can to ensure that a small number of authoritarian rulers will not control the future of more than 300 million Arabs, more than half of whom are not yet 20 years old. Freedom and democracy are the only ways to build a world where violence is replaced by peaceful public debate and political participation, and despair is replaced by hope, tolerance and dignity.

This article is adapted from an open letter to President Bush signed by 103 other Arab and Muslim activists and thinkers in Arab countries, Europe, the United States and elsewhere who have worked in support of democracy (see www.islam-democracy.org).

An Impossible Job (NYT)

The New York Times, October 11, 2006

It is heartening, and a little surprising, that the race to succeed Kofi Annan as United Nations secretary general was so hard fought. The job is grueling, requiring an extraordinary combination of public advocacy, tough management and tireless crisis diplomacy — and it can often feel thankless.

This week the Security Council picked Foreign Minister Ban Ki-moon of South Korea. Mr. Ban got a quick taste of his life to come, when the news of his selection was upstaged by North Korea's announcement that it had tested a nuclear weapon.

We wish Mr. Ban well. The United Nations is an essential organization for promoting American foreign policy goals and for achieving a fairer and more peaceful world. Yet the past few years have done serious damage. The problems range from the Security Council's bitter divisions over Iraq to the scandalous behavior of corrupt officials and sexually predatory peacekeepers to the General Assembly's watering down of essential reforms.

DOJ_NMG_0079091

But the single most ominous problem has been the sometimes hostile, sometimes aloof, but never constructively supportive attitude of the Bush administration. The United States isn't just the world's only superpower, the U.N.'s biggest contributor and its New York host. It championed the organization's creation and shaped its universalist values.

The next secretary general cannot succeed without Washington's active cooperation, or without pushing through the reforms that fell short in the current term. What's needed is a human rights council uncompromised by the inclusion of human rights abusers, and a secretary general with the authority to control spending and demand the highest performance of personnel. The organization also must have a General Assembly prepared to cut back on obsolete study missions, layers of duplicative committees and sinecure staff positions that have piled up over decades without serious review.

The United States strongly backed Mr. Ban's candidacy. If it supports Mr. Ban in doing his job, it would increase his chances for success.

To Grow Or Not To Grow (WSJ)

The Wall Street Journal, October 11, 2006

The first country in Latin America that institutes a flat-tax regime is going to make history for that region, just as history is being made by such pro-growth flat-tax regimes as Slovakia, Georgia and Estonia across Eastern Europe. The man who made it happen in Estonia is giving Costa Rica that chance. So far, they are proving they're not up to it.

Former Estonian Prime Minister Mart Laar went to Costa Rica last month to explain the groundbreaking structural change in his own country that sparked a free-market revolution all over Eastern Europe. According to press reports, his message hit home with Costa Rican business and opinion makers. Amazingly, the Costa Rican government is already trying to close the door on Mr. Laar's ideas. It's hard to understand why.

Costa Rica is not the poorest country in Latin America but it's hardly meeting its potential. Steep personal income-tax rates are the cause of a government-estimated tax evasion rate of 70%. A 30% corporate tax rate discourages investment.

Costa Rica was considered a model welfare state 20 years ago. Today, 80% of government revenues are dedicated to wages, pensions, debt service and higher education. Most of the region now takes for granted technology such as portable email devices; in Costa Rica such modern conveniences remain a dream.

Mr. Laar faced bigger challenges in post-Soviet-Estonia. In 1992 his country was running 1,000% annualized inflation and the economy had contracted 30% over two years. Today, with its zero corporate tax rate on reinvested profits, single tax rate for individuals and a fully deregulated economy, Estonia is running ahead of the European pack, attracting human and financial capital. Real GDP growth in 2006-2007 is forecast at more than 8% per year.

During three days of meetings with the government of President Oscar Arias, members of congress, economists, businessmen and opinion makers, Mr. Laar argued that Costa Rica could undergo a similar transformation if only the government would "just do it." He emphasized the importance of privatization, accession to Cafta and, of course, the flat tax.

He explained that the single rate, with an exemption for the poor, "could be applied in any country, and in most countries where it has been applied, it has shown satisfactory results." He said, "In Estonia, which has a large population of farmers, it has reduced inequality, created more income for the government and lowered the poverty rate."

The Arias government promised to "analyze" the idea. On Sept. 28 Finance Minister Guillermo Zúñiga announced, "We have analyzed it [the flat tax] and we have ruled it out." Its attraction is that it's simple, "but for Costa Rica it would have to be moderated." That, he explained, would "complicate it and reduce its attractiveness." The government is promising an alternate plan that, if Mr. Arias's rhetoric is any guide, will almost certainly raise taxes.

Costa Ricans may not back off so easily. The opposition in congress may not cooperate with tax increases. What's more, the Costa Rican press has been editorializing in favor of the flat tax. La Nación led off an editorial: "Estonia managed, in a few years, that which many countries, including Costa Rica, have sought laboriously for a long time. Why doesn't our government, instead of wasting its time on a complicated fiscal plan, follow a good example?"

Good question. Costa Rica has a chance to transform the region. It should take it.

TERRORISM NEWS:

N.Y. Mosque Leaders Found Guilty (AP)

By Michael Virtanen

AP, October 11, 2006

ALBANY, N.Y. - Two mosque leaders arrested in a terrorism-related sting were convicted Tuesday of federal money laundering charges.

Yassin Aref, imam at the Masjid as-Salam mosque in Albany, and Mohammed Hossain, a pizzeria owner and a founder of the mosque, were never accused of being terrorists, but prosecutors said they laundered money in 2003-04 for an FBI informant.

They were accused of attempting to provide support to Jaish-e-Mohammed, a Pakistan-based group listed by the federal government as a terrorist organization.

Hossain was convicted on all 27 charges against him, including three counts of conspiracy. The jury, which deliberated over four days, found Aref guilty of 10 of the 30 charges against him.

Prosecutors said the informant, a Pakistani businessman posing as an arms dealer, asked Hossain to launder $50,000 from the sale of a shoulder-fired missile that they were told would be used to kill a Pakistani diplomat in New York City. Aref acted as a witness to the series of transactions.

"Obviously we had a couple of individuals that were prone to supporting terrorism," U.S. Attorney Glenn Suddaby said after the verdict. "The FBI did what they had to do."

Aref, a 36-year-old Kurdish refugee from northern Iraq, was also found guilty of lying to FBI agents about having known a terrorist leader, Mullah Krekar.

Assistant U.S. Attorney William Pericek said through the sting, the men were simply offered an opportunity to choose whether to participate with the informant in a terrorist plot.

Defense lawyers said the two men had an incomplete understanding of what the informant was proposing. Hossain's lawyer, Kevin Luibrand, said his client was entrapped. Aref merely thought he was acting as a witness to financial transactions according to Muslim custom, said his lawyer, Terence Kindlon.

Hossain, a 51-year-old naturalized U.S. citizen from Bangladesh with severe diabetes, faces about 20 years in prison. Luibrand said that is tantamount to a life sentence and that the verdict likely will be appealed.

Kindlon did not comment on what kind of sentence Aref could face, saying he didn't want to speculate. Pericek said Aref likely would be deported after serving his prison sentence.

Luibrand added that his client had not committed any crimes, nor did he intend to, before he was targeted by the government. The FBI acknowledged Aref was its ultimate target, using Hossain to get close to him.

The men are scheduled to be sentenced Feb. 12.

Terror Trial Verdict Reached (ALBANYTU)

By Brendan J. Lyons, Senior Writer

Albany Times Union, October 11, 2006

Yassin Aref found guilty of 10 of 30 terrorism-related counts; Mohammed Hossain guilty on all 27 counts

ALBANY -- A federal court jury this afternoon found the leader of a Central Avenue mosque guilty of 10 of 30 terrorism-related counts against him and his co-defendant guilty on all 27 counts he faced.

Yassin M. Aref, the religious leader, and Mohammed M. Hossain are accused of taking part in a fictitious plot to help launder money from the sale of a shoulder-fired missile to terrorists plotting an attack in New York City.

Aref faced separate charges for allegedly lying on a green card application and while being interviewed by FBI agents about his ties to a Kurdish political party.

The verdicts came in the fourth day of deliberations in U.S. District Court. Jurors were sent home for the weekend late Friday afternoon and resumed deliberations this morning after the three-day holiday weekend.

Jurors on Friday asked to watch an FBI surveillance videotape of a key meeting between an undercover informant and Aref. At the meeting, which took place in January 2004, about six months after the sting began, the two men discussed the informant's plan to ``legalize'' money that he was loaning to Hossain.

DOJ_NMG_0079097

At the end of the day Friday, the jury also asked U.S. District Judge Thomas J. McAvoy to clarify two charges in the 30-count indictment. Jurors wanted to know whether the charges, as written, require that the defendants knew the informant was making money from the illicit smuggling of any firearms, or, specifically making money off the sale of the shoulder-fired missile that was used in the sting and shown to jurors during the trial.

The informant showed Hossain the missile launcher during a meeting in November 2003. Aref never saw the missile launcher. At another meeting with both men, in January 2004, the informant pulled out a missile-triggering device. Aref said he never saw it because he was counting money as the informant flashed the foot-long device.

Verdict Reached In Aref And Hossain Trial (CAPN9)

By Steve Ference

Capital News 9, October 11, 2006

Jurors have found two Albany Mosque leaders guilty of terrorism charges. Pizzeria owner Mohammed Hossain was found guilty on all charges against him, while Imam Yassen Aref was only convicted of 10 of the charges. Our Steve Ference has the latest information on the verdict.

The jury foreman speaks out after he and his fellow jurors spent a full four days deliberating over charges these two men supported terrorism through money laundering, lied on immigration documents and aided a designated terrorist group.

U.S. Attorney, Bill Pericak, said "This is a world where when we have suspicions about people, we have a choice. Do we do something or do we wait until something happens?"

Jurors have found two Albany Mosque leaders guilty of terrorism charges. Pizzeria owner Mohammed Hossain was found guilty on all charges against him, while Imam Yassen Aref was only convicted of 10 of the charges. Our Steve Ference has the latest information on the verdict.

Prosecutor Bill Pericak said the government sting operation nabbed two men who could have walked away from the FBI informant who pretended to be a missile dealer to a terrorist organization.

But they didn't.

The jury found Mohammad Hossain, a pizza shop owner guilty on all charges, conspiring to conceal money believed to be the proceeds of supporting a terror organization, importing and dealing firearms without a license and conspiring to prepare and threatening to use a weapon of mass destruction.

"The jury worked very hard," Pericak said. "And you could tell from their verdict that they really examined the evidence very carefully and I think they arrived at a just result."

While not found guilty on all counts, the jury decided Albany Muslim leader Yassin Aref also conspired to conceal money believed to be the proceeds of the sale of a surface to air missile, threatening to use a weapon of mass destruction and providing support to the terrorist group Jaish-il Muhammad.

Defense attorney, Terrence Kindlon, said he looks to the future.

"You know clearly, the willingness of the jury in this case to acquit on 20 of the 30 counts gives us a glimmer of hope for the future."

Now the attorneys try to figure out the complicated sentencing guidelines that could lead to Aref's deportation and Hossain's incarceration for around 20 years.

Jury Convicts 2 Albany Men In Missile Plot (NYT)

By Michael Wilson

The New York Times, October 11, 2006

ALBANY, Oct. 10 — A federal jury on Tuesday convicted two Muslim immigrants of participating in a plot with a man who said he was helping plan a missile attack on a Pakistani diplomat in New York City in 2004.

The man to whom the immigrants were linked was actually an informant working with the F.B.I. in a sting operation against the two defendants, Yassin M. Aref, 36, an Iraqi refugee and the imam at an Albany mosque, and Mohammed M. Hossain, 51, a Bangladeshi immigrant and the owner of a pizzeria here. The gestation of the case, with the government's informant ingratiating himself with the men and initiating all the conversations about a shoulder-fired rocket launcher, led to claims of entrapment from Mr. Hossain's lawyers during the three-week trial in Federal District Court.

"Obviously we had a couple of individuals that were prone to supporting terrorism," United States Attorney Glenn T. Suddaby said after the verdict.

Mr. Aref, the imam, smiled at his lawyers Tuesday as he left the courtroom in custody. He has been in jail for the past year awaiting trial in the case. Mr. Hossain, who had been free on bail, turned to address the handful of supporters from the Masjid as-

Salam Mosque where he and Mr. Aref met several years ago. “Peace is my victory,” he shouted. “God is great. He is watching who is right and who is wrong. Thank you so much to everyone.” He, too, was led away in shackles.

Prosecutors argued that he was driven by greed to enter a money-laundering scheme, and the imam by ideology. The defense argued that both men were duped into taking part in a deal they never understood. The garbled words supporting both versions played out before the jury in several hours of surveillance tapes.

A lawyer for Mr. Hossain, Kevin A. Luibrand, said that the defendants would appeal, and that the entrapment theory would again be raised. “Before the government arrived on the scene, they were not committing any crimes and were not thinking about committing any crimes,” he said.

The men are to be sentenced on Feb. 12. The lengths of their sentences were unknown Tuesday, with Mr. Luibrand estimating 20 years in prison for Mr. Hossain, who was convicted of more crimes than Mr. Aref.

The case began when the undercover informant, Shahed Hussain, who used the name “Malik,” introduced himself to Mr. Hossain at the Little Italy Pizzeria on Central Avenue in July 2003, bringing gifts for the restaurateur’s children, according to testimony. The two became friends, and the informant offered to lend Mr. Hossain $50,000 for improvements to the pizzeria. At later meetings, Mr. Hussain testified that he told Mr. Hossain that the money he was going to lend to him came from the sale of a missile launcher that would be used to kill a Pakistani diplomat in New York.

In reality, there never was a plot. In one meeting, captured on a video that was played at the trial, the informant showed Mr. Hossain a launcher. The restaurateur said he had only seen such a weapon on television, and he asked if it was legal, and the informant replied, “What is legal in this world?”

The defense argued that such cryptic statements made it unclear what was being discussed. Mr. Hossain, at the informant’s request, began repaying the loan in small checks of $2,000 to $6,000 over several months.

According to testimony, Mr. Hossain asked Mr. Aref to attend another meeting with the informant to act, by Muslim custom, as a witness to the loan. Mr. Aref, whose name and telephone number in Albany the government said were found in Iraq that same year on papers discovered among suspected terrorists, testified that he never knew of any plot.

A friend of Mr. Aref testified that at a dinner in 2004 at the imam’s home, the informant suddenly blurted out that New York would soon be attacked by a missile, and that Mr. Aref quickly patted him down and asked, “Are you carrying a recorder?” That time, there was none.

Mr. Aref testified that he thought Mr. Hussain was joking.

He also testified that anyone looking to attack the United States “came to the wrong person.” Mr. Hossain had been interviewed several times at his pizzeria over the years, saying once, after the Sept. 11 attacks, “I’m proud to be an American.”

The men were convicted of conspiring to aid a terrorist group and provide support for a weapon of mass destruction, as well as money-laundering and supporting a foreign terrorist organization, Jaish-e-Mohammed, or JEM, a group in Pakistan that the informant told the men he supported. Mr. Aref was acquitted of most of the 30 counts that involved writing checks.

Mr. Hossain is a citizen, but Mr. Aref, who arrived as a refugee from the Kurdish region of Iraq, will eventually be deported, prosecutors said.

Before the verdict, Mr. Hossain’s wife, Mossammat Fatima Hossain, sat quietly in a booth at the pizzeria, which was empty but for a friend and her eldest son, who is 13. Business had fallen since the indictment, she said. After she learned of the verdict, she sat in the restaurant, unable to speak.

FBI Agents Still Lacking Arabic Skills (WP)

By Dan Eggen

The Washington Post, October 11, 2006

Five years after Arab terrorists attacked the United States, only 33 FBI agents have even a limited proficiency in Arabic, and none of them work in the sections of the bureau that coordinate investigations of international terrorism, according to new FBI statistics.

Counting agents who know only a handful of Arabic words -- including those who scored zero on a standard proficiency test -- just 1 percent of the FBI's 12,000 agents have any familiarity with the language, the statistics show.

The numbers reflect the FBI's continued struggle to attract employees who speak Arabic, Urdu, Farsi and other languages of the Middle East and South Asia, even as the bureau leads a fight against terrorist groups primarily centered in those parts of the world. The same challenge is facing the CIA and other agencies as the government competes with the private sector for a limited number of applicants with foreign-language proficiency, according to U.S. officials and experts.

The shortage of agents with foreign-language skills also shows the extent to which the FBI has focused on translators since the Sept. 11, 2001, attacks, in part because officials believe it is more valuable to have specially trained linguists.

DOJ_NMG_0079099

In a recent deposition filed in an employee lawsuit, a senior FBI official testified that the bureau's two International Terrorism Operations Sections (ITOS) do not require any agents to know Arabic, even though the sections coordinate all foreign terrorism investigations. Only four agents in ITOS have any familiarity with Arabic, and none of them are ranked above elementary proficiency, documents show.

"There are no agent positions, at any level, in either ITOS I or II that utilize the Arabic language as part of their ITOS duties or responsibilities," Michael J. Heimbach, head of ITOS I, testified in his deposition. ". . . As such, knowledge of the Arabic language is not a skill set utilized by either ITOS I or II."

FBI officials said it is not crucial for agents working in the ITOS sections to know Arabic or other foreign languages, because they rely primarily on documents or interviews already translated by FBI linguists. As for agents in the field in the United States or overseas, FBI officials say translators are readily available when needed by investigators, usually within 24 hours.

But Daniel Byman, a Georgetown University associate professor who heads the school's Security Studies Program, said the FBI's continuing failure to attract Arabic-speaking agents is "a serious problem" that hurts the bureau's relations with immigrant communities and makes it more difficult to gather intelligence on extremist groups.

"With any new immigrant communities, they need these language skills, whether it's Vietnamese or Pakistani or Arabic," Byman said. "It also often gives you extra cultural knowledge and sensitivity. It makes you more sensitive to nuance, which is what investigations are often all about."

Margaret Gulotta, chief of the FBI's language services section, said in an interview that the bureau has made significant progress since 9/11 in increasing the number of translators who speak Arabic and other foreign languages. The number of translators proficient in Arabic has grown from 70 in September 2001 to 269 as of July -- an increase of nearly 300 percent -- while the overall number of linguists has nearly doubled.

The FBI also has a "very aggressive training program" of foreign-language instruction for agents and other programs that make it easier to hire candidates with foreign-language ability, Gulotta said. In fiscal 2005, she said, more than 1,600 agents took classes.

"Do we need more Arabic-speaking agents? By all means we want more Arabic-speaking agents," Gulotta said. "But admittedly it's a very difficult group of people to recruit and hire. . . . We've been a lot more successful in recruiting and hiring contract linguists and language specialists."

More than 1,400 agents have at least a limited working proficiency in a foreign language, including nearly 900 who speak Spanish. Other languages include Russian, Farsi, Vietnamese, Japanese, Korean, Mandarin and Cantonese, the FBI said.

Gulotta and other officials said several factors limit the number of foreign speakers who can become agents at the FBI. Special agents, for example, must be U.S. citizens. They also must undergo background checks that are much more difficult to pass if the candidate has relatives or friends overseas.

"It is easier to get a security clearance if you don't have any interaction with foreigners, which is not what you want if you want better interaction with foreigners," Byman said.

Some of the new information about language abilities at the FBI has emerged in connection with a lawsuit by one of the FBI's highest-ranking Arabic speakers, Special Agent Bassem Youssef, who sued the Justice Department and the bureau alleging retaliation after he complained that he was cut out of terrorism cases after the Sept. 11 attacks.

Youssef, a naturalized U.S. citizen who was born in Egypt, is one of only six FBI agents who scored a 4 for "advanced professional proficiency" in Arabic on standardized speaking tests administered by the Interagency Language Roundtable for federal agencies.

Youssef's attorney, Stephen M. Kohn, said the statistics indicate that most FBI agents have no way to gauge the accuracy of translated materials and must rely on linguists or other third parties for their information.

"How do you fight a war with that kind of disadvantage?" Kohn asked.

Gulotta and other experts note that the FBI is not alone in its struggle to attract qualified job candidates who speak Arabic or other foreign languages.

A study released last week, for example, found that three terrorists housed at a federal prison in Colorado were able to send more than 90 letters to fellow extremists overseas, in part because the prison did not have enough qualified language translators to understand what was happening.

The Bush administration early this year unveiled a "National Security Language Initiative" aimed at encouraging more instruction in "critical" languages in elementary schools, secondary schools and universities.

The lack of such programs hurts "national security, diplomacy, law enforcement [and] intelligence communities," said a fact sheet accompanying the initiative's launch.

DOJ_NMG_0079100

Steve Ackley, director of communications for the American Council on the Teaching of Foreign Languages in Alexandria, said the FBI and other agencies are faced with a serious challenge, because language instruction is so undervalued in U.S. schools.

"American society in general does not put a huge premium or value on multilingualism," Ackley said. "Until the general public . . . recognizes that this is an area that the government in general and agencies like the FBI and CIA have to invest in, this is not a problem that's going to get better."

The Cost Of Doing Your Duty (NYT)

The New York Times, October 11, 2006

During the recent debate over how to handle the prisoners at Guantánamo Bay, the Bush administration made a lot of noise about its commitment to fair treatment for the detainees and its respect for the uniformed lawyers of the armed forces. Anyone who believed those claims should consider the fate of the Navy lawyer whose integrity helped spark that debate in the first place.

In 2003, Lt. Cmdr. Charles Swift was assigned to represent Salim Hamdan, a Yemeni citizen accused of being a high-ranking member of Al Qaeda — for the sole purpose of getting him to plead guilty before one of the military commissions that President Bush created for Guantánamo Bay. Instead of carrying out this morally repugnant task, Commander Swift concluded that the commissions were unconstitutional. He did his duty and defended his client. The case went to the Supreme Court, which ruled in June that the tribunals violated American law as well as the Geneva Conventions.

The Navy responded by killing his military career. About two weeks after the historic high court victory in Hamdan v. Rumsfeld, Commander Swift was told he was being denied a promotion. Under the Navy's up-or-out system, that spelled the end of his 20-year career, and Commander Swift said last week that he will be retiring in March or April.

With his defense of Mr. Hamdan and his testimony before Congress starting in July 2003, Commander Swift did as much as any single individual to expose the awful wrongs of Guantánamo Bay and Mr. Bush's lawless military commissions. It was a valuable public service and a brave act of conscience, and his treatment is deeply troubling.

The law creating military tribunals for terror suspects, passed by Congress in a pre-election panic, leaves enormous room for the continued abuse of prisoners and for the continued detention of scores of men who committed no crime. If their military lawyers are afraid to represent them vigorously, their hopes for justice dim even further.

The Navy gave no reason for refusing Commander Swift's promotion. But there is no denying the chilling message it sends to remaining military lawyers about the potential consequences of taking their job, and justice, seriously.

HOMELAND RESPONSE:

Why Tariq Ramadan Lost (WT)

By Rachel Ehrenfeld And Alyssa A. Lappen

The Washington Times, October 11, 2006

Tariq Ramadan's latest attempt to legally obtain a visa to the United States was denied on Sept. 24. This was not the first time that Mr. Ramadan -- an Egyptian-born, Swiss citizen and the grandson of Muslim Brotherhood founder Hasan al-Banna -- was barred from the United States On July 28, 2004, the Department of Homeland Security revoked Mr. Ramadan's visa under the Immigration and Nationality Act. In that instance, while no specifics were given, Mr. Ramadan's activities -- lectures and writings in support of the Islamist agenda -- were presumed the obvious cause.

According to State Department spokeswoman Janelle Hironimus, Mr. Ramadan's latest application for a visa was denied "based solely on his actions, which constituted providing material support to a terrorist organization." However, Mr. Ramadan, an Oxford University fellow, claims that his contributions of $940 between 1998-2002 to the French-based Hamas front "Committee for Palestinian Charity and Aid" were legal, because the United States listed it as "Specially Designated Global Terrorists" only in 2003. Nevertheless, the Palestinian charity (and its 17 aliases) at the same Lille, Lyon and Paris addresses, had already been publicly identified and designated by Israel as a Hamas front organization in May 1997. Indeed, Mr. Ramadan reiterated his commitment to Hamas saying: "If the price to pay for this commitment is to never to tread upon American soil, I am ready to pay that without the slightest hesitation."

Mr. Ramadan, however, claims his funding of Hamas was just an excuse. The "Bush administration has barred me for a much simpler reason: It doesn't care for my political views."

In public statements from London, where he was appointed last year to the government's "working group on tackling extremism," and in an Oct. 1 op-ed in The Washington Post, Mr. Ramadan declared that unlike the enlightened Europeans who

DOJ_NMG_0079101

allow criticism, especially regarding the war on terrorism, "the U.S. government's paranoia has evolved far beyond a fear of particular individuals and taken on a much more insidious form: the fear of ideas."

Although the U.S. government barred him for his terror financing, his "ideas" and influence among Muslims are nothing to sneeze at.

Consider the following: On Dec. 8, 2005, the French prosecution of Chechen terror network chief Menad Benchellali revealed evidence of Mr. Ramadan's links to terrorists in Europe. Benchellali had traveled to Switzerland "one or two times in 2000, to attend conferences on Islam provided by Tariq Ramadan." Benchellali, who later planned chemical attacks in France "under the supervision of Abu Musab Al Zarqawi," was sentenced in June to 10 years in prison.

Earlier, in March 2005, Algerian al Qaeda member Djamel Beghal received 10 years in prison in Paris for participating in a foiled terror attack on the U.S. embassy there. Beghal testified in September 2001 that "his religious engagement started in 1994," when "he was in charge of writing the statements of Tariq Ramadan." That October, Beghal added that he had also taken "courses given by Tariq Ramadan."

Moreover, a 2001 Swiss intelligence memo said: "brothers Hani and Tariq Ramadan coordinated a meeting held in 1991 in Geneva attended by [al Qaeda leader] Ayman Al Zawahiri and Omar Abdel Rahman," the imprisoned planner of the 1993 World Trade Center attack.

Spanish Judge Balatasar Garzon, whose investigations into the terror activities of the Algerian Ahmed Brahim, rendered a 10-year prison sentence in April 2006, reported Ramadan's "routine contacts" with Brahim, the alleged financial chief of Al Qaeda in Europe and financier of the 1998 U.S. embassy bombings in Kenya and Tanzania.

Mr. Ramadan denies these charges. But according to French terrorism expert Jean-Charles Brisard, Mr. Ramadan also "denied being a director of the Geneva Islamic Center, a position he still holds, according to the official Swiss register of companies."

Mr. Ramadan's activities do not stop in Europe. In 1995, when the Algerian Armed Islamist Movement (AIM) perpetrated several terrorist attacks in Paris, French Interior Minister Jean Louis Debre barred Mr. Ramadan at that time from France -- based on his links to AIM. Tunisia, Saudi Arabia and his native Egypt also bar Mr. Ramadan from crossing their boarders. He is denied entrance to those countries, not for supporting Hamas or because he carries peaceful messages. They keep him out because of his links to and influence on radical Muslim groups.

Regardless, Mr. Ramadan's popularity among the Europeans is growing fast. He was just nominated by the EuropeanVoice, a Brussels-based newspaper covering the European Union, for a Europeans of the Year Award in two categories: the Non-EU Citizen who "has had the biggest impact on the Union in 2006," together with Bill Gates, Kofi Annan, Alan Greenspan and Mahmoud Abbas, and as European of the Year with the likes of Italy's prime minister, Romano Prodi, and German Chancellor Angela Merkel.

So do not count Mr. Ramadan out, yet. The American Civil Liberties Union, which filled several lawsuits on his behalf, condemned the State Department's decision, and said, "it was considering an appeal." Stay tuned.

Rachel Ehrenfeld is director of the American Center for Democracy. Alyssa A. Lappen is a senior fellow at the American Center for Democracy.

Congress Gives DHS Six Months To Revise Terrorist Watch Lists (GovExec/CD)

By Chris Strohm

Government Executive/CongressDaily, October 10, 2006

With frustration levels apparently reaching an all-time high, lawmakers have given the Homeland Security Department a hard deadline to revamp its process for clearing individuals who have been wrongly put on terrorist watch lists.

The fiscal 2007 Homeland Security appropriations bill -- signed into law last week -- requires the department within six months to "establish revised procedures for expeditiously clearing individuals whose names have been mistakenly placed on a terrorist database list or who have names identical or similar to individuals on a terrorist database list."

Frustration and anger has grown in Congress during the last year that government watch lists are riddled with inaccuracies, especially in the aviation arena where innocent U.S. citizens and even lawmakers themselves have been detained because their names appeared on one of the lists.

"If we're going to have a watch list that works, we should fine-tune it," Rep. Zoe Lofgren, D-Calif., said during a June hearing.

Senate Commerce Committee Chairman Ted Stevens, R-Alaska, said in February that his wife, Catherine, was questioned at airport checkpoints because her name matched that of a singer formerly known as Cat Stevens. And well-known Sen. Edward Kennedy, D-Mass, and civil rights pioneer Rep. John Lewis, D-Ga., also have said they were wrongly placed on a watch list and stopped many times.

DOJ_NMG_0079102

A spokesman for the Homeland Security Department was unable to provide comment as of Tuesday afternoon. But Homeland Security Secretary Michael Chertoff and Secretary of State Rice last January announced that the government would "accelerate efforts to establish a government-wide traveler screening redress process to resolve questions if travelers are incorrectly selected for additional screening."

Last Friday, the American Civil Liberties Union called for the government to shut down its aviation watch lists. The demand came in response to a CBS "60 Minutes" report disclosing that the lists include many common names along with people who are dead, in prison, or are international dignitaries, such as the president of Bolivia. The report also said the lists do not include the names of some suspected terrorists because agencies do not want to share them outside the government.

"Until Homeland Security can figure out a way to create a genuine, narrow, targeted list of real terrorists rather than harming innocent people, Congress needs to shut this monstrosity down," said Tim Sparapani, ACLU legislative counsel.

The Homeland Security Department's Transportation Security Administration operates three aviation watch lists: one with names of individuals who are not allowed to fly; one with names who need secondary screening; and one with names who have been cleared through a redress process. The FBI's Terrorist Screening Center is responsible for managing and consolidating all government watch lists.

The FBI and TSA both issued statements in the last two days defending watch lists as valuable counterterrorism tools and clarifying current redress procedures. A TSA spokeswoman said about 35,000 people have sought redress for mistakenly being on an aviation watch list. Both TSA and the FBI declined to reveal names or how many people are on any of the lists, saying that information is secret.

Katrina-Related Brawl With State Farm Heats Up (LAW)

By Peter Geier, The National Law Journal

National Law Journal, October 11, 2006

Allegations by whistleblowers and plaintiffs lawyers that State Farm Fire & Casualty Co. used a "one-size-fits-all" engineering report to deny policyholders' Katrina-related claims are stirring up Mississippi's southern federal district.

State and federal prosecutors and grand jurors are looking into allegations that insurance claims were denied on the basis of a biased engineering report. The allegations were brought to light by two claims adjusters who had worked for an Alabama risk management firm under contract with Bloomington, Ill.-based State Farm.

Richard T. "Flip" Phillips of Smith, Phillips, Mitchell, Scott & Nowak of Batesville, Miss., an attorney representing Judy M. Guice in a mass tort on behalf of Mississippi homeowners who lost their homes, alleges that State Farm's tactics reveal "a calculated strategy of wrongful claims denial." Guice v. State Farm Fire & Casualty Co., No. 06-cv-1 (S.D. Miss.).

"If they're allowed to do this, the lesson the insurance industry will have learned is that in mass catastrophe situations, a calculated course of across-the-board, wrongful claims denial and trying one case at a time pays," Phillips said.

State Farm spokesman Phil Supple said that the company has been resolving claims fairly and is cooperating with state and federal probes into its activities.

Loretta L. Worters, vice president of the New York-based Insurance Information Institute, an insurance industry-funded group, said that the accusations were merely the plaintiffs lawyers latest attempt "to see what, if anything, will stick -- both through the media and in a court of law."

"First, it was the so-called hurricane deductible (which does not exist), then it was the supposedly vague policy language (which, in fact, a judge has ruled is clear); now it is unfounded charges of conspiracy. As each one of [their] arguments gets shot down, [they try] a new tactic," Worters wrote in an e-mail.

Underlying the litigation is the issue of whether the damage to policyholders' homes was caused by Katrina's high winds, which most policies cover, or by the storm surge and high waters, against which many policyholders were not insured. The southern district of Mississippi so far has denied class certification on the ground that each case involves its own set of circumstances as to the percentage of wind to water damage.

But the plaintiffs allege that State Farm used a "generic engineering report ... which concluded that all of the hurricane damage to property on the Mississippi Gulf Coast was caused by storm surge and not by hurricane wind," in essence to deny all of their claims, according to an amended complaint filed in McFarland v. State Farm Fire & Casualty Co., No. 06-466 (S.D. Miss.).

Plaintiffs further allege that State Farm is following a pattern of fraudulent claims handling that was established in Oklahoma, Texas and other jurisdictions around the country.

A federal grand jury in Jackson, Miss., that is investigating these allegations reportedly asked to see the record and transcripts of an Oklahoma insurance claim case in which a state jury awarded $9.9 million in punitive damages in May to a

DOJ_NMG_0079103

homeowner who sued State Farm after a tornado destroyed his home in 1999. Watkins v. State Farm Fire & Casualty Co., No. CJ-2000-303 (Grady Co., Okla., Dist. Ct.).

In a related development, a recent State Farm motion for a protective order identifies by name two of five State Farm employees who are possible targets of state and federal criminal investigations and grand jury proceedings over claims-handling issues. State Farm has sought to prevent its employees from being deposed in civil matters while the criminal probes are pending.

Plaintiffs lawyers support their allegations regarding State Farm's claims handling with at least 15,000 documents copied and disclosed to them and to state and federal law enforcement authorities by Cori Rigsby Moran and Kerri Rigsby, sisters who were formerly adjusting Katrina claims for State Farm through their former employer, E.A. Renfroe & Co. of Birmingham, Ala. The sisters reportedly now work for Richard F. "Dickie" Scruggs of Oxford, Miss., who represents the McFarland plaintiffs. He did not return a call for comment.

Renfroe is now suing Moran and Rigsby in federal court in Alabama, seeking injunctive relief and unspecified damages for the sisters' alleged breach of contract and violation of the Alabama Trade Secrets Act. E.A. Renfroe & Co. Inc. v. Moran, No. 06-1752 (N.D. Ala.).

WAR NEWS:

Baghdad Blasts Kill 17; Dozens Of Bodies Found (NYT)

By Michael Luo

The New York Times, October 11, 2006

BAGHDAD, Oct. 10 — Dozens of bodies turned up in Baghdad and a series of bombs killed at least 17 people on Tuesday, indicating that the sectarian violence in the capital showed little sign of easing, despite efforts by the American military and its Iraqi counterparts to quell it.

At least 50 bodies, riddled with bullets and many bearing signs of torture, were discovered across Baghdad, an Interior Ministry official said. About 60 bodies were discovered the day before.

Meanwhile, a troubled neighborhood at the center of the American military's push to secure the capital was hit by three deadly bomb blasts, including one at a busy bakery, the authorities said.

The bombings came in addition to a series of huge explosions that shook the capital over several hours late Tuesday evening, apparently caused by a fire inside an ammunition holding area at a United States military base in southern Baghdad.

The origins of the blaze are still being investigated, but it set off ammunition and ordnance, including tank rounds and artillery, said Lt. Col. Jonathan B. Withington, a spokesman for the Fourth Infantry Division.

Television images showed an extensive fire burning in the night, punctuated by periodic explosions.

The deadly blasts earlier in the day took place in the southern Baghdad neighborhood of Dora. The area was one of the earliest to experience the sectarian bloodletting in Baghdad.

American and Iraqi soldiers moved into the neighborhood in force in August, as part of a new security plan for the capital that involved neighborhood-by-neighborhood sweeps in which troops would secure and hold areas.

Dora had been mostly quiet over the past two months, aside from periodic explosions that killed small numbers of people. Residents were able to sleep on their rooftops again. Garbage crews moved through and cleaned its streets for the first time in months.

On Tuesday, any semblance of normalcy was shattered, however. About 12:30 p.m. a bomb exploded outside a bakery and killed 10 civilians and wounded four others. The blast reduced the bakery to rubble.

About the same time, six policemen were killed when, as they responded to a report about a body in a car, the car exploded, said an officer of the Rafdian Brigade, an Iraqi commando unit assigned to Dora. Four others were wounded.

A half hour earlier, a roadside bomb killed one policeman and wounded four others, an Interior Ministry official said.

The deadly day in Dora underscored the difficulty for the American military as it tries to secure neighborhoods.

Iraqi lawmakers pushed ahead on Tuesday in their efforts to flesh out a plan introduced by Prime Minister Nuri Kamal al-Maliki to stem the sectarian attacks in the city.

At the heart of the plan is the creation of joint Shiite and Sunni committees that will be in charge of safeguarding each district in Baghdad.

Overseeing their efforts will be a Central Committee for Peace and Security, whose members met Tuesday to discuss a plan to require that each checkpoint in the capital be operated by an equal number of Sunni and Shiite troops, or perhaps by joint teams of police and army officers, said Basim al-Sharif, a Shiite and a committee member.

DOJ_NMG_0079104

The Iraqi immigration minister, Abdul-Samad Sultan, said more than 300,000 Iraqis hade fled their homes since the American-led invasion in 2003, The Associated Press reported. Half of them left after the February bombing of a sacred Shiite shrine in Samarra set off cascades of sectarian violence.

He estimated that about 890,000 Iraqis have moved to Jordan, Iran and Syria since 2003, after the American-led invasion toppled the government of Saddam Hussein.

On Tuesday, the chief judge at the genocide trial of Mr. Hussein once again ejected him from the courtroom. The former dictator is being tried on charges of killing more than 50,000 Kurds in a 1988 military campaign in northeastern Iraq.

When it was his turn to question a prosecution witness, Mr. Hussein made a speech, beginning with a quotation from the Koran. The judge, Muhammad al-Uraibi, who has been stricter in his courtroom than his predecessor, Abdullah al-Amiri, immediately cut him off and then eventually ejected him. Mr. Amiri, the previous chief judge, was removed from his position last month by Mr. Maliki for allegedly showing bias toward the defense.

One of Mr. Hussein's co-defendants, Hussein Rashid, a former military commander, was also dispatched from the courtroom. Mr. Rashid punched a guard and called prosecutors pimps and traitors as he was escorted out by guards.

Meanwhile, the American military reported that a joint United States and Iraqi patrol killed 11 militants on Monday evening in a clash in the southern Shiite city of Diwaniya, a stronghold of the Shiite cleric Moktada al-Sadr and his militia, the Mahdi Army.

Abdul Razzaq al-Nedawi, the head of Mr. Sadr's office in Diwaniya, insisted that no Mahdi Army members were killed in Monday's clash. He said it was provoked by American and Iraqi troops.

"They started to shoot randomly," he said, explaining the soldiers had come to search the al-Qaim mosque in the area but found it empty. "The brothers responded to that and shot back."

The Defense Ministry issued a statement denying that the patrol had raided the mosque and said militants had opened fire on the soldiers.

The military announced the death of an American soldier in Tikrit on Sunday from a roadside bomb.

Bomb Kills 11 At Baghdad Bakery (USAT)

USA Today, October 11, 2006

BAGHDAD — A bomb blew up Tuesday outside a bakery in a mixed Sunni-Shiite neighborhood of Baghdad, killing 11 people who had been waiting in line.

In addition, police told the Associated Press they had discovered the mutilated bodies of 60 men in different parts of Baghdad over the 24-hour period ending Tuesday morning — the latest victims of killings blamed on six months of intensifying Sunni-Shiite fighting.

U.S. forces also continued to pay a toll amid operations aimed at stemming bloodshed in the capital. The U.S. command said five more soldiers had been killed. This month, 37 U.S. servicemembers have died in Iraq.

Late Tuesday, a fire at an ammunition depot at a U.S. base in southeast Baghdad set off explosions that rocked the city. The cause of the fire was not immediately known, and there were no injuries, the U.S. military said.

Bombing At Iraq Bakery Kills At Least 11 (AP)

By Qais Al-bashir

AP, October 11, 2006

A bombing at a Baghdad bakery killed at least 11 people Tuesday as the Iraqi government put forward a new idea to help stop sectarian violence: ensuring security checkpoints in the capital have an equal number of Shiite and Sunni troops.

The bomb, planted under a car in the mixed Sunni-Shiite neighborhood of Dora, ripped through a line of people waiting outside a bakery — the worst in a day of attacks which left at least 23 dead across the country. Dora has long been one of Baghdad's most dangerous areas, with near daily killings

Hours after the bombing, a massive fire broke out Tuesday evening in an ammunition dump on a U.S. military base on Baghdad's southern edge, adjacent to Dora. It set off ordnance in a series of explosions that lasted for hours into the night and shook buildings miles away.

The cause of the fire was not immediately known and there were no injuries, the U.S. military said. A large fire and smoke were seen from the Forward Operating Base Falcon. Blasts from detonating artillery and tank shells sent up sparks, and the force of the explosions could be felt miles away in central Baghdad.

The blaze broke out in an area where ammunition is kept temporarily before distribution to the units at Falcon, where more than three battalions are located, said Lt. Col. Jonathan Withington, a spokesman at the base.

U.S. forces continued to pay a heavy toll amid stepped-up operations aimed at stemming the bloodshed, with the U.S. command announcing the death of five more service members. On Monday, three Marines were killed in fighting in western

DOJ_NMG_0079105

Anbar province, and a soldier died from an attack on his patrol in Baghdad, it said. Another soldier died Sunday from a roadside bomb in Tikrit, north of the capital.

The deaths bring the number of U.S. troops killed in October to 37 — many the result of stepped-up efforts to end violence in the capital.

Authorities discovered the mutilated bodies of 60 men in different parts of Baghdad over the 24-hour period ending Tuesday morning, police said. The bullet-riddled bodies all had their hands and feet bound and showed signs of torture — hallmarks of death-squad killings.

Under intense pressure to halt the sectarian violence, which has killed thousands this year, Prime Minister Nouri al-Maliki a week ago announced a four-point security plan aimed at stopping Shiite-Sunni killings.

In a first step, officials said Tuesday that all security checkpoints in Baghdad would soon be manned by an equal number of Shiite and Sunni Arab troops.

The new effort reflects the deep mistrust between Shiites and Sunnis even within the security forces — effectively putting them together to keep watch on each other. Each side accuses the other of backing militias, and Sunnis in particular say the Shiite-dominated police force often allows Shiite militias to carry out kidnappings and murders.

Al-Maliki's overall plan calls for the creation of local Shiite-Sunni committees that will oversee policing in each district of Baghdad, reporting back to a Central Committee for Peace and Security to coordinate with the security forces and the prime minister.

The parties agreed Saturday on the makeup of the central committee, said a member, Bassem Sherif, who represents the Shiite Fadila party on the body. It includes four representatives each from the Shiite coalition that dominates parliament and the main Sunni coalition, along with one representative each from the Kurds and the Iraqi List, a mixed, secular party, Sherif said.

The committee will meet in coming days to work with the Interior and Defense ministries on arranging the balanced checkpoints, Sherif said. A Sunni participant in Saturday's talks, Khalaf al-Alayan, head of the National Dialogue Council party, confirmed details of the plan.

The six-month wave of Sunni-Shiite killings has fueled the flight of Iraqis from their homes.

Iraq's Immigration Minister Abdul-Samad Sultan said more than 300,000 Iraqis have been displaced since the U.S.-led invasion in 2003. Half of them, he said, fled their homes after the February bombing of a Shiite shrine in the city of Samarra that sparked waves of violence.

Those displaced mostly moved in with their own sectarian communities — Shiites fleeing mainly Sunni or mixed areas to Shiite-dominated ones, and vice versa — exacerbating the segregation of the country of some 30 million.

Some 890,000 Iraqis have moved to Jordan, Iran and Syria since 2003, Sultan said.

In other violence Tuesday, a car bombing in the primarily Sunni neighborhood of Azamiyah in north Baghdad killed four people and wounded nine, police 1st Sgt. Mahmud Hussein said.

The brother of a Baghdad police brigadier was found shot dead, tied to a lamppost in Buhriz, 35 miles north of the capital, police in the nearby city of Baqouba said. Later authorities found the body of another of the brigadier's brothers, also shot, lying in the street.

The bodies of two other shooting victims were found in Khalis, 50 miles north of Baghdad, and another was found in Baqouba, police said.

The U.S. military said Iraqi and U.S. troops killed at least nine fighters in clashes with the Mahdi Army — Iraq's most powerful Shiite militia — in the southern city of Diwaniya on Monday. Two U.S. soldiers were wounded.

On Sunday, U.S.-Iraqi forces in Diwaniya battled for hours with members of the Mahdi Army, who are loyal to radical Shiite cleric Muqtada al-Sadr. The military said 30 militiamen were killed; the militia denied it.

The U.S. command also announced that DNA tests have confirmed that a man shot and killed by British forces in Iraq was the leading al-Qaida terrorist who embarrassed the U.S. military by escaping from the Bagram maximum security military prison in Afghanistan.

Omar al-Farouq was killed Sept. 25 after he fired on British forces during a raid in Basra, 340 miles southeast of Baghdad.

Fire Erupts At U.S. Ammo Dump In Iraq (AP)

By Lee Keath

AP, October 11, 2006

DOJ_NMG_0079106

A fire broke out at an ammunition dump at a U.S. base in southern Baghdad on Tuesday night, setting off a series of explosions from detonating tank and artillery shells that shook buildings miles away. The U.S. military said there were no immediate reports of casualties.

It was not clear whether the ammunition holding area at Forward Operating Base Falcon was hit by an attack. The cause of the fire was not immediately known, said Lt. Col. Christopher C. Garver, a military spokesman.

Explosions from detonating tank and artillery ordnance and small-arms ammunition stored at the site went off for hours after the fire erupted.

Large flames and smoke rose from the region, and flashes from the blasts and showers of sparks were visible on the horizon from several miles away in central Baghdad, where the force of the blasts could be felt. The blasts came at times sporadically, at times in rapid succession, lasting into the night. Helicopters were seen in the night sky flying over the area.

The blaze broke out in an ammunition holding area, where material is kept temporarily before distribution to the units at Falcon, said Lt. Col. Jonathan Withington, a spokesman at the base. He said more than three battalions were stationed there at the time of the fire but he would not give a specific number of troops.

"There is a lot of ammunition there, but it's not a full storage depot," he said. "This does not degrade our operational ability at all."

He said the cause of the fire was under investigation.

Falcon is located in a former commercial trucking depot in a sprawling industrial area at the southern entrance of Baghdad. It is near the violence-torn district of Dora, where U.S. troops have been focusing in a 2-month-old sweep of the capital neighborhood-by-neighborhood aimed at rooting out militants and weapons.

It lies on the main highway heading south of Baghdad. Much of the area around it is sparsely populated, but on the opposite side of the highway, about 600 yards away, are residential neighborhoods.

Iraqi military officials said no evacuations of residents were ordered from the Dora area.

Iraqi Interior Minister Jawad al-Bolani went on television to reassure residents of the capital.

"The situation is under control," he said. "There is an alert to security forces to provide any help to the residents of the area. We are waiting for information from the Americans" on the cause, he said.

U.S. Ammo Dump Explodes In Baghdad (MCT)

By Jay Price

McClatchy Newspapers, October 11, 2006

BAGHDAD, Iraq - A U.S. ammunition dump on the southeastern edge of Baghdad caught fire late Tuesday, setting off at least a half-dozen thunderous explosions and several smaller ones that rattled windows across the city.

Despite the size of the blasts, no casualties were reported, Spc. Jennifer Fulk, a U.S. military spokeswoman, said early Wednesday. There was no information yet on the cause of the fire, Fulk said.

An insurgent group called Al Fataheen Army took credit for the damage in a posting on an Islamic forum used by various insurgent groups in Iraq.

The group said it had attacked the base with several missiles at 11:55 p.m., but that timing cast suspicion on the claim. The explosions, which could be felt throughout the city, had begun about an hour earlier.

The same group claimed responsibility for attacking U.S. camps in northern Iraq on Sunday.

The blasts were the culmination of a particularly violent day in Baghdad.

Police reported that at least five bombs exploded throughout the city, killing at least 10 civilians and at least one police officer. Police also said they'd discovered at least 60 bodies in the 24 hours that ended at 6 a.m. Tuesday. The bodies were bound hand and foot and showed signs of torture, the police said.

An unknown number of troops from the 4th Infantry Division based at Fort Hood, Texas, were at Forward Operating Base Falcon when the base's ammo dump began to explode.

A military statement said the fire began at about 10:40 p.m. and ignited tank and artillery shells and small arms ammunition.

The fire, clouds of smoke and flashes from the ammunition detonating could be seen for miles.

The fire was contained on the base by emergency first responders, and the damage wasn't expected to hinder military operations, the statement said.

Price reports for the Raleigh News & Observer. Contributing to this report were McClatchy Newspapers special correspondents Mohammed al Awsy and Mohammed al Dulaimy.

Explosions Rock Baghdad As US Arms Dump Catches Fire (AFP)

DOJ_NMG_0079107

AFP, October 11, 2006

A fire erupted in an ammunition store at an United States military base in Baghdad, a spokesman said, triggering massive explosions that could be heard across the war-torn Iraqi capital.

Lieutenant Colonel Jonathan Withington of the 4th Infantry Division told AFP that military and civilian personnel had been evacuated from Forward Operating Base Falcon without injury but that the fire was continuing to burn.

"We have a fire," he said. "An ammunition holding area caught on fire. It's in our operating base in the Rasheed area of the city. The ammunition holding area contains tank and artillery rounds as well as small arms ammunition."

The blaze broke out at around 10:40 pm (1940 GMT) and Baghdad was rocked by a series of loud explosions. Iraqi officials appeared on state television to urge calm and prevent rumours of an attack from spreading.

US forces do not yet know the cause of the fire, Withington said.

The damage appeared to have been contained within the base, the US spokesman said, although Iraqi officials said that shells "cooking off" in the fire had crashed down in five districts in the south of the city.

State television showed live pictures of a blazing inferno and ordnance exploding skywards, but there was no immediate news of civilian casualties outside the base.

Two hours after the fire broke out a regular drumbeat of explosions could still be heard five kilometres (2.4 miles) away in the city centre, a barrage more intense that Baghdad's daily diet of car bombs and mortar strikes.

"All coalition forces and workers at the base were safely evacuated. At this time, no injuries have been reported," a coalition news release said.

"Baghdad Joint Coordination Center alerted Iraqi authorities who notified Iraqi citizens in the area of the fire and subsequent detonations. The damage to the area will not degrade the operational capability of MND-B."

Under U.S. Patrol, Once-Tough District Revives (LAT)

By Borzou Daragahi

The Los Angeles Times, October 11, 2006

BAGHDAD — The Amariya neighborhood has won a reputation as the most fearsome quarter of the capital, with car bombs, snipers and frequent clashes between U.S. forces and hardened Sunni Arab fighters.

But over the last few weeks, U.S. officials and Iraqi residents say, life has improved markedly in the notorious district, thanks to an American-led effort to improve security and services.

On a tour of the largely Sunni Arab district with U.S. soldiers Tuesday, a day on which at least 60 mutilated bodies were found elsewhere in Baghdad and violence left an additional 23 dead across Iraq, schoolchildren walked home gingerly along streets recently cleared of rotting garbage mounds. Young men emerged from newly reopened shops on main thoroughfares. Women shopped for vegetables at outdoor produce stands.

"Electricity is a problem, jobs are a problem, there's no gas, but thank God," said one woman as she gestured toward a group of U.S. soldiers, "security has gotten better."

The improvement in Amariya has come at a price, however.

Lt. Col. Gian Gentile, the 4th Infantry Division squadron commander in charge, acknowledged in an interview that he had to move troops from nearby neighborhoods under his command to bolster security in Amariya, risking rising peril in those districts.

He has also had to close off the western Baghdad neighborhood at all but two gateways in an effort to stanch the flow in and out of Sunni Arab insurgents and Shiite militia members. And he has watched helplessly as the district's Shiite Muslim population has plummeted. Once 15%, it is now less than 2%, he said, part of a displacement crisis that has disrupted lives but made neighborhoods such as Amariya less prone to sectarian violence.

He has also had to readjust his views, coming to grips with the hardened opinions of the people he must protect as well as occasionally fight.

"They see the [Sunni Arab] insurgents as their final source of protection," says Gentile, a Danville, Calif., native. "When we leave and they're left with this [Shiite-dominated] sectarian government, who else are they going to be left with?"

Amariya is to Sunni insurgents what Camp Victory — the nearby U.S. military headquarters — is to the Americans, Gentile says. An affluent and leafy suburban enclave teeming with out-of-work officers of toppled President Saddam Hussein's military and security apparatus, Amariya has been a stronghold of anti-American, anti-government and religiously radical groups since the U.S.-led invasion of Iraq in March 2003. American and Iraqi forces are frequently the targets of car bombs and snipers, including one who wounded an Iraqi soldier in Amariya on Tuesday.

"Down, down U.S.A.!" say the fading graffiti on an Amariya side street.

But though Sunni Arab militants continue to use Amariya as a haven, the general mood toward Americans has shifted since Iraq's Shiite-led elected government began to exert its muscle. In the wake of anti-Sunni reprisals that followed the Feb. 22

DOJ_NMG_0079108

bombing of a Shiite shrine in Samarra, many Sunni Muslims in Amariya came to see the Americans they detest as occupiers as the only force capable of protecting them from a Shiite hunger for revenge.

Until March and April, there was little U.S. presence in Amariya, Gentile said. Once Gentile took over the district, he said, he made strenuous efforts to build goodwill. Drawing lessons from previous commanders, he softened his tactical approach, ordering his troops to drive slowly and not brandish weapons at passing motor vehicles.

"We started off with our gunners showing their weapons and being very aggressive," Gentile said. "But we've moved away from that. As much time as we've spent out there, we've learned that the traffic is just traffic."

Sometimes his men complain about their peacekeeping posture.

"I'm a soldier," said Spc. Justin Cook, 26, an affable former bartender from Titusville, Fla. "They didn't train me to do this."

But during a drive through the district, Cook frequently yielded to oncoming Iraqi drivers. Gentile took other practical steps to improve the area's quality of life. After more than a dozen suicide bombs hit a pair of checkpoints along a main street in June and July, Gentile simply removed the checkpoints. As many as 60% of the businesses that were shut down along the street have reopened.

Gentile's armored reconnaissance squadron, formally part of the 4th Brigade of the 4th Infantry Division but currently attached to the 1st Armored Division, launched an effort to clean up the garbage-strewn district as part of an operation aimed at securing several volatile Baghdad neighborhoods. U.S. patrols increased about 50%, Gentile said.

"All they saw before was American patrols … up and down the main streets," Gentile said. "Now we've got American patrols out there with the Iraqi army. And we've got garbage trucks out here and workers from Amariya picking up garbage. It gave them a sense of security that things are a little better."

The improvements to the quality of life have been tangible. Artist Fuad Hamdi, a 44-year-old Amariya resident reached by phone Tuesday night, said he had fled his neighborhood. "We were living in terror, fear and chaos, and no one dared to leave his house unless it was an emergency," he said.

When he heard from neighbors that the security situation had improved, he returned, he said.

But Gentile readily acknowledges that despite the improvements, "bad things still happen in Amariya every day," including, he said, roadside bombings targeting U.S. patrols and killings of Iraqi officials and ordinary residents.

To consolidate the district's modest improvements, Gentile hopes to build a new police station staffed by locals.

The police are under the control of the Shiite-dominated Ministry of the Interior, whose alleged excesses against Sunnis are believed to fuel the popularity of the insurgents. The force remains an object of mistrust in Amariya.

Reducing the violence in Baghdad has proved bedeviling for U.S. forces. Despite a similar security crackdown in the southern neighborhood of Dora, a car bomb killed 10 civilians and injured four others at a bakery in the district Tuesday, and a roadside bomb killed a police officer.

Bombs in or near the capital killed at least six Iraqi police officers and soldiers and injured 10.

The U.S. military reported Tuesday that a soldier attached to the 25th Combat Aviation Brigade died of wounds sustained when his vehicle was struck by a bomb Sunday north of Tikrit. Three Marines assigned to the 1st Brigade, 1st Armored Division, were killed Monday as a result of "enemy action" in the western province of Al Anbar, the U.S.-led multinational force said today.

Among the corpses found was that of Azad Mohammed, a 29-year-old Kurdish radio reporter abducted a week ago. Ali Kareem, a journalist working for a weekly magazine, was abducted Tuesday on his way home from work.

Study Estimates 600,000 Iraqis Dead By Violence (USAT)

By Gregg Zoroya, Usa Today

USA Today, October 11, 2006

More than 600,000 Iraqis have died by violence since the U.S.-led invasion in 2003, according to a study released today by researchers at Johns Hopkins University.

The figure is based on surveys of households throughout most of the country. It vastly exceeds estimates cited by the Iraqi government, the United Nations, aid and anti-war groups, and President Bush.

The new estimate was immediately challenged by the Pentagon. Lt. Col. Mark Bellesteros, a Pentagon spokesman, said the Iraqi government “would be in a better position … to provide more accurate information on deaths in Iraq.”

Frederick Jones, a spokesman for the National Security Council said “many experts” found that a 2004 study by the same group “wildly inflated the findings.” That study said the war had caused 100,000 Iraqi deaths.

“This study appears to be equally flawed,” he said. The new study said the deaths have resulted from coalition military activity, crime and religious violence.

Iraq's Health Ministry estimated 50,000 violent deaths since the war began, through June. Last December, President Bush put the figure at 30,000. The Brookings Institution, a Washington think tank, estimated the death toll at 60,000.

DOJ_NMG_0079109

Overall, the analysis estimates that 2.5% of the Iraqi population has died as a result of the conflict.

The research relied on random sampling of 1,800 Iraqi households by researchers from the Bloomberg School of Public Health at Johns Hopkins University in Baltimore and the School of Medicine at Al Mustansiriya University in Baghdad. Based on deaths suffered by those households, analysts calculated an average of about 600 deaths a day since the invasion.

"I think it's perfectly plausible," said the study's lead author, Gilbert Burnham, professor of international health at Johns Hopkins.

Then-British foreign secretary Jack Straw was among those who criticized the earlier study.

This time the researchers doubled the size of their random survey. In 92% of the homes in which residents reported deaths, families had death certificates, they said.

Beyond violent deaths, the study said about 53,000 deaths from other causes, such as accident and illness, were attributable to the war because of its effect on health care.

Gunfire was the leading cause of violent deaths; car bomb fatalities are rising, the study said.

James Fearon, a Stanford University political scientist and Iraq expert, said, "One thing (the study may) certainly do is confirm the view that there is a very, very serious civil war going in Iraq."

Iraqi Death Toll Exceeds 600,000, Study Estimates (WSJ)

By Neil King Jr.

The Wall Street Journal, October 11, 2006

WASHINGTON -- A new study asserts that roughly 600,000 Iraqis have died from violence since the U.S.-led invasion in March 2003, a figure many times higher than any previous estimate.

The study, to be published Saturday in the British medical journal the Lancet, was conducted by the Johns Hopkins Bloomberg School of Public Health by sending teams of Iraqi doctors across Iraq from May through July. The findings are sure to draw fire from skeptics and could color the debate over the war ahead of congressional elections next month.

The Defense Department until 2004 eschewed any effort to compute the number of Iraqi dead but this summer released a study putting the civilian casualty rate between May and August at 117 people a day. Other tabulations using different methodologies put the range of total civilian fatalities so far from about 50,000 to more than 150,000. President Bush in December said "30,000, more or less" had died in Iraq during the invasion and in the violence since.

The Johns Hopkins team conducted its study using a methodology known as "cluster sampling." That involved randomly picking 47 clusters of households for a total 1,849 households, scattered across Iraq. Team members interviewed each household about any deaths in the family during the 40 months since the invasion, as well as in the year before the invasion. The team says it reviewed death certificates for 92% of all deaths reported. Based on those figures, it tabulated national mortality rates for various periods before and after the start of the war. The mortality rate last year was nearly four times the preinvasion rate, the study found.

"Since March 2003, an additional 2.5% of Iraq's population has died above what would have occurred without conflict," the report said. The country's population is roughly 24 million people.

Human Rights Watch has estimated Saddam Hussein's regime killed 250,000 to 290,000 people over 20 years.

The Lancet study, funded largely by the Massachusetts Institute of Technology's Center for International Studies, said while the percentage of deaths attributed to the U.S.-led coalition has decreased over the past year, coalition forces were involved in 31% of all violent deaths since March 2003. Most of the deaths in Iraq, particularly in the past two years, have been caused by insurgent, terrorist and sectarian violence.

Overall, the study found 55% of deaths since March 2003 were due to violence. Of that subset, 56% resulted from gunshots; car bombs and other explosives accounted for 27%, and airstrikes caused 13%. The rest were due to other factors.

Paul Bolton, a public-health researcher at Boston University who has reviewed the study, called the methodology "excellent" and said it was standard procedure in a wide range of studies he has worked on. "You can't be sure of the exact number, but you can be quite sure that you are in the right ballpark," he said.

A similar, smaller study by the same team in 2004 put the number of deaths at the time at 9,000 to 194,000. That report drew fire for the breadth of its estimate. In part to offset such criticism, the researchers said they picked the largest sample possible for this survey, after considering the high level of danger involved in sending teams door-to-door in Iraq.

The study's lead researchers, Gilbert Burnham and Les Roberts of Johns Hopkins, have done studies in the Congo, Rwanda and other war zones. "This is a standard methodology that the U.S. government and others have encouraged groups to use in developing countries," said Mr. Burnham, who defended the study as "a scientifically extremely strong paper."

This study, "The Human Cost of the War in Iraq," puts civilian fatalities at 426,369 to 793,663 but gives a 95% certainty to the figure of 601,027.

DOJ_NMG_0079110

Hamit Dardagan, co-founder of Iraq Body Count, a London-based human-rights group, called the Lancet study's figures "pretty shockingly high." His group tabulates the civilian death toll based on media reports augmented by local hospital and morgue records. His group says it has accumulated reports of as many as 48,693 civilian deaths caused by the U.S. intervention.

Mr. Burnham said the disparity between his survey and tabulations like Iraq Body Count are largely because of the heavy media and government focus on Baghdad and a few other cities. "What our data show is that the level of violence is going on throughout the country," he said.

Lt. Col. Mark Ballesteros, a Defense Department spokesman, said the Pentagon doesn't comment on reports that haven't been publicly released. Nonetheless, he said, "the coalition takes enormous precautions to prevent civilian deaths and injuries," adding that "the Iraqi ministry of health would be in a better position, with all of its records, to provide more accurate information on deaths in Iraq."

Since 2004, the Pentagon has collected data on civilian deaths in incidents where coalition forces were involved. According to its August civilian-casualty report, those figures show that the daily civilian death rate has increased nearly sixfold, to almost 120 this summer from about 20 in early 2004. The Lancet study cites the Pentagon's numbers to back its own findings, saying the mortality-rate increases in both tabulations closely parallel one another.

Iraqi Dead May Total 600,000, Study Says (NYT)

By Sabrina Tavernise And Donald G. Mcneil Jr.

The New York Times, October 11, 2006

BAGHDAD, Oct. 10 — A team of American and Iraqi public health researchers has estimated that 600,000 civilians have died in violence across Iraq since the 2003 American invasion, the highest estimate ever for the toll of the war here.

The figure breaks down to about 15,000 violent deaths a month, a number that is quadruple the one for July given by Iraqi government hospitals and the morgue in Baghdad and published last month in a United Nations report in Iraq. That month was the highest for Iraqi civilian deaths since the American invasion.

But it is an estimate and not a precise count, and researchers acknowledged a margin of error that ranged from 426,369 to 793,663 deaths.

It is the second study by researchers from the Johns Hopkins Bloomberg School of Public Health. It uses samples of casualties from Iraqi households to extrapolate an overall figure of 601,027 Iraqis dead from violence between March 2003 and July 2006.

The findings of the previous study, published in The Lancet, a British medical journal, in 2004, had been criticized as high, in part because of its relatively narrow sampling of about 1,000 families, and because it carried a large margin of error.

The new study is more representative, its researchers said, and the sampling is broader: it surveyed 1,849 Iraqi families in 47 different neighborhoods across Iraq. The selection of geographical areas in 18 regions across Iraq was based on population size, not on the level of violence, they said.

The study comes at a sensitive time for the Iraqi government, which is under pressure from American officials to take action against militias driving the sectarian killings.

In the last week of September, the government barred the central morgue in Baghdad and the Health Ministry — the two main sources of information for civilian deaths — from releasing figures to the news media. Now, only the government is allowed to release figures. It has not provided statistics for September, though a spokesman said Tuesday that it would.

The American military has disputed the Iraqi figures, saying that they are far higher than the actual number of deaths from the insurgency and sectarian violence, in part because they include natural deaths and deaths from ordinary crime, like domestic violence.

But the military has not released figures of its own, giving only percentage comparisons. For example, it cited a 46 percent drop in the murder rate in Baghdad in August from July as evidence of the success of its recent sweeps. At a briefing on Monday, the military's spokesman declined to characterize the change for September.

The military has released rough counts of average numbers of Iraqis killed and wounded in a quarterly accounting report mandated by Congress. In the report, "Measuring Stability and Security in Iraq," daily averages of dead and wounded Iraqi civilians, soldiers and police officers rose from 26 a day in 2004 to almost 120 a day in August 2006.

The study uses a method similar to that employed in estimates of casualty figures in other conflict areas like Darfur and Congo. It sought to measure the number of deaths that occurred as a result of the war.

It argues that absolute numbers of dead, like morgue figures, could not give a full picture of the "burden of conflict on an entire population," because they were often incomplete.

DOJ_NMG_0079111

The mortality rate before the American invasion was about 5.5 people per 1,000 per year, the study found. That rate rose to 19.8 deaths per 1,000 people in the year ending in June.

Gunshots were the largest cause of death, the study said, at 56 percent of all violent deaths, while car bombs accounted for about 13 percent. Deaths caused by the American military declined as an overall percentage from March 2003 to June 2006.

Violent deaths have soared since the American invasion, but the rise is in part a matter of spotty statistical history. Under Saddam Hussein, the state had a monopoly on killing, and the deaths of thousands of Iraqi Shiites and Kurds that it caused were never counted.

While the near collapse of the Iraqi state makes precise record-keeping difficult, authorities have made considerable progress toward tracking death figures. In 2004, when the Johns Hopkins study was first released, authorities were still compiling deaths on an ad hoc basis. But by this year, they were being provided regularly.

Iraqi authorities say morgue counts are more accurate than is generally thought. Iraqis prefer to bury their dead immediately, and hurry bodies of loved ones to plots near mosques or, in the case of Shiites, in sacred burial sites. Even so, they have strong incentives to register the death with a central morgue or hospital in order to obtain a death certificate, required at highway checkpoints, by cemetery workers, and for government pensions. Death certificates are counted in the statistics kept by morgues around the country.

The most recent United Nations figure, 3,009 Iraqis killed in violence across the country in August, was compiled by statistics from Baghdad's central morgue, and from hospitals and morgues countrywide. It assumes a daily rate of about 97.

The figure is not exhaustive. A police official at Yarmouk Hospital in Baghdad who spoke on the condition of anonymity said he had seen nationwide counts provided to the hospital that indicated as many as 200 people a day were dying.

Gilbert Burnham, the principle author of the study, said the figures showed an increase of deaths over time that was similar to that of another civilian casualty project, Iraq Body Count, which collates deaths reported in the news media, and even to that of the military. But even Iraq Body Count puts the maximum number of deaths at just short of 49,000.

As far as skepticism about the death count, he said that counts made by journalists and others focused disproportionately on Baghdad, and that death rates were higher elsewhere.

"We found deaths all over the country," he said. Baghdad was an area of medium violence in the country, he said. The provinces of Diyala and Salahuddin, north of Baghdad, and Anbar to the west, all had higher death rates than the capital.

Statistics experts in the United States who were able to review the study said the methods used by the interviewers looked legitimate.

Robert Blendon, director of the Harvard Program on Public Opinion and Health and Social Policy, said interviewing urban dwellers chosen at random was "the best of what you can expect in a war zone."

But he said the number of deaths in the families interviewed — 547 in the post-invasion period versus 82 in a similar period before the invasion — was too few to extrapolate up to more than 600,000 deaths across the country.

Donald Berry, chairman of biostatistics at M. D. Anderson Cancer Center in Houston, was even more troubled by the study, which he said had "a tone of accuracy that's just inappropriate."

Study Claims Iraq's 'Excess' Death Toll Has Reached 655,000 (WP)

By David Brown

The Washington Post, October 11, 2006

A team of American and Iraqi epidemiologists estimates that 655,000 more people have died in Iraq since coalition forces arrived in March 2003 than would have died if the invasion had not occurred.

The estimate, produced by interviewing residents during a random sampling of households throughout the country, is far higher than ones produced by other groups, including Iraq's government.

It is more than 20 times the estimate of 30,000 civilian deaths that President Bush gave in a speech in December. It is more than 10 times the estimate of roughly 50,000 civilian deaths made by the British-based Iraq Body Count research group.

The surveyors said they found a steady increase in mortality since the invasion, with a steeper rise in the last year that appears to reflect a worsening of violence as reported by the U.S. military, the news media and civilian groups. In the year ending in June, the team calculated Iraq's mortality rate to be roughly four times what it was the year before the war.

Of the total 655,000 estimated "excess deaths," 601,000 resulted from violence and the rest from disease and other causes, according to the study. This is about 500 unexpected violent deaths per day throughout the country.

The survey was done by Iraqi physicians and overseen by epidemiologists at Johns Hopkins University's Bloomberg School of Public Health. The findings are being published online today by the British medical journal the Lancet.

DOJ_NMG_0079112

The same group in 2004 published an estimate of roughly 100,000 deaths in the first 18 months after the invasion. That figure was much higher than expected, and was controversial. The new study estimates that about 500,000 more Iraqis, both civilian and military, have died since then -- a finding likely to be equally controversial.

Both this and the earlier study are the only ones to estimate mortality in Iraq using scientific methods. The technique, called "cluster sampling," is used to estimate mortality in famines and after natural disasters.

While acknowledging that the estimate is large, the researchers believe it is sound for numerous reasons. The recent survey got the same estimate for immediate post-invasion deaths as the early survey, which gives the researchers confidence in the methods. The great majority of deaths were also substantiated by death certificates.

"We're very confident with the results," said Gilbert Burnham, a Johns Hopkins physician and epidemiologist.

A Defense Department spokesman did not comment directly on the estimate.

"The Department of Defense always regrets the loss of any innocent life in Iraq or anywhere else," said Lt. Col. Mark Ballesteros. "The coalition takes enormous precautions to prevent civilian deaths and injuries."

He added that "it would be difficult for the U.S. to precisely determine the number of civilian deaths in Iraq as a result of insurgent activity. The Iraqi Ministry of Health would be in a better position, with all of its records, to provide more accurate information on deaths in Iraq."

Ronald Waldman, an epidemiologist at Columbia University who worked at the Centers for Disease Control and Prevention for many years, called the survey method "tried and true," and added that "this is the best estimate of mortality we have."

This viewed was echoed by Sarah Leah Whitson, an official of Human Rights Watch in New York, who said, "We have no reason to question the findings or the accuracy" of the survey.

"I expect that people will be surprised by these figures," she said. "I think it is very important that, rather than questioning them, people realize there is very, very little reliable data coming out of Iraq."

The survey was conducted between May 20 and July 10 by eight Iraqi physicians organized through Mustansiriya University in Baghdad. They visited 1,849 randomly selected households that had an average of seven members each. One person in each household was asked about deaths in the 14 months before the invasion and in the period after.

The interviewers asked for death certificates 87 percent of the time; when they did, more than 90 percent of households produced certificates.

According to the survey results, Iraq's mortality rate in the year before the invasion was 5.5 deaths per 1,000 people; in the post-invasion period it was 13.3 deaths per 1,000 people per year. The difference between these rates was used to calculate "excess deaths."

Of the 629 deaths reported, 87 percent occurred after the invasion. A little more than 75 percent of the dead were men, with a greater male preponderance after the invasion. For violent post-invasion deaths, the male-to-female ratio was 10-to-1, with most victims between 15 and 44 years old.

Gunshot wounds caused 56 percent of violent deaths, with car bombs and other explosions causing 14 percent, according to the survey results. Of the violent deaths that occurred after the invasion, 31 percent were caused by coalition forces or airstrikes, the respondents said.

Burnham said that the estimate of Iraq's pre-invasion death rate -- 5.5 deaths per 1,000 people -- found in both of the Hopkins surveys was roughly the same estimate used by the CIA and the U.S. Census Bureau. He said he believes that attests to the accuracy of his team's results.

He thinks further evidence of the survey's robustness is that the steepness of the upward trend it found in excess deaths in the last two years is roughly the same tendency found by other groups -- even though the actual numbers differ greatly.

An independent group of researchers and biostatisticians based in England produces the Iraq Body Count. It estimates that there have been 44,000 to 49,000 civilian deaths since the invasion. An Iraqi nongovernmental organization estimated 128,000 deaths between the invasion and July 2005.

The survey cost about $50,000 and was paid for by Massachusetts Institute of Technology's Center for International Studies.

Staff researcher Madonna Lebling contributed to this report.

3 U.S. Marines, 2 Soldiers Die In Iraq (AP)

AP, October 11, 2006

Three U.S. Marines and two soldiers were killed in fighting in Iraq, the U.S. command said Wednesday. The Marines, assigned to 1st Brigade, 1st Armored Division, died Monday from enemy action in Iraq's western Anbar province, the military said in a statement. It did not provide further details.

DOJ_NMG_0079113

Also Monday, a U.S. soldier was killed when his patrol was attacked by insurgents in an eastern part of Baghdad, the military said.

The second soldier, attached to the 25th Combat Aviation Brigade, died of wounds from an explosion during a vehicle patrol Sunday north of the city of Tikrit.

No further details were available, and the soldiers' names were being withheld pending notification of family.

U.S. Troops Often Need Iraqi Approval To Act (USAT)

By Rick Jervis

USA Today, October 11, 2006

BAGHDAD — U.S. and Iraqi military forces battling militias in Baghdad often must seek permission from Iraq's government before launching even routine missions, complicating efforts to loosen the grip of religious violence in the capital.

Lt. Col. Avanulas Smiley, commander of the 1st Battalion, 23rd Infantry Regiment, which patrols northwest Baghdad, said the requirements have made some operations difficult but so far haven't limited his unit's ability to fight the enemy.

"I have been able to exercise and execute everything we've wanted to do," Smiley said. "Now, how easy that's been to get through the approval process, we could debate that endlessly. Sometimes those things are difficult."

The U.S. military has said its main focus now is securing Baghdad, where religious killings and militia violence is the main threat. Tackling militias is a sensitive matter for Iraq's Shiite-dominated government.

One of the largest Shiite militias, the Mahdi Army, is loyal to Muqtada al-Sadr, a radical cleric whose forces have battled the American military. Today, al-Sadr's political organization is a key part of the coalition government of Prime Minister Nouri al-Maliki. Al-Sadr's organization controls 30 seats in Parliament and four Cabinet posts.

"The government, in a sense, is talking about taking on some of the very elements that support it," said Andrew Krepinevich of the Washington-based Center for Strategic and Budgetary Assessments.

Riyad al-Nouri, a senior member of al-Sadr's political organization, said al-Sadr has denounced the killings. "These accusations are false and aimed at ruining this great movement," he said.

The U.S. military says it needs approval before entering government offices and mosques and before targeting high-ranking Shiite leaders suspected of militia ties. U.S. troops won't conduct major operations into Sadr City, the sprawling Shiite slum in Baghdad, without al-Maliki's approval, Maj. Gen. William Caldwell, the top U.S. spokesman in Iraq, said last week. "The Iraqi security forces, with coalition forces in support, will conduct operations there whenever the prime minister so dictates," he said.

The political considerations have complicated matters for troops operating in Baghdad. 1st Sgt. John Blue of the 1st Battalion, 23rd Infantry Regiment said the Baghdad battle is far different from his experience in the northern cities of Tal Afar and Mosul in 2004. In Baghdad, soldiers are operating "not only under the guidance of your command, but under the guidance of the government of Iraq as well."

Government spokesman Ali al-Dabagh said the al-Maliki government is not protecting allies when it disapproves target requests. "The government is behaving as a sovereign and legitimate government and is taking proper action to prosecute anyone who violates the law," he said.

He said al-Sadr has called for an end to the violence, and that rogue gunmen posing as Mahdi militants are carrying out the killings.

The al-Maliki government is attempting to reach a political settlement with militias. But some officers think a direct confrontation with the Mahdi Army may be inevitable.

"At some point, from the coalition side, we have to say (the Mahdi Army) is a terrorist organization that must be dealt with by the Iraqi government and the U.S.," said Brig. Gen. Dana Pittard, head of the Iraqi Assistance Group. The Mahdi Army "hasn't seen the full weight of what we could put on them."

DNA Shows Dead Man Was Al-Qaida Militant (AP)

By David Rising

AP, October 11, 2006

DNA tests have confirmed that a man shot to death by British forces was a leading al-Qaida militant who embarrassed the U.S. military by making an unprecedented escape from a maximum-security military prison in Afghanistan, the U.S. command said Tuesday.

Omar al-Farouq was shot and killed Sept. 25 after he opened fire on British forces during a raid on his home in Basra, 340 miles southeast of Baghdad.

DOJ_NMG_0079114

British forces had said at the time that they had hoped to capture the suspect, but had returned fire on him when he started shooting at them.

"After taking photographs and gathering DNA evidence from the individual, ground forces left the suspected terrorist remains at the site," the U.S. military said. "It was later determined through DNA gathered the individual killed was Omar al-Farouq."

Al-Farouq, who allegedly led al-Qaida's Southeast Asia operations, had slipped into Iraq three months earlier, according to police. It was not known why al-Farouq fled to Iraq, but officials have said he was born in Kuwait to Iraqi parents and may have had roots in the area.

He and three other al-Qaida suspects escaped from Bagram, in central Afghanistan, in July 2005, picking locks and navigating a minefield, then evading a massive manhunt.

The escaped prisoners later appeared in a video sent to the Dubai-based television station Al-Arabiya and boasted of their feat.

The Pentagon waited until November to confirm his escape and the delay upset Indonesia, which had arrested al-Farouq in 2002 and turned him over to the United States.

Al-Farouq has been linked to thwarted plots on U.S. embassies in Southeast Asia, and is alleged to have been a key link between al-Qaida and regional terrorists.

On hearing the initial reports of his death, his Indonesia wife said she almost fainted, but then wondered if the news was true. "I still have faith he is still alive," Mira Agustina told el-Shinta radio at the time.

GOP Senator Wants Iraq War Policy Change (AP-Y)

By Anne Plummer Flaherty, Associated Press Writer

AP, October 11, 2006

Sen. Olympia Snowe joined a growing list of Republicans calling for a change of course in Iraq, a position that could undermine President Bush's election-year assertion that the nation shouldn't set a timetable for troops to come home.

Snowe, a moderate who often bucks the Republican Party line, said in a statement Tuesday more should be done to pressure the Iraqis to take control of their country and make clear U.S. support is not unlimited.

Her remarks echoed those of Senate Armed Services Committee Chairman John Warner, R-Va., who last week said Congress should reconsider its options if the security situation — which he described as dire — does not improve in the next couple of months.

Warner is not up for re-election, while Snowe is, although she is considered a shoo-in.

As the Nov. 7 elections inch closer, more and more Republicans have grown louder in expressing their opposition to the White House's handling of the war, which remains unpopular with voters and a thorn in the side of Republicans struggling to maintain control of Congress.

Among those voicing their disappointment with the war are Republican Sens. Susan Collins of Maine and Chuck Hagel of Nebraska, along with Reps. Christopher Shays of Connecticut and Walter Jones of North Carolina.

"As conditions in Iraq continue to worsen, there must be no question among the administration, the Congress and the Iraqi unity government that staying the course is neither an option nor a plan," Snowe said Tuesday.

Last year, the Senate overwhelmingly passed a measure championed by Warner that labeled 2006 the year of transition in Iraq. But a spike in U.S. casualties and ethnic violence kept troop numbers high with no chance troops will return home in large numbers by the time voters head to the poll.

Iraqi Airport Hopes To Land Tourists, NASA (WP)

By Robin Wright

The Washington Post, October 11, 2006

There's at least one optimist in Iraq these days.

The Kurds are building a new $300 million airport in Irbil that will take the biggest aircraft in the world, including the Russian Antonov 225 cargo plane and the American C-5 Galaxy, which is so big that the Wright brothers could have made their entire flight within its cargo bay.

The Kurds are hoping their dramatic mountain region, the one tranquil part of Iraq, will become a tourist haven as well as a transit refueling stop for international carriers between Europe and Asia or Australia.

But Kurdistan Regional Government Civil Aviation Director Zaid Zwain hopes the airport, scheduled for completion next year, will intrigue another potential customer: NASA.

DOJ_NMG_0079115

When Secretary of State Condoleezza Rice's military aircraft developed technical problems in Irbil last week, Zwain took advantage of the two-hour delay to tell U.S. officials and journalists about his goal of becoming a backup landing strip for NASA shuttles for emergency landings.

The runway will be about three miles long -- just a bit longer than the length required by the space shuttle, he told members of the U.S. delegation. "If you have any trouble," Zwain offered, "you can land here free of charge."

Enlistment Success Story (WSJ)

The Wall Street Journal, October 11, 2006

Critics of the Iraq war often slam the Bush Administration for sending unwitting American soldiers off to an unwinnable battle. The question is: On whose behalf are these concerned folks speaking?

Not the military, judging from the impressive recruitment and retention numbers for the armed forces just released by the Defense Department. The Pentagon announced yesterday that in fiscal 2006 the Army, Navy, Air Force and Marines all met or exceeded active-duty recruitment goals. More impressive, the number of active duty servicemen who re-enlisted exceeded the DoD's goals in every area. Looks like many troops believe in the mission enough to willingly return to a difficult battlefield.

As much as these numbers speak to patriotism, they also say something about the Defense Department's efforts to modernize its recruitment and retention program. This year's achievements are in contrast to 2005, when the Army fell about 6,600 recruits short of its goal of 80,000. Since then, services have added recruiters, revamped advertising and made a greater effort to reach out to the families of potential or acting servicemen, as spouses and relatives often help with decisions to enlist or re-enlist. The retention numbers are particularly important for the Pentagon because these experienced servicemen train the next generation.

Critics took an immediate swipe at the new numbers, arguing that the Army had raised recruits' maximum allowable age to 42 from 35. Yet it turns out a tiny fraction -- maybe 500 -- of new soldiers fall into that category.

The other standard complaint is that the military meets its goals because it offers cash bonuses. But these youngsters had a choice in FY 2006: The military's recruitment success took place in a period of strong economic growth that offered young people ever greater civilian job opportunities. Anyway, given how fierce the competition is for talent, the military would be derelict to not offer competitive incentives to get the best young Americans.

Many of those young people, despite the luxury of choice, have decided to ship off to boot camp and join the world's finest all-volunteer military force. It'd be nice if a few more politicians and pundits respected their decision.

Data Suggests Vast Costs Loom In Disability Claims (NYT)

By Scott Shane

The New York Times, October 11, 2006

Nearly one in five soldiers leaving the military after serving in Iraq and Afghanistan has been at least partly disabled as a result of service, according to documents of the Department of Veterans Affairs obtained by a Washington research group.

The number of veterans granted disability compensation, more than 100,000 to date, suggests that taxpayers have only begun to pay the long-term financial cost of the two conflicts. About 567,000 of the 1.5 million American troops who have served so far have been discharged.

“The trend is ominous,” said Paul Sullivan, director of programs for Veterans for America, an advocacy group, and a former V.A. analyst.

Mr. Sullivan said that if the current proportions held up over time, 400,000 returning service members could eventually apply for disability benefits when they retired.

About 2.6 million veterans were receiving disability compensation as of 2005, according to testimony to Congress by the V.A. The largest group of recipients is from the Vietnam era. Of the 1.1 million who served in the Middle East during the Persian Gulf war in 1991, 291,740 have been granted disability compensation.

The documents on the current conflicts provide no details on the type of disabilities claimed by veterans. Most were found to be 30 percent disabled or less, and one in 10 recipients was found to be 100 percent disabled. Payments run from a few hundred dollars to more than $1,000 a month depending on the severity of the disability.

A separate V.A. health care report shows that the most common treatments sought by recently discharged troops are for musculoskeletal disorders like back pain, followed by mental disorders, notably post traumatic stress disorder. About 30,000 Iraq and Afghanistan veterans have sought treatment for post traumatic stress, which afflicts soldiers who have been under fire or in prolonged danger of attack.

DOJ_NMG_0079116

A V.A. spokesman, Terry Jemison, said "service-related" disabilities could include an amputation as the result of a bomb injury or a case of diabetes or heart disease that was first diagnosed or found to get worse while in uniform. Mr. Jemison said officials had no cost projections for disability payments to Iraq and Afghanistan veterans.

The documents were obtained under the Freedom of Information Act by the National Security Archive at George Washington University.

The documents show that 37 percent of active duty veterans have filed for disability compensation, compared with 20 percent of those who served with National Guard or Reserve units. Also, 18 percent of claims filed by Guard and Reserve soldiers are denied, compared with 8 percent of those filed by active duty troops.

The report offered no explanation for the differences, but veterans' advocates said efforts to explain V.A. procedures might be better for those leaving active duty than those offered to reservists.

"The Guard and reservists may be falling through the cracks at a higher rate," said Joseph A. Violante, national legislative director for Disabled American Veterans. "The V.A. needs to study why there's a difference."

Mr. Violante, a Vietnam veteran, said young soldiers returning from war often shrugged off their injuries and did not necessarily seek compensation right away. "But as they get older," he said, "and their injuries cause them more problems, then they're more likely to file."

In recent years, disability compensation programs have seen a number of changes that are likely to increase the filing of claims by veterans.

Congress told the V.A. last year to advertise the availability of compensation to veterans in states where payments had been disproportionately low, a program that the agency has predicted will attract nearly 100,000 new applicants.

3rd Iraq Death Has One Town Shaken To Core (NYT)

By Peter Applebome

The New York Times, October 11, 2006

HIGHLAND, N.Y.

When Eugene Williams was killed by a suicide bomber north of Najaf, Iraq, on March 29, 2003, the grief was shadowed by what looked like a cruel accident of history. Only 11 days later, Baghdad fell. If he had lived a few more days, people thought, the war would have been over.

When Doron Chan died on March 18, 2004, after his vehicle turned over near Balad, it seemed too much to bear. This Hudson River town of 10,000 had accounted for three of the 58,000 servicemen lost in Vietnam. Now two of its sons were among what was then 600 lost in Iraq? How could that be?

But when Pfc. Michael K. Oremus — "Mikey O" to his friends — was killed by a sniper bullet in Baghdad on Oct. 2, the numbers lost all meaning, washed away by tears: Jimmy Ventriglia crying all 45 minutes of his drive to coach soccer at West Point, Kevin Brennie unable to pull himself together when he heard the news at the town hall, tears and more tears at the wake here yesterday.

Death is more tornado than hurricane, picking its spots with capricious malice, but a third soldier gone, Mikey O, in this close-knit throwback of a town, Grover's Corners on the Hudson, seemed particularly beyond grief, beyond pain, beyond knowing.

"You have to understand, all the relationships here are so layered," said Peter Harris, who coached Mr. Oremus on the high school soccer team and taught him English. "You know people, you know their brothers and their parents, you know them for generations. So I held Michael when he was a baby, I played with him when he was 2 or 3, I coached him in high school, I played soccer with him after he graduated, as a friend. You don't experience that most places in the world. But you do here."

In this Ulster County town of deep ties and long memories, where family and soccer are two of the most enduring threads, few family names mean more than Oremus. Michael's older brothers, Eric and Richard, were soccer stalwarts. His parents, Madeline and Bruce, were universally admired. And when Bruce Oremus, who coached youth soccer teams in Highland and taught special education nearby in New Paltz, died of cancer in 1995, everyone in town shared the pain.

Many also shared the job of raising Michael, then 11 years old, a small, thin boy with a shock of blond hair. The Oremus family's kid brother became something of the town's kid brother as well. And if part of that meant developing a bit of moxie to be able to stand up to bigger brothers and bigger kids, he did it in spades. Despite his size, Michael was the kind of kid who would put on the goalie's gloves in practice and dare teammates, dare them, to kick one by him. The one in any group who would be first to vote yes on whatever plan was in the offing.

After graduating from high school in 2002, and a short stint studying at Dutchess Community College and doing odd jobs, he had a surprise announcement for his soccer buddies. He would not be playing with them next year. He had joined the Army to become a military policeman, a job that almost certainly meant hazardous duty in Iraq.

DOJ_NMG_0079117

Some were scared for him, but they were impressed as well. “When he told me, I was shocked,” said Mr. Brennie, who runs a pizza parlor where Mr. Oremus worked and who serves on the Town Council. “I thought, this kid has way more guts than anyone ever realized.”

After he enlisted in February 2005, he came back from training beaming — buff, grown up, his post-graduation uncertainty washed away by the rigor and mission of military life. While many here worried over every casualty report on the radio, others felt oddly insulated. They figured Highland had already overpaid its bill to the god of war. “We had lost two people already,” said his best friend, Jacob Brett. “It seemed impossible to me we could lose anyone else.”

When the impossible happened, some could not separate one town’s tragedy from a nation’s. “Highland should not send another soldier to Iraq,” one woman told the local newspaper, The Mid-Hudson Post Pioneer. Mr. Brett said neither he nor Mr. Oremus had been political, but the death had changed him. “I hope this does make people look differently at the war,” Mr. Brett said. “I don’t want any other people to go through what we’re going through.”

But for most, for now, the grief has obliterated the larger debate over the war. For the people in Highland, like generations before them, it is about young people who died much too soon, about families having to cope with too much and, this time, about a burden no town should have to bear.

On the road into town, there are war memorials from the Civil War to Vietnam. The flagpole and monument in front of the Methodist church honors those who served and those who died “in the Great War of the Nations,” the quaint coinage before World War I merited a Roman numeral. And today, people say, the funeral for Mikey O, dead at 21, could be the biggest in town history.

“All three of them died so young,” said Mr. Brennie. “They had so much to offer, so much they wanted to achieve, and it was all ripped away.”

In Marine's Death, Clues To A Son's Life (WP)

By Dan Morse

The Washington Post, October 11, 2006

Gilda Carbonaro pulled her car to a stop inside Arlington National Cemetery, stepping out to visit the freshly dug grave of her only child, Alex.

With her was a broad-shouldered Marine, limping from a leg shattered in battle, who towered a foot over Gilda. The Marine hadn't known Alex well but held precious clues about the person he had become.

Gilda had many questions. She and her husband had raised Alex in a world different from the military's -- the protected streets of Bethesda. Alex graduated from a Quaker high school, then stunned them by enlisting in the Marine Corps.

Gilda trusted he would serve out his initial five-year commitment, come home and go to college. Instead, he reenlisted, earning a spot in one of the Marines' elite reconnaissance units, called Recon, which operate deep inside enemy territory. That took Alex on two tours in Iraq, a war Gilda had spent two years trying to end.

On May 1, a roadside bomb tore through Alex's Humvee, setting him and two of his men on fire. He died 10 days later in a military hospital in Germany in the arms of his mom, his dad, his wife of not quite 12 months and his mother-in-law.

Alex remains the only service member listed from Bethesda killed in Iraq or Afghanistan. He was 28.

His grave in sight, Gilda -- a 56-year-old school teacher -- wrestled with unyielding grief, and with a mother's need to understand her son. The Marine walking with Gilda was a sergeant, like Alex. They placed flowers on Alex's grave, doing the same at the nearby grave of one of Alex's men. They walked to a big tree and sat down.

"Have you read the Recon Creed?" the Marine asked. "We live by that."The Corps Over College

Alex was a tough read, even as a kid. Private and headstrong, he tended to reveal big decisions only after he had made them.

The world around him couldn't have been more focused on college. In 2000, according to U.S. Census data, Bethesda held more degrees per capita than any place in the country with more than 50,000 people.

Gilda held a master's in linguistics from Georgetown University. She taught Spanish at two of the area's top prep schools, first Holton-Arms, then St. Albans. Alex's father, Fulvio, a native of Italy with a master's in computer science, consulted at financial institutions in developing nations around the world.

The couple tried not to smother their only child. When he was 12, Gilda walked him through their neighborhood, helping line up friends who needed lawns mowed. Alex spent $300 of his earnings on a watch for his dad.

Alex spelled poorly, shaking his confidence as he advanced in school. Seeking smaller classes, his parents enrolled him at Sandy Spring Friends School, an eclectic prep school where students call teachers by their first names and are exposed to the Quaker tenets of peace and pacifism.

DOJ_NMG_0079118

Alex applied himself to only what interested him -- Russian history, Brazilian history, creative writing -- and posted erratic grades reflecting that. He came to see college as a place others headed simply to get a degree. Without studying, he posted an SAT score high enough to give him a good shot at Georgetown.

Gilda handed him an application. "You'll have the most fun you've had in your life," she said.

Alex began to fill it out but halted at a section he viewed as phony. "This is when the person applying to college writes these essays saying what wonderful people they are," Gilda recalled him saying. "I'm not doing that."

Alex stood a wafer-thin 5 feet 7 inches tall, making it that much more shocking when he told his parents that he had enlisted after high school. The three drove to the Marine recruiting office in Rockville. "You can live a year of your life wasting time," the recruiter told them. "Or you can live it, planning every minute of it, and living it well."

To Gilda, it sounded like a standard spiel for parents. But part of it reflected her beliefs. "The unexamined life is not worth living," she thought.

Alex's decision stunned friends. He was the kid playing Dungeons & Dragons, the garage-band guitarist, the high-schooler squeezed into a booth at TGI Friday's, sucking down cigarettes and endless cups of coffee. He told them that he wanted to be financially free, to travel, to become stronger. "You know what," he told buddy Jon Codell, cutting off his concerns, "I think it's honorable."

Alex shipped off for boot camp at Parris Island in summer 1998. His parents soaked up his letters.

"My first shot was in the 2-ring center and to the left," Alex wrote. He had to nail seven bull's-eyes from 500 yards in his final seven shots. He did, "and so now I can move on in boot camp."

After graduating, Alex was sent to Japan to maintain electronic components of Marine aircraft.

"Hi Bug," Gilda e-mailed, addressing him by a nickname she had coined when he was a baby. "Well, so it's Lance Corporal now. Fantastic! What is the rank that follows it? Some sort of sergeant?"

"What follows lance Corporal is Corporal," Alex responded. "A lance Corporal is just a Corporal without a horse. I learned that yesterday. From the sound of it, most LCPL's don't get their horse for about three years in this particular occupation."

The Marines sent him to an Air National Guard base in New York. Then terrorists struck the Pentagon and World Trade Center on Sept. 11, 2001. The world seemed to be going to hell, Alex told a high school friend, and he wanted to get in the middle of it. Apart from that, he had never become the Marine he envisioned. He reenlisted, setting his sights on Recon. Fewer than one in five make it.

Gilda suggested having the Marines send him to college so he would come out an officer: "Doesn't it make sense to seek a commission?"

"So I can be stacking papers and signing things while my men are in the field?" Alex responded. "I don't think so."'I Struggle With Myself'

Gilda and Fulvio fully supported removing Afghanistan's Taliban government. Given time, Fulvio thought, the United States would lead poorer nations toward democracy. "I am now convinced I was wrong," he e-mailed friends a month after the Iraq invasion.

A year later, Gilda and Fulvio thought the United States shouldn't pull out. Then, for Gilda, came a growing sense that staying was doing more harm. In spring 2004, she joined Military Families Speak Out.

She placed a sign in her living room window: "Bring The Troops Home Now." She kept postcards in her purse calling for withdrawal and slipped them onto windshields in downtown Bethesda. She went to rallies, visited members of Congress. She sent Alex articles on such topics as the challenges of reconstructing Iraq.

"I struggle with myself in deciding whether or not to send you these things," she wrote. "Obviously I want you to have total conviction in what you are doing. To me, this conviction translates to your safety. But another part of me is convinced the more knowledge you have, the better off, the safer you'll be."

Alex kept training for Recon. At home one weekend, he and Bethesda friend Andy Huff jogged to Bradley Hills Elementary School. Alex reached for a chin-up bar, knocking out 20. He took a quick break and did nearly 20 more. "Whoa," Huff remembers telling him. "That's pretty crazy."

In September 2004, as part of a Recon battalion with the motto "Swift, Silent, Deadly," Alex shipped off to Iraq.'Enough of the Politics'

Two months later, Gilda heard from Alex's fiancee. A bomb had blown up under Alex's Humvee, sending shrapnel into his foot and laying him up in a field hospital outside Fallujah.

"Mom, Mom, Mom," he said over the phone. "I don't want you to make a big deal out of this. I don't want anybody out there thinking, 'Oh, poor Alex, poor Alex.' "

He asked his parents to visit a wounded buddy at the National Naval Medical Center in Bethesda. While there, they met other Marines, too, including one blinded by a gunshot who asked what Alex did.

DOJ_NMG_0079119

"He's Recon," Gilda said.

"Recon. They're crazy, ma'am."

She asked what he meant.

"They have no fear," he said.

Gilda and Fulvio also met Frank Delgado, the tall Recon Marine who two years later would go with Gilda to Alex's grave. Three metal rings surrounded Delgado's lower left leg, and rods descended into his bones. He told the Carbonaros that he had just seen Alex. He was okay, and Delgado told them how lucky he was: Alex soon would be fighting alongside his buddies, not laid up worrying about them.

Gilda began visiting the hospital weekly. She also learned of Marines in boot camp who didn't get mail. She wrote them, trying to lift their spirits.

She sent Alex cookies, cakes, books, articles. She tried to engage him in campaign discussions.

"Enough of the politics," Alex e-mailed her from Iraq.

A month later, a red bouquet arrived for Gilda. "Happy Birthday," the card read. "Just know that I am doing OK. I love you. Alex."Joining in Protests

May 28, 2005, was his wedding day.

At 11:30 a.m. he walked downstairs in his dress-blue uniform, a row of five medals, including a purple heart, hanging on his chest.

"Wait a minute," Gilda said. "The wedding is at 3, Alex."

He wanted to join six other Marines at the church to practice a ceremony in which he and his bride would walk under an arch of swords.

The newlyweds settled outside a Recon base in North Carolina. Selected as team leader, Alex was in charge of five younger Marines. It was down there, between his deployments, that Alex searched the Internet for his mom's name.

At the rallies, Gilda hadn't mentioned Alex's name. She had rarely mentioned hers. Still, as Alex could see, she had certainly been active. At a rally in Washington, a speaker saw Gilda, calling out her name. She spoke in Philadelphia. And just before Alex had left on his first tour, she spoke by phone to a reporter with Radio Free Europe.

"I can't let my son see how upset I am," she said in an online version of the story. "How do you turn around and tell your son: 'Your president, he made a mistake. You need to abandon your men.' You don't tell your child that."

Alex didn't like it. "Keep a low profile," he told Gilda.

She did. As Gilda wrote senators and friends, she stacked copies in a box, hoping one day to give them to Alex.

"How did the pistol shooting go? . . . What's the mood like in the country at least as far as Marines are concerned about the way things are going in Iraq?" she e-mailed from Italy.

"Political-wise marines are marines," he wrote back, "and will always just talk about the last time they went over there or the next time they may have to go."Part of the Family

By April this year, Alex was back in Iraq for his second tour. "Hi guys," he wrote to his parents April 28. "I'm doing fine. I really haven't been in [camp] a lot. Maybe five days since I've been here. . . . I will get a hold of you soon. Alex."

Four days later, Gilda heard a knock on her classroom door. The chaplain asked her to her office. "It's Alex, isn't it?" Gilda asked.

Within days, she stood outside Alex's hospital room in Germany, being asked to put on a gown, rubber gloves, a mask and a hair cap. She walked in. Alex was hooked to a respirator. Bandages covered all but small patches of his darkened face.

"Don't worry," Gilda told him. "Everyone says you've been such a fighter, how tough you are. You have the best doctors, baby. You're going to be just fine."

Alex couldn't respond. "You've had more Masses than the pope," his wife told him, forcing a smile in her voice. Alex's mom broke for the door, screaming as she reached the hall.

Two weeks later, Alex's parents, his widow and his in-laws sat in a front row at Washington National Cathedral. More than 700 mourners sat behind them -- relatives, friends, Marines, St. Albans boys in their coats and ties.

Jeff Corwon, a Marine, walked to the lectern, his lower lip quivering, his back ramrod straight. He spoke of Alex's dedication. He turned to Alex's parents.

"Mr. and Mrs. Carbonaro, in your eyes Alex may have been an only child," he said, his voice halting. "But through your eyes, you may not have seen how good of a brother he was of mine."

It was the kind of language they had heard for weeks -- over the phone from North Carolina, in Germany, in Washington setting up the funeral: You are part of our family.

DOJ_NMG_0079120

That evening, friends and relatives gathered at the Carbonaros'. Carloads of Marines pulled up, parking near Gilda's Bring The Troops Home sign. Inside, they stood in clumps, telling stories about Alex and smiling. Gilda kept approaching. They offered to do anything for her -- now, 20 years from now. "We're going to get together again, right?" she asked.

Absolutely, they said.

Online, she found tributes: "Many times, I went to Alex for ideas and advice on how to accomplish a task," wrote his platoon commander, Lt. Tommy Waller, "never walking away without a better plan than the one I had started with."

Gilda also found the Recon Creed, which offers its own tenets for life: Sacrifice comfort. Complete the mission. "A Recon Marine can speak without saying a word," it closes, "and achieve what others can only imagine."

Alex's widow, who is also named Gilda, told his parents of her final phone conversation with Alex in late April. She told him that people were praying for him. He told her to thank them. "Tell them to pray for my team, too," he said, adding that if something happened to them, it would be as bad or worse than if it happened to him. Alex also asked his wife to round up information on the veteran's college scholarships they had discussed. He planned to leave the Corps next year.

Alex's mom read the book "One Bullet Away," written by a Recon officer. In battle, he wrote, Recon operated in such small units that its team leaders were "the battalion's backbone."The Bombing

Closer to home, two Marine veterans of the Iraq war check on Gilda and Fulvio. Sometimes they bring Italian wine, staying for dinner. "There's a bit of Alex in all of us," Delgado, who just retired from the Corps, told them last month.

Alex's full unit is due home this month, with members planning to visit Arlington. Gilda has invited many of them over. She and Fulvio want to meet Marines such as David Drexler, the last known person to hear Alex speak.

After the blast, he wrestled Alex to the ground, damping out flames with his gloved hands. He wrapped Alex in a gel-lined blanket, laid him on his back and propped Alex's head on his leg as they waited for the helicopter. Alex cursed roadside bombs, joking that they had gotten him again. He asked for water.

"Where's Elmo?" Alex asked. "Where's Moss?"

"Doc's working on them now," Drexler said.

"How's Palmer? How's Fulks?"

"Everybody's fine," Drexler said.

Twenty minutes passed. Alex kept asking about his team. Finally, he said his arms felt like they were burning, and his face hurt.

"Okay," Drexler said, knowing he needed morphine. "I'm going to call for Doc."

Chief Of The Army Says U.S. Needs Consensus To Combat Terrorism (MCT)

By Drew Brown

McClatchy Newspapers, October 11, 2006

WASHINTON - The United States needs to reach a consensus on how to fight terrorists and increase defense spending to make sure the Army stays ready to fight, the Army's chief of staff said Tuesday.

Gen. Peter J. Schoomaker also called on teachers, parents and other influential adults to encourage young people to serve in the military.

Speaking at the Army's annual convention, Schoomaker said the United States was "much closer to the beginning than the end" of the war on al-Qaida and other terrorists. "Ultimate victory," he said, would require a common understanding of the enemy and the nature of the conflict, plus a "national strategic consensus" on how to address the threat.

"While such a common strategic foundation - understood and accepted by the American people - existed during the Cold War in the form of `containment,' it is not evident that such common understanding exists today," he said.

Schoomaker didn't give specific figures about the amount of defense-spending increases he thought was necessary. He said the Army had learned a "bitter lesson" during the 1990s when 425,000 soldiers were cut from its ranks and expenditures fell to levels unseen since the late 1940s. From the late 1980s until 2001, there was a $100 billion shortfall in investment in new technologies and $56 billion in equipment shortages, Schoomaker said.

Defense spending now is less than 4 percent of U.S. gross domestic product, compared with 38 percent during World War II, 14 percent during the Korean War and 10 percent during the Vietnam War.

"Let there be no mistake: Our soldiers' effectiveness in battle - both today and tomorrow - ultimately depends upon a national commitment to recruit, train, equip and support them and their families properly," he said. "This is a matter of national priorities, not affordability."

Schoomaker, who's nearing the end of his four-year term, said the Army faced a challenge in recruiting enough soldiers to fight in a protracted war.

"We should see our best young people seeking to serve," he said. "America's future depends on it."

DOJ_NMG_0079121

The Army missed recruiting targets in 2005. It made its goals in fiscal year 2006, which ended Sept. 30, but had to make some changes, including increasing the maximum age for recruits to 42 and allowing 4 percent of recruits to score in category 4, the lowest level, compared with a previous limit of 2 percent in the lowest category.

Army officials denied that they'd lowered standards. They said the overall Pentagon standard was 4 percent in category 4 and the change brought the Army's standard in line with that.

Army officials said waivers for crimes had increased but that most were for misdemeanors. Waivers for serious crimes are below 1 percent of the total number of recruits, and waivers for drug and alcohol use also remain below 1 percent of the total.

A study last month by the National Priorities Project, a nonprofit group that examines federal spending, found that new recruits in 2005 came primarily from low- and middle-income neighborhoods, and that recruits from households with annual incomes of more than $55,000 were increasingly underrepresented.

CORPORATE SCANDALS:

Bed Bath & Beyond Admits Extensive Options Backdating (WSJ)

By Mark Maremont

The Wall Street Journal, October 11, 2006

Bed Bath & Beyond Inc. admitted to rampant backdating of stock-option grants as part of a policy to provide extra incentives to insiders, but said an internal probe found no evidence of "willful misconduct."

The detailed mea culpa by the big Union, N.J., retail chain is another demonstration that the options scandal, which has engulfed more than 100 companies, is reaching far beyond Silicon Valley and the technology sector.

MORE ON OPTIONS

· Bed, Bath & Beyond's Oct. 10 filing on options1

· Options Scorecard: Companies under scrutiny2

· Perfect Payday: Complete coverage3

Bed Bath & Beyond said its internal probe examining the period from its 1992 initial public offering through May 2006 found that the company had misdated options on 44 occasions, 37 of them in favor of the recipients. In many cases, the probe concluded, executives used "hindsight" to select favorable grant dates in the past when the stock was trading at low points. (Read the text of the company's report on options.4)

The probe criticized the company's options-granting process as deficient in a number of ways, including the practice of allowing its three senior executives to select the dates for their own options grants. It said the responsibility for selecting grant dates rested with its co-founders and current co-chairmen, Leonard Feinstein and Warren Eisenberg, and its current chief executive, Steven H. Temares.

The company said it doesn't intend to restate past financials to record the extra compensation expense associated with the backdated options. Instead, it said it will cut $66 million from the equity portion of its balance sheet, and expects to record another $8 million in expense in its fiscal third quarter. The company also said it is reviewing potential tax implications of the backdated options.

Backdating involves pretending the option was granted at an earlier time when the stock price was lower, thus handing the employee an instant potential profit. Backdating generally is improper or illegal, and can lead to criminal or civil charges, plus accounting problems. The Securities and Exchange Commission is conducting an informal inquiry of Bed Bath & Beyond, the company has said.

While companies such as Apple Computer Inc. recently have provided only bare-bones disclosures about the conclusions of their internal options probes, Bed Bath & Beyond's statement late yesterday gives copious details.

Bed Bath & Beyond Ends Internal Probe (AP)

AP, October 11, 2006

Bed Bath & Beyond Completes Internal Stock Probe, Will Take $8M Charge in 3Q

WASHINGTON (AP) -- Bed Bath & Beyond Inc. said Tuesday it completed its internal investigation of stock-option practices, and while the home furnishings retailer will not revise past financial statements, it will take an $8 million charge in third quarter.

The Union, N.J.-based retailer said the general and administrative expense charge represents "the total of the first and second quarter charges related to the impact of the revised measurement dates...and the applicable charge for the third quarter," in a filing with the Securities and Exchange Commission.

DOJ_NMG_0079122

The review committee found 31 off-cycle monthly grant dates not made on the 15th of the month as required by the company's policies, and 12 of them were "at notable low prices." Interviews and the documentation reviewed did not explain the selection of the dates, the company said.

"The low prices were suggestive of the use of some hindsight in selecting the low price off-cycle grant dates," according to the filing. However, the committee found no willful misconduct and no intent to mislead auditors.

At least 136 companies have disclosed internal, SEC or Justice Department investigations into the possible backdating of past stock options to artificially inflate their value.

Bed Bath & Beyond also will reclassify $66 million "within the equity section of the consolidated balance sheet to be included in its Form 10-K for the fiscal year ending March 3, 2007." The charge represents the effect of the adjustment resulting from non-cash charges from fiscal 1993 through the second quarter of this year, according to the filing.

"The company is reviewing any potential tax implications relating to the company's stock option grants and restricted share awards, but believes that such matters will not have a material impact on the company's financial position," according to the filing.

Shares of Bed Bath & Beyond dipped 5 cents to $39.88 in after-hours trading, after losing 6 cents to close at $39.93 on the Nasdaq.

2 Ex-Comverse Execs In Plea Discussions (HC)

By Chad Bray, Dow Jones Newswires

Houston Chronicle, October 11, 2006

NEW YORK — Two former executives of Comverse Technology Inc. are engaged in plea discussions with the U.S. Justice Department to end the criminal fraud case against them, according to court documents filed late last week.

In separate orders filed late Friday, U.S. Magistrate Judge Joan M. Azrack ordered that the time to indict former Comverse finance chief David Kreinberg and ex-senior general counsel William F. Sorin be extended by 30 days to Nov. 8.

According to court documents, Sorin and Kreinberg are engaged in plea negotiations with the U.S. Attorney's office in Brooklyn, which "they believe are likely to result in a disposition of this case without trial."

Kreinberg and Sorin were charged, along with ex-Comverse Chief Executive Jacob "Kobi" Alexander, with conspiracy to commit mail fraud, securities fraud and wire fraud in August in an alleged scheme to improperly backdate options at the company. The men were charged at the time under a criminal complaint.

Alexander, who was arrested in the African nation Namibia last month, has since been indicted on charges of conspiracy, securities fraud, making false filings with the Securities and Exchange Commission, mail fraud, wire fraud, money laundering and engaging in unlawful monetary transactions. Alexander was granted bail at a hearing last week in Namibia.

The SEC also has separately filed civil charges against the men.

A spokesman for the U.S. Attorney's office in Brooklyn declined comment Tuesday. Lawyers for Sorin and Kreinberg didn't immediately return phone calls for comment on Tuesday.

Prosecutors have alleged that Alexander and others engaged in a scheme to backdate millions of stock options for themselves and other employees when the stock was trading at periodic lows. The improper grants occurred between 1998 and 2002, according to court documents. As a result, Alexander "reaped substantial personal gain" from his alleged conduct, prosecutors said.

Alexander and others allegedly arranged to award new hires with "in-the-money options backdated to days before the new employees were employed by CTI," according to court documents.

The government also has alleged that Alexander and others used fictitious names to generate hundreds of thousands of backdated options, which were parked in a "secret slush fund" designed to evade the requirements of Comverse's stock-option plans. Alexander then unilaterally awarded options from the slush fund to favored employees, according to prosecutors.

The slush fund was first named I.M. Fanton, after "Phantom of the Opera," according to the indictment against Alexander. The earlier criminal complaint said the assistant who helped manage the slush fund named after "Phantom" said the name fit what they were being asked to do: create phantom employees.

The slush fund's name was later changed "Fargo" _ based on the Coen brothers' movie of the same name, according to the indictment. The earlier complaint said the name was changed after thinking better of the wisdom of naming the fund after "Phantom."

Prosecutors are seeking the forfeiture of about $138 million in Alexander's assets, as well as two apartments in Alexander's name in Manhattan, according to court documents.

Subway Series Alive After All: The Legal One (WSJ)

By Paul Davies And Peter Lattman

The Wall Street Journal, October 11, 2006

Federal Prosecutors in Brooklyn One-Up Prosecutors Across River, Snag More White-Collar Cases

NEW YORK -- Federal prosecutors in Manhattan aren't used to being upstaged. But if Kobi Alexander, the fugitive executive arrested last month in Namibia, makes it stateside to answer stock-option-backdating charges, he will do so across the East River, in a different borough of New York City: Brooklyn.

Ownership of the case -- involving Comverse Technology Inc., which Mr. Alexander co-founded -- is the latest in a string of white-collar cases overseen by the Justice Department's U.S. attorney's office in Brooklyn. Known as the Eastern District of New York, its prosecutors lately have gained ground in a friendly, but sometimes-pointed, rivalry with their Southern District counterparts in the borough of Manhattan, who have stumbled recently on a few big cases.

That rivalry between prosecutors in two of the country's 93 judicial districts is playing out amid a broader competition for business cases that has intensified nationwide since the dot-com collapse. Led by New York state's attorney general, Eliot Spitzer, and Manhattan District Attorney Robert Morgenthau, state and local prosecutors also have jockeyed for prominence, sometimes stepping on the toes of regulators, especially at the Securities and Exchange Commission, which has authority to bring only civil cases.

In the criminal realm, the Manhattan U.S. attorney's office is the "old established group that considers itself the best," says Alan Vinegrad, a former Brooklyn U.S. attorney. But now the scrappy underdog is "on the map."

Unwilling to concede much, Steve Peikin, former head of the Manhattan office's securities unit, quips that Brooklyn is a "great second."

The Eastern District's white-collar troops used to focus mainly on Long Island boiler-room operations peddling dicey stocks.

More recently, they were among the first to jump on stock-options backdating, launching probes of Comverse and Cablevision Systems Corp., of Bethpage, N.Y. No charges have been filed in the Cablevision case. Mr. Alexander and two other former Comverse executives were charged with illegally backdating grant dates to days when share prices were low, potentially increasing the options' value. The others pleaded not guilty, but court records show they are in plea-bargain talks. Prosecutors are trying to extradite Mr. Alexander from Namibia, where he is out on bail.

In the spring, the Brooklyn prosecutors secured guilty pleas from three former executives of CA Inc., an Islandia, N.Y., software company. They indicted about a dozen brokers for allegedly trading on information from brokerage giants' communications systems, known as squawk boxes; five pleaded guilty, the rest await trial. The prosecutors also landed guilty pleas in May from nine people for fraudulently boosting circulation at Newsday, a Long Island newspaper owned by Tribune Co. A former FBI agent was sentenced Oct. 2 in Brooklyn federal court to six years in prison for trading on information about companies under investigation.

One setback for the office: a hung jury in February in an accounting-fraud case against three former Symbol Technologies Inc. executives. A retrial is set for next year. The company's former general counsel pleaded guilty in 2004.

After the collapse of Enron Corp. and the passage of the Sarbanes-Oxley corporate-oversight law, the Brooklyn office enhanced its white-collar expertise, says Roslynn Mauskopf, the Eastern District's U.S. attorney. With public companies having proliferated on Long Island, the district was in need of more business policing, Ms. Mauskopf adds.

The office got a boost in July 2002 when the Bush administration formed the Corporate Fraud Task Force, which included both Brooklyn and Manhattan, and decided to spread white-collar cases around the country.

"We quickly leveraged our in-house expertise and made some really smart hires," including lawyers from the SEC, the Manhattan district attorney's office and other U.S. attorney shops, says Ms. Mauskopf, recently nominated for a federal judgeship.

The Brooklyn office's experience in organized-crime cases aided its white-collar push. "If you've tried complicated, multidefendant RICO [racketeering] cases, it's not going to be a challenge to you to try a complicated corporate-fraud case," says Leslie Caldwell, an Eastern District alumna who headed the Enron prosecution team, which included two other former Brooklynites.

The Manhattan U.S. attorney's office -- the nation's oldest, created by President Washington in 1789 -- opened a securities-fraud unit in the 1960s, decades before other offices. It has a reputation for jealously guarding its dominance of corporate-fraud cases, earning the moniker among critics as the "Sovereign District."

Rudolph Giuliani, later New York City's mayor, made his name there in the 1980s, prosecuting Wall Street titans Ivan Boesky, Michael Milken and others. More recently, the office won convictions in a string of cases -- against Martha Stewart, WorldCom Inc.'s Bernard Ebbers and Adelphia Communications Corp.'s John Rigas and Timothy Rigas.

Now headed by Michael J. Garcia, the office recently has hit a rough patch, mostly from missteps that predated him. Charges against former star investment banker Frank Quattrone were deferred in August, after a mistrial and an overturned

conviction. A federal judge chastised the office for heavy-handed tactics against former KPMG LLP executives charged with tax fraud. Prosecutors dropped fraud charges against two New York Stock Exchange floor traders after losing trials against two others; another two pleaded guilty, and two were convicted.

The office still wins most cases, and it remains aggressive on the white-collar front, pursuing some of its own stock-options probes. (An inquiry into buyout deals by private-equity firms is being handled by a separate Justice Department antitrust unit in New York.)

"I am proud of our long history of prosecuting securities-fraud cases," Mr. Garcia said in a statement. "Many offices around the country have increased their efforts in this area, with fine results for the public. We applaud the excellent work of our colleagues."

The two offices have had past turf battles involving mob and drug cases. Their securities units bump into each other less often, battling over boiler-room cases in the 1990s. They butted heads over the securities-fraud prosecution of shoe designer Steve Madden. Each office ended up indicting him. He pleaded guilty in both cases and was sentenced to 41 months.

Ms. Caldwell sees the competition as healthy because it gives investigators in the SEC and Federal Bureau of Investigation alternative avenues to pursue cases.

"In either district here in New York, if a case is not being given the attention it deserves, the agents can just go across the river," she says.

Skilling Asks Judge To Overturn Conviction (BLOOM)

By Bloomberg News

Bloomberg News, October 11, 2006

Enron's former chief executive, Jeffrey K. Skilling, found guilty in May of directing a huge fraud, asked a judge to throw out his conviction, citing a successful appeal in another Enron case.

In a filing yesterday in federal court in Houston, Mr. Skilling, 52, joined other convicted Enron executives in asking a trial judge to void his guilty verdict, based on an August ruling by a federal appeals court in New Orleans. Mr. Skilling's request came as part of a motion to remain free pending an appeal he said he planned to file after his sentencing, scheduled for Oct. 23.

Mr. Skilling told Judge Simeon T. Lake III of the United States District Court that his conviction should be thrown out because the jury might have relied on a prosecution claim that he deprived the company of "honest services," a theory that caused the New Orleans court to overturn four other Enron-related convictions in August.

"The whole theory of deprivation of honest services is that I have a duty of loyalty to the company, yet I'm going out and doing something that hurts the company and benefits me personally," said Barry Pollack, a lawyer who successfully defended Michael W. Krautz, an accountant for Enron Broadband Services. "With these Enron guys, it's different. These individuals went out and did something they honestly believed was in the company's best interest and what the company's management at the highest level wanted done."

Mr. Skilling, convicted of 19 counts of fraud, conspiracy and insider trading, faces a sentence of as much as 25 years in prison. Prosecutors gave jurors several situations under which they could find him guilty of defrauding Enron, which collapsed into bankruptcy in December 2001. Having deprived the company of his honest services was one. Deliberately deceiving investors was another.

Since the jury did not explain how it reached its guilty verdict, the fraud and conspiracy convictions were tainted by the possibility that "honest services" played a part. Mr. Skilling argued that his entire conviction should be thrown out, using the logic the appeals court followed in August.

The government will respond to Mr. Skilling's motion "in an appropriate court filing," a Justice Department spokeswoman, Jaclyn Lesch, said. The government has already asked the entire appeals court in New Orleans to review the honest-services issue and reinstate the ex-bankers' convictions.

Third Trial Begins For Former Cendant Exec (USAT)

By Greg Farrell

USA Today, October 11, 2006

BRIDGEPORT, Conn. — For the third time in the past two years, prosecutors on Tuesday accused former Cendant chairman Walter Forbes of masterminding an accounting fraud that inflated his company's earnings by $252 million. The disclosure of the fraud in April 1998 caused Cendant's share price to plummet 50%, wiping out $14 billion in shareholder value in one day, making it one of the biggest accounting frauds of the 1990s.

DOJ_NMG_0079125

In a scene reminiscent of the movie Groundhog Day, the government argued that Forbes, 63, founder of Comp-U-Card International, used CUC's merger-and-acquisition reserves as a slush fund through which his underlings padded the company's earnings.

The government has already put Forbes on trial twice for his alleged actions. In a trial that began two years ago, a jury convicted Forbes' right-hand man, E. Kirk Shelton, of securities fraud, but it deadlocked on the question of Forbes' involvement. Shelton received a 10-year prison sentence. In a retrial of Forbes last year, a different jury also reached an impasse.

In the 1990s, CUC was profitable, prosecutors conceded, but Forbes wanted the company to grow by 25% per year, so he had his subordinates "cook the books," according to assistant U.S. Attorney Michael Martinez.

Forbes allegedly pulled off the fraud, Martinez said in Tuesday's opening arguments, by merging CUC with other companies and creating huge accounting reserves. But the problem with the scheme, Martinez continued, was that CUC had to fill a larger and larger hole each year in order to keep up with the 25% growth rate.

Finally, in 1997, Forbes agreed to merge CUC with a franchise company, HFS, to form the travel and real estate firm Cendant. Under terms of the merger, top HFS executives would run the company the first two years and then Forbes and his executives would assume control. Martinez argued that Forbes tried to hide CUC's accounting games from Cendant CEO Henry Silverman, but that the new management eventually uncovered the fraud.

In response to the government's accusations, Forbes' lead attorney, Brendan Sullivan, said Forbes knew nothing about the fraud. He laid the blame for the accounting mess squarely at the feet of the government's chief witness, former CFO Cosmo Corigliano.

Forbes' first two trials took place in Hartford, before U.S. District Judge Alvin Thompson. The current trial is being heard in Bridgeport before U.S. District Judge Alan Nevas. Unlike Thompson, who gave defense attorneys wide latitude to argue motions, Nevas sternly lectured one of Forbes' lawyers, Barry Simon, for raising questions about witnesses Tuesday afternoon, saying he wanted to deal with specific requests regarding the testimony of government witnesses all at once, not each day on the jury's time.

Buffett Waves Ethical Vigilance Flag (WP/AP)

By Timberly Ross

The Washington Post, October 11, 2006

OMAHA -- "Everyone else is doing it" is no justification for unethical business practices, Warren E. Buffett told managers of his company, Berkshire Hathaway Inc.

In a Sept. 27 memo, Buffett cautioned managers that many corporate scandals arise because questionable activity is accepted as normal behavior.

"Somewhere along the line they picked up the notion . . . that a number of well-respected managers were engaging in such practices and therefore it must be OK to do so," Buffett wrote. "It's a seductive argument."

Buffett acknowledged that it is inevitable that someone among Berkshire Hathaway's almost 200,000 workers would give in to temptation. He called on his top executives to resist improper behavior and head it off in employees.

"Berkshire's reputation is in your hands," Buffett wrote.

The memo comes as the former chairman of Hewlett-Packard Co. is being investigated on charges she violated state privacy laws when probing her board for leaks to the press.

Berkshire Hathaway owns 68 companies, according to its most recent annual report, including insurance, reinsurance, carpet, jewelry, furniture, restaurants and utility firms. And it has major investments in such companies as H&R Block Inc., Anheuser-Busch Cos. and The Washington Post Co. Buffett is on the Washington Post Co. board of directors.

The recent ethics lesson is nothing new for Buffett.

"Every couple of years for the past 15 or 20 years, he has been sending out memos to our Berkshire subsidiaries," Buffett's spokeswoman Debbie Bosanek said Tuesday.

This is necessary, she said, because Berkshire Hathaway continues to acquire new companies and works with new people in top positions.

He said in his Sept. 27 memo, "Let's start with what is legal, but always go on to what we would feel comfortable about being printed on the front page of our local paper."

The H-P Investigation (WSJ)

By Patricia Dunn

The Wall Street Journal, October 11, 2006

DOJ_NMG_0079126

When I agreed to accept the position of non-executive chairman of the Hewlett-Packard board during the tumultuous period surrounding Carly Fiorina's departure, I knew there would be challenging and difficult times ahead. Never in my wildest dreams did I anticipate how difficult.

One of the first requests I received from my fellow directors was to find a way to stop leaks of confidential information emanating from our boardroom. The company had actually begun efforts to identify the source of the leaks prior to my assuming the chairmanship, but made no progress. It was of concern to us all. Well, almost all of us.

The most sensitive aspects of a company's business come before its board: strategy, executive succession, acquisitions, new product development. This is exactly the type of information a company's competitors and those who trade in its stock would love to have before that information is properly disseminated. This is exactly why it is so essential that directors respect the confidentiality of the discussions and decisions that occur in the boardroom.

At H-P, all directors, officers and employees are bound by the same Standards of Business Conduct, to which they attest compliance annually, including a section which says, "You may not grant interviews or provide comments to the press without prior approval from H-P Corporate Communications . . ." Boards are also highly regulated, with a myriad of complex structures. These regulations cannot be followed if any individual discloses sensitive information in an unauthorized manner. If any suspicion emerges that one or more board members are violating their oath of confidentiality, then, it is the board's responsibility to do something about it. This is the situation we faced at H-P in 2005, when seven of my nine fellow directors made it clear that taking steps to identify and correct the problem was a top priority of my new appointment.

As I testified before Congress, the first thing I did after being directed by the majority of the board to find and stop the leaks was to approach one of my fellow directors -- who at the time was the company's CFO and acting CEO, and to whom H-P's legal and security departments reported -- to ask him how I should proceed. I said I wanted to make sure that everything done was not only legal and proper, but in the H-P way.

I was told that H-P did this kind of work all the time, and instructed to contact an executive in H-P's security department, who directed me to an outside licensed investigator who was under a long-term contract with H-P to do investigations of this nature. I reiterated to both H-P's head of security and the outside licensed investigator what I had told the acting CEO: Any work undertaken must comply with all applicable laws and H-P's Standards of Business Conduct. I was assured it would.

This first phase of the investigation started in April 2005 and ended in August 2005. While it yielded no information about the identity of the leaker, the leaks ceased or at least slowed dramatically. Satisfied that the investigation had achieved its primary goal -- to stop the leaking of confidential information -- the investigation halted, and I was relieved that the problem was behind us.

That is, until Jan. 5, 2006, when an article appeared in this newspaper about the potential acquisition of Computer Science Corp. by H-P and Blackstone. CSC stock jumped about 8% the day after that article appeared. Approximately 15 days later, two other articles appeared which said H-P was no longer considering this acquisition. CSC's stock dropped approximately 5% the next day. Shortly thereafter, yet another article appeared disclosing sensitive and confidential information discussed by directors at the board's annual strategy offsite.

H-P's board members were upset, and the board, general counsel and CEO felt that the leak investigation should be re-opened. I suggested we use a global investigatory firm to create some independence and assure that top-notch resources were being used. The general counsel advocated the work remain in-house. She recommended that a team headed by the company's head of ethics investigations -- also a lawyer -- be given the assignment, as they regularly dealt with sensitive, high-level issues. The By ethics officer chose to work with H-P's internal security department, which decided to use the same licensed private investigator who had handled the first investigation. I did not learn until late August 2006 that the first investigator subcontracted to a second firm, which undertook the methods now so widely reported in the media.

Despite reports to the contrary, I did not unilaterally decide to initiate a leak investigation. I did not run, supervise or direct the investigations. I did not select or hire the investigators or direct who should be investigated. Nor was I aware of exactly who was being investigated. The company's legal and security departments were in charge of the work. In fact, I was a full subject of the investigations and was "pretexted" along with the others. While I did (appropriately) receive periodic reports on the progress of the investigation, I was not aware until after the investigation was complete and the results were presented to the full board of some of the tactics used. I am still learning about some of the techniques that were used or contemplated.

Throughout the process I asked and was assured -- by both H-P's internal security department and the company's top lawyers, both verbally and in writing -- that the work being undertaken to investigate and discover these leaks was legal, proper and consistent with the H-P way of performing investigations.

Prior to the presentation of the results of the investigation to the board, two lawyers reviewed the report we had obtained. Neither raised concerns about the information or what was known to that point about the process used to obtain it. Subsequently,

in response to an email inquiring about the methods and legality of the investigation, a prominent outside attorney stated, "the process was well done and within legal limits."

I offered during the week the story broke, and will continue to offer, my sincere apologies to those whose phone records were accessed, particularly those outside the company. I had no knowledge that journalists' phone records were being accessed. It was always my understanding that their telephone numbers were only being cross-referenced against legally obtained director phone records.

I want to be clear on one point, though: Once conclusive information determined that a director had been disclosing confidential information, the board had no choice but to act. The risk of a future disclosure that could result in a security laws violation or some other problem was too great, and against the backdrop of having done nothing about previous leaks, would have raised serious questions about the board's resolve to deal with a chronic problem.

Upon receiving the report, we were given legal advice that proper handling of the matter was for the full board to deliberate on any appropriate actions. At the risk of bursting yet another myth about this investigation, there was no "Perry Mason" moment, no dramatic revelation about the identity of the leaker. Rather, directors received a reasoned and balanced summary of the matter not from me, but from the audit committee chairman. * * *

As a result of extraordinary negative publicity from these episodes, the board asked me to step down as chairman and director. Less than two weeks later I was charged by the California attorney general on four felony counts of fraud and conspiracy.

Some have said they feel I have been made a scapegoat. That is not for me to say. What I will say is that throughout the process I asked the right questions of the right people at the right times. I have no reason to believe that the people who continually assured me that what was being done was being done both legally and properly did not believe this to be true. And, despite the outrage and incredulity with which my statements about accepting assurances that phone records could be obtained legally, my lawyers assure me that there are in fact ways this can be done. That is one reason Congress is considering a bill against pretexting, which I support.

One more thing: Tom Perkins did not resign from the H-P board because of concern over the leak investigation -- he resigned because he was upset that the full board had been given the chance to decide his friend's fate.

H-P remains a great company with outstanding people. I am proud of the contributions I made during my tenure as a board member, particularly the leadership role I played in bringing Mark Hurd to the company and recruiting two new outstanding directors. I am fully confident that the H-P board and management are completely focused on continuing their work to create value for the customers, employees and shareholders of H-P. The constituents of this great company expect and deserve nothing less.

Ms. Dunn is former non-executive chairman of Hewlett-Packard.

H.P. Could Be A Finger-Pointing Case (NYT)

By Matt Richtel

The New York Times, October 11, 2006

SAN FRANCISCO, Oct. 10 — The five defendants in the Hewlett-Packard spying case must overcome a paper trail of evidence against them. But they could wind up with as much to fear from one another.

At least one lawyer involved in the case and several outside legal experts said the five defendants might wind up turning on one another as part of a way to shift blame away from themselves.

“It’s every man for himself,” said Stephen Naratil, the lawyer for Bryan Wagner, who is charged with having misrepresented himself to phone companies to obtain calling records of Hewlett-Packard directors. “Everyone is going to pass the buck down, and that’s where my guy is sitting.”

Mr. Naratil said he would not be surprised ultimately to see conflict between the lawyers for the company’s former chairwoman, Patricia C. Dunn, and its former head of ethics, Kevin T. Hunsaker. “They’re going to point fingers at each other and other executives.”

His comments, and interviews with lawyers for the other defendants, have begun to bring preliminary shape to a defense strategy in a case that is moving from the political and media stage to the courtroom.

At a joint arraignment hearing on Tuesday in San Jose, Calif., Mr. Wagner and two private investigators — Ronald R. DeLia and Matthew DePante — pleaded not guilty and agreed to return to court on Nov. 17 for a preliminary hearing along with Ms. Dunn and Ms. Hunsaker.

It is not yet clear whether the defendants will be tried together or separately. It is possible that one or more defendants could choose to cooperate with the prosecution and testify against others.

DOJ_NMG_0079128

But lawyers for any of the defendants could also try to shade the evidence in a way that is more favorable to their client and less so to another defendant. If the cases are severed, evidence presented in one trial could be subpoenaed in another trial.

Prosecutors want to try all the defendants at once. "We will resist any attempt to sever the prosecution of the case," said Tom Dresslar, a spokesman for Attorney General Bill Lockyer, citing the interest of "judicial economy."

Legal experts and lawyers in the case said that for all five defendants, the case was likely to be fought not just on the facts but also on the law. If there is one theme that will unify the defendants, legal experts said, it is that they will seek to challenge whether California law is even applicable to "pretexting" — a technique involving misrepresentation to get personal and calling records.

The defendants are said to have engaged in a conspiracy to obtain such records to determine the identity of a director who Ms. Dunn and others thought was giving confidential information to the news media.

"The thing we're most interested in is whether the statutes selected for charging do not address the alleged conduct," said Richard J. Preira, co-counsel for Mr. DePante. Mr. Preira said the defense lawyers "have a common interest in educating the court as to the inapplicability of the statutes."

The defendants are each charged with four felony counts. Among the charges, the state accuses them of violating laws against knowingly gaining unauthorized access to computer data to devise or execute a scheme, or using the data to defraud or deceive, or for unlawful purposes.

Legal experts said there would certainly be a vigorous pretrial debate about whether the laws fitted the charges. The legal experts themselves are sorely divided on the question.

"The statutes would have to be expansively interpreted in order to reach pretexting," said Joseph A. Grundfest, professor of law and business at Stanford University. "But courts have interpreted statutes expansively before."

In a recent interview, Mr. Lockyer, the attorney general, said, "I think our laws are sufficient to cover the behavior."

Ms. Dunn's lawyer, Jim Brosnahan, declined to discuss many aspects of his strategy. But he said he might argue that his client had not ordered anyone to commit an illegal act and had not known one was being committed.

"If the attorney general has progressed against Pattie Dunn on the theory she didn't have to know she was doing anything wrong or didn't have to order that something be done wrong, the weakness of that case will be subject to some very interesting motions," Mr. Brosnahan said.

Ms. Dunn also hinted at her own strategy in an interview broadcast Sunday on "60 Minutes." She said she did not recall — as prosecutors assert — that she had given home phone numbers of Hewlett-Packard board members to Mr. DeLia, the investigator.

She also rejected contentions, indicated in interview notes from Hewlett-Packard's outside lawyer, that she had been told that investigators might have to use false pretenses to obtain calling records.

But legal experts said Ms. Dunn might not have done her defense team any favors by appearing on "60 Minutes."

"It was an act of total lunacy," said Jonathan Turley, professor of law at George Washington University. Because everything in the interview can be used as evidence, it could close the door on some lines of defense, he said.

Mr. Turley said Ms. Dunn's best defense is "rather obvious."

"She's got to claim that she did not micromanage the investigation," he said. "Her best defense must not be ignorance of the law, but ignorance of the act."

But he and other legal experts said Ms. Dunn and Mr. Hunsaker might have trouble making the case.

Joel Reidenberg, professor of law and director of the center on law and information policy at Fordham University, said: "Their best argument is to say, 'We didn't know what Wagner was doing'? Is it a credible argument? I don't think so. They got reports of detailed phone records."

Mr. Turley said he expected the challenges to be severe for Mr. Wagner as well, because the other defendants would seek to isolate him as the bad actor.

"He is someone we call the 'designated defendant,' " Mr. Turley said. "He'll be portrayed as the rogue employee or rogue contractor."

But that could work against the other defendants, too, he said. "If prosecutors really want to nail the top executives, they could cut a deal with him."

Mr. Wagner's lawyer, Mr. Naratil, said he was still studying the statutes in the case but said one central question was whether the state of California has jurisdiction over his client, who lives in Littleton, Colo.

Mr. Wagner is said to have been hired to gather phone records in the Hewlett-Packard investigation for Mr. DePante's firm, Action Research Group, based in Florida, which was hired in turn by Mr. DeLia, an investigative consultant in the Boston area.

Outside the courtroom on Tuesday, Mr. Naratil said Mr. Wagner "didn't know anyone at H.P. and he didn't know he was working for H.P."

The lawyer representing Mr. DeLia in court on Tuesday, John Williams, declined to comment after the hearing.

Michael Pancer, the lawyer for Mr. Hunsaker, said he expected to be able to elaborate on his strategy after he got further into the pretrial procedures. For now, he said, his client's defense is based on a good-faith belief that the investigators' conduct was legal.

But Mr. Turley said Mr. Hunsaker could have a tough road, too, partly because of an e-mail message that the defendant is said to have written. In that message — in response to a note from investigators saying that a ruse had been used to obtain phone records — Mr. Hunsaker wrote back that he "shouldn't have asked."

Mr. Turley said that, whatever the defense strategy, that message could become a cornerstone of the prosecutor's case. "The quote supplies a ready-made narrative," Mr. Turley said. "It sums up the case in a single sentence."

He said prosecutors would characterize a corporate culture in which top executives did not confront the hard questions, telling the jurors: "Isn't that what Dunn is all about? She knew not to ask."

Three Investigators In HP Scandal Arraigned In California (AP)

By Jordan Robertson, The Associated Press

AP, October 11, 2006

Three private investigators who allegedly obtained confidential telephone records as part of Hewlett-Packard's boardroom spying probe pleaded not guilty Tuesday to identity theft and other felony charges.

Ronald DeLia of Massachusetts-based Security Outsourcing Solutions Inc., Matthew DePante of Florida-based Action Research Group Inc. and Bryan Wagner of Colorado were arraigned in Santa Clara County Superior Court. Each was later booked and released on personal recognizance.

DeLia, DePante and Wagner are among five people criminally charged last week for their roles in the spying scandal at the computer and printer giant. Former HP Chairwoman Patricia Dunn surrendered and appeared in court late last week, and the company's ousted ethics chief Kevin Hunsaker also turned himself in and was released.

The three investigators are accused of impersonating HP board members, employees and journalists to trick telephone companies into divulging their private phone logs.

All five are charged with using false or fraudulent pretenses to obtain confidential information from a public utility; unauthorized access to computer data; identity theft; and conspiracy to commit each of those crimes. Each charge carries a fine of up to $10,000 and three years in prison.

They are all scheduled to return to court Nov. 17.

Wagner's defense lawyer, Stephen Naratil, said outside court that his client worked for many companies and didn't know what the telephone records were being used for.

He declined to comment on prosecutors' claims that Wagner acknowledged destroying the computer linking him to the HP probe "because it had incriminating evidence on it."

"He's a hard worker," Naratil said. "He didn't know anything about HP. He didn't know anyone at HP. He was just doing his job."

DePante's defense lawyer, Richard Preira, reiterated his client's innocence but declined to comment further.

DeLia's defense lawyer declined to comment.

State Attorney General Bill Lockyer has said the investigation is ongoing and could lead to more charges.

DeLia, a longtime HP contractor on security investigations, was allegedly the middleman between HP and the other two investigators.

According to an affidavit filed in support of the charges, Dunn worked with DeLia on HP's ultimately unsuccessful media-leak investigation in 2005.

HP then contracted with him again this year after a story appeared on CNET's News.com in January with an anonymous source dishing about a private board retreat.

DeLia contracted with Action Research Group, where DePante is a manager, to obtain the private phone logs, who in turn hired Wagner as a subcontractor, according to the criminal complaint.

Prosecutors say a series of e-mails shows that DeLia regularly updated Dunn, Hunsaker and other members of HP's security team on the investigation, which became public last month and has prompted the resignation of three board members and three top HP employees.

According to the criminal complaint, private investigators working for HP compromised the personal data of more than 24 people. By March, the detectives had compiled records of 1,750 phone calls made on 157 cellular phones and 413 landlines.

In one of the more egregious cases, an impostor had a reporter's cell phone password removed, logged into her online account, changed her password and viewed the detailed call log for nine minutes.

The probe eventually identified longtime board member and former presidential adviser George Keyworth II as the anonymous source in the News.com story. Keyworth was outed in a board meeting, prompting the resignation of another director, venture capitalist Tom Perkins. Keyworth himself later resigned.

Dunn initially said she would cede the chairmanship to HP Chief Executive Officer Mark Hurd in January while remaining on the board, but she eventually stepped down entirely.

Hunsaker refused to resign from HP and was fired, according to his defense lawyer, Michael Pancer, who said Tuesday that his client would also be arraigned on Nov. 17.

Pretexting will become a criminal offense in California when a new law signed by Gov. Arnold Schwarzenegger takes effect Jan. 1. Violators will be punished by $2,500 in fines and up to a year in jail, though the law will not retroactively apply to the HP investigation.

How Carly Lost Her Gender Groove (NYT)

By Maureen Dowd

The New York Times, October 11, 2006

Carly Fiorina prided herself on being adept at succeeding in a man's world without whining about sexism.

In her new memoir, "Tough Choices," the expelled C.E.O. of Hewlett-Packard — the first female head of a Fortune 20 company — describes how she insisted on going along to a business meeting at a Washington strip club when she started out as an ambitious young woman at AT&T.

"I was scared to death," she writes, adding that she wore her most conservative dress-for-success business suit and little bow tie, carried her briefcase like "a shield of honor," and repeated the mantra, "I am a professional woman," even when her cabdriver asked her if she was the new act for the club, where babes in see-through negligees danced on tables.

"In a show of empathy that brings tears to my eyes still," she recounts, "each woman who approached the table would look the situation over and say: 'Sorry, gentlemen. Not till the lady leaves.' "

On her first day at HP, she proclaimed, "The glass ceiling doesn't exist." But she now concedes that the glass trapdoor might.

"I think somehow men understand other men's need for respect differently than they understand it for a woman," Ms. Fiorina told Lesley Stahl on "60 Minutes."

The male-dominated board's handling of her exit was "heartless in some ways and disrespectful in other ways," she said. "Maybe they took great pleasure in seeing me beat up publicly for weeks and weeks."

Other controlling blondes, like Hillary Clinton, Martha Stewart and Tina Brown, were slapped back after great success (in a trend that The Times's Alessandra Stanley dubbed blondenfreude), and Ms. Fiorina now thinks she was victimized by gender.

"In the chat rooms around Silicon Valley, from the time I arrived until long after I left HP, I was routinely referred to as either a 'bimbo' or a 'bitch,' she writes. "Too soft or too hard, and presumptuous, besides." She adds: "I watched with interest as male C.E.O.'s fired people and were hailed as 'decisive.' I was labeled 'vindictive."

She reels off things that offended her: The editor of Business Week asked her if she was wearing an Armani suit. She felt adjectives such as "flashy," "glamorous," and "diamond studded" were meant to make her seem superficial. (Who doesn't like being called glamorous?) Stories referred to her by her first name. There was "painful commentary" that she'd chosen not to have children because she was "too ambitious."

"When I finally reached the top, after striving my entire career to be judged by results and accomplishments," she concludes, "the coverage of my gender, my appearance and the perceptions of my personality would vastly outweigh anything else."

One of her foes was Tom Perkins, the 74-year-old rich venture capitalist on the HP board who also tangled with Patricia Dunn, the former board chairwoman. Being married to the romance novelist Danielle Steel and writing his own steamy novel, "Sex and the Single Zillionaire," did not improve Mr. Perkins's skills in dealing with women, it seems.

With several of the few high-profile women at the top tanking, it's interesting to note that Columbia Business School has introduced a new program that teaches the importance of a more empathetic and sensitive leadership style in globalized business, as opposed to the command-and-control style that has dominated the White House and Pentagon for, lo, these many messed up years.

Students learn how to read facial expressions, body language and posture, and get coaching on their brain's "mirror neurons" — how what they're thinking and feeling can affect others.

"This less autocratic leadership style draws on capabilities in which women are as good as men," says Michael Morris, a professor of psychology and management who is running the business school's new program.

Daniel Goleman, whose new book "Social Intelligence" is being taught in the program, points out that "while women are, in general, better at reading emotions, men tend to be better at managing them during a crisis. Women tend to be more sophisticated in reading social interactions but also tend to ruminate more when things go wrong."

And that can lead to score-settling memoirs — Ms. Fiorina fillets both her male tormentors on the "dysfunctional" board and Ms. Dunn — and to the sort of awful judgment and sneaky behavior that Ms. Dunn exhibited.

Neenu Sharma, an M.B.A. student in the new Columbia program, says the moral of the story is that leadership works best with both sexes involved. "You need the woman there to know what's actually going on, but you need the man there to deal with the critical emotions at the time."

Black Ordered Not To Sell Wife's $2.9M Diamond Ring (TORSTAR)

By Rick Westhead, BUSINESS REPORTER

Toronto Star, October 11, 2006

Conrad Black has been slapped with a restraining order that will bar him from selling a rare $2.9 million diamond ring he gave his wife Barbara Amiel-Black as a gift and other antique jewellery.

Black, accused of engineering a racketeering, fraud and tax evasion scheme when he was CEO of Chicago publisher Hollinger International Inc., successfully fought off an attempt by the U.S. Justice Department to force him to relinquish the 26-carat diamond ring he purchased in 2000 at British jeweller Graff Diamonds Ltd. Black has pleaded not guilty to the charges. He is on bail and living in Toronto.

He has said the ring and other antiques were gifts to Amiel-Black, who has not been charged with any wrongdoing. Nevertheless, in an Oct. 6 restraining order, Judge Amy St. Eve in Chicago barred Black from "selling, transferring, assigning, pledging, distributing, encumbering, wasting, secreting, depreciating, damaging, or in any way diminishing the value" of the diamond ring and other antiques.

Black has also been ordered to provide the court by tomorrow with proof he has bought insurance for the items. To post bail, Black, whose trial is scheduled to begin in March, has already has put up as collateral his Palm Beach estate, worth more than $20 million.

CRIMINAL LAW:

Bush Calls For Help In School Shootings (AP-Y)

By Ben Feller

AP-Yahoo, October 11, 2006

President Bush urged the nation Tuesday to help prevent deadly school shootings, saying adults should intervene when they notice children are in trouble.

"Hopefully, out of these tragedies will come the sense of communal obligation all throughout our country, for people to take an extra effort to comfort the lonely," Bush said at a summit he ordered in response to recent violence.

Bush seemed most struck by one of the points raised by experts: When students plot violence, they often brag about it in advance to other students. Safety specialists say schools must encourage students to speak up when they notice any ominous behavioral changes.

"The whole purpose of this exercise is to help educate," Bush said at the National 4-H Conference Center, "and if there needs to be a cultural change inside schools, for teachers to become more aware and more active."

There were no new policies nor new money announced. The administration instead touted Web sites of existing resources. Panelists spent the day sharing examples of local programs.

Democrats mocked the event as a photo opportunity with little substance. Democratic senators challenged Bush to reinstate funding that's been cut from school-safety programs.

"It seems every week we learn of yet another school shooting, and all the president is willing to do is hold a summit," said Sen. Frank Lautenberg, D-N.J.

Over the last two weeks, school shootings in Wisconsin, Colorado and Pennsylvania have unnerved the nation. Two involved adult intruders; the other was a student seeking revenge.

The federal role in school safety is limited. It's mainly a local matter. But the White House, sensitive to the concerns of many parents, wanted to show it was doing something.

DOJ_NMG_0079132

Education Secretary Margaret Spellings and Attorney General Alberto Gonzales led three panel discussions. Time and again, speakers said schools get safer when they take bullying seriously, practice their crisis plans, and talk to parents about what's happening.

"Our first line of prevention is really having good intelligence," said Delbert Elliott, director of the University of Colorado Center for the Study and Prevention of Violence.

Columbine survivor Craig Scott told the wrenching story of the day his sister died. He was in the Colorado school in 1999 when two student gunmen went on a rampage, killing 13 people, including his sister Rachel. He told Bush that kindness and compassion can trump violence.

"Please take my words to heart today," Scott said. "They were bought at a high price."

Bush applauded Scott's efforts. But when responding to an audience member, Bush challenged an assertion that the school testing he champions has crowded out character education.

"I don't think it's zero sum," Bush said. "I think you make sure a child learns and you can instill character at the same time."

He also said it was beyond the federal government to change what is in people's hearts.

"Government is law and justice," Bush said. "Loves comes from the hearts of people that are able to impart love."

At one point, someone in the audience asked Gonzales why the government hadn't done more to keep guns out of kids' hands.

"Obviously, kids should not have access to weapons, and there should be no weapons in our schools," the attorney general said. "That's been the position of our president since his days as governor."

The number of deadly shootings has gone up and down over the last 15 years. Overall school violence has trended downward, although it has increased lately.

Students in middle school and high school reported about 660,000 violent crimes in school in 2002 — a 43 percent drop from a decade earlier. But the number rose to 740,000 in 2003.

Four weeks before Election Day, the event gave Bush a chance to emphasize education, the issue at the center of his domestic agenda. The summit comes as Republicans in Congress have been eager to change the subject from a sex scandal involving former House pages.

Conference Addresses School Shootings (WP)

By Katherine Shaver

The Washington Post, October 11, 2006

President Bush said at a conference of school officials, police officers and youth advocates yesterday that communities need a list of "best practices" to prevent and respond to the kinds of school attacks that have occurred in recent weeks.

"In many ways, I'm sorry we're having this meeting," Bush told about 350 people at the National 4-H Conference Center in Chevy Chase. "In other ways, we know how important it is that we're having this meeting."

Bush said he was "troubled" by the recent school shootings in Colorado, Wisconsin and Pennsylvania. "All of us in this country want our classrooms to be gentle places for learning," he said.

His remarks wrapped up the six-hour Conference on School Safety, hastily arranged last week by the White House, the U.S. Department of Justice and the U.S. Department of Education after five girls were killed and five were wounded at an Amish schoolhouse in Pennsylvania. The president announced no new funding or policy initiatives to handle the problem but said he wanted the conference to reveal "concrete actions to help people understand what's possible and what's working."

"It seems to me, a lot of our attention should be on preventing" such incidents, Bush said. That would require "a mosaic of programs," he said, such as better training for school officials to spot the warning signs of a student bent on violence.

Bush spoke while seated onstage at a U-shaped table with a Florida sheriff, a Los Angeles specialist in school crisis counseling, a survivor of the 1999 shootings at Columbine High School and the Fairfax County school system's director of safety and security.

The president heard calls for more coordinated planning between schools and police, more character education, more peer mentoring programs, more parental involvement and more counseling for suicidal children who might also have homicidal tendencies. Adding metal detectors and more security cameras can create a "lockdown" atmosphere and make the school less hospitable, several panelists said.

Frederick E. Ellis, head of safety and security for Fairfax schools, said safety plans need to be updated frequently and practiced. Fairfax schools fine-tuned their security plans after the Columbine shootings in Colorado, the Sept. 11, 2001, attacks, the anthrax mail attacks and the Washington-area sniper shootings, he said.

For example, the system created a plan to shelter in place in response to an attack rather than automatically evacuate.

"We tell [school officials] you can't learn to dance the night of the ball," Ellis said. "It's too late."

DOJ_NMG_0079133

U.S. Education Secretary Margaret Spellings called Fairfax schools a national model for security planning.

In a room full of national experts dressed in conservative suits and police uniforms, it was a 23-year-old Colorado man in a brown leather jacket who received the standing ovation. Craig Scott described how two friends were shot to death next to him under a table in the Columbine High School library. His older sister, Rachel, then 17, was also killed.

Scott now tours the country as part of Rachel's Challenge, a program that urges teenagers to show more kindness and compassion and avoid violent music and video games.

"I've seen depression and a lot of loneliness and anger" among teenagers, Scott said. "Incorporating character back into the education system is something my generation is desperately crying out for."

The conference about school violence began with a national expert saying that schools are still among the safest places. Children ages 12 to 18 are far more likely to be killed or seriously assaulted outside school, said Delbert S. Elliott, director of the Center for the Study and Prevention of Violence at the University of Colorado.

Although high-profile attacks are relatively rare, he said, statistics show that "everyday violence," such as fights and gang attacks, are on the rise.

Warlene Gary, chief executive of the National Parent Teacher Association, said she wondered why it took three highly publicized school shootings to prompt a national conference when shootings in and near schools have become a too-frequent occurrence in urban areas such as the District.

"I hope people will collaborate and get things done, but we're sitting in the audience listening to experts talk about issues," said Gary, who lives in Silver Spring.

"The question is, when people walk away from it, what will they do?"

Summit On School Safety Focuses On Collaboration (USAT)

By Greg Toppo, Usa Today

USA Today, October 11, 2006

CHEVY CHASE, Md. — Reacting to a spate of school shootings, President Bush convened a one-day summit Tuesday on school safety and said he expected "some concrete action" out of it.

"All of us in this country want our classrooms to be gentle places of learning," he told a crowd of safety advocates, parents and police, "places where people not only learn the basics ... but learn to relate to one another."

Parents, he added, want to send their kids "to schools that are safe places. The violence we're seeing is upsetting to a lot of people."

Bush attended the last hour of the event, run by Attorney General Alberto Gonzales and Education Secretary Margaret Spellings. Though it focused mostly on what communities can do to keep kids from acting out violently, a good portion of the discussion centered on how schools react to violence.

Gonzales said schools need to review "crisis plans" regularly, in part because of staff turnover. "You can't just assume that people know what to do," he said.

When a gunman entered a Park County, Colo., school on Sept. 27 and took a group of girls hostage, the school had just practiced an emergency "lockdown" drill — officers were "able to get right to Room 206 and pin the shooter down there," said Sheriff Fred Wegener, a summit panelist.

In many ways, the conference pointed to the biggest challenge facing those who would stop school violence: There are different theories about what causes it and how to prevent it.

Panelists and attendees floated at least a dozen theories: bullying, easy access to firearms, a broken mental health system, bad parental role models, absent fathers, the death of God in public schools, not enough character education, too much emphasis on academics, too much testing, too many violent video games and movies, too much violent TV and music, the side effects of antidepressants.

Lisa VanSyckel, a New Jersey mother whose 15-year-old daughter became violent while taking the antidepressant Paxil, said the Food and Drug Administration isn't doing enough to get information about drug side effects into the hands of teachers, who often don't know that kids are taking them. "How is a teacher going to know how to monitor them?" she asked.

When an audience member forcefully recommended limiting access to guns, Wegener suggested guns weren't the problem. "When I went to school, I had a .30-30 (rifle) in the bed of my pickup, but I never thought about shooting anybody with it," he said.

To those steeped in violence prevention and children's well-being, the summit delivered few fresh ideas. But a few attendees said the discussion had advanced since 1999, when two teenage gunmen stormed Columbine High School in Colorado.

DOJ_NMG_0079134

Darrell Scott's daughter Rachel was killed at Columbine, and after that horrific attack, he recalled, most discussions centered on metal detectors and other "exterior solutions." Tuesday's summit, with its emphasis on mental health, communication and community building, represented a promising change, he said.

Bush Emphasizes Local, Private Role In Ending School Violence (NYT)

By Diana Jean Schemo

The New York Times, October 11, 2006

CHEVY CHASE, Md., Oct. 10 — The federal government should not play the primary role in responding to school violence, President Bush said Tuesday, but should instead give out information about strategies to help parents and schools grappling with the threat of deadly outbursts in the nation's schools.

The president and his wife, Laura, both spoke at a conference on school violence here, which he asked Education Secretary Margaret Spellings and Attorney General Alberto R. Gonzales to convene after a recent spate of school shootings that left six students and a principal dead in three incidents in a single week.

Several of the participants, many of whom run private, nonprofit efforts to prevent school shootings, urged a greater emphasis on character education. Gerard W. Rosolie, principal of Solanco High School, down the road from the Amish schoolhouse where five girls were killed last week, noted that money had been cut from a federal program intended to reduce school violence. Another participant said schools were under such pressure to show academic progress that they had no time to teach morality or values.

Mr. Bush bristled at any suggestion that his cornerstone education plan, No Child Left Behind, which emphasizes academic gains, might be a problem. "I don't think it's zero sum," he said.

He added that it was not up to the federal government to legislate character education. "It requires a higher power than the federal government to cause somebody to love somebody," he said.

No Single Answer To School Violence, Bush Says (MJS)

By Craig Gilbert

Milwaukee Journal Sentinel, October 11, 2006

Summit explores safety measures after shootings

Chevy Chase, Md. - Spurred by recent school shootings in Wisconsin, Colorado and Pennsylvania, the White House convened a presidential summit Tuesday to talk about what students, parents, teachers and police can do.

"In many ways, I'm sorry we're having these meetings," President Bush told participants, many of whom had personal stories to tell about some of the country's most horrific school tragedies, from Columbine High School in Colorado (1999), to Springfield, Ore. (1998), to Jonesboro, Ark. (1998).

Experts at the conference said Tuesday that those killings had led to meaningful changes: new schools designed for safety; anti-bullying programs; and better police training and information-sharing with the schools.

But the fact that seven or eight years later the country has endured another wave of school violence injected a note of caution about finding big lessons and grand solutions.

Recent incidents include the arrest of a student in the shooting of a high school principal in Cazenovia on Sept. 29; a shooting and hostage-taking by a 53-year-old man in Colorado on Sept. 27; and the shooting deaths of five Amish girls a week ago in Pennsylvania.

In the latest incident, a 13-year-old student in Joplin, Mo., was accused of firing an assault weapon in school Monday but was arrested before anyone was hurt.

"The risk of being murdered (for kids) . . . is 70 times greater away from school than it is at school," said Delbert Elliott of the University of Colorado. But the bad news, he said, is that - after a decade of positive trend lines - some overall indicators of school violence are up in the past two years.

Joining one discussion panel, Bush said that schools should be "gentle places of learning," but recent events are "upsetting to a lot of people."

Bush said there was "no single answer" but a "mosaic of programs."

Also speaking were first lady Laura Bush, Attorney General Alberto Gonzales and Education Secretary Margaret Spellings.

Sheriff thought it was drill

The Colorado sheriff who responded to the hostage-taking and shootings there two weeks ago recounted his experiences to an invited audience of several hundred.

"I first heard it over the radio. I think it's a drill," Park County Sheriff Fred Wegener said.

DOJ_NMG_0079135

Wegener said law enforcement had the benefit in this case of a "post-Columbine" school design that made it easier to isolate the area where the gunman was, and up-to-date training and procedures, down to "the little cards to slip under the door" of locked-down classrooms to find out whether students inside were safe.

But Wegener said he wasn't sure what lessons he could draw from the incident, in which six girls were held hostage. One was shot dead.

"I still think our school was safe," Wegener said. "I think this is just one of those times when an individual is able to get in." Encouraging expression

Others talked about the importance of encouraging classmates to let authorities know when students seem deeply troubled or express violent thoughts about school. One expert said that, in about four out of five cases, a student planning a violent act tells others about it beforehand.

Last month in Green Bay, authorities said they pre-empted a plan by students to attack their school when a classmate tipped them off.

The conference was clearly meant to signal that the administration was actively engaged in the issue, even though the president and his education secretary pointed out that matters such as school security and school policy are largely a state and local domain.

By the time it was over, the discussion had veered across a wide range, from the pros and cons of metal detectors to the importance of fatherhood to faith-based programs to post-traumatic stress disorder to the condition of society in general.

The audience members selected by the administration included a large number of advocates of character, or "values," education in the schools, including the father and brother of a student killed in the Columbine massacre, Rachel Scott.

The girl's brother, Craig Scott, speaks across the country about Columbine and promotes values education. Scott spoke to Bush and the conference about surviving the massacre, decried the influence of popular culture and violent video games, and called on schools to put the same priority on building character as imparting knowledge.

Others in the audience made similar appeals, in one case suggesting that the emphasis on regular achievement tests in schools (a feature of Bush's No Child Left Behind law) left too little room for moral instruction.

In response, Bush said it wasn't a "zero-sum" game.

"I think you can make sure a child learns, and I think you can instill character at the same time," said Bush, who also suggested that the ultimate answers to school violence won't come from government but from parents and communities.

"It's really important . . . that people not think government is a loving entity. Government is law and justice. Love comes from the hearts of people that are able to impart love," Bush said. Recovery after violence

Also discussed Tuesday was how to help communities and students recover emotionally after school violence, from the process of re-opening schools to choosing memorials.

"Recovery takes a long time. We're eight years out, and we're still recovering," said Cathy Paine, who was in charge of recovery programs at Springfield, Ore., after the 1998 incident in which a student killed his parents, then went to school and opened fire in the cafeteria, killing two.

One attendee, Milwaukee Public Schools security director Peter Pochowski, said he didn't expect to change "the way we do things" as a result of Tuesday's conference.

"Nobody expects a magic wand (or) one pearl of wisdom," he said in an interview. But "it's good to have people come together."

Turn Anguish To Action, Bush Says (BSUN)

By Julie Hirschfeld Davis, Sun Reporter

The Baltimore Sun, October 11, 2006

President attends meeting in Md. on ways to keep kids safe in school

CHEVY CHASE -- President Bush urged Americans Tuesday to turn their anguish over school shootings in Pennsylvania and around the nation into "concrete action" to prevent further tragedies.

But he told a gathering of educators, activists and law enforcement officials that more federal funding and government regulation won't solve the problem.

"In many ways, I'm sorry we're having this meeting," Bush said as he wrapped up a conference hastily organized by the White House to respond to the recent spate of deadly school violence. "In other ways, I know how important it is."

Bush said the meeting, moderated by Education Secretary Margaret Spellings and Attorney General Alberto R. Gonzales, was part of "a nationwide effort to help people who are responsible to protect our children."

Trading ideas

DOJ_NMG_0079136

More than 300 local leaders and specialists from around the country spent about six hours trading ideas, from drafting strong school emergency plans to urging fathers to get more involved in school, to providing character education for kids.

The president, peppered by criticism from Democrats who accused him of short-changing school-safety programs, said the government shouldn't play the lead role in fostering a nurturing school environment.

"The federal government is a limited funder of education, and that's the way it should be," Bush said during a brief question-and-answer session. "It's really important that people not think government is a loving entity. Government is law and justice."

Administration officials also rejected calls for enacting new gun laws, saying Bush is focusing on enforcing existing statutes and prosecuting violent crime.

"There's only one common thread in all of these recent shootings, and that's the easy availability of guns by the assailants, whether they were [age] 15 or 50," said Theo Milonopoulos, a 19-year-old gun control activist from Los Angeles, Calif. "They just didn't want to address it."

Milonopoulos made the only mention of the issue during a question period with Gonzales.

'Complete denial'

Kristen Rand of the Washington-based Violence Policy Center said leaving guns off the agenda showed the administration's "complete denial regarding the catalytic role that guns play in school violence."

Bush took a seat at a three-sided table on the stage of a packed suburban Maryland auditorium in the headquarters of the National 4-H Council, a youth development organization. The administration had set up a mock classroom complete with fake wood paneling and a chalkboard backdrop emblazoned with the event's title, and Bush questioned participants about how best to share their experiences with others around the nation.

"What it shows is that this is a concern, and they're marshaling these types of figures from the federal government to show that the government is aware of what's going on in our schools," said Russell Tedesco, the director of security for Prince George's County public schools.

Democrats seized the opportunity to blast Bush for his education policy, noting that he worked to wipe out a key school safety grant program, which has been cut by more than 25 percent over the past four years.

Bush slashed the program because his budget office determined it was "ineffective," said Emily Lawrimore, a spokeswoman, and instead proposed "a more targeted and accountability-based approach."

President Tackles School Safety (LAT)

By Mima Mohammed, Times Staff Writer

The Los Angeles Times, October 11, 2006

Recent shootings help prompt the summit on prevention. Bush calls for more civic and parental involvement.

WASHINGTON — In the wake of three deadly school shootings in recent weeks, President Bush convened a conference on school safety Tuesday in which Cabinet members, educators, police and students discussed ways to recognize and prevent violence.

Conspicuously absent in the all-day session was any mention of the role of firearms in the shootings, a politically volatile issue sure to inflame partisan passions in a midterm election year.

"In many ways, I'm sorry we're having this meeting. In other ways, I know how important it is that we're having this meeting," Bush said. "The violence that has been occurring in our schools is incredibly sad."

Bush, joined on a panel by Atty. Gen. Alberto R. Gonzales and Education Secretary Margaret Spellings, called on parents and communities to take responsibility for ensuring school safety, saying that there are limits to what the government can do.

Indeed, the federal government plays a limited role in school safety, as education is mainly under local and state jurisdiction.

The panel discussions focused on human interaction and the psychology of violence.

Some participants argued that schools needed to do a better job of determining which students might bring weapons on campus. Psychologists pointed out that students who have suicidal tendencies often have thoughts of homicide too. And many panelists focused on the importance of building character in students, which they said had been degraded by media influences such as music and video games.

Harsher measures such as installing metal detectors in schools were viewed with skepticism. Gonzales said metal detectors may not be appropriate, noting that not all school shootings occur inside the buildings.

DOJ_NMG_0079137

The conference at the 4-H Youth Conference Center in Chevy Chase, Md., took place four weeks before a midterm election that could cost the Republicans control of Congress and allowed Bush to focus on the seemingly politically safe issue of child safety in schools.

But critics used the occasion to attack the administration's policies on gun control and funding for school safety programs.

"I'm disappointed that today's White House conference on school violence did not focus on the too-easy access to guns in our society," said Paul Helmke, president of the Brady Campaign to Prevent Gun Violence.

"Two years ago, President Bush abandoned his campaign pledge to reauthorize the federal assault weapons ban," Helmke said. "Yesterday, a 13-year-old Missouri boy brought an AK-47 clone to school and fired it before being apprehended. The Bush administration's inaction two years ago has led to even deadlier weapons being available in our communities."

In a statement issued Tuesday, the Democratic National Committee weighed in with a shot at White House budget priorities: "Funding for the Cops in Schools program has been slashed on numerous occasions under the watch of Bush and his GOP Congress."

White House spokeswoman Emily Lawrimore responded with an e-mailed statement: "President Bush believes we should target criminals who break our laws — not law-abiding citizens who follow the law.

"At the same time, he has made school safety a priority…. President Bush has proposed a more targeted and accountability-based approach, which we believe would be more effective in making schools safer."

Bush Summit On School Violence Begins (GANNETT)

By Ledyard King, Gannett News Service

Gannett News Service, October 11, 2006

CHEVY CHASE, Md. — The Colorado high school where a gunman took hostages and killed a student Sept. 27 had crisis plans in place, limited access to visitors and recently drilled for the possibility of an armed intruder.

“I still think we have a safe school,” Park County Sheriff Fred Wegener told police officers, students and teachers gathered for a summit on school violence convened by President Bush on Tuesday. “This is just one of those times when an individual was able to get in. ... We’re not supposed to lose our kids at school.”

The Conference on School Safety, moderated by top White House advisers, featured more than a dozen education and law enforcement experts trading ideas: encouraging students to come forward with tips, controlling the movement of visitors, running drills so students and staff know what to do when an emergency arises.

“You can’t learn to dance the night of the ball,” said Fred Ellis, security director of Fairfax County, Va., schools.

But last month’s shooting at Platte County High School in Bailey, Colo., suggests that even the most prepared and equipped schools can’t always protect children.

“We can never really let our guard down and that was one the things that was clear to us last week,” said U.S. Education Secretary Margaret Spellings, one of the summit’s moderators. “All of us who are parents know it’s frightening. This could really happen anywhere.”

The summit was called following a spate of school shootings nationwide, including the killing of five girls at an Amish schoolhouse in rural Pennsylvania. Although researchers say that school remains one of the safest places for children, statistics indicate that campus violence and death is on the rise after a decade of decrease.

A recent survey found that 6 percent of students reported carrying a weapon to school within the past 30 days, said Delbert Elliott, director of the Center for the Study and Prevention of Violence at the University of Colorado. That makes knowing what students are up to paramount, he said.

“Our first line of prevention is having good intelligence,” he told the summit.

Researchers say most students planning attacks often share their intentions with someone. So student-run programs like Walton Senior High School’s Youth Crime Watch in Defuniak Springs, Fla., could prove extremely valuable in gauging the student behavior that could lead to violence.

“If you know a real good friend and they start changing, they stop doing stuff that you know that they love, happy one day, depressed the next, talk to (them),” said Chiara Perkins, a junior who leads the program. “If there’s nothing you can do as a friend, go ahead and talk to an adult,” Perkins, the only student panelist at Tuesday’s summit, said.

U.S. Attorney General Alberto Gonzales dismissed one questioner’s call for increased gun control, saying weapons prosecutions had increased dramatically since Bush took office in 2001. Following the 1999 shooting at Columbine High School in Littleton, Colo., then-President Bill Clinton pushed for restricting access to guns.

Panelists also didn’t give metal detectors much of a thumbs-up. Not only do they give schools the kind of foreboding climate that feeds into student rebellion, they don’t work very well.

DOJ_NMG_0079138

"It doesn't take long for students to know how to circumvent (it)," said Thomas Kube, executive director of the Council of Education Facility Planners in Scottsdale, Ariz., adding that 80 percent of school shootings happen outside the building.

Bush, Others Hear Ideas On School Safety (RTD)

By Gil Klein, MEDIA GENERAL NEWS SERVICE

Richmond Times-Dispatch, October 11, 2006

WASHINGTON -- Metal detectors won't stop school shootings, speakers at a conference on school safety told President Bush yesterday. Only listening to students, hearing about their problems and getting them help will stop the violence before it begins.

The White House hastily called the conference of law-enforcement officers, school counselors and safety-advocacy groups after three school shootings in two weeks in Wisconsin, Colorado and Pennsylvania -- stunned the nation.

"All of us want our classrooms to be gentle places of learning," Bush said. "Rather than be upset . . . it's best to be proactive, and that's what this meeting is all about."

Bush, sitting between Attorney General Alberto Gonzales and Education Secretary Margaret Spellings, heard Craig Scott describe how in April 1999 he hid under a table in the Columbine High School library as his two friends next to him were shot and killed. The rampage took the lives of 12 students and a teacher.

Not until Eric Harris and Dylan Klebold had shot themselves did Scott crawl from under the desk and discover that his sister, Rachel, was the first victim.

Seven and a half years later, Scott now talks to high school students through an organization his family started, "Rachel's Challenge." He told Bush that stressing academics alone will not stop school shootings.

About 300 people attended the conference, which was planned only last week. The Justice and Education departments invited participants.

Bush called on both departments to put together the best practices learned from this conference and distribute them to law-enforcement and education officials.

Gil Klein writes for the Washington bureau of Media General News Service. He can be reached at gklein@mediageneral.com.

Conference On School Safety Ends With Call For Focus On Character (MCT)

By Ron Hutcheson, McClatchy Newspapers

McClatchy Newspapers, October 11, 2006

CHEVY CHASE, Md. - Victims of school violence shared their horrific experiences at a White House conference Tuesday that ended with a call for more focus on character and values in the nation's classrooms.

Sitting at a table with President Bush, Craig Scott, a survivor of the 1999 Columbine High School massacre, urged educators to influence students' hearts as well as their heads.

"Eric Harris and Dylan Klebold were very smart," Scott said of the two shooters who killed his sister and 12 others at the Colorado school. "The problem wasn't their education at my school, Columbine. Their problem was their character."

Other conference participants - including Bush - echoed Scott's assessment. The meeting, hosted in a Maryland suburb of Washington by Attorney General Alberto Gonzales and Education Secretary Margaret Spellings, examined ways to prevent school violence and strategies for dealing with the trauma of a school shooting.

Bush announced the conference after recent shootings in Wisconsin, Colorado and Pennsylvania schools claimed seven victims and left two of the shooters dead.

Experts cited a host of factors that have contributed to the violence, including stress and feelings of alienation among students, negative media influences and inattentive parents. They said shooters tended to be depressed and suicidal.

"What we've learned about shooters is suicide and homicide are two sides of the same coin. They all in some ways express a wish to die," said Marleen Wong, the director of crisis counseling for the Los Angeles School District.

A 2004 threat assessment by the Secret Service warned that attempting to profile school shooters is dangerous, however, because some shooters don't fit the mold.

"Rather than asking whether a particular student `looks like' those who have launched school-based attacks before, it is more productive to ask whether a student is on a path toward a violent attack," the assessment concluded.

Conference participants urged educators, parents and students to pay more attention to students who complain of alienation, appear depressed or talk about violence. School shootings are rarely impulsive acts; in 81 percent of cases, at least one person knew that the attacker was contemplating violence, the Secret Service report said.

DOJ_NMG_0079139

"Teachers should know more about mental health and have a system to report concerns," said Cathy Paine, a crisis-response specialist for the Springfield School District in Oregon. Paine said teachers at Thurston High School in Springfield saw potential warning signs in 15-year-old Kip Kinkel in 1998, but didn't connect the dots until he opened fire in the school's cafeteria, killing two students and wounding about two dozen others.

Scott of Columbine, who's now a film student at the University of Colorado, said he frequently met potential shooters on his travels for Rachel's Challenge, an organization founded in memory of his slain sister. The group urges students to reach out to loners, victims of bullies and other vulnerable students.

"I see a lot of depression. I see a lot of loneliness and a lot of anger," he said. "I've heard all kinds of terrible stories about things they've been through." He urged educators to "take a look at teaching that doesn't just teach the head, but teaches the heart. ... You can help point them to what's right and what's wrong."

Some advocates of character education offered implicit criticism of Bush's No Child Left Behind Act, which stresses academic achievement and requires frequent testing.

"I think you can make sure a child learns, and I think you can instill character at the same time. I don't think you have to choose," the president said after one of the speakers complained that "testing and testing and testing" was crowding out attention to character and values in schools.

He also told the audience members that they shouldn't look to the federal government to bankroll character education or other school programs.

"Let me put the funding issue right on the table. The federal government is a limited funder of education. And I happen to believe that's the way it should be. ... This is a local responsibility," he said.

Acknowledging the reality of school shootings, one conference panel focused on helping students cope with classroom deaths. Experts advised extensive mental-health follow-up.

"Recovery takes a long time. We're eight years out and we're still recovering," Paine said of the Oregon shooting. "Whenever something happens, we're always right back there again in that cafeteria."

Compassion, Not Laws (DENP)

By John Aloysius Farrell

Denver Post, October 11, 2006

Bush meeting on schools big on emotions. The brother of a girl killed at Columbine speaks of healing amid talk of recent safety improvements.

Attorney General Alberto Gonzales takes part in a conference on school safety Tuesday in Chevy Chase, Md. (AP / Evan Vucci)

Chevy Chase, Md. - President Bush said he wanted Tuesday's White House conference on school safety to produce a concrete plan of action. But tangible solutions like the use of metal detectors or a ban on assault weapons were rejected and eclipsed by testaments to the power of love.

The conference was quickly staged after recent invasions by berserk intruders at schools in Colorado and Pennsylvania. But the session's most emotionally potent moments were devoted to identifying and communicating with murderous homegrown students like Eric Harris and Dylan Klebold, who killed 13 people in the 1999 shootings at Columbine High School.

"The main thing I have learned is that kindness and compassion can be the biggest antidote," said Craig Scott, whose sister Rachel died at Columbine, and who narrowly escaped death himself that day.

"Take my words to heart today; they were bought at a high price," he said.

The audience of several hundred law enforcement officials, educators and others rose and applauded as Scott finished speaking. Bush told Scott's father, Darrell Scott, who was in the audience, that he "raised a good man here."

Several speakers at Tuesday's conference urged Bush to purge America's coarse and violent culture, and to order that schools teach students about character, virtue and God. But the president noted the limitations of government in the battle against school violence.

Craig Scott "is inspiring others to continue to reach out to say to somebody who is lonely, 'I love you.' And I'm afraid this requires a higher power than the federal government to cause somebody to love somebody," Bush said.

The best solution, he added, is for parents, educators and students to find the love and compassion to reach out to troubled youths before they turn to violence.

"Societies change one heart at a time," said Bush. "This need to say 'I love you' comes from your soul. Hopefully, out of these tragedies will come the sense of communal obligation ... for people to take an extra effort to comfort the lonely."

First lady Laura Bush, Attorney General Alberto Gonzales and Education Secretary Margaret Spellings also addressed the conference, which was held on the campus of the National 4-H Conference Center in one of the capital's wealthy suburbs.

DOJ_NMG_0079140

Delbert Elliott, director of the Center for the Study and Prevention of Violence at the University of Colorado, spoke approvingly about steps that have been taken since the Columbine tragedy.

"Our kids are safer at school than they are at almost anyplace," Elliott said.

He noted that students today have a greater chance of being killed at a shopping mall or in their home than at school.

Yet in the last two years, Elliott said, gang-related violence and school-related deaths have risen.

Improved safety touted

Law enforcement officials vowed renewed dedication to school design improvements aimed at security, better coordination among local authorities, and lockdown and evacuation drills that have been widely adopted since the Columbine killings.

Such drills "made a big difference two weeks ago in ... the shooting in Bailey, Colo., where they were able to respond in a very effective manner to that tragedy," Gonzales said.

The attorney general and other experts urged parents and educators to stay on the alert for potentially violent students and to get them treatment.

During one panel presentation, Gonzales and Park County Sheriff Fred Wegener, who led the raid that ended the Sept. 27 hostage crisis at Platte Canyon High School in Bailey, characterized some proposals - like the purchase and operation of metal detectors and security cameras - as overly expensive and easily evaded.

And both dismissed the proposal of California student Theo Milonopoulos, who suggested that a ban on assault weapons and other gun-control measures might reduce the number of school shootings.

"Obviously, kids should not have access to weapons," said Gonzales, but he advocated tougher enforcement of existing gun laws rather than promoting new ones.

Wegener noted how in his younger days it was not uncommon for students in his rural community to keep rifles in their pickup trucks or to carry knives in school. A subsequent breakdown in society, he said, has led to school violence.

"I'm not sure that response - that society should change - is enough," Milonopoulos replied.

The conference was largely ceremonial, with victims and representatives of volunteer organizations offering testimony to Bush administration officials, who listened but offered little.

Sen. Ken Salazar, D-Colo., joined other Democratic senators in criticizing the administration for cutting the budgets of federal programs that had been adopted after Columbine to funnel funding to law enforcement agencies for community police officers and other assets.

"As the recent tragedies in Colorado, Wisconsin and Pennsylvania have made clear," Salazar and eight other Democratic senators wrote Bush, "our children remain all too vulnerable in school."

Prevent School Violence, Bush Tells Conference (HC)

By Julie Mason

Houston Chronicle, October 11, 2006

Panelists focus on warning signs and values issues

WASHINGTON - Keys to stopping what appears to be an epidemic of school violence include learning how to spot troubled students, boosting their self-esteem and preparing for emergencies, according to panelists at a special White House conference Tuesday.

Organized in response to a recent spate of deadly shootings at schools, the conference did not address gun control or firearms-related issues. Rather, it focused on values and community action.

"The violence we've seen is upsetting to a lot of people and I know it's upsetting to the professionals who are with us," President Bush told participants. "But rather than be upset, it's best for all of us who are responsible for helping the folks not only to cope, but to prevent action from taking place."

Among the recent attacks, a gunman in Colorado took six girls hostage in a classroom, sexually assaulted them and then killed one. In Wisconsin, a 15-year-old student walked into his high school and shot the principal. And in Pennsylvania, an intruder shot five girls to death at an Amish schoolhouse.

Experts said warning signs of possible violent behavior include changes in dress, mood, friends and diet. Students expressing suicidal or despairing thoughts also warrant special attention, they said.

One of the speakers was a survivor of the 1999 Columbine massacre that left 15 people dead. Craig Scott, currently a film student at the University of Colorado, told Bush that his sister, Rachel, died in the attack.

"I'm not promoting that religion be brought back to schools, I don't believe that's the answer," Scott said. "But I do believe in education that touches and teaches the heart and helps form character."

In the Houston area, all school districts have emergency preparedness plans, said Linda Clarke, director of education and special projects in the Office of Mayor Bill White.

DOJ_NMG_0079141

"Houston adopted a community-based program to work with kids, and there are programs in the schools to help kids with emotional problems," Clarke said. "And of course there's been a lot done in the past year after the hurricane, to make sure we are better prepared for any kind of emergency situation."

In an effort to make schools safer, many Houston schools employ cameras, uniformed officers and metal detectors — an approach that drew skepticism from Bush administration officials.

"One panel member said that it sends the wrong message about what we think of our kids when we have them come to an environment where they're supposed to learn and have to pass through metal detectors," said Attorney General Alberto Gonzales.

Bush said he agreed, but asked whether sheriff departments could be more involved with enforcing school safety.

Democratic leaders, meanwhile, faulted Bush for cutting funding for two programs that provide funding and personnel for law enforcement officers around schools. Eight Democratic senators wrote to Bush Tuesday asking the funding be fully restored in future budgets.

"As the recent tragedies in Colorado, Wisconsin, and Pennsylvania have made clear, our children remain all too vulnerable in school," they wrote.

First lady Laura Bush, a former teacher and school librarian, said easing school violence calls for addressing the underlying causes.

"One of the best ways to keep Americans away from violent behavior, both as young people and adults, is to give our children a more positive vision for their future," the first lady said.

Helping Kids Fight School Violence (NSDY)

By Audrey Dutton, Newsday Washington Bureau

Long Island Newsday, October 11, 2006

WASHINGTON - Nearly 10 years ago, Daniel Gross' brother Matthew was shot in the head by a gunman while standing on an observation deck of the Empire State Building. After watching his brother slowly recover from a coma, Daniel started a gun violence prevention organization, PAX.

The group Gross co-founded runs a nationwide anonymous hotline that, he says, is helping kids fight school violence, 866-SPEAK-UP.

"You could safely say hundreds of incidents have been averted," Gross said. He cites 15,000 calls to the hotline in the past four years. "New York has lagged behind a lot of other communities" in terms of school violence prevention, he said.

Gross joined other advocates, law enforcement officers and educators from around the country yesterday in Chevy Chase, Md., for a conference on school safety.

President George W. Bush participated in a panel at the conference, which followed recent school-shooting tragedies in Pennsylvania, Colorado and Wisconsin.

"Hopefully, out of these tragedies will come the sense of communal obligation all throughout our country, for people to take an extra effort to comfort the lonely," Bush said, but he expressed hopes that "people not think government is a loving entity. Government is law and justice."

The rate of violent crime in schools dropped over 10 years, according to the most recent figures from the Bureau of Justice Statistics and National Center for Education Statistics. In 1992, 48 of every 1,000 students would fall prey to violence at school, but in 2003 that number fell to 28 of every 1,000.

"We are, however, seeing some indications in the last two years that those trends are changing," Attorney General Alberto Gonzales said.

Of all violent crime in 2004, 14.2 percent occurred inside a school building or on school grounds. But there is no nationally mandated standard for school crime reporting, leaving it up to local officials to decide whether a shove in the cafeteria line should be considered an assault.

This year, Canton and Middletown school districts won a combined $2.9 million in federal funds to merge youth-saving efforts by law enforcement, teachers and mental health professionals. The Uniondale school district also has received grant money from the federal Safe Schools/Healthy Students Initiative.

The Safe Schools program doled out a total of $31 million this year, but of 485 school districts that applied, only 19 received funding. And their grants, which are awarded under No Child Left Behind, expire after three years.

Bush Advocates Volunteers For Schools (PPG)

By Jerome L. Sherman, Pittsburgh Post-gazette

Pittsburgh Post-Gazette, October 11, 2006

DOJ_NMG_0079142

WASHINGTON -- President Bush yesterday said local communities need more impassioned volunteers, not more federal government intervention, as a means for promoting stronger moral values in the wake of several deadly school shootings.

"It's really important to me that people not think government is a loving entity. Government is law and justice. Love comes from the hearts of people who are able to impart love," the president said during a conference on school safety in Chevy Chase, Md., that emphasized the faith-based approaches at the center of some of his domestic policies. "I'm afraid it requires a higher power than the federal government to cause somebody to love somebody."

Mr. Bush called for the meeting shortly after a gunman killed five girls and wounded five others at the West Nickel Mines Amish School on Oct. 2. His administration invited educators, public safety experts, and shooting survivors from across the country, including Craig Scott, whose 17-year-old sister, Rachel, was one of 15 people killed in the 1999 Columbine High School massacre in Littleton, Colo.

The president cited Mr. Scott as a "social entrepreneur" for his work with Rachel's Challenge, an organization -- started by his father, Darrell -- that teaches students about Rachel Scott's life, trying to inspire them to rethink how they treat others. Mr. Bush also pointed to the potential of the USA Freedom Corps, a White House initiative aimed at encouraging more volunteer service among Americans.

Craig Scott, now 23, was in his school library on April 20, 1999 when two fellow students, Eric Harris and Dylan Klebold, entered and started shooting. He saw them kill several of his close friends. His sister, shot in the head, was the first person to die that day.

Mr. Scott told the president that he thinks schools often focus too much on academic performance, not moral character, echoing a theme stated by several speakers. "The youth are crying for something to stand for, something to believe in," Mr. Scott said.

Mr. Bush agreed, but defended his administration's emphasis on academic testing through the No Child Left Behind Act.

"I think you can make sure a child learns and you can instill character at the same time. I don't think you have to choose," he said.

He also called on local law enforcement agencies and school districts to start sharing their "best practices" in preventing violence, and he said educators may need to be more aware of sudden personality changes in their students, especially evidence of suicidal tendencies.

Marleen Wong, director of crisis counseling and intervention services for the Los Angles Unified School District, said most school shootings involve children who likely have discussed their plans with fellow students.

She shared a panel with Larry Macaluso, superintendent of the Red Lion Area School District in York County, Pa., where in April 2003 an eighth grade student shot and killed a junior high school principal in the cafeteria before shooting himself.

Mr. Macaluso said his students and staff had made a "remarkable recovery" since then, partly because of steps administrators took in the days and weeks immediately following the shooting.

In particular, he said, officials held an open house with parents and students just before classes resumed, serving beverages in the cafeteria as a symbol of a return to normalcy.

"Try to share with them how safe and warm this environment can be," Mr. Macaluso said.

During the first day of classes, students were encouraged, but not required, to visit the cafeteria and put their handprints on a makeshift memorial there.

This month's violence at the Amish school, however, brought back painful memories for Mr. Macaluso and many others in Red Lion. "The healing process never ends," he said.

In Lancaster County, locals have decided to take down the school house where the girls were killed as part of their recovery.

One panelist yesterday commended the Amish for forgiving Charles Carl Roberts IV, the shooter, and his family. Betty Alvarez Ham, president of City Impact, a Christian outreach group for young people in Ventura County, Calif., said forgiveness is something that should be taught in schools to help children avoid outbursts of anger.

Guns Are In Schools But Not In The President's Vocabulary (WP)

By Dana Milbank

The Washington Post, October 11, 2006

President Bush has always been a disciplined man, but yesterday he set a new standard for self-control: He moderated an hour-long discussion about the rash of school shootings in the past week without once mentioning the word "guns."

First lady Laura Bush was nearly as good, giving a seven-minute speech at yesterday's White House Conference on School Safety without mentioning guns. Two longtime aides, Attorney General Alberto Gonzales and Education Secretary

DOJ_NMG_0079143

Margaret Spellings, deftly led hours of panels at the National 4-H building in Chevy Chase with only a few glancing references to weapons.

This was no misfire. The White House, hastily arranging yesterday's forum to react to shootings over the past fortnight at schools in Pennsylvania, Colorado, Wisconsin and Missouri, neglected to invite any gun-control advocates. In fact, how the killers had carried out their deeds might have remained a mystery if 19-year-old twin brothers Theo and Niko Milonopoulos hadn't infiltrated the gathering.

Managing to get in front of a microphone during question time, Theo pointed out to Gonzales that "the common denominator in the rash of school shootings" has been access to high-powered guns. He asked what could be done to reduce the spread of such weapons "in light of the expiration of the federal assault weapons ban?"

"Assault weapons," Gonzales repeated. Some in the audience chuckled as he looked to see who on the panel would take the question.

The attorney general decided to do it himself. "Obviously, kids shouldn't have access," he granted, before quickly adding that there is no need for new laws. "We need to make sure those who break the laws are prosecuted," he said.

"There's a big elephant in the room and it's gun control," Niko observed after the panel ended.

The Bush administration has for years been known for its use of human props to make its points: middle-class "tax families" to pitch for tax cuts, victims of Saddam Hussein's torture to pitch for the Iraq war, and friendly partisans to pitch soft questions at "Ask President Bush" sessions. The technique is not new; Bill Clinton did much the same when hosting events about race.

Still, yesterday's forum was unusual. While experts dispute how much blame to place on children's access to guns, even the invited guests found it a bit odd to banish the topic entirely from a school-violence forum. "No one wants to touch gun control before an election," surmised one participant, Warlene Gary of the National PTA.

Democrats and gun-control advocates shut out of the invitation-only event had to do their sniping from a distance. They pointed out the COPS in Schools program, given $160 million in 2000, has been cut to zero. "The Bush administration is in denial," protested the Violence Policy Center.

At the conference, Bush's thoughts leaned in the opposite direction; he mused at one point about whether schools were becoming too locked down.

Gonzales advised Bush that one panelist said metal detectors send "the wrong message about what we think of our kids."

"I happen to agree," Bush said. "But what do I know?"

"Yes, sir," Gonzales replied, drawing chuckles from those in the crowd who thought he was agreeing with the "what do I know" quip.

Bush and his fellow participants stood in front of a faux blackboard inscribed with the words "Conference on School Safety" 42 times. With gun control off the table, the questions and comments became a bit repetitious, too, as a long line of participants echoed the belief that school violence would be reduced by values education and religious belief.

"It's illegal to say 'God' in the public schools these days," complained one questioner. He was followed by a representative of the American Association of Christian Schools. Craig Scott, brother of a girl killed in the Columbine massacre, said she was "killed for her faith."

"Lots of folks find answers in their faith," Spellings observed.

They certainly did yesterday. Another panelist spoke about the need for churches to "adopt" schools. An organization started by the Scotts, Rachel's Challenge, distributed brochures comparing the slain girl and her father to Anne Frank and her father.

When Bush arrived, Craig Scott was invited to speak again. This time, he read a poem he said his father read while appearing before a congressional committee.

"You've outlawed simple prayer.

"Now gunshots fill our classrooms and precious children die . . .

"You regulate restrictive law through legislative creed, and yet you failed to understand that God is what we need."

Until that point, Bush had been having trouble finding his voice on school shootings, which one of his own panelists asserted could number as high as 600 over the past six years. He labeled the violence "inexplissible," apparently merging "inexplicable" and "inexpressible." And he had to guide the discussion away from one panelist's remark about "computer predators" -- a dangerous topic during the Mark Foley scandal.

But on hearing Scott's "unbelievably eloquent testimony," Bush brightened considerably.

"That was great, Craig," the president said, after the audience finished its standing ovation. "Could I have that?"

Apparent Prank Puts Castro Valley High On Lockdown (CCT)

By Ricci Graham

The Contra Costa Times, October 11, 2006

CASTRO VALLEY - A rumor that a student had carried a firearm onto the Castro Valley High School campus today forced administrators to lock down the school for three hours while nearly two dozen deputies and investigators searched the campus.

No weapon was found, and police later attributed the scare to an apparent prank.

The lockdown was issued around 11:40 a.m. after school officials received word of the report. Teachers were ordered to lock all doors, close all windows and pull down all the window blinds, said Alameda County Sheriff's Sgt. Scott Dudek.

School officials informed the sheriff's office of the threat as soon as the rumor reached administrators. The sheriff's office responded by dispatching 25 deputies and three K-9 units to the 2,800-pupil campus at 19400 Santa Maria Ave., Dudek said.

Deputies cordoned off the campus, setting up a perimeter where worried parents gathered and waited in vain for about three hours, not sure what exactly had transpired at the 40-acre campus.

As students huddled underneath their desks or gathered in classroom closets, sheriff's deputies patrolled the halls with K-9s trained to detect gunpowder and weapons, Dudek said.

The police dogs searched the lockers, and another K-9 Unit searched the exterior of the campus, but no weapon was found, Dudek said.

At about 2:45 p.m. -- just over three hours after the lockdown was issued -- the campus was cleared by deputies and students were permitted to leave.

Dudek said deputies interviewed a number of students and learned that one pupil whom he described "as a prankster" joked that he was armed with a firearm when he arrived at school this morning.

"Basically, his comment was, 'I'm strapped,'" Dudek said. The teenager then asked a friend, "Are you strapped?" Dudek said.

"I really think that he was a prankster," Dudek said. "If it wasn't for the nature of today's incidents, it would not have made everyone's concern go sky high."

Deputy Superintendent Jerry Marcy said the student who made the comment will face disciplinary action."It's not appropriate to comment on any possible disciplinary action," Macy said. "Obviously, we take this whole thing seriously."

As investigators combed the campus, nervous parents gathered on the surrounding streets, fearful that the recent spate of violence at schools throughout the country had touched down close to home.

"I was thinking about Columbine," said Rhonda Scott, whose son is a junior at the high school. "I was thinking, 'Oh, my God. Not in Castro Valley.'"

As parents waited, many expressed frustration because they said they had to depend on text messages or cell phone calls from their children to find out what was going on inside the campus.

"The only thing that upset me is that they should let the parents know ahead of time," Deborah Dillon said of school officials. "My daughter had to text message me (about what was going on). I got 15 text messages."

Though it was a difficult call to make, Sgt. Scott Dudek said investigators decided against sharing information with parents for fear it would set off a near riot.

"I think the parents were concerned that we didn't come out sooner and let them know what was going on," Dudek said. "But we were concerned that we didn't want to put out false information.

"If we had told the parents the reason for the lockdown, then we would have had parents trying to covertly go onto school grounds,"

he said. "Then we would have had a nightmare."

Students were clearly relieved when the lockdown was lifted and they were permitted to go home.Andrew Quan, a junior, said students gathered in a closet and waited for three hours with his teacher, who was clearly shaken by the incident.

"We hid in the back and occasionally, when we thought it was safe, we popped out," Quan said. "We had to wait it out. It really was that big a deal."

Joel Becker, another junior, said he found the incident frightening."I was sort of scared," Becker said. "I didn't expect it, because the school is not known for dangerous stuff. It was a drag to have to do that."

The lockdown occurred at a time when public awareness has been heightened by a recent series of deadly school shootings in Wisconsin, Colorado and Pennsylvania.

In response to the violence, U.S. Attorney General Alberto Gonzales and Education Secretary Margaret Spellings convened a school safety conference today in Chevy Chase, Md.

The conference was attended by parents, teachers, researchers, law enforcement leaders and policy officials, who discussed violence prevention and ways to help the schools and their communities recover from the traumatic attacks that have shaken campuses across the nation.

Student Safety (SLT)

By Julia Lyon, The Salt Lake Tribune

Salt Lake Tribune, October 11, 2006

BOUNTIFUL - The choir continued to rehearse as a hostage situation evolved in the classroom next door. The music was about to be interrupted.

"Police! Hands up!" the officers yelled as they burst into the room at Bountiful High School. An armed intruder had been "shot" and lay face down on the hall floor. Now the police were looking for more suspects.

The students wound out of the classroom with their hands behind their heads, but many were laughing. One wiggled her hips. They knew this was not real.

It could have been. At Bountiful High on Tuesday morning, the school was teaching a post-Columbine lesson in a subject most of us never expected to study: school violence. By practicing a lockdown situation as it has for several years, members of the staff learned what they need to do to keep students safe. The students taste what a scary situation at school could be like and how to help.

"I'd hate to go to sleep at night thinking we hadn't done our best to prepare," Principal Ryck Astle said.

What was new at Bountiful High this year was the number of police agencies involved and the hostage twist. Schools have been reeling from the spate of shootings over the past few weeks that seemed to leave no community, even the peaceful Amish, untouched. On Tuesday, safety and education experts from across the country met in Maryland at a conference called by the White House.

Education Secretary Margaret Spellings and Attorney General Alberto Gonzales led three panel discussions. Time and again, speakers said schools get safer when they take bullying seriously, practice their crisis plans, and talk to parents about what's happening.

"Our first line of prevention is really having good intelligence," said Delbert Elliott, director of the University of Colorado Center for the Study and Prevention of Violence.

Bountiful High is far from a fearful place. Students walk in the high school without having their bags searched or being screened by metal detectors. Several doors are open during the school day. Unlike some schools, it does have an on-campus school resource officer who can react immediately.

While the school lockdown may have been more for the school's benefit, officers Tuesday filmed their exercise and evaluators stood nearby taking notes. The police shouted commands and codes over their radios communicating with an improvised command post outside. Not communicating, as one officer put it, can be deadly.

Joel Briscoe, who began teaching 24 years ago, mused after the lockdown about how times have changed.

"If you would have told me we'd be debating public policy about arming teachers in schools, I wouldn't have believed you," the Bountiful U.S. history and government teacher said.

The drills are worthwhile, the teacher said, if only for the benefit of practice. The unanswerable question is whether any school is ever perfectly safe.

"It's like saying is it safe to fly on an airplane," Briscoe said. "I don't think they can ever be 100 percent safe."

Jake Craig, 16, was in the choir room when the police rushed in the door. It seemed pretty real, he said afterward. They were yelling and running around the room.

Some teens shrugged off the lockdown, but several confessed an underlying anxiety.

"I think everyone fears Columbine a lot," said Heidi Thueson, 16. "Bountiful is a safe place - but you never know."

911 Transcripts Are Released In Amish School Shooting; Killer Was Calm (NYT)

By Sean D. Hamill

The New York Times, October 11, 2006

An hour after walking into a small Amish schoolhouse in Pennsylvania last week with a small arsenal of guns and hardware, Charles C. Roberts IV told a dispatcher in a calm, dispassionate voice just what his emergency was.

“I just took, uh, 10 girls hostage and I want everybody off the property or, or else,” Mr. Roberts told a 911 dispatcher for Lancaster County, according to a transcript of the conversation released yesterday.

As the dispatcher tries to engage him, Mr. Roberts threatens to kill the girls, but his voice “is not angry, there is no yelling and screaming,” the county district attorney, Don Totaro, said in an interview.

DOJ_NMG_0079146

Mr. Totaro authorized the release of the transcript after formal requests from state and national news media under Pennsylvania's Right to Know Law. He said he listened to the tapes to check the transcript's accuracy.

Mr. Roberts's voice is "flat," Mr. Totaro said. "It's almost like there's no soul there."

"It's beyond comprehension, particularly when you listen to the tapes and realize he's about to shoot 10 innocent Amish girls," he said.

Mr. Roberts, 32, a married father of three children who collected milk from farms in the area and delivered it for processing, shot all 10 girls inside the West Nickel Mines Amish School. Five were killed and five others suffered serious wounds, including at least one who is not expected to recover, officials have said.

The dispatcher's short conversation with Mr. Roberts, as well as calls from his wife, Marie, and the farmer who made the first 911 call, after a young teacher fled the schoolhouse to seek help, show how frantic Mr. Roberts's brief siege was.

Mr. Roberts's call came in at 10:55 a.m. on Oct. 2, and lasted just over a minute, with the dispatcher trying to figure out what was going on.

"O.K., what's the problem there?" asks the dispatcher, who was not identified.

"Don't try to talk me out of it, get 'em all off the property now," Mr. Roberts replies, referring to the state police, who were already on the scene in response to a call some 20 minutes earlier from the farmer, Amos Smoker, who first alerted the police to the situation after the teacher, Emma Mae Zook, fled to his home.

"I'm going to let the state police down there," the dispatcher says to Mr. Roberts. "I need to let you talk to them. O.K., can I transfer you to them?"

Mr. Roberts replies: "No, you tell them, and that's it. Right now or they're dead, in two seconds."

As the dispatcher tries to transfer the call, Mr. Roberts repeats, "Two seconds, that's it," before the line goes dead.

About two minutes later, Marie Roberts called 911 about a phone conversation she had just had with her husband.

"She's obviously distraught and concerned," Mr. Totaro said, characterizing the call. "But she's composed."

During the call, Mrs. Roberts says: "Yes, my name is Marie Roberts, my husband just called me on his cellphone and told me that he wasn't going to be coming home and that the police were there and not to worry about it. And I have no idea what he is talking about, but I am really scared."

Mrs. Roberts tells the dispatcher her husband told her that "he was upset about something that had happened 20 years ago and he said he was getting revenge for it. I don't think he was getting revenge on another person. I'm worried that maybe he was trying to commit suicide."

After her call is transferred to a state police dispatcher, Mrs. Roberts explains that her husband took her grandfather's blue GMC pickup truck that morning and left behind notes expressing the thought of not seeing his children, "not seeing them grow up, like, let's see, uh, I'm not even sure."

"Here it is: 'My daughter Abigail. I want you to know that I love you and I'm sorry I couldn't be here to watch you grow up.' That's how the note starts," Mrs. Roberts says.

A 1999 Pennsylvania Supreme Court decision allows withholding 911 tapes from the news media, but "because of the unfettered media access in this case," Mr. Totaro said, he decided to release a transcript.

He decided against releasing an audiotape of the calls after discussing the issue with the state police commissioner, Jeffrey Miller, and concluding that to do so "would only serve to further traumatize the victim's family and the family of the perpetrator," Mr. Totaro said.

The state police are now considering whether to release a transcript from their dispatch tapes, which would include additional conversations, a spokeswoman, Trooper Linette Quinn, said.

"We've never released them before, but this is a different set of circumstances," Trooper Quinn said.

Pa. Schoolhouse Gunman Made Demand, Began Firing (WP/AP)

By Mark Scolforo

The Washington Post, October 11, 2006

LANCASTER, Pa., Oct. 10 -- The gunman who attacked an Amish schoolhouse opened fire on his 10 hostages just moments after demanding that authorities get off the property, giving state troopers no time to try to save the girls, according to investigators and 911 transcripts released Tuesday.

Charles Carl Roberts IV threatened to kill the children "in two seconds" during a 70-second call to a 911 dispatcher.

"Don't try to talk me out of it, get 'em all off the property now," Roberts told a Lancaster County dispatcher in a calm, flat voice, his only contact with police.

The dispatcher asked Roberts to stay on the phone so he could be transferred to state police. Roberts replied: "Two seconds, that's it." He then hung up, before police could have him talk to a negotiator.

DOJ_NMG_0079147

Before authorities could react, he started shooting inside the West Nickel Mines Amish School, killing five girls and wounding five others before killing himself. Police burst in after hearing the gunfire.

"He clearly did not give the police any opportunity to get off the property," said Lancaster County prosecutor Don Totaro, who did not release the actual audiotapes to avoid further traumatizing the Amish community and Roberts's family.

PA. Gunman Intent On Massacre, 911 Tapes Show (USAT)

By William M. Welch

USA Today, October 11, 2006

A 911 dispatcher tried to keep gunman Charles Carl Roberts IV on the phone moments before he shot 10 girls at an Amish school, according to transcripts of the call released Tuesday.

Roberts dialed 911 nearly an hour after he entered the Nickel Mines Amish School in Lancaster County, Pa., on Oct. 2. By then, police were outside the school.

Transcripts of the call, along with one from Roberts' wife and two others to 911, were released by Lancaster County District Attorney Don Totaro.

“They tried to keep him on the line as long as possible,” Totaro said. “They tried to diffuse the situation, but there was just no possible way for them to do so. It was clear he was intent on carrying out his mission.”

Roberts' call came in to the Lancaster County 911 dispatch center at 10:55 a.m. By then he had been in the school since about 10 a.m. Asked if he had an emergency, he said “yes.”

The dispatcher asked for the address.

“It's on White Oak Road. I just took, uh, 10 girls hostage, and I want everybody off the property or, or else,” Roberts replied.

The dispatcher responded, “OK. All right.”

Roberts: “Now.”

Dispatcher: “Hold on a second. Hello.”

Roberts: “Yeah.”

Dispatcher: “OK, what's the problem there?”

Roberts: “Don't try to talk me out of it. Get 'em all off the property now.”

Dispatcher: “Sir, I want you to stay on the phone with me. OK? I'm going to let the state police down there — I need to let you talk to them, OK? Can I transfer you to them?”

Roberts: “No. You tell them, and that's it. Right now or they're dead, in two seconds.”

After a pause, he repeats: “Two seconds. That's it.”

Dispatcher: “Sir, listen to me. Listen.”

Totaro says Roberts then hung up.

Moments later, Roberts, 32, a milk truck driver and father of three children, opened fire on the 10 girls he was holding, then turned the gun on himself. Five girls were fatally wounded and five more were injured. Roberts also was dead.

“It was chilling,” Totaro said of listening to the 911 tapes. “There really was no anger. It was very matter-of-fact.”

Among the other calls released was one made at 10:35 a.m. from Amos Smoker, who lives in a farmhouse behind the school.

A teacher and another adult at the school ran there after seeing Roberts.

“There's a, there's a guy in the school with a gun,” Smoker said. The next call was from Marie Roberts, the gunman's wife, at 10:58 a.m. She said she was worried that her husband was trying to commit suicide.

She told the 911 dispatcher that her husband had called her from his cellphone “and told me he wasn't going to be coming home and that the police were there and not to worry about it.”

“I have no idea what he is talking about, but I am really scared,” she said.

She was transferred to the state police and described notes her husband had left for the family. She read from one:

“My daughter Abigail, I want you to know that I love you, and I'm sorry I couldn't be here to watch you grow up.”

First Lady Lauds Sisters (LANNP)

By Colby Itkowitz

Lancaster Newspapers (PA), October 10, 2006

Bush holds summit on school safety

CHEVY CHASE, Md. - Two Amish girls who put their classmates' lives before their own represent the country's best, first lady Laura Bush said during a school safety summit Tuesday.

DOJ_NMG_0079148

The first lady was referring to Marian Fisher, 13, and her 11-year-old sister, Barbie Fisher, both of whom beseeched Charles Carl Roberts IV to shoot them first, hoping he'd spare the lives of the younger Amish girls locked inside their one-room schoolhouse on Oct. 2.

"The most recent school attacks have saddened and troubled all Americans, yet these tragedies have also shown the best in our country," Laura Bush said. "We saw tremendous courage in the Amish girls who in the face of immediate danger thought first of the safety of their younger schoolmates."

In response to the string of school shootings, President Bush called a summit Tuesday in suburban Maryland to open a dialogue among experts on how school violence can be stopped. "The violence in our schools is incredibly sad and troubles a lot of folks, and it troubles me," Bush said at the National 4-H Conference Center. "Everyone in our country wants our classrooms to be gentle places of learning."

During three panel discussions, one moderated by Attorney General Alberto Gonzales and two by Secretary of Education Margaret Spellings, speakers offered their suggestions for the prevention of violence.

GOP Employee Seen As Key To Foley Timetable Investigation (CHIT)

By Mike Dorning And Andrew Zajac

Chicago Tribune, October 11, 2006

WASHINGTON -- A Republican patronage employee who formerly controlled the administrative apparatus of the House emerged Tuesday as a key figure in the scandal over former Rep. Mark Foley's inappropriate emails to underage pages.

A new account from a Republican congressman who was informed as early as 2000 of suggestive emails from Foley to a former page described a more significant role for then-House Clerk Jeff Trandahl. The congressman, Rep. Jim Kolbe (R-Ariz.), said he passed the complaint on to Trandahl, who also was involved in handling a complaint in 2005 about inappropriate emails to another former page.

The account raises new questions about the quiet disposition of the later complaint, which officials handled by privately warning Foley to cease contact with pages.

With an Aurora, Ill. graveyard as a backdrop, House Speaker Dennis Hastert (R-Ill.) defended his own staff's handling of the 2005 complaint about inappropriate emails from Foley, saying he could not find any fault in their actions based on what they knew at the time.

"They've handled it as well as they should," Hastert said. " I didn't think anybody at any time in my office did anything wrong."

Hastert added, "in 20/20 hindsight probably you could do everything better."

However, Hastert said he would dismiss any member of his staff involved in a cover-up, while Sen. John McCain (R-Ariz.) asked for an independent investigation of Republican leaders' handling of the complaints. The House Ethics Committee is currently examining the response.

More signs of discontent among the party's core social conservative supporters also emerged, with a prominent conservative activist questioning in an article whether gay Republican staffers and members of Congress were working behind the scenes to undercut the political agenda of religious conservatives.

Tony Perkins, president of the Family Research Council, wrote in a web newsletter for members of the organization that the Foley scandal "raises another plausible question for values voters: has the social agenda of the GOP been stalled by homosexual members and/or staffers?"

Several key figures involved in the scandal and its handling are gay or linked to gay causes. Foley has acknowledged he is gay. Kolbe, who is retiring and received the first complaint, is openly gay. And Trandahl, 42, is a board member for the gay-rights group Human Rights Campaign.

Noting that, Perkins continued, "The GOP will have to decide whether it wants to be the party that defends the traditional moral and family values that our nation was built upon and directed by for two centuries. Put another way, does the party want to represent values voters, or Mark Foley and friends?"

Patrick Sammon, executive vice president of Log Cabin Republicans, a gay Republican organization, said the connection was spurious.

"The anti-gay groups are trying to spin this into some kind of gay cover-up," Sammon said. "But I don't think any of this had anything to do with sexual orientation."

Kolbe, who has been traveling in Europe, offered his first account of the 2000 complaint he received about Foley in a written statement.

Kolbe said a former page whom he had sponsored contacted his office to complain about emails from Foley "that made him uncomfortable.

DOJ_NMG_0079149

"I was not shown the content of the messages and I was not told they were sexually explicit," Kolbe said in the statement. "It was my recommendation that this complaint be passed along to Rep. Foley's office and the clerk, who supervised the page program. This was done promptly."

Kolbe, who is a former page, was on the House Page Board at the time. But Rep. Sue Kelly (R-N.Y.), who was then the chair of the Page Board, was never informed, said her spokesman, Kevin Callahan.

Five years later, a Louisiana Republican received another complaint about Foley from a page that congressman had sponsored. The complaint was forwarded to Hastert's office, which referred the matter to Trandahl.

Rep. John Shimkus (R-Ill.), chairman of the Page Board when the second complaint arrived, has said he and Trandahl decided to keep the matter private and ask Foley to cease contact with pages.

Shimkus spokesman Steve Tomaszewski said that Trandahl never informed Shimkus of the earlier complaint, though he acknowledged that Shimkus did not ask about any prior aberrant behavior.

"He had never heard anything before, so there was no impetus to ask about anything else," Tomaszewski said.

Trandahl, who left his House position last November to become a lobbyist for the National Fish and Wildlife Foundation, declined through his attorney to comment.

Trandahl "will cooperate fully with the FBI and the House ethics committee investigations," his lawyer, Cono Namorati, said in a statement.

Another key figure in the investigation, Kirk Fordham, a former chief of staff to Foley, is slated to appear before the ethics committee on Thursday, according to his attorney Tim Heaphy. Fordham was interviewed by the FBI last week.

Fordham has said that he warned Hastert's chief of staff, Scott Palmer, no later than January 2004 that Foley had exhibited inappropriate behavior with pages.

Hastert has maintained that no one on his staff learned of Foley's aberrant behavior with pages until fall 2005. Hastert said he did not personally know of any inappropriate behavior until Foley resigned late last month.

Hastert's attorney, J. Randolph Evans, said Hastert has not yet been asked to appear before the committee, but is willing to do so.

"I've reached out to the committee to let them know that we want to be as cooperative as possible," Evans said.

Doubt Is Raised About Foley As Secret Drinker (HILL)

By Jeffrey Young

The Hill, October 11, 2006

When former Rep. Mark Foley (R-Fla.) entered alcohol-abuse treatment amid scandal over his relationships with congressional page boys, his attorney said the ex-lawmaker never drank alcohol in public.

Attorney David Roth categorically stated that the disgraced lawmaker hid his abuse by drinking alone.

But the photograph (above) from The Hill's archives shows Foley holding a glass of wine at a Capitol Hill reception on May 19, 2004.

He went to the reception with several other House members. This and other evidence suggests Foley was a social drinker and a wine aficionado.

The photograph and first-hand accounts of Foley's public drinking told by acquaintances in Washington and Florida could reinforce doubts about the veracity of the claim that a drinking problem fueled his behavior, which included carrying on sexually explicit instant-message chats with former pages.

Reps. Steve Buyer (R-Ind.), Norm Dicks (D-Wash.), Nick Rahall (D-W. Va.) and Mike Thompson (D-Calif.) also appear in other photographs by The Hill of the 2004 event, which was hosted by the Washington Wine Commission to tout the state's wineries and to honor Washington's congressional delegation and the Congressional Wine Caucus, of which Foley was a member.

Thompson cannot recall seeing Foley at the reception, according to his spokesman; calls to the other lawmakers' offices were not returned. Sen. Patty Murray (D-Wash.) also attended but does not remember seeing Foley, according to her spokesman.

Though no law-enforcement authority has filed charges against Foley, his attorney could cite alcohol addiction as part of a legal defense by arguing that Foley was not in complete control of his actions when he contacted former pages over the Internet.

At a press conference in West Palm Beach, Fla. last Tuesday, Roth said that the former congressman did not drink around other people.

"People close to Mark knew that he was a closet drinker, as it is referred to," Roth said, adding, "Mark, to my knowledge and based upon all the information that I have, never drank in public," according to a transcript of the press conference.

"However, at night he did drink and has admitted to that and he has indicated that he strongly believes that he's an alcoholic and is receiving treatment for it."

Roth did not return two calls requesting comment.

In addition to the 2004 photograph, news reports during Foley's tenure in Congress have included accounts of him drinking at public events. Recently published interviews with lawmakers and other acquaintances of Foley also indicate that he was often seen at parties, receptions and fundraisers drinking alcohol.

In a story that ran in the St. Petersburg Times (Fla.) on Sunday, Rep. Ginny Brown-Waite (R-Fla.) is quoted saying that while she saw Foley drink alcohol on occasions, "I never saw him inebriated, never saw him even close, never saw him slur a word." Speaking to Fox News Channel after Foley resigned, Rep. Peter King (R-N.Y.) stated directly that he did not believe Foley's claims of alcoholism.

So far, no one has come forward with a specific account of Foley appearing to be inebriated in public. Rep. Deborah Pryce (R-Ohio), however, has pressed for an investigation of allegations that a drunken Foley once tried to gain admittance to the House pages' dormitory but was turned away by Capitol Police officers.

The public record seems to belie Roth's claims about Foley's drinking habits.

In one well-reported example, Foley was a co-host of two fundraising events for Ways and Means Committee Republicans that used alcohol as a theme.

The "D Street Block Party" took place in the spring of 2005 and 2006 in the homes of Foley and four colleagues who live on the same city block in S.E. Washington, D.C.

At the fundraiser on May 18, 2006, Foley served wine to his guests, according to the invitation and reports by The Washington Post and others.

Along with Foley, GOP Reps. Chris Chocola (Ind.), Clay Shaw (Fla.) and Nancy Johnson (Conn.) each offered different alcoholic drinks in their homes, while Rep. Jim Ryun (R-Kan.) served coffee and dessert. The mandatory contribution to visit each home during the event was $1,000.

One criminal-defense attorney who specializes in alcohol-related cases said that if Roth is angling to use Foley's drinking as a mitigating factor in his behavior with pages and former pages, the approach could work.

"From a criminal-defense perspective, somebody being an alcoholic can be helpful," said Darren Kavinoky, whose practice is in Southern California.

If a defense attorney can convince a jury and a judge that the defendant did not have a specific intent to break a law, the penalty could be smaller, even if the defendant did violate that law, Kavinoky said. Roth could be looking to avoid a prison sentence for his client and hoping to persuade a judge to consider an alternative sentence, such as alcoholism treatment.

"This could be laying the foundation for that kind of defense," said Kavinoky, who added, "I think it would be effective in court" against any charges that might be levied against Foley.

Ironically, if Foley has successfully hidden an addiction to alcohol from his friends, family and colleagues, as Roth asserts, the alcoholism defense becomes more problematic, Kavinoky said. Without witnesses to Foley being intoxicated, his attorney would have a harder time establishing his condition as an alcoholic, he said.

Staff Heads Would Roll For Foley Cover Ups (LAT)

By Richard Simon And Noam N. Levey

The Los Angeles Times, October 11, 2006

WASHINGTON — House Speaker J. Dennis Hastert (R-Ill.) said today that anyone who covered up information about contacts between then Rep. Mark Foley and male pages "really ought to go."

During a question and answer session with reporters outside a meeting of the Hispanic Chamber of Commerce in Aurora, Ill., Hastert said that ongoing investigations in the sex scandal should determine if his staff or anyone in Congress covered up information about the former Florida representative, and the former pages, "shouldn't continue to have their jobs."

Hastert acknowledged today that his office could have handled the matter better. "In 20/20 hindsight, probably you could do everything a little better."

Hastert noted that none of the pages were approached by Foley while they were in Washington — only after they had graduated from the program. Moreover, Hastert said he is still searching for a candidate to run the program. "I asked (former FBI Director) Louie Freeh to do it and (House Democratic Leader) Nancy Pelosi rejected him for some reason."

Witnesses will begin testimony behind closed doors this week in the sex scandal, which has sent shudders through the Republican-controlled Congress and potentially though the upcoming elections.

The investigation, which is being conducted by the House Ethics Committee in an otherwise quiet Capitol, will look into who knew what, and when, about the contacts between Foley and male pages.

In what is shaping up as a classic "he said/he said," Kirk Fordham, a former Foley aide, is expected to testify that he warned Hastert's office in 2003 or earlier about Foley's inappropriate interest in teenage pages.

Officials in Hastert's office have said they did not learn about Foley's interest until last fall, when a Louisiana congressman alerted the office to a series of e-mails Foley sent to a former page. Hastert has maintained that his aides then alerted officials in charge of the page program, who told Foley to cease contact with the teenage boy.

"All eyes will be on Hastert, and the basic point of the interviews with staff and GOP leaders will be to find out when the speaker had serious indications something was wrong with Foley," said Julian Zelizer, a specialist in congressional history at Boston University.

Hastert's attorney, J. Randolph Evans, said, "We're going to be fully cooperative."

Also Monday, it became clear that the Foley scandal was sparking political concerns at the highest levels of the White House, with strategist Karl Rove conceding in a private briefing that the matter "complicates things" for some Republican candidates who have been linked to the scandal.

Fordham's attorney, Tim Heaphy, said Monday said that he expects the committee investigation to focus "less on what Congressman Foley did and more on who knew what when."

This week's questioning of witnesses and scrutinizing of records comes as the committee broadens its inquiry to determine whether any other House members have had inappropriate contact with the 16- and 17-year-old congressional pages.

Ethics Committee Chairman Rep. Doc Hastings (R-Wash.) and the panel's top Democrat, Rep. Howard L. Berman of Valley Village, asked all House members to contact current and former pages sponsored by their offices to determine "whether any of those individuals had any inappropriate communications or interactions with former Rep. Foley or any other member of the House."

The politically sensitive investigation also comes as the scandal has become an issue in the battle for control of Congress. The committee has vowed to act swiftly, but it is unclear whether it will be done before the November elections.

The panel conducting the investigation, made up of two Democrats and two Republicans, is trying to determine whether any House members or staff violated House rules. The committee has no power to discipline Foley, who resigned from Congress Sept. 29. A separate criminal investigation is being conducted by the FBI.

The committee is expected to interview Hastert and members of his staff, including Scott Palmer, whom Fordham has said he spoke to in 2002 or 2003 about Foley. Hastert's chief political advisor, Mike Stokke, and his senior counsel, Ted Van Der Meid — both of whom helped field the complaint last year, according to an account prepared by the speaker's office — may be called as well.

So may a host of other lawmakers and staff, and perhaps Foley and former pages. Other possible witnesses include:

.Former House Clerk Jeff Trandahl, who oversaw the page program and allegedly was asked to talk to Foley after the speaker's office received a complaint last year;

.Rep. John Shimkus (R-Ill.), chairman of the board that oversees the page program, who allegedly accompanied Trandahl to talk to Foley;

.Rep. Rodney Alexander (R-La.), who sponsored the page who received e-mails from Foley last year;

.Rep. Thomas M. Reynolds (R-N.Y.), chairman of the National Republican Congressional Committee, who hired Fordham as his chief of staff last year.

.Rep. Jim Kolbe (R-Ariz.), whom the Washington Post reported confronted Foley as early as 2000 about messages to pages. Kolbe issued a statement today, saying he contacted Foley's office after receiving a complaint from a page but knew nothing about contents of the message.

"Some time after leaving the page program, an individual I had appointed as a page contacted my office to say had had received e-mails from Rep. Foley that made him uncomfortable," Kolbe said in a statement.

"I was not shown the content of he messages and was not told they were sexually explicit. It was my recommendation that this complaint be passed along to Rep. Foley's office and the clerk who supervised the page program. This was done promptly."

Hastert said in Illinois that Kolbe was on the page board at the time and "that was his job…that confrontation," but that "if it was something he should have reported" to more authorities, "then he should have done that. If anyone's found to have covered up information, they really ought to go."

The panel has prepared about four dozen subpoenas, but officials refuse to say whom they have summoned. Witnesses called by the committee testify under oath; they can be accompanied by an attorney and can plead the 5th Amendment protection against self-incrimination.

In his private briefing Monday, Rove noted that with the Democrats needing just 15 seats to take control of the House, "every seat matters." It does not help, he suggested, "having Foley's seat up for grabs rather than being safe and having Reynolds responsible now for fighting back on this issue."

Rove's remarks, in a roughly half-hour conference call with GOP supporters across the country, offered a glimpse into private worries over the Foley fallout in a White House that has tried to steer clear of the controversy. A participant in the Rove call invited a Times reporter to listen in. The White House said it would have no comment on private calls, but added that Rove assured activists that the party would overcome the problem.

Overall, Rove sought to sound upbeat as he addressed the activists. He predicted the GOP would hold the House and Senate, but seemed to acknowledge that his hopes had been dampened in recent days

"I felt great about [the House] before Foley," he said. "But I still feel good about it."

Hastert Says Fire Anyone Who 'covered' For Foley (USAT)

By Kathy Kiely And Kevin Johnson

USA Today, October 11, 2006

WASHINGTON — House Speaker Dennis Hastert said Tuesday that any staff member who failed to alert him to former representative Mark Foley's advances to congressional pages should be fired.

"If they covered something up, then they should not continue to have their jobs," the Illinois Republican said to reporters in his suburban Chicago district.

The speaker's comments came amid signs that investigations are moving ahead into Foley's sexually explicit e-mails and instant-message exchanges with teenage boys who served in the page program:

·Kirk Fordham, a former Foley aide who says he alerted Hastert staffers to Foley's inappropriate behavior as early as 2003, is scheduled to appear before the House ethics committee Thursday.

·Jordan Edmund, a 21-year-old former page who received electronic messages from Foley, met with FBI agents for two hours in Oklahoma City. He was not required to turn over copies of the messages, and the FBI did not schedule any additional meetings with him, said Edmund's attorney, Stephen Jones.

Jones wouldn't describe the contents of the messages. He said there was no physical relationship between his client and Foley.

Foley, a Florida Republican, resigned from the House of Representatives on Sept. 29 and checked into an alcohol rehabilitation program after he was confronted by ABC News with sexually explicit messages that he allegedly sent pages. His lawyer, David Roth, has said the former congressman did not have sex with minors. Roth also said Foley is gay.

The FBI is investigating the possibility that Foley violated criminal statues against sex with minors. The ethics committee is trying to determine whether members of the House or its staff failed to respond appropriately when alerted to Foley's activities.

At least five FBI field offices are now involved in the federal government's preliminary inquiry into Foley's conduct, two federal law enforcement officials said.

The sources, who are briefed on aspects of the investigation, declined to be identified because they were not authorized to speak publicly. They said agents were working off rosters of current and former pages, dating back at least to 1995, when Foley arrived in the House.

Rep. Jim Kolbe, an Arizona Republican and the party's only openly gay House member, confirmed Tuesday that a former page complained to him several years ago about e-mails received from Foley. Kolbe is a former House page and a strong supporter of the program.

In a statement, Kolbe said that the page told him the e-mails made him "uncomfortable" but that he was not shown the messages. "It was my recommendation that this complaint be passed along to Rep. Foley's office and the clerk who supervised the page program. This was promptly done," the statement said. Kolbe is in Europe and was not available for further comment.

Kolbe press secretary Korenna Cline said the congressman's staff members believe that the page contacted Kolbe in 2000 or 2001. Kolbe assigned an aide to contact Foley's office and the office of the House clerk, which oversees the page program, Cline said.

Jeff Trandahl, House clerk from 1999 until last year, has not commented about the case. Trandahl has retained defense lawyer Cono Namorato to represent him.

Revelations about Foley's contact with pages have created a political nightmare for Republicans one month before an election that will determine control of the House and Senate. In a USA TODAY/Gallup Poll taken over the weekend, 55% of respondents said they have an unfavorable view of the Republican Party; 43% said Hastert should resign.

Hastert Vows To Fire Aides If A Cover-Up Is Discovered (NYT)

By Jeff Zeleny And David Johnston

The New York Times, October 11, 2006

DOJ_NMG_0079153

WASHINGTON, Oct. 10 — Speaker J. Dennis Hastert said Tuesday that members of his staff should be fired "if there was a cover-up" in the way they had handled complaints about Mark Foley's conduct toward teenagers in the Congressional page program.

"They'll be under oath, and we'll find that out," said Mr. Hastert, an Illinois Republican who along with his top aides is expected to be called to give sworn testimony in a House inquiry into the page scandal. "If they did cover something up, then they should not have their jobs."

The remarks by Mr. Hastert, made to reporters in his Congressional district in Aurora, Ill., were the first time he had used the term "cover-up" in talking about the case. Mr. Foley, a Florida Republican, resigned late last month after explicit messages he had sent to a former page became public.

Mr. Hastert has contacted the House ethics committee through his lawyer, J. Randolph Evans, who said in an interview on Tuesday, "We want to be as helpful and cooperative as we can."

A former Congressional aide, Kirk Fordham, is scheduled to testify Thursday that he alerted Mr. Hastert's staff to Mr. Foley's behavior at least three years ago. A former clerk of the House, Jeff Trandahl, who had received numerous complaints about Mr. Foley's conduct, issued a statement through his lawyer on Tuesday, saying he would "cooperate fully with the F.B.I. and the House ethics committee."

The Federal Bureau of Investigation has begun its own inquiry to determine whether laws were broken in the exchange of sexually explicit messages. On Tuesday, F.B.I. officials in Oklahoma City interviewed a former page for more than two hours, said a person briefed on the matter who spoke on the condition of anonymity because the case was under investigation.

The former page, Jordan Edmund, 21, who was accompanied by his lawyer, Stephen Jones, said he had had limited contact with Mr. Foley while he was a page in 2001 and 2002, the person said, but Mr. Foley sent him e-mail after he left the program.

Mr. Edmund said the exchanges led to two meetings with Mr. Foley, the person briefed said, including dinner in San Diego in October 2002. Afterward, Mr. Edmund said, he returned to Mr. Foley's hotel room, where the congressman touched his knee. Mr. Edmund said he had left after about 20 minutes, and he told the agents that nothing untoward had happened.

It was unclear whether this encounter was the one described in instant messages obtained by ABC News, which quoted Mr. Foley writing to a page, "I miss you lots since San Diego."

Also on Tuesday, Representative Jim Kolbe, Republican of Arizona, said a former page had complained to him of being uncomfortable with e-mail messages Mr. Foley had sent him. Mr. Kolbe said he had not confronted Mr. Foley, but had "passed along" the complaint to Mr. Foley's office and the House clerk.

A spokeswoman for Mr. Kolbe confirmed Tuesday that during the Fourth of July Congressional recess in 1996, Mr. Kolbe took two former pages on a three-day rafting trip through the Grand Canyon. The spokeswoman, Korenna Cline, said several of Mr. Kolbe's staff members and his sister had gone on the excursion, and that the former pages had paid their own way.

Hastert Expresses Faith In Staff As FBI Questions Former Page (WP)

By Charles Babington

The Washington Post, October 11, 2006

House Speaker J. Dennis Hastert (R-Ill.) said yesterday that he believes his staff has handled the Mark Foley matter properly, but "if they did cover something up, then they should not continue to have their jobs."

Hastert's remarks came amid a quickening pace of investigations into Foley's relationships with teenage congressional pages and the House's handling of warnings about the Florida Republican's behavior. FBI agents interviewed former House page Jordan Edmund in Oklahoma City, and Foley's former chief of staff, Kirk Fordham, is scheduled to speak with House ethics committee members and staffers on Thursday.

Edmund was among the male pages who received sexually explicit instant messages from Foley, a six-term House member. Foley abruptly resigned on Sept. 29, just as ABC News was airing some of the graphic exchanges.

Speaking yesterday to reporters in Illinois, Hastert again said he knew nothing of alarms raised in some circles about Foley's behavior toward pages until the day he resigned. Two high-ranking GOP House members have said they mentioned to Hastert concerns about 2005 e-mails that Foley sent to a former page from Louisiana. The speaker's office says that two of his high-ranking aides -- counsel Ted Van Der Meid and deputy chief of staff Mike Stokke -- also knew of those e-mails but did not inform Hastert.

Hastert said he recalls no such conversations with colleagues. He said his aides have "handled it as well as they should." He added: "In 20/20 hindsight, probably you could do everything a little bit better. . . . If anybody's found to have hidden information or covered up information, they really should be gone."

In Oklahoma City, Edmund and his attorney, Stephen Jones, talked to reporters after meeting with FBI agents. Edmund "answered their questions and cooperated to the fullest," Jones said.

The FBI is investigating only whether Foley committed a crime. The ethics committee has jurisdiction over current House members and employees, and is focusing on how they handled suspicions about Foley.

Foley, who is in a Florida treatment center for alcoholism, has said through a lawyer that he never had sexual contact with a minor. Congressional pages are high school students -- typically 16 or 17 years old -- who spend a semester or two in Washington and live in a Capitol Hill dorm. E-mail records indicate that Foley kept in touch with some of them for several years after they left Washington.

Meanwhile yesterday, Rep. Jim Kolbe (R-Ariz.) issued a statement regarding his knowledge of one complaint about Foley's dealings with pages. Kolbe said that, several years ago, a former page alerted his office to "e-mails from Rep. Foley that made him uncomfortable." Kolbe, a former member of the House Page Board, said he did not see the messages "and was not told they were sexually explicit."

Kolbe said that, at his suggestion, the complaint was taken to Foley's office and to the House clerk, who oversees the page program on the speaker's behalf.

"I believed then, and believe now, that this was the appropriate way to handle this incident," Kolbe said.

Also yesterday, former House clerk Jeff Trandahl said through a lawyer that he will cooperate fully with the FBI and the ethics committee. Trandahl, considered a key witness to several reported meetings regarding Foley and House GOP leaders, has not spoken with reporters since the scandal broke two weeks ago.

Fordham resigned as chief of staff to Rep. Thomas M. Reynolds (R-N.Y.) last week after it was learned that he had tried to negotiate with ABC News on Foley's behalf. Fordham has said that several years ago he implored Hastert's chief of staff, Scott Palmer, to help persuade Foley to stop showing so much attention to male pages.

Palmer released a statement last week saying: "What Kirk Fordham said did not happen."

Hastert Vows To Fire Staff In Foley Cover-up (WT)

By Charles Hurt

The Washington Times, October 11, 2006

House Speaker J. Dennis Hastert yesterday said that he would remove from his staff anyone found to have participated in any cover-up of the Foley scandal.

"If they did cover something up, then they should not continue to have their jobs," he told reporters yesterday before a speech in Aurora, Ill.

Mr. Hastert also said that after meeting last week with staff, he thinks they handled the concerns that had been raised about former Rep. Mark Foley's inappropriate contact with teenage boys in the congressional page program.

"In 20/20 hindsight, you probably could have done everything a little bit better," he said.

"But if there is a problem -- if there was a cover-up -- then we should find that out through the investigation process. They'll be under oath, and we'll find out," Mr. Hastert said, adding that he "didn't think anybody at any time in my office did anything wrong."

The House ethics committee is investigating the matter, including whether there was a cover-up after the initial "over-friendly" e-mails from Mr. Foley to teenage boys came to light.

The panel is expected this week to interview former Foley staffer Kirk Fordham, who resigned last week amid accusations that he tried to suppress some of the more lurid Internet messages. Upon resigning, Mr. Fordham said Republican leadership staff members knew about Mr. Foley's inappropriate behavior at least a year earlier than they have said.

Ethics committee members indicated last week that their inquiry into the scandal could be resolved before the November elections.

The FBI is also conducting an investigation and has been contacting former congressional pages who may have been pursued by Mr. Foley. Federal investigators interviewed for more than two hours yesterday a former page in Oklahoma City who reportedly received sexually explicit Internet messages from Mr. Foley.

Mr. Hastert's confidence that his staff will be exonerated in the investigations brought scorn from Democrats.

"America's parents are fed up with double talk and hypocrisy. They want Republican leaders to put politics aside and put our children first," said Stacie Paxton, press secretary for the Democratic National Committee, who accused Mr. Hastert of "fishy explanations, hair-splitting spin and blanket denials about the Republican cover-up of the Foley scandal."

Evidence emerged yesterday that suggests that it wasn't only Republicans who knew about Mr. Foley's bad behavior.

Writing in Harper's Magazine online, editor and blogger Ken Silverstein said it was a Democrat who provided him with the Foley e-mails that Democrats and some conservatives say should have tipped Republicans off that something was wrong. Like

Mr. Hastert and several other news organizations, Harper's Magazine decided the e-mails were inconclusive and did not publish the story.

Also yesterday, Rep. Jim Kolbe, Arizona Republican, explained that he, too, had been contacted by a page who said Mr. Foley had sent him e-mails that made him "uncomfortable."

"I was not shown the content of the messages and was not told they were sexually explicit," he said yesterday, adding that he recommended forwarding the complaint to Mr. Foley's office and the House clerk, which he said "was done promptly."

Outside Washington, the scandal continued roiling congressional campaigns.

In California, Democrat Jerry McNerny challenged Republican Rep. Richard W. Pombo to call for Mr. Hastert's resignation and return campaign contributions from the speaker.

"For more than a week, Pombo has remained silent about Dennis Hastert's failure to protect 16- and 17-year-old congressional pages from Mark Foley's predatory behavior," Mr. McNerny said. Continued silence from Mr. Pombo, he added, would be a sign of "complicity."

In West Virginia, meanwhile, a Republican sought to use the issue of child predators against his Democratic opponent, Rep. Alan B. Mollohan.

Republican Chris Wakim said Mr. Mollohan voted against the Children's Safety Act of 2005 to authorize $2 million in federal grants for technology and training for a task force going after online child predators.

"Alan Mollohan owes the voters an explanation of why he voted against authorizing money for a program designed to protect our children from Internet predators," Mr. Wakim said.

Prominent Democrats Refrain From Calling For Hastert's Ouster (HILL)

By Elana Schor, Amy Sherman And Patrick O'Connor

The Hill, October 11, 2006

While House Republicans rush to contain the political damage from the Mark Foley scandal, Democrats have relied on their challengers to push for Speaker Dennis Hastert's (R-Ill.) resignation while party leaders and most vulnerable incumbents refrain from calling for Hastert's head.

More than 20 Democratic opponents of vulnerable GOP incumbents have urged Hastert to abandon the Speakership in the wake of questions over how much and how early Republican leaders knew about Foley's sexual pursuit of House pages. Yet no elected Democratic leader and no Democratic incumbents in competitive races have echoed those challengers, according to a search of public statements conducted by The Hill.

One senior Democratic aide said it was "normal" for candidates to take the politically potent step of asking for Hastert's resignation while incumbents use more measured rhetoric. House Minority Leader Nancy Pelosi (D-Calif.) has set the tone for her caucus, stating that the ethics committee investigation should run its course before any leader is asked to step down.

The trend places Pelosi, Minority Whip Steny Hoyer (D-Md.) and Democratic caucus chairman James Clyburn (S.C.), all of whom have declined to urge Hastert to step aside, in a less combative camp than the conservative Washington Times editorial page, several conservative activists and at least one Republican candidate. New Jersey state Sen. Tom Kean Jr. (R), who is running a close race against Sen. Robert Menendez (D-N.J.), said Friday that Hastert should resign his post for failing to put a stop to Foley's behavior.

"The incumbents don't have to do it. Why bother?" University of Virginia political scientist Larry Sabato said. "They work with the Speaker, and I suppose they want to reduce the friction to a certain degree."

Sabato also noted the political value of staying silent and leaving Republicans to sort out the internal fault lines exposed by Foley's swift and stunning fall. "It's not [Democrats'] story," he added. "Remember the old rule: When your opponent's committing suicide, get out of the way."

Of the eight Democratic incumbents remaining in reelection bids rated highly competitive by the nonpartisan Cook Political Report, only Rep. Leonard Boswell (D-Iowa) has publicly entertained the possibility of Hastert's departure, according to The Hill's survey. Boswell said during a debate last week with his GOP foe Jeff Lamberti that an "immediate, quick investigation" should preclude any resignations.

Foley resigned his seat on Sept. 29, soon after the first reports emerged of sexually improper instant message conversations he conducted with underage pages. National Republican Congressional Committee Chairman Thomas Reynolds (R-N.Y.) and Hastert have since come under fire for their aides' alleged prior knowledge of Foley's actions.

Hastert stood by members of his own staff while reiterating his call to dismiss any member or aide who covered up Foley's inappropriate contact with the pages.

"If they did cover something up, then they should not continue to have their jobs," Hastert told reporters in Aurora, Ill., yesterday. "But I didn't think anybody at any time in my office did anything wrong."

Across the country, Democratic challengers are readily employing Hastert's role in the scandal. Gabrielle Giffords, who is vying for the open seat created by Rep. Jim Kolbe's (R-Ariz.) retirement, has directly urged an end to the Hastert era, as has Kentucky Democratic nominee Ken Lucas, a former House member. Pennsylvania's three top Democratic challengers, Lois Murphy, Joe Sestak and Patrick Murphy, have repeated the calls.

Other Democratic challengers use Hastert's public troubles to neatly define their outsider status compared with their Republican opponents. In Connecticut, Democrat Joe Courtney has implored Rep. Rob Simmons (R) "to demand the immediate resignation of GOP Speaker of the House Dennis Hastert." California Democratic nominee Jerry McNerney similarly insists that Rep. Richard Pombo (R) explicitly ask for Hastert's resignation, and Colorado candidate Angie Paccione (D) makes a similar request of incumbent Rep. Marilyn Musgrave (R).

"It is an organic movement," Democratic Congressional Campaign Committee spokeswoman Jen Psaki said. "See it from New Mexico to Minnesota to New York. Public outcry has come from families in the districts who are outraged with the Republican leadership ...and are outraged with how the republican leadership has mishandled it and brushed the facts under the rug in favor of politics."

A small minority of candidates has not demanded Hastert resign but advocate the incumbent-favored stance of a full investigation of the Speaker's role in the Foley scandal. Democrat Mike Weaver, running against Rep. Ron Lewis (R-Ky.), has said the matter should be investigated before resignations are demanded. Colorado Democratic candidate Ed Perlmutter, running against Republican Rick O'Donnell for an open seat in the 7th district, put himself in line with Rep. Tom Davis (R-Va.), the former GOP campaign chief, by calling for a probe to play out first.

"We have not called for his immediate resignation and events are continuing to unfold but we want the matter fully investigated," Perlmutter communications director Scott Chase said.

Many of Hastert's top aides are expected to testify before the ethics committee before the November midterms.

Kirk Fordham, Foley's former chief of staff who accused Hastert's chief of staff last week of knowing about the Florida Republican's behavior as early as 2003, is set to testify tomorrow, his lawyer said. Fordham resigned his post last week as chief of staff in Reynolds' personal office amid reports that he tried to suppress the emails that ended Foley's political career.

Timothy Heaphy, an attorney at McGuireWoods, LLP, representing Fordham, would not discuss his clients conversations with Hastert chief of staff Scott Palmer or any other members of the Speaker's staff now that the FBI and the ethics committee have both initiated investigations into an alleged cover-up of Foley's relationship with pages.

An attorney for Jordan Edmund, a former congressional page who received suggestive e-mails from Foley, confirmed that his client met with FBI investigators yesterday to discuss the e-mails Stephen Jones, Edmund's attorney, told reporters in Oklahoma yesterday that the House ethics committee had contacted him in order to question his client about the former page's interaction with Foley.

Hastert Meets With Critic Over Scandal (AP-Y)

By Nathaniel Hernandez

AP-Yahoo, October 11, 2006

House Speaker Dennis Hastert met Tuesday with an evangelist who hoped to persuade the Illinois Republican to step down because of the congressional page sex scandal.

Hastert had no comment after the meeting at his home with Christian evangelist K.A. Paul, founder of the Global Peace Initiative.

Paul told The Associated Press he met alone with Hastert for about 30 minutes and prayed with him.

"I am humbled with his humility and simplicity," Paul said of Hastert.

Hastert has resisted calls for his resignation over his handling of the situation involving former Rep. Mark Foley of Florida, who stepped down after he was confronted with sexually explicit electronic messages he sent to teenage male pages. Foley is under investigation by federal and Florida authorities.

Paul said the scandal is distracting the country from other issues.

"We don't want the Foley scandal when we have 100 more important things to do," said Paul, whose Global Peace Initiative is a nonprofit group that focuses on causes aimed at peace and humanitarian aid.

The page sex scandal threatens Republicans' congressional control just a month before the elections.

Rep. Thomas Reynolds, who has been criticized by Democrats who say he didn't do enough to protect a page from Foley, says he told Hastert months ago about his concerns about Foley.

Hastert has insisted he was not aware of the charges until more recently but has accepted responsibility for the matter.

Hastert's Great Listening Skills (HILL)

DOJ_NMG_0079157

By Emily Heil

The Hill, October 11, 2006

John Laesch is not a household name, but he is getting more attention in the wake of the House page program fiasco. Laesch is running against House Speaker Dennis Hastert (R-Ill.), who attracted 69 percent of the vote in 2004.

Hastert is still a prohibitive favorite to win on Nov. 7, but his memory lapses may cost him some points this fall.

Reps. John Boehner (R-Ohio) and Thomas Reynolds (R-N.Y.) have said they talked to the Speaker about suspicious e-mails that former Rep. Mark Foley (R-Fla.) sent to House pages. Hastert had not denied that those conversations took place, but maintains he does not recall them.

His office has also claimed that the Speaker was not made aware of the e-mails until very recently, even though his aides were told of them a year ago.

Laesch doesn't buy it. On his website, he highlights a noteworthy paragraph in Hastert's 2004 autobiography.

On page 186, Hastert writes, "Reading is not my strong point … In our office the basic rule is: 'If you can say it, don't write it down. If you can nod your head, don't say it.'… I'm not comfortable with computers ... I need to be focused on what's going on in the room and who's saying what to whom. I base most of my knowledge on listening to people. I get a lot of briefings and have good people working for me."

Here's the kicker: "Some say I have an incredible memory or recall for exactly what happened when and who said what to whom. I do listen pretty diligently, more than a lot of people listen, and I do pick up facts that way."

Laesch may not win, but he certainly knows how to compile opposition research.

A spokesman for Hastert did not comment.

American Idol, Senate style

Sens. Trent Lott (R-Miss.) and Larry Craig (R-Idaho) aren't quite Jake and Elwood Blues, but they're putting the band back together, and given their conservative credentials, they might think they're on a mission from God.

Well, not exactly a band, it's actually a barbershop quartet, which is just as cool as a blues band — at least that's what someone needs to tell Sen. John Thune (R-S.D.).

That's right, Lott and Craig are putting their quartet, the "Singing Senators," back together after a six-year hiatus. The Republican quartet, which originally included Lott, Craig, Sen. Jim Jeffords (I-Vt.), and Sen. John Ashcroft (R-Mo.), broke up after Ashcroft lost his re-election bid in 2000. Any hopes keeping the group intact with a replacement fell apart half a year later when Jeffords defected from the GOP, swinging control of the Senate to Democrats.

Now that Lott has decided to serve another term, it appears the 65-year-old wants to revive the good ol' days when he sang bass (and also was majority leader).

Lott and Craig are auditioning for new singing partners and they've found two solid prospects in Sen. Bob Bennett (R-Utah) and Thune.

"Senator Thune has a lovely tenor voice," said Craig, who also sings tenor. "And Senator Bennett has a good baritone."

On the original quartet, Jeffords sang tenor and Ashcroft baritone.

But it appears the comeback tour may be threatened by a generation gap. While the 73-year-old Bennett is enthusiastic, the 45-year-old Thune isn't so sure.

"Bob wants to do it," said Craig, 61. "It's Thune who doesn't know. He thinks it's a little hokey. He asked if senators do this sort of thing."

"I said yes," said Craig, who has advised his colleague to relax and live a little. "You've got to let your hair down and enjoy it."

Iraq as the 51st State? No, we don't think so.

One of the more startling disclosures in Bob Woodward's new book about the Bush administration's handling of the war in Iraq apparently has been overlooked because of other juicy tales of vicious turf battles among Bush's top advisers.

But turn to pages 223-24 of "State of Denial" to read how a leading Shiite cleric hopes to make Iraq the 51st state.

As Woodward tells it, retired Army Gen. Jay Garner, who briefly served as Iraq's first occupation administrator before being abruptly dismissed, told Bush and Defense Secretary Don Rumsfeld during a meeting in the Oval Office about a meeting he held with the cleric.

Asked by Garner for guidance "on what we should do next," the cleric spoke for an hour. He summed up his advice by saying Iraq needed a working government founded on democratic principles and based on a constitution supported by all the Iraqi people.

"So we must follow these principles and we must put a democracy together and we have to write a constitution built on the principles of Jesus Christ," the cleric, identified as Sheik Farqat al-Quizwini, said.

Then, he added, "Once we have this government, you'll bring us in as the 51st state."

Garner said he told the cleric that was “a terrific idea” and he would work on it. Afterward, when talking to Malcolm McPherson, a Time magazine reporter who was at the meeting, Garner asked the journalist if he would report the story.

“For Christ’s sake, I’ll never put this in Time,” McPherson replied. “Nobody would believe it.”

Democrats for Mark Foley

Democrats have been scoring some major political points off the Mark Foley scandal, with some predicting it will help them take control of Congress next year.

But a leading Democrat for Congress, at least at first glance, appears to have been a fan of the disgraced lawmaker by registering the domain name democratsformarkfoley.com last year.

The Democrat is Tim Mahoney, who is looking to win Foley’s seat on Nov. 7.

After expressing surprise that Mahoney had reserved the domain name, his spokeswoman Jessica Santillo went searching for answers.

Within a couple of hours, Santillo confirmed it, saying that “our Web guy” registered it “as a strategic move.”

Mahoney is also listed as the contact for the domain name republicansfortimmahoney.com. Neither site is live.

Mahoney’s rights to the Mark Foley domain name expire tomorrow. Will he be retaining those rights?

No comment, Santillo said.

Joe Negron, the Republican who is actually pushing for signs at Florida polling places that say, “A vote for Mark Foley is a vote for Joe Negron,” could not be reached for comment. Despite his resignation, Foley’s name will appear on the ballot while Negron’s will not.

Kolbe Says He Warned Of Foley Years Ago (AP-Y)

By Andrew Taylor

AP-Yahoo, October 11, 2006

Arizona Rep. Jim Kolbe said Tuesday he told the House official in charge of the page program as early as 2001 about Rep. Mark Foley's "creepy" e-mail to a former page.

Kolbe, the only openly gay Republican in Congress, said a former page he had sponsored contacted his office to complain of e-mails from Foley and that he "passed along" the complaint to Foley, R-Fla., and then-House Clerk Jeff Trandahl. Kolbe said he did not take the matter to other lawmakers.

Elsewhere on Tuesday, House Speaker Dennis Hastert, R-Ill., again said his staff aides acted appropriately last fall in handling information on Foley's conduct.

"I didn't think anybody at any time in my office did anything wrong," Hastert said. But he also issued a stern warning: "If they did cover something up, then they should not continue to have their jobs."

The developments unfolded as a prominent conservative quoted Hastert as casting doubt on claims by two members of the leadership in connection with the page scandal.

Hastert "assured me that the statement by Congressman John A. Boehner ... that months ago he had told Hastert about the page problem with Congressman Foley, was incorrect," Paul Weyrich wrote in an e-mail commentary on the issue. Boehner, R-Ohio, is the majority leader.

"As to Congressman Thomas M. Reynolds, the speaker said, 'If he had mentioned this problem to me, I surely would have taken notice,'" Weyrich added in an account of a phone conversation with Hastert. Reynolds, R-N.Y., heads the House Republican campaign organization.

Weyrich quoted Hastert as saying Reynolds often came to him with numerous requests to help "incumbents who are in trouble. The speaker said he signs off on the majority of requests and only listens with one ear because the requests are repetitive."

Kolbe spokeswoman Korenna Cline said the complaints to the lawmaker from a former page involved e-mails that were described as "creepy" but were not seen by Kolbe, and occurred in 2001 or 2002, well before House leaders say they first learned of inappropriate messages sent by Foley.

Kolbe is the second person to come forward and say that top House officials had early warnings about inappropriate Foley approaches to pages. Trandahl, the top administrative officer of the House, got his job from Hastert.

A lawyer for Kirk Fordham, Foley's longtime chief of staff, said Fordham will tell the House ethics panel Thursday that he warned Hastert's chief of staff, Scott Palmer, about inappropriate Foley conduct with pages in 2003 or possibly the previous year. Palmer has denied Fordham's account.

Hastert says he learned of Foley's conduct toward pages only on Sept. 29, when the Florida lawmaker abruptly resigned after being confronted by ABC News with copies of lurid instant messages he had sent to a former page. About a year ago,

Hastert aides learned from Rep. Rodney Alexander, R-La., about "over-friendly" but not sexually explicit e-mails from Foley to a former page from Louisiana. The aides did not inform Hastert, according to an account by his office.

In other developments Tuesday:

_A former congressional page said to have received electronic messages from Foley met with FBI agents in Oklahoma City. Stephen Jones, an attorney for ex-page Jordan Edmund, said Edmund "answered their questions and cooperated to the fullest" and that he had been contacted by the House ethics committee as well.

· Trandahl's lawyer, Cono Namorato, said Trandahl "will cooperate fully with the FBI and the House ethics committee investigations."

· Rep. John Shimkus, R-Ill., chairman of the House Page Board, has relayed to the House Ethics Committee his "interest to cooperate" and appear before the panel whenever requested, Shimkus spokesman Steve Tomaszewski said. Shimkus has not been informed when he should expect to testify.

_Ethics Committee Chairman Doc Hastings, R-Wash., told The Associated Press the panel is "moving to have this done in weeks. ... We are moving as quickly as we can." But he declined to say whether the committee would complete its investigation before the elections on Nov. 7.

Kolbe, who is retiring from Congress at the end of this year, defended his actions in response to the complaint from the former page.

"Some time after leaving the page program, an individual I had appointed as a page contacted my office to say he had received e-mails from Rep. Foley that made him uncomfortable," Kolbe said in a statement. "I was not shown the content of the messages and was not told they were sexually explicit. It was my recommendation that this complaint be passed along to Rep. Foley's office and the clerk who supervised the page program. This was done promptly."

Asked about Kolbe's statement, Hastert told reporters in Aurora, Ill.: "I don't know anything more about it. If there's something that was of a nature that should have been reported or brought forward, then he should have done that."

Hastert confirmed reports from last week that he had suggested having former FBI Director Louis Freeh head a Capitol Hill inquiry on the page program, but that House Democratic leader Nancy Pelosi objected.

Foley has acknowledged through his attorney that he is gay but has denied having any sexual contact with minors.

Meanwhile, lawmakers are responding to the ethics committee's request that they survey aides and former House pages to find out if any of them had knowledge of inappropriate conduct by Foley toward male pages.

Earlier Warning About Foley Emails Is Confirmed (WSJ)

By David Rogers

The Wall Street Journal, October 11, 2006

WASHINGTON -- A Republican congressman and past member of the House Page Board confirmed an earlier incident in which a former House page complained of inappropriate email from Rep. Mark Foley.

Rep. Jim Kolbe of Arizona said his office informed Kirk Fordham, chief of staff to Mr. Foley -- a former Republican congressman from Florida -- and Jeff Trandahl, then the House Clerk, of the complaint.

"We contacted Kirk Fordham in Foley's office and told him he should advise Mr. Foley to stop communicating with the individual," Mr. Kolbe said Tuesday. "My staff says the Clerk was advised."

The complaint appears to have been made between 2000 and 2002, or more than two years before a separate incident last fall, when a Louisiana family complained to their congressman of Foley emails to their teenage son, also a former page.

In both cases, Mr. Foley was warned directly or through his staff to cease contact with the former pages, and he apparently did. But following Mr. Foley's resignation on Sept. 29 -- and disclosure of his sexually explicit messages to former pages -- House Republicans are under fire for not having done more to investigate these early warnings of his behavior.

Mr. Fordham, who is to testify Thursday before the House Ethics Committee in its probe of the matter, has accused the House Republican leadership of ignoring his pre-2005 warnings about Mr. Foley's inappropriate contacts with House pages. A veteran political operative who left Mr. Foley's employ in late 2003, Mr. Fordham said last week that he went to the leadership because of his own concerns, as well as warnings by Mr. Trandahl about Mr. Foley's conduct.

At a speech about the economy, House Speaker Dennis Hastert (R-Ill.) says2 anyone linked to a cover up in the Foley scandal will be fired, but insists that no one in his office did anything wrong.

Mr. Trandahl, who is described by friends as having been very protective of the pages under his supervision, has declined to comment. The new developments highlight the importance of his future testimony, because he was responsible for the page program and reported to Speaker Dennis Hastert's office. If Mr. Trandahl was informed, the Ethics Committee will want to know if he shared that information with the speaker's office. When the complaint came last year from the Louisiana family, it would have been a second red flag about Mr. Foley's behavior for Mr. Trandahl and anyone he advised in Mr. Hastert's office.

At home in Illinois, Mr. Hastert again defended how his staff handled the 2005 complaint, but said that "in 20/20 hindsight, probably you could do everything a little bit better." He added, "If they did cover something up, then they should not continue to have their jobs."

Mr. Fordham's attorney, Timothy Heaphy, declined to comment about whether his client had been a contact in dealing with the page complaint raised by Mr. Kolbe. Mr. Trandahl's attorney, Cono Namorato, also declined to comment when told of Mr. Kolbe's account.

Mr. Kolbe, a former page, is retiring this year after 11 terms in Congress, during which he served a stint on the Page Board until February 2001.

Traveling in Europe, Mr. Kolbe responded Tuesday, in written answers sent by email to the Journal and then later in a statement from his office.

"I never saw any of the messages," he said, "And was never told they were sexually explicit, only that they made the former page uncomfortable."

He said his best recollection is the complaint came to him "much later than 2000," that he didn't speak directly to Mr. Foley, and instead his office contacted Mr. Fordham and Mr. Trandahl's office.

Mr. Kolbe said that if the former page, whom he appointed to the House program, says the complaint was made in 2000, he wouldn't dispute this. But he believed the date was later and after he had left the Page Board.

"Whenever this happened, it was after his tenure as page," Mr. Kolbe said. "He was no longer a page, not subject to the jurisdiction of the Page Board. I thought then and think now we handled this exactly correctly, given the amount of information we were given."

Nonetheless, the Foley matter has forced the House to rethink its responsibility for teenagers after leaving the page program, in which they work for one or two semesters on Capitol Hill. Mr. Foley showed a pattern of engaging in flirtatious, friendly behavior with pages while in Washington, and then pursuing them on the Internet after their stints as pages.

Retiring Kolbe In Spotlight (AP-Y)

By Jennifer Talhelm

AP-Yahoo, October 11, 2006

If Arizona Rep. Jim Kolbe was trying to retire quietly, it isn't working out that way.

Kolbe confirmed Tuesday that he referred concerns about then-Rep. Mark Foley to the House clerk's office in 2001 or 2002 after a former page told him Foley had sent him e-mails that made him feel uncomfortable.

The revelation is key to the question of when top House Republicans knew about Foley's behavior and whether they should have acted sooner to intervene.

It has thrust Kolbe, 64, the only openly gay Republican in Congress, into the spotlight just as he is preparing to leave Washington after 22 years in the House.

Kolbe is best known for his advocacy for free trade, international development and immigration reform. He also has waged a quixotic campaign to eliminate the penny, which costs more to produce than it is worth and which many argue is becoming obsolete.

He served on the board that oversees the page program between 1995 and February 2001. He was a page for Arizona Sen. Barry Goldwater from 1958 to 1960, and Kolbe's young staffers have described him as a professor-like figure who was willing to make time to discuss the issues of the day with them.

Spokeswoman Korenna Cline said Kolbe frequently offers his home to former pages, interns, constituents and colleagues.

"We joke in the office that we can't keep track of who is staying there," she said. "He's just very generous."

Kolbe, who is traveling in Europe, has declined interviews about his knowledge of concerns about Foley.

It may have been Kolbe's close relationship to the young staffers that led his former page to approach him about Foley.

Kolbe said in a statement Tuesday that his office reported the matter to the House clerk and took it up with Foley himself. The page did not report further problems, and Kolbe said he believed the matter was resolved.

"I believed then and believe now that this was the appropriate way to handle this incident given the information I had," Kolbe said.

It is unclear whether Kolbe's role in the Foley saga will affect his post-Congress employment options. This week, he was named one of five finalists to head the Global Fund to Prevent AIDS, Tuberculosis and Malaria, the central financing engine of international efforts to fight those diseases.

Among his supporters is Jack Valenti, former president and chief executive officer of the Motion Picture Association of America and president of the Friends of the Global Fight Against AIDS, Tuberculosis and Malaria.

DOJ_NMG_0079161

In an interview, Valenti said Kolbe is ideal for the job because he regularly won consensus while serving as chairman of the appropriations subcommittee on foreign operations, export financing and related programs.

"Members of his subcommittee ... trust him, they respect him and they believe in him," Valenti said.

AP Exclusive: Records Suggest Abramoff, Pombo Lobbying Contacts (AP)

By Erica Werner, ASSOCIATED PRESS WRITER

AP, October 11, 2006

WASHINGTON -- California Rep. Richard Pombo has insisted he was never lobbied by Jack Abramoff. Records show the disgraced lobbyist billed a client for at least two contacts with Pombo a decade ago.

The lobbying records released by the Northern Mariana Islands show that Abramoff billed once for calls to Pombo, chairman of the House Resources Committee, and a second time for a discussion with him, while lobbying in 1996.

On more than two dozen other occasions from 1996 through 2001, Abramoff associates called or met with members of Pombo's staff, including his chief of staff, the records indicate. As the contacts picked up, Pombo voted Abramoff's way on a bill important to Abramoff's clients.

Pombo spokesman Brian Kennedy disputed the reported contacts, saying direct lobbying by Abramoff "never happened" and the staff-level contacts were "greatly inflated." Abramoff, who pleaded guilty in a congressional corruption investigation, is "an admitted felon" who can't be trusted, Kennedy said.

"I think any of these billing records should be taken with a grain of salt if not dismissed entirely," Kennedy said. He noted that e-mails have surfaced showing Abramoff instructed associates to inflate their billing hours.

Still, the records put in question Pombo's campaign-trail assertions that he barely knew Abramoff and was never lobbied by him. Pombo is running against Democrat Jerry McNerney and is favored to win an eighth term representing California's Central Valley.

The race is drawing attention from the national political parties and from environmental groups that oppose Pombo's pro-industry policies as chairman of the Resources Committee, which writes environmental laws.

Abramoff pleaded guilty in January to tax evasion and wire fraud and is cooperating in a wide-ranging federal bribery investigation that has already led to guilty pleas from Rep. Bob Ney, R-Ohio, and several congressional aides. On Friday, an aide to presidential strategist Karl Rove resigned after a congressional report showed she had extensive contacts with Abramoff.

"I met the guy two or three times in my whole life - he never once lobbied me on anything," Pombo said of Abramoff last week in a debate against McNerney, who's made ethics an issue in the campaign. It's a claim Pombo's made repeatedly during the campaign.

The Northern Mariana Islands, a chain of 14 islands near Guam, became a U.S. commonwealth in 1986. Residents have nonvoting citizenship but the islands are exempt from many federal labor laws.

Democrats, complaining about reported abuses at low-paying garment factories, have sought to end those exemptions and increase the minimum wage, now $3.05 an hour. The Marianas government hired Abramoff to block such moves.

The island government released billing records and correspondence to The Associated Press and other organizations after Abramoff came under federal investigation last year for his work for Indian tribes.

The records, covering 1996 to 2001, indicate contacts beginning in March 1996 between officials at Abramoff's then-law firm, Preston Gates, and Pombo's staff.

One focus was legislation in the Resources Committee, of which Pombo was then a junior member, to give the Marianas a nonvoting delegate to Congress. Then-Marianas Gov. Froilan Tenorio was opposed. Abramoff and his associates lobbied the Hill, including a July 29, 1996, contact with Pombo's office.

Three days later the bill was narrowly defeated in committee. Pombo voted no.

"I have great news!" Abramoff wrote to Tenorio on Aug. 1, 1996. The delegate bill "was DEFEATED at the markup which finished about an hour ago. ... We were able to add four conservative Republicans to the block of Democrat opponents and defeat the bill by a vote of 13-12."

Kennedy said Pombo's opposition had nothing to do with Abramoff, whom he hadn't yet met. Instead, Pombo believed the Mariana Islands were too politically unstable to merit congressional representation. He now believes the situation has improved and supports a delegate for the islands, Kennedy said.

On Sept. 10, 1996, Abramoff billed for a discussion with Pombo. Two days later he gave Pombo a $500 donation, the first of what would become $7,500 in campaign contributions. Pombo has since donated the money to charity. On Nov. 21, 1996, Abramoff reported putting in calls to Pombo and other lawmakers.

In December 1996, a Marianas newspaper reported that Pombo was among lawmakers who would be visiting the island later in the month. The trip was being arranged by Abramoff's firm, but Pombo didn't end up going; Kennedy said he never was

DOJ_NMG_0079162

confirmed on the trip. One of Pombo's staffers, Todd Willens, did visit the islands with other congressional staffers on an Abramoff-planned trip the following year.

Pombo became Resources Committee chairman in 2003 when then-Majority Leader Tom DeLay, an Abramoff ally, helped jump him over more senior lawmakers.

Last year, a Mariana Islands audit became public that questioned the island's payments to Abramoff. Democratic Rep. George Miller, D-Calif., called on Pombo to hold hearings in the Resources Committee on Abramoff's conduct with the Marianas.

Pombo declined. Instead he and the Resources Committee's top Democrat, Nick Rahall of West Virginia, sent a letter to the Justice Department asking for the Marianas allegations to become part of the Abramoff investigation.

Judge Orders Government To Respond To Siegelman Evidence Preservation Order (WSFA-TV)

By Helen Hammons

WSFA-TV, NBC 12, Montgomery, AL, October 11, 2006

MONTGOMERY, Ala., October 10, 2006 -- U.S. District Judge Mark Fuller has given the government until Friday, October 13, 2006 to show cause in writing why the emergency motion submitted by attorneys for Governor Don Siegelman, requesting preservation of evidence related to alleged jury misconduct, should not be granted.

"Upon consideration of the defendant's Emergency Motion For Order to Require Preservation of Evidence (Doc. #469) filed on October 6, 2006, it is hereby ORDERED that the government show cause in writing on or before October 13, 2006 as to why the motion should not be granted."

The action of the judge is standard procedure.

Assistant United States Attorney Steve Feaga told wsfa.com,"We will of course comply with the Court's order. We do not believe the motion is well founded and will so state in our response and provide our reasoning at that time."

Siegelman attorney David McDonald, responding to Mr. Feaga's comment told wsfa.com,"I can't wait for the Justice Department to file a brief that opposes the preservation of evidence. I'm going to blow it up, frame it, and hang it on my wall."

McDonald says he understands the government and the judge need time to respond to the motion concerning alleged juror misconduct and the possible introduction of extrinsic evidence into the jury room. However, McDonald says all he's asking is that all evidence be preserved while the judge takes the motions into consideration. "How in the world is the government going to oppose that?" questions McDonald.

Concerning Judge Fullers order McDonald says, "I think it signifies to us the judge is taking this motion seriously..."

Death Penalty Sought In Puerto Rico Case (AP)

By Manuel Ernesto Rivera

AP, October 11, 2006

Federal prosecutors on Tuesday urged a jury to choose capital punishment for a Puerto Rican man convicted of killing a hospital guard in what could be the first death sentence handed down in the U.S. territory in nearly 80 years.

Carlos Ayala Lopez was found guilty two months ago in the 2002 slaying of Jose Rodriguez Reyes, a guard at the Veteran's Medical Center in Rio Piedras. The jury reconvened Tuesday to decide if Ayala should be executed or sentenced to life in prison.

"Justice will be to give him the punishment that he deserves ... and to sentence Carlos Ayala Lopez to death," Assistant U.S. Attorney Jacabed Rodriguez told the jury of six men and six women.

One of the jurors cried as Rodriguez displayed photos of the crime scene at the hospital just outside San Juan. Prosecutors said Ayala shot the guard while trying to steal the man's gun for a planned drug trafficking operation.

Puerto Rico abolished capital punishment in 1929, but federal prosecutors can still seek the death penalty in some cases because the territory is subject to U.S. federal law. The island's last execution was in 1927, when a man was hanged for murder. The island's legislature approved a resolution reaffirming the anti-death penalty stance in May.

The only other case in which a federal jury in Puerto Rico had to decide whether to impose a death sentence was in 2005. The jury opted to give two men charged with murder a life sentence.

Gov. Anibal Acevedo Vila has urged the U.S. Justice Department not to seek the death penalty in cases in Puerto Rico. Anti-death penalty protests are held often in the territory, and local activists have accused the United States of trying to impose federal capital punishment in colonialist fashion.

Supreme Court Considers Indictment Flaws (AP)

By Mark Sherman, Associated Press Writer

AP, October 11, 2006

WASHINGTON -- Judges and prosecutors make mistakes, a Justice Department lawyer told the Supreme Court Tuesday, but sometimes those errors are so minor that they don't warrant reversing a conviction in a criminal case.

A jury convicted Juan Resendiz-Ponce of attempting to enter the United States illegally from Mexico. But the 9th Circuit U.S. Court of Appeals overturned Resendiz-Ponce's conviction because his indictment by a grand jury did not set out any specific acts showing how he tried to enter the United States.

The omission was so serious that it required automatic reversal of the conviction, the appellate court said.

Deputy Solicitor General Michael Dreeben told justices Tuesday, however, that Resendiz-Ponce received a fair trial at which the government proved that he had displayed two false pieces of identification in an effort to enter the country. Resendiz-Ponce presented his cousin's green card and driver license when he approached the border crossing at San Luis, Ariz., on June 1, 2003.

Dreeben conceded that prosecutors should have included more information in the indictment and, when they didn't, the trial judge should have dismissed the charge before the trial began.

Even so, he said, the conviction should stand.

"Such an error violates the Fifth Amendment, but it is harmless," he said.

Upholding the appeals court ruling would force "the government to pay a tremendous penalty when a mistake is made in the indictment," Dreeben said.

Some justices said they saw nothing wrong with the indictment. "It doesn't seem to me there's any defect in this indictment," Justice Samuel Alito said.

Atmore Baggot, Resendiz-Ponce's lawyer, said the grand jury meets in secret and the only public record of its work is the indictment. If there are errors, the government should be required to have a grand jury correct them, Baggot said.

Resendiz-Ponce remains in jail while the government's appeal is pending. Prosecutors could seek to indict him again.

The case is U.S. v. Resendiz-Ponce, 05-998.

Pilot Didn't Kill Wales, Lawyer Says (SEAPI)

By Paul Shukovsky, P-I REPORTER

Seattle Post-Intelligencer, October 11, 2006

FBI to reveal new details today on prosecutor's death 5 years ago

The lawyer representing the prime suspect in the killing of federal prosecutor Tom Wales publicly declared his client's innocence Tuesday, rejecting the notion that he held a grudge against Wales and protesting the government's inquisitionlike investigation.

"This is Richard Jewell all over again," Seattle attorney Larry Setchell said, referring to the man wrongly suspected in the 1996 Olympics bombing.

Setchell's client, a 45-year-old commercial pilot who recently moved to Snohomish, has been in the FBI's cross hairs since Wales was shot to death in his Queen Anne home five years ago today.

Next week, Setchell said, the pilot will provide agents with handwriting samples -- hoping to prove he wasn't the author of a bizarre, anonymous letter sent to the bureau earlier this year by someone claiming to be a hit man hired to kill Wales.

After the Oct. 11, 2001, slaying, federal authorities launched a massive manhunt. If Wales was killed because of his job, he would be the first federal prosecutor murdered in the line of duty.

But in an interview with the Seattle P-I, Setchell said the FBI has "no science" connecting the pilot to the scene of the killing.

"They took everything from his house and they have nothing connecting him to Tom Wales. If they did, he wouldn't be walking the streets," the attorney said. The P-I isn't identifying the pilot because he hasn't been charged with a crime.

Making his most extensive comments on the case to date, Setchell likened it to the Atlanta Olympics bombing investigation, which has become synonymous with FBI blunders. Jewell, a security guard at the games, was named in national news reports as the focus of the federal investigation, only to be cleared.

In the Wales case, FBI agents have searched the pilot's homes three times and hauled away clothes, cars and most of his shoes. They got the airline he worked for to ground him. They've also intercepted his phone calls, put him under surveillance, interviewed friends and neighbors -- even talked to the women he was dating. He has since remarried.

Despite the pilot's assertions of innocence, investigators consider him a "vengeful, calculating, controlling" man who had a strong motive to kill Wales.

In 2001, Wales prosecuted the pilot, his business partner and others on charges that they improperly modified a surplus military helicopter for civilian use. Wales ultimately dropped the charges after an expert witness for the government was shown to have lied in another, similar case to the Justice Department, Federal Aviation Administration and the court, Setchell said. An internal investigative report from the Department of Transportation's Inspector General obtained by the P-I confirms that the expert witness lied.

Setchell said his client, who spent more than $100,000 in legal fees, felt "profound frustration" over the prosecution. "How could there not be? He hadn't done anything wrong."

But Setchell said that he and his client "never once blamed Tom Wales."

The pilot later sued the government, alleging that Wales' prosecution had been improper.

In a response to that suit filed shortly before Wales was killed, prosecutors said the pilot had a "violent and retributive nature" and was trying to ferret out the names of government witnesses in order to "avenge himself."

Setchell said two of the witnesses were the pilot's ex-wife, with whom he had a contentious divorce, and a former business partner who had an ax to grind.

While Setchell insists "there weren't bad words" between his client and Wales, a federal criminal justice source said that in the middle of the helicopter case -- after Wales had talked to the pilot's ex-wife -- the pilot angrily confronted Wales in person and told him to stop talking to her.

Setchell flatly denied that. "It never happened," he said.

In the middle of the pilot's suit to recover attorney's fees, terrorists attacked America on 9/11. Wales, a leading anti-gun activist, argued on television against calls to arm commercial pilots. One federal criminal justice source later speculated that the pilot, whom he called a "Second Amendment nut" who owned several guns, saw Wales on TV and "went over the edge."

A few weeks later, Wales was found dead in his basement. He had been shot through a window while he worked on his computer.

Setchell rejects such speculation, saying his client isn't a gun activist, didn't belong to any gun club and didn't know Wales was an anti-gun activist.

The night of the killing, the pilot maintains he was with a friend at the Cinerama in downtown Seattle watching "2001, A Space Odyssey." They left the film and went to their separate homes, Setchell said.

The lawyer said records will confirm the pilot was at home at the time of the killing, making phone calls. But federal agents say there was enough unaccounted-for time for the pilot to drive to Wales' home, fire the fatal shot and return to his residence in Bellevue.

"Just like any other human being, the pilot can't account for all of his time that night," Setchell acknowledged.

Authorities dissecting the pilot's life started by getting him grounded. On Dec. 20, 2001, U.S. Airways wrote the pilot a letter saying that it had been "notified by federal law enforcement personnel that you are a 'person of interest' in a homicide" and that he was also suspected of transporting illicit drugs on US Airways planes.

The following March, the company allowed him back in the cockpit, saying their internal investigation was complete.

Authorities notified the airline of the investigation on the direct order of then-U.S. Attorney General John Ashcroft, according to a federal criminal justice source.

FBI Special Inspector Robert Jordan, who this summer took charge of the investigation, will conduct a media briefing at noon today in which authorities will provide "new information about the investigation." The briefing will follow a memorial observance to be attended by Wales' family members and top federal and local law enforcement officials.

Jordan did not return a call for comment Tuesday. Steven Clymer, the special prosecutor appointed to the investigation, declined to comment.

In their exhaustive investigation into the pilot's life, the feds have found stories that reinforce their psychological profile that the suspect is "the kind of guy that would do this," according to a federal criminal justice source.

The case against the pilot is replete with circumstantial tidbits: For example, shortly after the shooting, the pilot left town and headed east of the mountains for a time, according to the source. The pilot also sent his brother a letter with information just in case "something happened," the source said.

The most tantalizing circumstantial evidence to emerge so far may be the fact that the pilot was in Las Vegas earlier this year when the anonymous "hit man" letter was mailed from there.

Setchell said his client was in Las Vegas at the time on a layover. The August search of his Snohomish home was conducted to obtain examples of his handwriting to compare it with the letter.

FBI Investigating Actions Of Specter Staff Member (USAT)

By Matt Kelley

USA Today, October 11, 2006

WASHINGTON — The FBI is investigating whether a member of Sen. Arlen Specter's staff broke the law by helping her husband, a lobbyist, secure almost $50 million in Pentagon spending for his clients, the senator acknowledged Tuesday.

In an Aug. 21 letter, FBI official Joseph Persichini Jr. told Specter, R-Pa., that the bureau is investigating "allegations of possible criminal misconduct" by staff member Vicki Siegel Herson. Persichini also asked for a copy of a report summarizing the results of an investigation of Siegel and other Specter employees with relatives who are lobbyists. Specter's former chief of staff, William Reynolds, carried out the investigation.

Specter provided a copy of the FBI letter to USA TODAY and said his staff gave the FBI the report last month.

The federal probe stems from a February report by USA TODAY about Siegel. Specter helped direct $48.7 million in Pentagon spending over the past five years to clients of her lobbyist husband, Michael Herson.

Specter has acknowledged he used his position on the Senate Appropriations Committee to put special-interest language in Pentagon spending bills directing the money to clients of Herson's firm, American Defense International.

Specter says he didn't know of the link to Siegel, who was one of his top advisers on spending issues until last fall.

Specter says he did nothing wrong. "There's no violation of the (Senate) ethics rules," Specter, the chairman of the Senate Judiciary Committee, said Tuesday.

Siegel and Herson did not return messages seeking comment Tuesday evening.

Specter's investigation found that two lobbyists related to Specter staff members had lobbied the senator's office and that Specter inserted language directing a $200,000 grant to the client of one of them last year. That lobbyist, Eric Wallace, is the son of Specter's Scranton office chief, Andy Wallace.

USA TODAY reported on the findings April 25. That day, FBI agent Jennifer Bach reviewed Specter's personal financial disclosure statements, Senate records show. Specter said his family's assets are in a blind trust, and "I've taken every step to avoid problems."

After the first report about Siegel, Specter changed his office rules to ban contact with any lobbyists related to staff members. Specter also referred the matter to the Senate ethics committee, which has taken no action.

The Siegel investigation is the latest probe centering on the House and Senate appropriations committees. Federal authorities are investigating the links among House Appropriations Committee Chairman Jerry Lewis, R-Calif., his staff and a lobbying firm that employs several of his friends, former staffers and relatives of staffers.

FBI Eyed Specter $$ Reports In Probe Of Aide (PHI)

By Dave Davies

The Philadelphia Inquirer, October 11, 2006

FBI agents have reviewed U.S. Sen. Arlen Specter's financial disclosure statements as part of an investigation into a Specter aide whose husband's lobbying firm secured millions in federal funds with Specter's help.

The agents are "conducting an investigation into allegations of possible criminal misconduct" by Specter staff member Vicki Siegel Herson, according to an FBI letter sent in August requesting an internal staff report on the aide.

Siegel Herson's husband, Michael Herson, is a lobbyist whose clients secured $48.7 million in appropriations "earmarked" by Specter, R-Pa., according to a USA Today report in April .

Earmarks are funds inserted in legislation by a lawmaker for a specific project that weren't requested by the receiving agency or authorized by previous legislation.

Specter said in a phone interview yesterday that he has not been interviewed by the FBI and neither he nor his staff has received subpoenas in the matter.

"Everything that was ever done here was within the [Senate] ethics rules," Specter said.

After USA Today stories appeared on Siegel Herson and another staff member whose son is a lobbyist for federal funds, Specter said he banned lobbying contact with his office by relatives of his staff, asked for a Senate Ethics Committee probe, and ordered his own staff to investigate.

FBI agents reviewed the staff report, which found no impropriety, in September, Specter said.

The Capitol Hill newspaper Roll Call reported yesterday that in April an FBI agent reviewed Specter's own financial disclosure report, a public document on file in Washington.

Specter confirmed the newspaper report yesterday and said he had no idea why authorities might be interested in his financial statement.

He said he'd placed stocks owned by him and his wife, Joan, in a blind trust and "taken every precaution" to avoid any conflict of interest.

Neither Siegel Herson nor her husband could be reached for comment yesterday.

According to USA Today, Michael Herson's lobbying firm, American Defense International, represented six firms between 2002 and 2005 that got nearly $50 million in funds earmarked by Specter.

None of the firms had gotten earmarks from Specter before hiring Herson's firm.

Specter said he had no idea that the firms were represented by a relative of his staff member, and said that Herson had not lobbied his office.

He also noted that some senators are married to lobbyists, citing former Minority Leader Tom Daschle, D-S.D., and Sen. Kent Conrad, D-N.D.

USA Today also reported that Specter staff member Andy Wallace has a son, Eric Wallace, whose firm succeeded in getting a $200,000 earmark for a Philadelphia nonprofit.

Specter said yesterday he's suspended the practice of earmarking in his subcommittee of the Appropriations Committee, and is considering whether to make the ban permanent.

Specter: FBI Reviewed His Report On Lobbying Ties (PHI)

By Steve Goldstein

The Philadelphia Inquirer, October 11, 2006

WASHINGTON - Sen. Arlen Specter (R., Pa.) said yesterday that the FBI reviewed results of an internal investigation by his office into whether staffers on his appropriations subcommittee steered earmarks to relatives working for lobbying firms.

The FBI sent a letter requesting access to the report in late July and examined it in September, Specter said. He said the internal review concluded there was no impropriety.

The senator said he thought the inquiry was prompted by a USA Today story in April that alleged that lobbyists related to Specter aides used that access to obtain earmarks for clients.

The congressional newspaper Roll Call reported yesterday that an FBI agent reviewed Specter's financial disclosure forms when the USA Today story appeared. The FBI acknowledged that it reviewed the forms but had no further comment.

"I really do not know" what the FBI was looking for, Specter said. He said the FBI contacted neither him nor any member of his staff.

Specter referred the matter to the Senate ethics committee, which has not concluded its inquiry. He has also changed the rules in his office to preclude any contact between office staff and relatives of employees engaged in lobbying.

Ney, Still Collecting Federal Salary, To Appear In Court This Week (HILL)

By Jackie Kucinich

The Hill, October 11, 2006

With Republicans still reeling from the former Rep. Mark Foley (R-Fla.) scandal, more bad news is on the way for the GOP later this week.

Rep. Bob Ney (R-Ohio), who has admitted to corruptly accepting thousands of gifts from lobbyists in exchange for legislative favors, is scheduled to appear before a federal judge on Friday the 13th to formally admit wrongdoing.

And to the dismay of Republicans, he will likely do so as a sitting member of Congress.

Ney has given up his gavels on the House Administration Committee and the Financial Services Housing and Community Opportunity subcommittee, but has kept his seat.

He will appear before Judge Ellen Segal Huvelle at 10 a.m. at the U.S. District Court for the District of Columbia.

Shortly after announcing his plea agreement with the Justice Department on Sept. 15, Ney checked himself into an alcohol rehabilitation program.

Ney's last vote was cast Sept. 12 in support of a monument to the World Trade Center attacks in 2001 and 1993.

His congressional website makes no mention of his legal troubles and has not posted a new release since August.

Neither Ney's lawyer nor his congressional office returned calls for comment.

A spokeswoman for the House Administration Committee confirmed Ney is still on the congressional payroll. Ney makes $165,200 annually, or $452.60 per day.

Ney has ignored calls from colleagues and outside ethics groups to step down from his post, including one from Ohio state Sen. Joy Padgett, who is running to replace him.

On Sept. 18, Padgett said, "Congressman Ney's admission of guilt to serious charges requires his immediate resignation."

She added that if he fails to do so, Congress should take action to expel him.

Earlier last month, House Speaker Dennis Hastert (R-Ill.) had promised a "quick solution" to Ney's admissions, as the ethics committee launched an investigation.

DOJ_NMG_0079167

Asked whether Ney should resign, Hastert said, “I think you will see a solution to that very, very quickly.”

House Majority Leader John Boehner (R-Ohio) was more guarded, saying, “Until he has his day in court, I don’t think it is up to me to say what he should and shouldn’t do.”

Seeking to deflect criticism about Foley, Hastert has noted that the disgraced ex-legislator is no longer a member of Congress, adding that Republicans moved quickly to address the matter.

On CBS’s “Face the Nation” on Sunday, Rep. Ray LaHood (R-Ill.) also defended Hastert, saying, “I give Speaker Hastert high marks for strong leadership. He took care of [former Rep.] Tom DeLay [R-Texas], his best friend, when Tom was having ethical problems. The Speaker went to him and asked him to leave. When he appointed [former Rep.] Randy “Duke” Cunningham to the Intelligence Committee, he went to Duke and made sure he wasn’t on the Intelligence Committee after it was disclosed he took $2.3 million. And when Bob Ney was appointed chairman of the House Administration Committee, he was appointed by Speaker Hastert. Speaker Hastert went to him and told him to step down from that committee after the [Jack] Abramoff disclosures. Hastert has the ability to take on these big ethical challenges that our party has faced.”

However, he has apparently fallen short in persuading Ney to step aside.

Hastert’s office did not comment for this article.

Current rules permit Ney to keep his pension should he go to prison, which has outraged tax and ethics watchdog groups.

“This Ney thing has been outrageous for years,” said Melanie Sloan, executive director of Citizens for Responsibility and Ethics in Washington. “The ethics committee is never going to look into it.”

Others echo that claim, saying the ethics panel will focus on Foley in the coming weeks.

Sloan added that she believes the ethics committee would use Ney’s plea as an excuse to not aggressively probe his behavior as a member of Congress.

Tim Batkins, a spokesman for the National Taxpayers Union said, “A government pension is basically a federal entitlement. … Some felons can’t vote and yet members of Congress [in prison] will receive $30,000 to $40,000 a year,” after they are released.

Foley resigned Sept. 29 after inappropriate e-mails and instant messages to House pages surfaced in the media. The ethics committee, the FBI and the Florida Department of Law Enforcement are investigating the matter.

Malvo Pleads Guilty To Montgomery Slayings (WP)

By Ernesto Londoã±o

The Washington Post, October 11, 2006

Sniper Lee Boyd Malvo formally took responsibility yesterday for his role in the October 2002 sniper shootings in Montgomery County, pleading guilty to six counts of first-degree murder.

His attorneys said that before Malvo's scheduled Nov. 9 sentencing hearing, they will try to reach a "global resolution," which presumably would entail his pleading guilty to slayings and shootings in other parts of the country where he is a suspect.

If such a deal is reached, Malvo, 21, could benefit by being allowed to serve time in a federal prison rather than a maximum-security penitentiary in Virginia, where he was first convicted of murder. Although defense lawyers raised the prospect of such an agreement, no negotiations appear to be underway.

Malvo, dressed in a green prison jumpsuit, said little during the 30-minute hearing in Rockville. He spoke softly, answering "yes" or "no" to questions that are routinely asked in plea hearings to ensure that the admission of guilt is being offered freely and legitimately.

"This is an articulate, intelligent kid who was manipulated and cajoled by a monster, a coward," said attorney Timothy J. Sullivan, referring to Malvo's fellow sniper, John Allen Muhammad. "Malvo is making attempts to redeem himself and to move forward."

Malvo pleaded guilty in the slayings of James D. Martin, 55; James L. "Sonny" Buchanan, 39; Premkumar A. Walekar, 54; Sarah Ramos, 34; Lori Lewis Rivera, 25; and Conrad Johnson, 35.

Malvo's attorneys spoke only broadly about his "legal problems" outside the Washington area and declined to describe their efforts to reach a sweeping plea agreement.

"The jurisdictions know who they are, and they know where we are," said William Brennan, Malvo's other attorney.

In June, The Washington Post reported that Malvo told law enforcement officials in the spring that he and Muhammad committed two homicides and two nonfatal shootings outside the area that had not been publicly attributed to them. The slayings happened in California and Texas; the other shootings took place in Florida and Louisiana.

Muhammad and Malvo killed 10 people in the Washington area and wounded four. Including the four crimes Malvo cited this spring, the pair are suspects in seven homicides and six nonfatal shootings that took place before they reached the Washington area.

DOJ_NMG_0079168

Montgomery State's Attorney Douglas F. Gansler said his office made no concessions to Malvo in exchange for his guilty plea in the Maryland cases. Prosecutors intend to ask Montgomery Circuit Court Judge James L. Ryan to sentence Malvo to six terms of life in prison without the possibility of parole. His punishment in Maryland is likely to be merely symbolic, however, because he is serving life without the possibility of parole in Virginia.

Gansler said a plea hearing on a deal that would allow Malvo to serve time in a federal prison could provide answers and closure to dozens of victims' relatives.

"It's not about Mr. Malvo," Gansler said. "In our view, the families of victims in other states totally deserve the right to know what happened and why."

If there is no deal, Malvo is expected to return to southwestern Virginia's Red Onion State Prison, which holds some of the state's most dangerous criminals and has been criticized by human rights organizations for what they say are severe conditions.

Gansler said his office won't try to persuade Virginia Gov. Timothy M. Kaine (D) to relinquish custody of Malvo. But he said the office could assist in consolidating dozens of crimes in numerous jurisdictions into a single plea hearing if a deal is reached. Such a plea hearing should happen in the Washington area, Gansler said.

Kevin Hall, a spokesman for Kaine, said no one has formally approached the governor with a proposal that would allow Malvo to serve time outside Virginia. He said Montgomery prosecutors raised the idea this year with the governor, which triggered stern opposition from the Virginia prosecutors in the sniper trials.

"Their wishes carry considerable weight in this discussion," Hall said, referring to Fairfax County Commonwealth's Attorney Robert F. Horan Jr. and Prince William County Commonwealth's Attorney Paul B. Ebert.

Ebert said criminals shouldn't be allowed to choose their prison.

"I know Malvo doesn't like Red Onion," Ebert said. "He should have thought about that before he came here and committed these crimes."

Ebert said he still has "serious doubts" about Malvo's credibility and thinks that relatives of victims in other jurisdictions "got all the answers they're going to get."

A federal indictment encompassing the unsettled shootings could be an alternative to a plea deal at the state level. But that option seems unlikely.

"This is a state case," FBI Special Agent Michelle Crnkovich said yesterday. "Any deals they're making are being made by the states."

She said FBI agents assisted Montgomery prosecutors during Muhammad's trial but are not actively involved in the case.

Tom Reedy, a spokesman for the Denton County Sheriff's Office in North Texas -- which is investigating the May 27, 2002, shooting of landscaper Billy G. Dillon, one of the crimes Malvo cited in the spring -- said the case remains unsolved.

"We haven't had any movement on that," Reedy said. "We haven't heard anything from anybody."

Cheryll Witz, the daughter of 60-year-old Jerry R. Taylor, who was fatally shot March 19, 2002, at a Tucson golf course, said she would like her day in court. Malvo told investigators that he and Muhammad were responsible for killing Taylor.

"I really would like an answer as to why and an 'I'm sorry,' " Witz said. "I would like to know that he's remorseful for what he did. You can tell that someone is truly remorseful by looking in their eyes."

Malvo testified against Muhammad during his month-long trial in Maryland in May, providing the first public firsthand account of the shooting spree that the two carried out while traveling in an old Chevy Caprice. The pair shot people in public places with a high-powered rifle, often pulling the trigger from the trunk of the car. Muhammad, 45, has been convicted of murder in Virginia and Maryland for his role in the shootings and is awaiting execution in Virginia.

Malvo said he was indoctrinated by Muhammad, whom he described as a cunning man bent on killing scores of people and then moving to Canada to train dozens of young killers.

Muhammad, who represented himself, described Maryland's case against him as a law enforcement conspiracy. Malvo said he was acknowledging his role because he is no longer under Muhammad's spell.

Malvo Pleads Guilty To 6 Sniper Killings (WT)

By Arlo Wagner

The Washington Times, October 11, 2006

Lee Boyd Malvo pleaded guilty yesterday to the six sniper murders in Montgomery County, a deal that might lead to legal conclusion of other shootings in the District, Virginia, Alabama and Louisiana.

Circuit Judge James L. Ryan postponed sentencing until Nov. 9 after public defender William Brennan said time was needed "to reach a global resolution to Mr. Malvo's legal problems."

DOJ_NMG_0079169

During the 45-minute hearing, Principal Deputy State's Attorney Katherine Winfree read an eight-page proffer detailing the killings of 13 persons and wounding of seven in Maryland, Virginia, the District, Alabama and Louisiana from Sept. 5 to Oct. 22, 2002.

Wearing a green prison jumpsuit, Malvo, now 21, showed no emotion during the hearing and answered only "yes" or "no" to his attorneys' questions. The proffer included details from his testimony during the May trial of his partner, John Allen Muhammad, 45, who was convicted of the six Montgomery County murders and sentenced to six life terms. Muhammad is now back in Virginia on death row for killing Dean Harold Meyers, 53, in Manassas.

"Mr. Malvo is making attempts to redeem himself and move forward," said his other public defender, Timothy Sullivan. "The first step was when he had the courage to testify against the man who taught him to be a killer. He's going to make the best of what is left of his life.

"This kid was manipulated by a monster," Mr. Sullivan said.

State's Attorney Douglas F. Gansler said Malvo probably will be sentenced to six consecutive life terms without a chance for parole. The minimum sentence would be a single life term with a chance for parole.

According to an interstate agreement before the Montgomery trials, Mr. Gansler said Malvo will be returned to Virginia, where he was sentenced to life in 2003 for killing FBI analyst Linda Franklin, 47, on Oct. 14, 2002, in a parking lot outside the Home Depot in Falls Church.

Mr. Gansler said the plea deal could mean Malvo won't serve his sentence in Virginia. Malvo could plead guilty to the Oct. 3, 2002, shooting of Pascal Charlot, 72, in the District and thus serve a life term in the federal system, which houses D.C. prisoners.

Malvo is "willing to give these families the satisfaction of knowing what happened, how it happened," Mr. Gansler said of the shootings that have yet to be prosecuted.

But Mr. Gansler said the decision on a plea rests with Virginia authorities, who agreed to let Muhammad and Malvo go temporarily to Montgomery County for new trials.

Kevin Hall, a spokesman for Virginia Gov. Timothy M. Kaine, said the governor's office has not had any recent discussions with Maryland prosecutors on a plea deal for Malvo. The prosecutors who first tried Muhammad and Malvo, Paul B. Ebert in Prince William County and Robert F. Horan Jr. in Fairfax County, were opposed when the idea was proposed a few months ago.

"Their objections were pretty sharp," Mr. Hall said.

Muhammad was described as the killer in the Montgomery County shootings, most from the trunk of a blue Chevrolet Caprice, firing a .223-caliber rifle through a hole just above the license plate.

The first victim in Montgomery County was James D. Martin, 55, who was shot in the parking lot of Shoppers Food Warehouse in Wheaton on Oct. 2. The next day, the victims were landscaper James L. "Sonny" Buchanan, 39, at Fitzgerald Auto Mall in Rockville; cabdriver Premkumar A. Walekar, 54, at a gas station on Connecticut Avenue in Aspen Hill; Sarah Ramos, 34, at the Leisure World shopping center in Silver Spring; and Lori-Ann Lewis-Rivera, 25, at a gas station in Kensington. The snipers struck elsewhere over the next three weeks until they returned to Montgomery County and killed bus driver Conrad E. Johnson, 35, on Grand Pre Road in Silver Spring on Oct. 22.

Malvo and Muhammad were arrested Oct. 24 in Frederick County, Md.

In all, 10 persons were slain and three wounded in Maryland, Virginia and the District.

The short hearing to formalize Malvo's Montgomery County plea contrasted with the two days of riveting testimony Malvo gave in May while helping prosecutors win convictions against Muhammad. It was the first insider account of the three-week rampage across the Washington region. The two snipers shot random victims with the high-powered rifle using the beat-up Chevrolet Caprice as cover.

Malvo described the genesis of the plot, saying Muhammad wanted to use it to extort $10 million and wreak havoc on the Washington area. Malvo described how they mapped out shooting sites in advance and worked as a team -- one spotting random victims, the other firing.

The young sniper also laid out Muhammad's grander scheme to shoot up to six persons each day for a month, target school buses and police officers with explosives, and set up a camp in Canada where homeless children would be trained as terrorists.

Malvo's Lawyers Seek Plea Deal (BSUN)

By Andrea F. Siegel, Sun Reporter

The Baltimore Sun, October 11, 2006

Young sniper reportedly seeks prison change for admitting to shootings

Attorneys for Washington-area sniper Lee Boyd Malvo, who pleaded guilty Tuesday to six murders in Montgomery County, are trying to forge a wide agreement that would have him also admit his role in other 2002 shootings in other states.

The deal has the potential to give Malvo what he reportedly wants -- a move from Virginia's Red Onion prison to a federal penitentiary -- if it includes a plea to the fatal shooting in Washington, D.C. to which he and John Allen Muhammad have been linked.

Malvo's lawyers said Tuesday they will move quickly to try to reach an agreement by his scheduled Nov. 9 sentencing in Rockville, where prosecutors are seeking the maximum sentence of six consecutive prison terms of life without parole.

"We are about to hopefully embark on some candid and frank discussions with some local prosecutors," said William C. Brennan, Malvo's lawyer. He said he will try in the coming weeks to "to effectuate a global resolution to Mr. Malvo's legal problems," but he and prosecutors declined to specify which shootings might be involved.

Charges are pending against Malvo and Muhammad in Alabama, Louisiana and Washington, D.C.. The pair is suspected -- in some cases because Malvo reportedly told police about them -- in shootings in Arizona, California, Florida, Georgia, Texas and Wash ington state.

Malvo, 21, is already serving a life prison term without parole in Virginia for a fatal sniper shooting there. Muhammad is on Virginia's death row for a fatal sniper shoot ing in that state, and has been sentenced to six life prison terms without parole for his role in the Montgomery County slayings of James D. Martin, 55; James L. "Sonny" Buchanan Jr., 39; Premkumar A. Walekar, 54; Sarah Ramos, 34; Lori Lewis-Rivera, 25; and Conrad E. Johnson, 35.

Buchanan's sister, Vickie Snider, was the only relative of a sniper victim to see Malvo plead guilty Tuesday before Judge James L. Ryan. She said she has no opinion on where Malvo serves his time, just that he remains incarcerated.

"I don't care whether it's a federal prison or Red Onion" prison in Virginia, said Snider, whose brother was the first of four people fatally shot on Oct. 3, 2002, in Montgomery County. Buchanan was killed while cutting the grass for an auto dealership in Rockville.

More family members of victims are likely to attend the sentencing, when they may speak in court. They also may provide written statements in advance.

Snider said her heart breaks for the families who have yet to hear their murdered loved ones formally named as among Malvo and Muhammad's victims.

Montgomery County State's Attorney Douglas F. Gansler, the Democratic candidate for Maryland attorney general, agreed: "I would imagine it would give them more peace. They have the right to know what happened."

Malvo cooperated with Maryland authorities, providing details about crimes. He testified in May at Muhammad's trial, breaking his public silence about his role in the crimes, saying his mentor turned him into a killing machine.

Timothy J. Sullivan, Malvo's other lawyer, said that the native Jamaican would like to "redeem himself." No longer under Muhammad's sway, "he is growing every single day in sadness about the life he has wasted," Sullivan said.

An arrangement to shift Malvo into the federal prison system would hinge on authorities in Virginia, where Malvo is serving multiple life sentences for sniper shootings. Virginia authorities sent Malvo to Maryland for trial as part of a pact that says he has to be returned, Gansler said.

"It's really up to Virginia," Gansler said, adding that his office would not be involved in efforts to reach an expansive agreement for Malvo.

But last year when the subject was first broached, the two Virginia prosecutors who obtained convictions in trials against Malvo and Muhammad vehemently objected to what they viewed as letting Malvo pick his prison.

"I don't think any defendant should be able to choose the venue of his incarceration," Paul Ebert, the commonwealth's attorney for Prince William County who obtained a death sentence for Muhammad that is now on appeal, said Tuesday. "He should have thought of that when he came to Virginia to commit his crimes."

Kevin Hall, spokesman for Virginia Gov. Tim Kaine, said the prosecutors' opinions "would be a significant factor if the governor were to be asked to consider such a request." Told that Malvo reportedly might prefer federal prison accommodations to those in Virginia, Hall replied, "He hunted people. Tough."

A deal also would hinge on Malvo reaching an agreement with federal prosecutors in Washington, D.C. They said they cannot discuss any open case.

Ellen Brooks, the district attorney for Montgomery County, Ala., where authorities believe Malvo and Muhammad killed one woman and wounded another as they closed a liquor store Sept. 21, 2002, said she has not heard anything in months about Malvo.

"Certainly, we are interested in a resolution to our case," she said.

In the Washington area, 10 people were killed, three wounded and the region terrified by sniper shootings during the fall of 2002. Malvo maintained that he was following Muhammad's plan to extort $10 million from the government to end the terror. At

his Maryland trial last spring. Muhammad claimed innocence, saying he'd come east from Washington state to reclaim the three children he'd lost in a bitter divorce.

Though Malvo initially said he did all the shootings, he later said he took full responsibility to shield Muhammad. He testified that he shot and wounded two people and killed only the final victim, bus driver Conrad E. Johnson, on Oct. 22, 2002, serving as Muhammad's spotter in the rest.

Attorney: Sniper Seeking Deal For Life In Federal Prison (FINDLAW/AP)

By Stephen Manning, Associated Press Writer

AP, October 11, 2006

(AP) - ROCKVILLE, Maryland-Convicted Washington-area sniper Lee Boyd Malvo is seeking a broad plea agreement in which he would plead guilty to other 2002 sniper shootings that authorities have linked him to, defense attorneys and Maryland prosecutors said Tuesday.

The deal, announced as Malvo formally pleaded guilty to six Maryland murders, could be reached before his Nov. 9 sentencing for those killings. He is expected to receive six life sentences at that hearing.

Malvo lawyer William Brennan told Montgomery County Circuit Judge James Ryan that he hoped to use the time before sentencing to "reach a global resolution to Mr. Malvo's legal problems." Asked later by reporters for specifics, Brennan would only say that he would have "candid, frank discussions with some local prosecutors."

Malvo has already been convicted of shootings in neighboring Virginia. Montgomery County State's Attorney Douglas Gansler said such a plea deal could mean Malvo may not serve his sentence there.

Malvo could plead guilty to the Oct. 3, 2002, shooting of Pascal Charlot in Washington, D.C. and serve his life term in the federal system, Gansler said. Federal prosecutors handle murder cases in the District of Columbia.

Gansler said the decision rests with Virginia authorities, who agreed to let Malvo and his one-time mentor, John Allen Muhammad, come to Maryland for new trials. Under an interstate agreement, Maryland must return Malvo after his sentencing.

Kevin Hall, a spokesman for Virginia Gov. Tim Kaine, said Kaine's staff has not had any recent discussions with Maryland prosecutors on a plea deal for Malvo. The Virginia prosecutors who first tried the pair were opposed when the idea was proposed a few months ago.

"Their objections were pretty sharp," Hall said.

Malvo, 21, is already serving a life prison term in Virginia for his 2003 conviction of murdering FBI analyst Linda Franklin at a Home Depot parking lot in Falls Church, Virginia, in October 2002. He later pleaded guilty to another Virginia sniper shooting.

Charges are still pending against Malvo and Muhammad for sniper shootings in Louisiana, Alabama, Washington, D.C., and Prince George's County, Maryland. In addition, authorities and published reports have tied the pair to shootings in Arizona, California, Georgia, Texas, and Washington state.

In all, 10 people were murdered and three wounded during the October 2002 shootings in Maryland, Virginia and Washington, D.C.

Brennan and Montgomery County State's Attorney Douglas Gansler would not say which shootings could be included in the larger plea agreement.

Another Malvo attorney, Timothy Sullivan, said Malvo has accepted responsibility for his part in the shootings and wants to make amends.

"Every single day this kid realizes the enormity of what he has done," Sullivan said. "Mr. Malvo is making attempts to redeem himself and move forward."

Muhammad, who was convicted in May by a Montgomery County jury and given six life terms, has already been sent back to Virginia, where he is on death row for a sniper shooting in Manassas, Virginia.

In May, while helping prosecutors win convictions against Muhammad, Malvo gave two days of riveting testimony that provided the first insider account of the duo's three-week rampage across the Washington region, shooting random victims with a rifle while using a beat-up Chevrolet Caprice as cover.

Malvo said Muhammad wanted to use it to extort $10 million (â‚¬800,000) and wreak havoc. He described how they mapped out shooting sites and worked as a team - one spotting random victims, the other firing the .223-caliber rifle.

He also laid out Muhammad's grander scheme to shoot as many as six people each day for a month, target school buses and police with explosives, and set up a camp in Canada where homeless children would be trained as terrorists.

Before testifying in May, Malvo also confessed to shooting two liquor store clerks in Montgomery, Alabama.

Wecht Corruption Trial Postponed (PTR)

DOJ_NMG_0079172

By Jason Cato, TRIBUNE-REVIEW

Pittsburgh Tribune-Review, October 11, 2006

The federal public corruption trial of Dr. Cyril H. Wecht will not begin next week as scheduled.

U.S. District Judge Arthur J. Schwab released the jury pool of nearly 300 people, effectively postponing the Oct. 16 trial start date indefinitely.

At issue is whether the 3rd U.S. Circuit Court in Philadelphia will remove Schwab from the case. Wecht's lawyers have asked the court to disqualify Schwab, saying he has exhibited bias against their client by having secret communication with prosecutors and through a number of rulings against Wecht.

The judge and prosecutors have denied the allegations.

Wecht, 75, of Squirrel Hill, was charged in January with 84 counts of mail fraud, wire fraud and theft of honest services. He is accused of using his public office while Allegheny County coroner for private financial gain.

The appeals court has been asked to decide whether internal disciplinary records of the lead FBI agent in the case should be made public and whether a federal court rule in Pittsburgh that keeps lawyers from speaking to the media is constitutional.

There is no deadline for the appeals court to make a decision.

A three-judge panel heard arguments Sept. 12 and issued a stay of Wecht's trial three days later.

Jason Cato can be reached at jcato@tribweb.com or 412-320-7840.

Wecht Trial Delayed While Attorneys Wait For Appeals Court Ruling (AP)

By Joe Mandak

AP, October 11, 2006

PITTSBURGH - Former Allegheny County coroner Dr. Cyril Wecht's federal corruption trial has been postponed indefinitely because an appeals court has yet to rule whether a judge is biased and should be removed from the case.

The order canceling jury selection, which was to have begun next Monday, was issued Tuesday by U.S. District Judge Arthur Schwab.

The 3rd U.S. Circuit Court of Appeals last month ordered all pretrial proceedings halted until it rules on Schwab's alleged bias and other issues. Wecht's attorneys contend Schwab has favored prosecutors in his rulings; the judge has threatened to hold a contempt hearing for defense lawyers after the trial.

Federal prosecutors in Pittsburgh say Wecht used his county staff to do work and otherwise help his multimillion-dollar private pathology practice. Wecht is also accused of trading cadavers for lab space at a local college, and overbilling private clients using faked limousine bills for trips in which he was allegedly chauffeured by county employees in a county car.

Wecht's attorneys appealed to the 3rd Circuit after Schwab upheld FBI searches for Wecht's records and computers. Defense attorneys had attacked the credibility of the FBI agent who obtained the search warrants, but Schwab overruled some of their objections because he said they were filed too late.

Wecht is a renowned pathologist who has consulted on high-profile deaths including those of Elvis Presley and JonBenet Ramsey and, most recently, the son of former Playboy model Anna Nicole Smith. He resigned from county office in January after he was indicted on charges of theft of honest services, mail fraud and wire fraud.

Colma Councilman Pleads Not Guilty To Corruption (BCNW)

Bay City News Wires, October 11, 2006

COLMA A Colma city councilman facing public corruption charges was arraigned Tuesday morning in San Francisco federal court.

Philip J. Lum, 53, pleaded not guilty before a U.S. Northern District Court judge to charges he failed to report gifts accepted from the owner of a Colma casino in exchange for voting favorably on City Council matters that benefited the casino.

A federal grand jury in San Francisco indicted Lum on Oct. 3 on one count of conspiracy to commit mail fraud and two counts of mail fraud. If convicted, Lum faces a maximum sentence of 20 years in prison and fines of $250,000 for each count, according to the U.S. attorney's office.

The charges came after a three-year FBI investigation revealed that Lum, who has been on the Colma City Council since 1986, accepted first-class and coach airline tickets to the Philippines from 1999 until 2001 from the owner of Colma's Lucky Chances Casino, according to the U.S. attorney's office.

The indictment alleges that Lum didn't notify the state of the gifts as required annually by the Fair Political Practices Commission and took part in City Council action in favor of the casino without revealing his profits, according to the U.S. attorney's office.

DOJ_NMG_0079173

Lum was released on $100,000 bail and is next scheduled to appear in federal court in San Francisco in front of U.S. District Judge Jeffrey White on Dec. 7.

Colma City Manager Diane McGrath said she did not know if the City Council was planning to take any action on the matter, or whether Lum would be at the next City Council meeting, scheduled to take place Wednesday at 7:30 p.m. at the Colma Town Hall.

Figure In Pay-to-play Scandal Sentenced To Probation (PHI)

By John Shiffman

The Philadelphia Inquirer, October 11, 2006

A Philadelphia architect who participated in a pay-to-play scheme in which $30,000 from a corporation was illegally funneled toward Mayor Street's reelection was sentenced to two years' probation yesterday.

The case is part of a continuing FBI investigation into corruption at Philadelphia International Airport and is related to federal authorities' City Hall probe.

The architect, Terry Crockett, had pleaded guilty to conspiracy and fraud and had helped authorities make a case against two codefendants.

"There's no excuse for allowing friendship and the need to sustain your business to [make you think] you are above the law," Crockett told U.S. District Judge James T. Giles. "This I am very sorry for."

Crockett, 61, generated bogus paperwork for $30,000 worth of architectural services submitted to the victim corporation, Sky Sites Inc., which hoped to continue an airport advertising contract. Sky Sites is a subsidiary of JCDecaux, which specializes in indoor, back-lit advertising displays in airport terminals throughout the world.

After Sky Sites paid Crockett, he gave $10,000 each to consultant Joseph Moderski and Eric Selby, a former vice president of Sky Sites. The three men then each gave $10,000 to a political action committee controlled by Ronald A. White, a chief Street supporter.

It is against state law for corporations to make campaign contributions.

Moderski, Selby and Joseph Evans, former Sky Sites chief executive, have all pleaded guilty and are to be sentenced in January.

White, indicted with former City Treasurer Corey Kemp in a much larger conspiracy case, died before trial.

Assistant U.S. Attorney Joan L. Markman told Giles yesterday that although Crockett's offense was serious, it was Moderski who proposed the idea, "and the others went along it." Crockett deserved credit for confessing and helping the government, she said.

The advisory federal sentencing guidelines called for a sentence of probation to six months in prison.

Crockett's lawyer, Joel Slomsky, said that "what occurred in this case was an aberration."

"He should have known better," Slomsky said. "He's tried to do the right thing by correcting his mistake and cooperating with the government."

In sentencing Crockett, Giles compared the architect's conduct to that of someone who skates on a pond he knows is covered with thin ice.

When the ice breaks and the skater plunges in, the judge said, "the water is always deeper than was thought to be the case."

Passwords Jump-started Fumo Probe (PHI)

By John Shiffman And Mario F. Cattabiani

The Philadelphia Inquirer, October 11, 2006

Last fall, agents on the FBI's public corruption squad faced a problem: They couldn't read encrypted e-mail seized from State Sen. Vincent J. Fumo's offices.

On Oct. 18, they got a break. Donald Wilson, a state Senate computer technician who had been granted immunity, suddenly remembered something, according to a newly unsealed FBI affidavit. He still had two portable data cards - with all the passwords to open the e-mail.

Wilson's lawyer called authorities and turned over the passwords. The feds were in.

With that breakthrough, the affidavit said, agents were able to read more Fumo office e-mails talking about destroying records and fretting about the FBI - a trail that helped lead to obstruction-of-justice charges against two other Fumo computer technicians, Leonard Luchko and Mark Eister.

Thus far, they're the only ones charged. Prosecutors, who have been investigating Fumo for three years, say they will decide by Christmas whether to indict Fumo, or others.

The FBI's corruption and extortion probe is focused on whether Fumo or others misused a South Philadelphia charity, Citizens Alliance for Better Neighborhoods, for personal or political gain. Donations from Verizon and Peco Energy Co. to Citizens Alliance are also under review.

Prosecutors declined to comment yesterday, as did Wilson's lawyer, Mark Cedrone. Fumo's lawyer, Geoffrey Johnson, did not return a phone call.

Fumo, long considered the most powerful Democrat in the state Senate, has said he has done nothing wrong. He has said the investigation was politically inspired by Republicans.

The newly unsealed affidavit also includes other new information about the case.

For example, it says the charity "organized and managed" by Fumo paid money to a polling company, Kiley & Co. of Boston. Sources say it was for a 2002 poll that cost $44,800.

Tax laws prohibit charities from engaging in political activity.

The charity paid another polling firm about $215,000, The Inquirer reported last year. A Fumo politicial committee repaid the charity for that expense, public records show.

The series of events that led the FBI to the computer passwords last fall are detailed in the affidavit, written by FBI agent Kathleen McAfee:

Wilson was an apparently reluctant witness who was granted immunity and testified to the grand jury Oct. 4, 2005.

According to the affidavit, Wilson said then that he and Luchko "systematically destroyed" e-mails and other evidence after The Inquirer reported the existence of the investigation in January 2004.

The FBI had already seized computers but couldn't unlock certain files because of an encryption program. Wilson told the grand jury that he no longer had the passwords - he had deleted them to thwart the FBI.

Two weeks later, his lawyer called prosecutors with news: Wilson had found a copy of the passwords in an Excel spreadsheet.

Wilson also gave authorities two portable computer drives; on one, agents found a document that suggested Luchko had stashed backup copies of Citizens Alliance records at his home.

That triggered a scramble by the FBI to search Luchko's house in Collingdale. The affidavit that agents used to obtain the warrant for that search is the one that was unsealed late Friday.

On Oct. 20, agents raided Luchko's home and hauled away boxfuls of electronic storage devices, including CDs, portable data cards, a Blackberry, and a large quantity of computer backup tapes, records show.

Luchko and Eister were charged in May with trying to thwart the FBI's corruption and extortion investigation. They have pleaded not guilty.

Federal Prosecutors Start Special Child Porn Fight (SLPD)

By Robert Patrick, ST. LOUIS POST-DISPATCH

St. Louis Post-Dispatch, October 11, 2006

Missouri's federal prosecutors said Tuesday that they are reinforcing the battle against an "epidemic" of online child pornography, in an effort funded in part by well-known St. Louis concert promoter and philanthropist Steven Schankman.

He said he donated $100,000 toward the estimated $600,000 annual budget to help provide a more coordinated attack. He said his desire comes from various directions, including experiences of his employees' children.

Schankman said it had little or nothing to do with federal charges that sent his son, Jason P. Schankman, to prison in April for almost 16 years for producing and receiving child pornography here. The younger Schankman, 31 when he was charged last year, lived in Kirkwood.

Steven Schankman said his financial help was not intended to get his son a break from U.S. Attorney Catherine L. Hanaway's office. "I'm too smart to say this will help my son and she's too smart to say it will," he said. "Catherine Hanaway did what she had to do."

Hanaway said she had told Steven Schankman she could not work with him on the project while his son's case was open.

On Tuesday, her office announced creation of a child exploitation unit, which will refocus some prosecutors' efforts on child pornography. She also said the FBI is planning to bear down on pornographers who use "peer-to peer" file-sharing networks that are commonly used to share music.

Several cases where child pornographers used the Kazaa network have been prosecuted in federal court in Kansas City, said Bradley Schlozman, U.S. attorney for the Western District of Missouri. Kazaa cases have also been handled in St. Louis, Assistant U.S. Attorney Jeff Jensen said.

Schlozman, who is introducing similar initiatives in his office, is cooperating with Hanaway, Gov. Matt Blunt and Attorney General Jay Nixon in the statewide initiative.

Its Website, INOBTR.com, pronounced "I know better," will debut in January to provide information to children, parents, teachers and law enforcement.

The initiatives have roots in February's launch of "Project Safe Childhood" by U.S. Attorney General Alberto Gonzales, designed to coordinate federal, state and local law enforcement efforts "to prosecute predators and rescue their victims." At the time, Gonzales cited an "epidemic of sexual abuse and exploitation of our children."

Former LA Sergeant Charged With Abusive Sexual Contact (MHCA)

Monterey (CA) Herald, October 11, 2006

LOS ANGELES - A retired police sergeant and former television reporter was charged Tuesday in connection with several encounters between him and two 12-year-old boys in a cruise ship spa, authorities said.

Roderick "Rod" Bernsen, 58, was arrested at the Port of Los Angeles Saturday by FBI agents investigating a complaint by the mother of one of the boys, authorities said.

He faces one count of abusive sexual contact. He made his first appearance in federal court Tuesday, where his bail was set at $850,000.

"He is shocked and devastated by these charges, as minor as they are," Bernsen's attorney, James Epstein, said about his client. " ... and I think we should let this play out in court."

While aboard the Princess cruise ship to Mexico, Bernsen met and befriended the boys after they sneaked into a spa restricted to men and women over the age of 16, according to an FBI affidavit.

During an encounter in the steam room, the boys alleged that Bernsen inappropriately touched himself in front of them. They claim he later followed them to shower stalls where he inappropriately touched them, the affidavit said.

The boys told their parents about the alleged encounters, which led to a heated discussion between a boy's mother and Bernsen, the affidavit said. They reported him to the security staff, which also spoke with Bernsen about the complaints.

"Bernsen stated that he spoke to the boys, but not in an inappropriate manner," the document said.

Bernsen, who lives in Colorado, was KTTV-TV's law enforcement specialist until he left the station in 2004. His broadcasting career followed service in the Los Angeles Police Department as a sergeant and spokesman.

From late last year until May, he filled in as a host on KFI-AM, Los Angeles' most popular talk radio station.

Ex-Reporter Appears In Court To Face Sex Count (LAT)

By Joe Mozingo, Times Staff Writer

The Los Angeles Times, October 11, 2006

In shackles and handcuffs, former Los Angeles police spokesman Roderick "Rod" Bernsen appeared in a federal courtroom Tuesday to face a felony count of "abusive sexual contact" during an encounter with two 12-year-old boys in a cruise ship sauna.

Bernsen, 58, also a former Fox 11 news reporter, was arrested on board the Diamond Princess after it docked in Long Beach on Saturday at the end of a weeklong cruise to Mazatlan, Puerto Vallarta and Cabo San Lucas, Mexico.

The single criminal count alleges that Bernsen spanked the bare buttocks of one boy, and touched the other's penis with his toe. His lawyer, James Epstein, downplayed the allegations. "He's shocked and devastated by these charges, minor as they are," he said.

The count carries a statutory maximum of two years in prison, according to Assistant U.S. Atty. Patricia Donahue. Prosecutors have until Nov. 13 to return with a grand jury indictment, which could contain different charges, or to drop the case.

Bernsen was released on $850,000 bond and ordered to stay away from children. In court, he sat behind glass gazing at former colleagues in the news media, mostly with a pained expression, but at one point clowning with a court artist he knew by briefly covering his face with his hands and then laughing.

According to the arrest affidavit, the two boys, cousins and part of an extended family taking the cruise together, first encountered Bernsen in the Lotus Spa sauna Sept. 30. Children were not allowed in the sauna, but it was not monitored.

Bernsen was naked. He introduced himself and chatted about golf, eventually showing them a scar from a back injury that he said prevented him from playing sports, the boys told FBI Special Agent Julie Viana, according to the affidavit.

"John Doe 2 explained that he was surprised when Rod stood up, since he was naked…. It appeared to John Doe 2 that Rod was purposefully sticking out his buttocks to the boys," Viana wrote in the affidavit.

"The boys were uncomfortable … " she wrote. "As they left the sauna Rod tried to arrange a time when the three of them could meet again."

DOJ_NMG_0079176

The boys went to the steam room later, where Bernsen allegedly talked to them about puberty and questioned them about erections while "holding and rubbing his own penis with his hand." As the boys left to take a shower, Rod spanked John Doe 2 "hard enough to sting," according to the affidavit.

Wearing only towels, they then moved to the sauna, where Bernsen shortly thereafter arrived naked, authorities allege. As one of the boys walked out, arranging his towel, Rod touched the adolescent's uncovered penis with his big toe, the affidavit said.

The boys allegedly had three more encounters with Bernsen before one of their mothers confronted the older man and accused him of saying inappropriate things to the children. She then reported to security what the boys had told her, including the touching, the affidavit said.

Later that day, Bernsen went to ship security too, said nothing inappropriate had happened, but promised to stay away from the boys. A Princess Cruise Lines executive called the FBI that day to report "a possible sexual assault of two 12-year-old boys by a 58-year-old man." The FBI waited until the ship docked five days later to question and then arrest Bernsen.

Outside the court building Tuesday, Bernsen's lawyers questioned why the boys would repeatedly return to the sauna after such allegedly disturbing behavior. "They kept sneaking back in," Epstein said.

Aviation Debate Centers On Use Of Criminal Probes (USAT)

By Alan Levin

USA Today, October 11, 2006

Two U.S. charter pilots being held in Brazil following a fatal midair collision over the Amazon jungle are at the forefront of the latest debate over whether members of flight crews should face criminal charges in jet crashes, aviation experts said Tuesday.

Authorities in Brazil are trying to determine why a Gol Airlines Boeing 737 and a Embraer Legacy 600 corporate jet collided at 37,000 feet on Sept. 29, sending the Gol jet plunging to the ground. All 154 people aboard the large jet died, but the pilots of the corporate jet with seven people on board managed to land at a military base.

The pilots, Joseph Lepore, 42, of Bay Shore, N.Y., and Jan Paladino, 34, of Westhampton Beach, N.Y., are being held in a Rio de Janeiro hotel. The local acting federal police director, Geraldo Pereira, said last week that the pilots were not under arrest but could face charges of involuntary manslaughter.

Lepore and Paladino work for the New York charter company ExcelAire.

The main question investigators seem to be focusing on is why the two jets were flying at the same altitude; flight rules are designed to keep jets at different altitudes when flying near each other.

Criminal investigations after an accident are part of “an increasing and alarming trend,” said William Voss, president of the Flight Safety Foundation, a safety group. “This tends to get in the way of the safety investigation, whose purpose is to find the causes and prevent future tragedies,” Voss said.

“There is nothing like the threat of criminal charges to put a chill on an accident investigation,” said Peter Goelz, former managing director of the U.S. National Transportation Safety Board.

The NTSB determines the “probable cause” of accidents, but steers away from criminal cases or civil lawsuits. Groups such as the Flight Safety Foundation say that punishing individuals for mistakes does not help prevent accidents.

Among the recent criminal cases:

·Two retired airline executives, an Airbus official, a retired French aviation official and an air traffic controller face charges of negligent homicide in connection with a 1992 crash of a jet in Strasbourg, France.

·Charges were brought this year against eight air traffic officials for their roles in a 2002 midair crash in Swiss-controlled airspace above Germany that killed 71 people. The controller who issued the command that led to the crash, Peter Nielsen, was later stabbed to death by the father of one of the victims.

·Five aviation officials were convicted of manslaughter for their roles in a 2001 crash that killed 118 people on two jets that collided on the ground in Milan. The convictions were upheld in July.

A lawyer for the two pilots in the Brazil crash, Jose Carlos Dias, issued a statement saying they are “confident that they acted appropriately.” Calls to the Brazilian Embassy in Washington were not returned.

Assault Charge Against Miller Dropped For Lack Of Evidence (WP)

By Ovetta Wiggins

The Washington Post, October 11, 2006

DOJ_NMG_0079177

A Baltimore prosecutor dropped an assault charge yesterday against Senate President Thomas V. Mike Miller Jr., who was accused last month of punching a developer in the jaw during a public meeting.

Gerard B. Volatile, who was handling the case on behalf of the Prince George's County state's attorney's office, said he did not have enough evidence to move forward with the case. State's Attorney Glenn F. Ivey recused himself from the case because of his political ties to Miller (D) and Leo Bruso, the developer, who accused the senator of hitting him during a County Council meeting.

"After interviewing numerous potential witnesses, including the witnesses closest to Mr. Bruso at the council hearing and persons in a position to have the best perspective to see what happened, I do not believe that this allegation rises to a criminal matter," Volatile told District Judge Thurman H. Rhodes yesterday.

"I'm just glad it's over," Miller said. "I'm very grateful for the citizens of my district that came forward and their honest testimony to assist the prosecutor in this investigation."

Volatile said that he interviewed more than a dozen potential witnesses and that none corroborated Bruso's account.

"I talked to the man directly behind him, the man directly in front of him, people in front of the room, people in back of the room," Volatile said. "None characterized it the way he did."

Bruso said: "I'm highly disappointed with the judicial system. I just don't know why I wasn't given my day in court."

According to the charging documents filed last month, Bruso said Miller put his left arm on Bruso's left bicep, then slugged him in his left jaw.

"I did nothing to provoke this attack," Bruso wrote in the documents. "Apparently my political positions offend him. He has seen me at other political functions."

Shortly after the charges were filed, several witnesses came to Miller's defense, calling Bruso's charges false.

William Brennan, Miller's attorney, said Miller was just saying hello as he left the public hearing. "There is no such thing as an assault by handshake," Brennan said.

Because Bruso, a supporter of Miller's Republican opponent, reported the incident to the District Court commissioners, a summons rather than an arrest warrant was issued against Miller.

"Fortunately I was in a room with 400 people, and there were eyewitnesses galore," Miller said.

Don't Scrimp On Care, Prosecutor Warns Nursing Homes (SLPD)

By Robert Patrick

St. Louis Post-Dispatch, October 11, 2006

With a nursing home CEO facing prison and stiff fines for scrimping on care, U.S. Attorney Catherine L. Hanaway gave a "strong warning" to the industry Tuesday that patients must come ahead of profits.

American Healthcare Management and its former chief executive officer, Robert Wachter, reaped at least $4 million by slashing care while some patients lay dehydrated, underfed or in their own filth, officials said. One resident was covered in ants, one was bruised from falls, one wandered off across a six-lane intersection and one was beaten to death by an employee.

Wachter, AHM and three nursing homes pleaded guilty Tuesday to one count of conspiring to defraud the federally backed Medicare and Medicaid programs by taking payments for a level of care not provided.

The homes named in the plea agreement, Claywest House Healthcare, Lutheran Care Center, and Oak Forest North, now operate under different names and owners. Claywest was in St. Charles, Lutheran in north St. Louis and Oak Forest North in north St. Louis County.

Eight other Missouri nursing homes cited in the charges - in St. Louis, Florissant, Ballwin, Herculaneum, Lexington, Linn, Jefferson City and Rolla - also have new names and owners. AHM owned or managed all 11.

The company also has settled civil lawsuits by residents or their relatives for millions of dollars.

Prosecutors will recommend 18 months in prison for Wachter, 59, of Jackson, Wyo., and a total fine of $750,000 spread among him and the companies. The government agreed to drop five charges of making false statements.

"This is really a first-of-its-kind prosecution in the country," Hanaway explained at a news conference, in that the charges did not allege billing for service not performed but for service "so minimal that it just didn't exist."

State surveys originally alerted the Department of Health and Human Services to problems, said Roland Corvington, special agent in charge of the FBI at St. Louis, which joined the investigation.

Hanaway held Wachter responsible because he kept ordering cost cuts, she said.

Nursing home administrators complained to AHM's then-president, Charles Kaiser, that they didn't have enough workers, but he threatened them with probation if their staff costs went too high, officials said. Kaiser later served a year in jail for failure to report elder abuse in the death of an Alzheimer's patient.

DOJ_NMG_0079178

Wachter lied and told others to lie about conditions at the homes, according to the indictment. It says administrators were ordered to limit hiring and hold down payroll expenses, and that staff members were told not to report suspected abuse.

From 1998 to 2000, Wachter's salary ranged from $426,000 to $892,000, the indictment says. As co-owners of the company, he and former vice president R. William Breece Jr. took distributions of more than $5.5 million from 1997 to 2003, court documents show. Breece has not been charged, and officials declined to comment about him.

Wachter, an AHM representative and defense lawyers all declined to comment as they left the federal courthouse in St. Louis.

But relatives of two former residents had plenty to say after watching Tuesday's hearing.

"They got him," said Joyce Thiele, who with her sister, Gloria Stringer, had picked ants off their mother, Ruth Cawthon, at Claywest. She said the ants were attracted by urine from a disconnected catheter on the floor.

"I can't imagine an individual who could let something happen to another human being's loved one," Thiele said.

"All for the love of money," added Bonnie Thorpe, who said her mother, Edythe Beck, also was neglected at Claywest. She said her mother had nothing to eat or drink for a week before being admitted to a hospital and dying of double pneumonia.

Thorpe said that she found few staffers in her mother's Alzheimer's wing. Once, she said there was a single staff member for 21 patients. "One person for 21? I couldn't do it one on one," she said.

The women suggested that Wachter would be treated better in prison than their loved ones were in his nursing homes.

AHM has agreed to be permanently excluded from Medicare and Medicaid programs. Wachter agreed to be excluded for 20 years, and Breece agreed to restricted involvement for five years.

Woman's Property Eyed In Probe Of Prostitution Case (WT)

By Gary Emerling

The Washington Times, October 11, 2006

Federal officials have filed suit against two California properties owned by a woman whose D.C.-based escort service is the subject of a money-laundering and prostitution investigation.

A civil suit filed Oct. 3 by the U.S. Attorney's Office in the District lists two properties owned by Deborah Jean Palfrey -- one in Vallejo and one in Escondido, Calif. -- as subject to forfeiture pending the outcome of the criminal investigation. As of July, the properties were worth $495,000 and $480,000, respectively.

"We're alleging this property was derived from or traceable to proceeds of criminal activity," Assistant U.S. Attorney William Cowden said.

Miss Palfrey, 50, of Vallejo, Calif., has been at the center of a two-year investigation by the Internal Revenue Service and U.S. Postal Service, which are examining charges that she illegally earned money from prostitutes working as escorts for her business, Pamela Martin and Associates.

The federal investigation focuses on the escort service she has operated since 1993 as a call-girl ring in the District, Maryland and Virginia, according to court documents.

IRS investigators already have seized more than $427,000 from accounts in Miss Palfrey's name, court documents show.

Miss Palfrey, who court documents say served 18 months in prison on a 1991 conviction for operating a prostitution business in California, could not be reached for comment via phone or e-mail yesterday.

In an interview with the Web site the Smoking Gun -- which first reported the investigation Monday -- Miss Palfrey said that she never kept records in order to protect her clients' confidentiality.

She also said that her workers did not engage in "illegal sexual activities."

There are "a lot of erotic activities that one can do without participating in things that are illegal," Miss Palfrey said.

Miss Palfrey advertised the business online, in the Yellow Pages and in the Washington City Paper, court records show. She hired women who were at least 22 years old and required that they mail her an application and photo before being employed.

The women also went through a screening process in which they were required to engage in sexual activity without being paid to ensure that they were not law-enforcement officers, according to court records.

The prostitutes were encouraged to work at least three nights a week, charging their clients as much as $300. They would send money or postal orders with half of their earnings to Miss Palfrey, who used the funds to pay for her mortgage, car lease and stocks.

Court documents say that she earned more than $750,000 from the ring since January 2000.

According to search warrant records, investigators on Oct. 3 seized items including appointment books, binders of notes on men for the escort service and binders containing women's profiles from Miss Palfrey's home and her car in Vallejo.

Investigators also seized mapbooks of the District, Maryland, Northern Virginia and New York, as well as gold coins from Canada and South Africa.

The seizures have fueled speculation that the prostitutes' clients may have included high-profile doctors, lawyers and politicians in the D.C. area.

Channing Phillips, a spokesman for the U.S. Attorney's Office, said he could not comment on what prompted the investigation but added that "it's not because of her suspected clientele."

"The affidavit speaks for itself in terms of the allegations, which like in any case, we would have an obligation to investigate," Mr. Phillips said.

Islamic Center Files Suit On Checks (WT)

By Jim Mcelhatton

The Washington Times, October 11, 2006

The Islamic Center of Washington, D.C., one of the most prominent mosques in the country, is accusing its longtime financial manager of embezzling hundreds of thousands of dollars by funneling checks to companies under his control.

Farzad Darui of Falls Church was suspended last month as financial manager of the center, according to court records.

Officials for the Islamic Center, located in the 2500 block of Massachusetts Avenue Northwest, have told their attorneys that they discovered more than $300,000 in canceled checks since 2000 that were paid by the center to at least two Virginia companies under Mr. Darui's control, court records show.

Center officials have declined to discuss the matter but detailed the scandal in a recent lawsuit against Mr. Darui in federal court in Alexandria.

No criminal charges have been filed in the case.

According to the federal lawsuit, since the mid-1990s, Mr. Darui has handled the finances of the Northwest mosque, which receives funding from Saudi Arabia.

For years, Mr. Darui prepared checks to legitimate entities, then after getting the required approval, altered the names of the payees to businesses under his control, including Virginia-based Blue Line Travel Inc. and Zaal Inc., the lawsuit states.

Mr. Darui yesterday called the lawsuit "factually incorrect," but referred questions about specific accusations in the suit to his attorney, Victoria Toensing. She declined to discuss the case.

"This, from my point of view, is about me opposing a Saudi takeover of the center," said Mr. Darui, who is a corporate officer for Blue Line Travel Inc. and Zaal Inc. "They've been trying to unilaterally appoint a new Saudi director without going through the board."

Mr. Darui frequently has served as the public face of the center and has been quoted in several national and international publications.

A woman who answered the phone at the Islamic Center yesterday said that officials have no comment on any matters in connection with Mr. Darui's employment.

The center's director, Abdullah M. Khouj, approved various checks at Mr. Darui's request but never approved payments to Blue Line Travel, which also is referred to as BLT Inc. in the lawsuit, or Zaal Inc., according to the lawsuit.

Concern about the center's finances arose after Mr. Khouj ordered an independent audit because he was planning to leave his post to become Saudi ambassador to South Africa, the suit states.

Mr. Khouj asked Mr. Darui to commission the audit, but Mr. Darui put the matter off, the suit says. Ultimately, Mr. Khouj obtained copies of canceled checks from Bank of America and found previously undisclosed payments to Blue Line Travel and Zaal Inc.

"Neither Dr. Khouj nor anyone else at the Islamic Center ever authorized checks to be written to Blue Line Travel Inc., BLT Inc., Zaal Inc., or any other companies controlled or owned by Mr. Darui," the suit states.

Mr. Darui declined to discuss questions about Zaal Inc. or Blue Line but said "things will be clarified" when his attorney files an answer to the lawsuit.

According to the suit, the center receives funding from Saudi Arabia and is required to send copies of its checks to the Saudi Embassy in the District.

Dedicated in 1957, the Islamic Center is the District's oldest mosque and serves thousands of local Muslims each month.

The center is ruled by a board of governors that mostly consists of ambassadors from Islamic countries. Saudi Prince Bandar bin Sultan, former ambassador to the United States, is the current board chairman.

The mosque has been a focal point in the District. Days after the September 11 terrorist attacks, President Bush visited the center to call for an end to violence against Muslims.

DOJ_NMG_0079180

In March 1977, a dozen Muslim gunmen took over the center, the B'nai B'rith headquarters and the District Building, holding 139 persons hostage. One person was fatally shot during the siege. Marion Barry, who was wounded in the incident, won his first mayoral election the following year.

Suspect Held In Triple Slaying (CHIT)

By David Heinzmann And Jason Meisner

Chicago Tribune, October 11, 2006

Chicago police were questioning a suspect Tuesday in the weekend slayings of an 80-year-old grandmother and two of her adult children and the assault of a teenage relative in their South Side home.

The male suspect was in custody and charges were expected, but none had been filed Tuesday evening, Chicago police spokeswoman Monique Bond said. She declined to say how long he had been in custody or whether it was believed he acted alone.

The bodies of Elnora White, her son Curtis, 56, and her daughter Elnoria Countee, 54, were found Saturday afternoon in their first-floor apartment in the 8100 block of South Green Street in the Auburn Gresham neighborhood, police said. A neighbor and a family member entered the home because they had been unable to reach anyone inside for several hours.

Countee's 14-year-old daughter, Veronica Giles, was found on the floor near the door to the home, critically injured and barely conscious. Giles, a freshman at Bogan Computer Technical High School, remained hospitalized at Advocate Christ Medical Center in Oak Lawn.

According to the Cook County medical examiner's office, which conducted autopsies Sunday, Curtis White, who was disabled and found dead in bed, died of stab wounds in his face. Elnora White, who was found on the floor of the dining room, died of blunt trauma wounds. Countee, who was found on her bedroom floor, died of a stab wound in the chest.

Police have not said whether a motive for the attack was known.

Chicago police have kept a vigilant watch on homicide trends in the last few years and have touted the continuing decline in the number of killings. After the number of murders hovered above 650 in 2001 and 2002, murder totals had dropped steeply—to 599 in 2003, and then a dramatic 25 percent drop to 448 in 2004. Last year the number was 447.

But a recent surge in homicides in the city has pushed the murder total so far this year higher than the same period last year.

As of Tuesday, there had been 371 murders in Chicago, compared with 369 by the same date in 2005, police officials said. At the end of September, there had been 10 fewer murders in 2006 than in the year-earlier period, Bond said.

Gang Member Accused Of Shooting 3 Year Old Caught (LAT)

By Richard Winton And Erika Hayasaki

The Los Angeles Times, October 11, 2006

A 17-year-old gang member accused of intentionally shooting a 3-year-old girl at point-blank range last month was captured by an LAPD-FBI task force in San Bernardino County today after community members gave up his location, police said.

Jonathan Banks of Los Angeles was named Monday by the LAPD as the man who killed Kaitlyn Avila and wounded her father, Cesar, during a Sept. 24 attack that stunned the Baldwin Village neighborhood.

An alleged accomplice of Banks was arrested Friday.

At an afternoon news conference, LAPD Chief William J. Bratton announced the arrest of the man believed to be the shooter. Bratton and members of the Avila family praised the community for helping to catch Banks.

"Without your help," Bratton said, "this would not have been possible."

LAPD Deputy Chief Charles Beck said: "This case would never have come to a conclusion so quickly without the help of the public."

Cesar Avila, the dead girl's father, also thanked the community and "the people out there for giving out clues on the whereabouts of this criminal....

"We feel a lot better now," he said.

On Monday, police said Kaitlyn was intentionally targeted by a teenage gang member. The announcement prompted new anxiety in the Southwest Los Angeles neighborhood of Baldwin Village, which has struggled with gang violence for decades.

Deputy Chief Beck on Monday said the killer approached Kaitlyn, her father and her 6-year-old sister as they were getting out of the car outside their apartment building.

He shot and wounded Cesar Avila, a glass worker, erroneously believing that he was a member of a rival gang. The suspect then aimed his gun at Kaitlyn and shot her once in the chest, police said.

DOJ_NMG_0079181

"This wasn't an accident or case of her getting caught in the fire," Beck said. "He intended to kill her. This was callous killing. It is beyond even what gangsters consider usual."

Authorities said they pieced together the chain of events after interviewing people who witnessed the shooting, as well as Cesar Avila and Kaitlyn's sister Kassey, who was unhurt in the attack.

The shooting occurred at 2:45 p.m. on a block of densely packed apartment buildings. Several people were outside and saw the attack, detectives said.

Beck said Kaitlyn's death underscored the continuing gang problems in Baldwin Village, a neighborhood of less than a square mile between La Brea Avenue and Crenshaw Boulevard off Coliseum Street.

The revelations stunned residents there.

One mother, who asked that her name not be used, suggested that the shooter was trying to "earn his stripes" and gain respect from gang members.

"I don't even feel safe walking down the street," said a 20-year-old woman who was holding her 5-year-old son's hand.

Another mother, Joy Daniels, 17, carried her 1-year-old daughter home from day care, across the street from a memorial for Kaitlyn that was overflowing with teddy bears, flowers and candles.

She said she was scared to drop her daughter off every morning, fearing that bullets from outside the school might somehow find her daughter.

The thought of the killer deliberately targeting a child gave her chills. Daniels said she wanted to knock some sense into the shooter.

She wished she could ask him: "How do you feel? Do you have remorse? You just took her little life, and on top of that it was intentional?"

The killer may have earned the respect of gang members, Daniels said, but the community was disgusted with him.

"I just pray and ask God to watch over all these little kids," she said.

Avila and his daughters were getting out of their car outside their Pinafore Street home when the killer jumped out of a gray Chrysler Pacifica and began firing a 9-millimeter handgun. Both the shooter and the driver, identified as Laron Lee Larrimore, allegedly shouted gang slogans.

Avila spent nine days in the hospital, some of them in critical condition.

"Something made me come back," he said Monday. "The whole time I was thinking about my [other] daughter. I still had something."

Avila said it was hard for him to return to his home, where his daughter's bedroom overlooks the crime scene.

The LAPD has focused considerable resources recently on cracking down on gang violence in Baldwin Village, with help from the U.S. Justice Department, police officials said. Though crime in Baldwin Village is down, officials said, the influence of gangs remains strong.

"The monster of gangsterism in South Los Angeles is the cause of this shooting," Beck said.

Two warring gangs occupy the area: the Black P-Stones, a mostly black gang, and 18th Street, a mostly Latino gang.

Though the victims were Latino and the suspects African American, police officials said they believe the shooting was gang-related, not racial.

L.A. Liquor Store Owner Dares To Stand Up To Gangs (LAT)

By Hector Becerra And Richard Winton, Times Staff Writers

The Los Angeles Times, October 11, 2006

His hunt for the men who robbed his store 10 times yields two arrests. Now he fears payback.

They would march into the liquor store like pirates ready to gorge on ill-gotten goods.

Ten times in the last month, the same group of robbers walked in and hauled away beer, chips and other food. Brandishing a knife, the robbers warned the store's owner: "We know where you live."

But the owner of the Washington Boulevard shop would not back down.

Instead, he installed video cameras around the store to capture images of the robbers. Then he roamed the neighborhood with the photos, getting their identities.

The culmination of his detective work came Monday night when undercover Los Angeles police officers watched as several of the young men walked out of the store with two cases of stolen beer. The detectives chased the men and arrested two of them.

But in a neighborhood where street gangs cast a large shadow, the crackdown brought more anxiety than relief for the liquor store owner and his customers.

DOJ_NMG_0079182

Speaking from behind a slab of bulletproof glass that protects the counter, he said: We don't just have to work here, we have to survive. Worried about reprisals, he asked that the newspaper not publish his name or the name and exact location of his store.

"They found a solution to their problem, they found these guys, got photos and did their own investigation," Grace Yoo, executive director of the Korean American Coalition, said of the owner and his family. "But now that they've done it, they're in fear of their lives."

It was this fear of gang payback that made the owner hesitate about going to police, Det. Rick Ramos of the Los Angeles Police Department said. When the heists began, the owner decided not to involve the authorities. But on Sunday, a group of the robbers came into the store, one brandishing a bat, Ramos said. It alarmed the owner so much that he finally told police about the robberies.

The suspects are members of a tagging crew that, like the gangs in the area, has increasingly turned to extorting merchants, Ramos said.

"They thought they could take control of this particular business," the detective added. "And take advantage because they'd robbed them several times without any consequences."

As word spread of the merchant's actions, some rose to praise him.

Councilman Ed Reyes, who represents the area, said he hopes the owner's actions send a message to gang members and empower the community.

"What this owner did was very brave and calculating in a positive way. You've got to do something. Enough is enough," he said.

"The truth is you have to be proactive if you want to change things, otherwise you're a sitting duck."

But Reyes said he can also understand the fear the owner and many of his customers still have about gang activity.

Despite a drop in crime in his district over the last few years, gangs remain a potent force, the councilman said.

"The ratio of officers to gang members is just crazy," Reyes said. "There's a distinct disadvantage."

In the neighborhood south of MacArthur Park, one woman applauded the owner's actions, but declined to give her name.

She said a "bad element" kept bringing the neighborhood down.

A longtime resident who lives blocks from the liquor store, she said people were disturbed to hear that the business had been hit so many times. But they also have mixed feelings about such stores, which tend to draw drunks and troublemakers.

Still, she said, the owner was brave to stand up to the robbers.

"People have to overcome their fear, pick up the phone and call the police," said the woman, who is a Guatemalan immigrant. "The community is always in fear. They think, 'If the police take away this kid, they're going to know it was me who reported him. They're going to know it was me who complained.' "

The neighborhood is a melting pot of blacks, Latino immigrants and others. The liquor store owner is Korean.

The LAPD's Rampart Division has seen a significant drop in crime over the last four years as the department has launched a new crackdown and some neighborhoods have undergone gentrification.

But more than a dozen gangs still operate there. Last month, federal authorities accused a group of 18th Street gang members of charging "rent" to drug dealers on certain street corners.

So far this year, homicides are down 22% but rapes and robberies are up about 10% in Rampart, according to police statistics. Bucking a citywide trend, burglaries rose 4% this year.

LAPD Senior Lead Officer Iris Santin, who patrols the streets around the liquor store, said it would be naive to separate the tagging crews from the more sinister gangs.

For one thing, these graffiti vandals are operating in territories prowled by major street gangs, something that would be nearly untenable without some sort of consent.

"These tagging crews associate with gangs. The gangs allow them to tag these neighborhoods," Santin said. Tagging crews are "where the delinquency usually starts. The step before heading to the gang."

Bertha Woolridge, 63, said she could relate to the anger the store owner must have felt after being robbed so many times. The Mexican immigrant said her hardware business was robbed 19 times.

The last time, Woolridge said, "five guys came in here [with guns] and had us all laid down on the floor."

Woolridge said her experiences prompted her to become active in the local Neighborhood Watch, and to help organize events telling gang members they were not welcome.

"It made me so upset that people can come in and take whatever you build up, and they don't even have to work," Woolridge said. "They don't have to do anything to take possession of what you own. That's why I turned around and said, 'No more.' "

Three Men Charged In Robbery, Slaying (WP)

By Joshua Partlow

The Washington Post, October 11, 2006

Three Prince George's County men have been charged with attempting to rob a 41-year-old man of his backpack and cellphone, then beating him with a baseball bat and fatally shooting him, according to charging documents.

The three men -- Timothy McLeod, 20, James D. Brumfield, 19, and Douglas I. Riley Jr., 21 -- are charged with first-degree murder in the killing of Jose Vicente Yaque, who lived along Edmonston Road in the Bladensburg area. They appeared yesterday via teleconference in Prince George's County District Court for a bond hearing.

Brumfield, of Seat Pleasant, told investigators that he helped plan the robbery and then hit Yaque repeatedly with an aluminum bat early on Oct. 5, according to charging documents. Brumfield said that McLeod, of Suitland, drove the getaway car. McLeod told investigators that Riley, of Capitol Heights, was the shooter, the documents show.

Police found Yaque lying in the street after the attack.

Investigators tracked Yaque's stolen cellphone to McLeod's home in the 600 block of Birchleaf Avenue in Suitland, where two of the suspects admitted their roles in the robbery and homicide, and said a 9mm handgun was used in the killing, according to charging documents. They were not named in the documents.

Investigators said Brumfield waived his Miranda rights and admitted planning the assault and attacking the victim with the bat. McLeod also waived his Miranda rights, according to police, and admitted helping plan and participating in the robbery.

At a bond hearing, McLeod's attorney, Joseph L. Gibson Jr., said his client was a high school graduate with no previous criminal record who lives with his mother and was "probably in the wrong place at the wrong time."

He said that McLeod denies taking part in the crime and that his statement to police, in the course of spending more than 30 hours with investigators, was "not voluntary." An attorney for Riley said his client was a hardworking man whose mother died last year of lung cancer and who had a young child himself.

Brumfield said he planned to get a public defender.

All three men were denied bond.

CIVIL LAW:

Oracle Agrees To Pay $98.5 Million To Settle Suit Over GSA Contracts (WSJ)

By Vauhini Vara

The Wall Street Journal, October 11, 2006

Oracle Corp. agreed to pay $98.5 million to the U.S. government to settle a lawsuit alleging PeopleSoft Inc., which Oracle acquired last year, overcharged the government on contracts for software and services.

Under a General Services Administration program, vendors agree to disclose pricing policies for their private-sector customers in exchange for a chance to sell to government customers under one contract.

In this case, during PeopleSoft's negotiation with the government over an initial software contract and two extensions, the company understated the discounts it provided to commercial customers, according to a statement from the Justice Department. That meant most federal purchasers under the contract paid inflated prices between March 1997 and Sept. 2005, the Justice Department said.

The conduct alleged in the suit predated Oracle's purchase of PeopleSoft in January 2005, according to the Justice Department.

"Oracle cooperated fully with the government in its investigation of the PeopleSoft GSA contract and conduct at issue in the suit," Oracle spokesman Bob Wynne said. "Oracle was not aware of the suit at the time of the acquisition."

The case was filed in the U. S. District Court for the District of Maryland by James A. Hicks, a former PeopleSoft employee. Federal prosecutors in Baltimore joined the lawsuit earlier this year.

It was filed under the "qui tam," or "whistleblower," provisions of the False Claims Act, in which private citizens can sue on behalf of the government to recover federal funds obtained by false or fraudulent claims and receive a portion of the proceeds of a settlement or judgment awarded against the defendant. Mr. Hicks will receive $17.7 million.

The payment to the government is the largest the U.S. has ever obtained in a civil settlement under the False Claims Act involving the multiple-award-schedule program, said the Justice Department.

Oracle Settles Price-Gouging Claim (WP)

By Eric Rich

The Washington Post, October 11, 2006

Database giant Oracle Corp. has agreed to pay $98.5 million to settle claims that PeopleSoft Inc., a software maker it acquired last year, had overcharged the government by providing false pricing information to the General Services Administration, the Justice Department said yesterday.

The civil settlement, reached at U.S. District Court in Maryland, was disclosed at a news conference in Washington as officials announced a new task force targeting procurement fraud. Deputy Attorney General Paul J. McNulty said the task force, established by the department's criminal division, would detect and prosecute fraud associated with increased contracting activity for national security and other government programs.

McNulty said the task force is modeled on efforts to combat fraud after Hurricane Katrina and a similar program he initiated last year when he was U.S. attorney in the Eastern District of Virginia.

The settlement with Oracle resolved allegations that PeopleSoft understated to the GSA the discounts it provided to commercial customers. GSA regulations require that a vendor disclose its commercial pricing policies during negotiations for a single contract that can give a vendor access to hundreds of government purchasers.

As a result of the defective disclosures, the government alleged, federal purchasers buying through the GSA program paid inflated prices for software and maintenance services for many years. Oracle inherited the liability when it acquired PeopleSoft, which was based in Pleasanton, Calif.

Maryland U.S. Attorney Rod J. Rosenstein said the 1997 contract resulted in about $127 million of software sales and $77 million in maintenance sales before it was cancelled by Oracle in September 2005.

A former employee of PeopleSoft's federal sales office in Bethesda filed the case in 2003 under seal in federal court in Greenbelt. James A. Hicks said in the lawsuit that he was fired in 2000 after repeatedly raising the issue with senior company officials. The government later took over the case, which had been filed under the False Claims Act.

Under the act, whistleblowers may collect a portion of any money recovered by the government that had been obtained by false or fraudulent claims. Hicks will receive $17.73 million, government officials said.

Oracle To Pay $99 Million Settlement (AP)

By Lara Jakes Jordan, The Associated Press

AP, October 11, 2006

WASHINGTON - Software maker Oracle Corp. agreed Tuesday to pay $98.5 million to settle complaints that it overcharged the government for nearly a decade on a slew of contracts, Justice Department officials said.

The settlement with Oracle's PeopleSoft kicked off what the department called a crackdown on waste, fraud and abuse in federal contracts.

"Criminals who cheat the government must be identified, stopped and punished," Deputy Attorney General Paul McNulty told reporters in Washington. He estimated that 5 percent of federal agencies' annual revenues is wasted on faulty or otherwise illegal contracts.

The case against Redwood Shores, Calif.-based Oracle Corp. is the largest settlement from a single company that had multiple contracts with the General Services Administration, McNulty said. Between 1997 and 2005, he said, the government "paid vastly inflated prices" for computer software and maintenance for human resources and financial systems for 60 federal agencies.

The federal investigation followed a complaint against PeopleSoft by a former employee, James A. Hicks, who tipped off officials that the government was not receiving discounts for buying multiple products and services - as other clients were given.

Hicks will receive $17.7 million - 18 percent of the settlement - for his complaint as allowed under federal whistle-blower provisions.

Oracle said the complaints originated with PeopleSoft, which Oracle purchased in January 2005 for $11.1 billion after an 18-month hostile takeover battle. The deal created the world's second-largest business software manufacturer after Germany's SAP AG.

"Oracle was not aware of the suit at the time of the acquisition," said Oracle spokesman Bob Wynne. "Oracle is pleased to have fully resolved this legacy PeopleSoft suit and all claims under the PeopleSoft contract."

In all, the government paid about $300 million to PeopleSoft's office in Bethesda, Md., which was responsible for selling software products to federal agencies. U.S. Attorney for Maryland Rod J. Rosenstein called the case the largest fraudulent federal contract settlement in state history.

The Justice Department's new task force is modeled in part after efforts to track relief money and contracts rushed to the Gulf Coast last year after Hurricane Katrina, which has so far yielded 400 investigations into complaints or criminal cases.

McNulty said the task force also will closely monitor spending to military contractors, and noted an increase in prosecutions of contracts involving reconstruction efforts in Iraq. Inspectors from about 25 federal agencies will participate in the task force.

Oracle Agrees To Pay U.S. $98 Million (CNET)

By Ina Fried, Staff Writer, CNET News.com

CNET News, October 11, 2006

Deal to settle charges that PeopleSoft provided false pricing information to obtain a federal contract.

Oracle has agreed to pay the U.S. government $98.5 million to settle charges that PeopleSoft provided false pricing information to obtain a federal contract.

According to a Justice Department press release issued on Tuesday, federal agencies overpaid for PeopleSoft products from March 1997 through September 2005 because of faulty disclosures by the software vendor, which was acquired by Oracle in January 2005.

The settlement was the largest ever related to the General Services Administration's Multiple Award Schedule program, the Justice Department said. The MAS program requires vendors to provide their commercial pricing information to the government in exchange for the ability to strike deals with hundreds of federal agencies under a single contract. The Justice Department said PeopleSoft's disclosures "were not current, accurate and complete."

"The program works well when vendors follow the disclosure rules and provide GSA with the information it needs to negotiate good prices for government purchasers," Deputy Attorney General Paul McNulty said in a statement. "This agreement demonstrates the department's determination to hold vendors accountable for abusing GSA's trust and damaging its programs."

This case originated as part of a whistleblower action brought under the Federal Claims Act. Former PeopleSoft employee James A. Hicks, who filed suit in the U.S. District Court for the District of Maryland, will receive $17.7 million of the settlement, as provided for under the statute. Under the Federal Claims Act, whistleblowers can sue on the government's behalf and can garner some of the proceeds of any settlement or judgment.

Oracle said it was not aware of the suit at the time it bought PeopleSoft and said it "cooperated fully with the government" in its investigation of the PeopleSoft contract and the company's conduct. "Oracle is pleased to have fully resolved this legacy PeopleSoft suit and all claims under the PeopleSoft contract," Oracle spokesperson Bob Wynne said in a statement.

Oracle Agrees To Pay $98M For 'defective Pricing' (CNN)

By Terry Frieden, Justice Producer

CNN.com, October 11, 2006

The fraud settlement stemmed from multiple government contracts with the computer software maker and PeopleSoft.

WASHINGTON (CNN) -- Justice Department officials Tuesday said computer software maker Oracle has agreed to pay the government $98.5 million dollars in a procurement fraud settlement stemming from multiple federal contracts with the firm's PeopleSoft software sales operations.

Officials said Oracle acknowledged "defective pricing disclosures" in connection with software licensing contracts with federal agencies.

Deputy Attorney General Paul McNulty was expected to announce the settlement at a news conference Tuesday afternoon.

McNulty also planned to announce establishment of a Procurement Fraud Task Force designed to combat efforts to defraud the government in contracting.

Justice Department officials said the Task Force would be modeled after the Hurricane Katrina Fraud Task Force, which they say has been successful in uncovering efforts to defraud the federal government.

Shares of Oracle (Charts) rose nearly 1 percent during after hours trade on Nasdaq while rival BMC Software (Charts) and Symantec Corp (Charts) edged higher.

Oracle Settles Government Claim Of Overcharging By PeopleSoft (MRKTWTCH)

By Michael Paige, MarketWatch

Market Watch, October 11, 2006

DOJ_NMG_0079186

Business-software giant agrees to pay government $98.5 million

LOS ANGELES (MarketWatch) -- Oracle Corp. agreed to pay $98.5 million on behalf of PeopleSoft Inc. to settle charges that PeopleSoft provided inaccurate pricing information and overcharged the government on multiple contracts before it was acquired by Oracle, Justice Department officials said on Tuesday.

Oracle (ORCL: news, board) inherited liability under the government contracts through its acquisition of PeopleSoft, which closed at the beginning of last year following a bitter hostile takeover battle.

The settlement resolved allegations that PeopleSoft provided inaccurate and incomplete pricing information for licenses of its software and related maintenance during negotiations with the government. As a result, federal agencies overpaid for software and maintenance between March 1997 and September of last year, according to the Justice Department.

A spokeswoman for Oracle, of Redwood Shores, Calif., said the company cooperated fully with the investigation of the PeopleSoft contract.

"Oracle was not aware of the suit at the time of the acquisition," said Deborah Hellinger, the spokeswoman. "Oracle is pleased to have fully resolved this legacy PeopleSoft suit and all claims under the PeopleSoft contract."

PeopleSoft was the focus of the suit that was initiated by one of its former employees on behalf of the government under whistleblower provisions.

Companies agree to disclose their current and complete commercial pricing policies to the General Services Administration during negotiations for a contract that allows them to sell services to multiple government agencies under a single order.

PeopleSoft, the suit alleged, understated the size of discounts it provided to commercial customers and failed to disclose accurate details of a program that gave clients incrementally steeper discounts based on the number of products purchased at one time.

"Because PeopleSoft did not give GSA [General Services Administration] accurate pricing information, it negotiated higher prices for its products and services than it would have obtained if GSA had known the truth," according to a statement issued by U.S. Attorney Rod Rosenstein of the District of Maryland.

Oracle's stock closed up 18 cents, or 1%, at $18.74 Tuesday -- a new 52-week high.

Michael Paige is a reporter for MarketWatch in Los Angeles.

Justices Back Small Tobacco Firms (WSJ)

By Mark H. Anderson And Vanessa O'connell

The Wall Street Journal, October 11, 2006

WASHINGTON -- A group of 30 states failed to persuade the Supreme Court to review whether three small tobacco companies can use one lawsuit to challenge state-by-state payment requirements related to a massive 1998 industry settlement.

The court's decision not to consider the appeal means the three companies can proceed, in a New York federal court, to challenge payments to state accounts established to cover damages in tobacco lawsuits.

The companies had challenged provisions of the settlement under which all tobacco companies -- even those that didn't participate in the settlement -- are required to make annual payments to the states in perpetuity, an amount estimated to reach $243 billion over the first 25 years.

Following the settlement, most states passed laws requiring cigarette makers that didn't participate -- mostly small players selling discount cigarettes -- to pay money into escrow funds to satisfy future damage awards in cigarette suits. Their payments are based on the number of cigarettes the companies sell annually in each state.

But Grand River Enterprises Six Nations Ltd. of Gowanda, N.Y.; Nationwide Tobacco Inc. of Blaine, Wash.; and 3B Holdings Inc. of Lewiston, Idaho, challenged the payments in a lawsuit filed in New York, where the master agreement was negotiated and signed by the four major cigarette makers and 46 states. The small companies weren't party to the settlement.

The Second U.S. Circuit Court of Appeals ruled in September 2005 that a New York federal trial court could handle the challenge that was made against all of the state escrow-fund laws. The 30 state attorneys general said they believe the court decision violates state sovereignty.

(King v. Grand River Enterprises)

In other rulings yesterday, the court dismissed an appeal from Apotex Inc. of Weston, Ontario, seeking early Food and Drug Administration approval to sell a generic alternative to Pfizer Inc.'s Zoloft, an antidepression and anxiety drug. Pfizer, based in New York, successfully argued that a key Zoloft patent has expired since the Supreme Court agreed to hear the case, and that another company, Teva Pharmaceutical Industries Ltd., of Petach Tikva, Israel, has already begun selling a Zoloft alternative.

(Apotex v. Pfizer)

DOJ_NMG_0079187

W.R. Grace & Co., Columbia, Md., lost a final appeal of $55 million in court-ordered Superfund cleanup costs sought by the Environmental Protection Agency for remediation at the company's former vermiculite mine in Libby, Mont. The company closed the mine in 1990, and the EPA began a cleanup of asbestos contamination in and around the mining facility in 1999.

(W.R. Grace & Co. v. U.S.)

Supreme Court Rejects Appeal On Tobacco Escrow Ruling (DOW)

Dow Jones, October 11, 2006

WASHINGTON -(Dow Jones)- A group of 30 states Tuesday failed to convince the U.S. Supreme Court to review whether three small tobacco companies can challenge state escrow provisions that were developed on a state-by-state basis as part of the $245 billion 1998 master tobacco settlement.

The three tobacco companies - Grand River Enterprises Six Nations Ltd., Gowanda, N.Y.; Nationwide Tobacco Inc., Blaine, Wash.; and 3B Holdings Inc., Lewiston, Idaho - in a New York federal court challenged provisions in the tobacco settlement. The national tobacco settlement requires the companies to escrow funds even though they declined to join the master agreement. The lawsuit was brought in New York, where the master agreement was negotiated and signed by four tobacco companies and 46 states in 1998.

The 2nd U.S. Circuit Court of Appeals ruled in September 2005 that a New York federal trial court could handle the challenge against all of the state escrow fund laws. The 30 state attorneys general said they believe the court decision violates state sovereignty because the tobacco company challenge deals with 30 different sets of state laws.

"The Second Circuit's ruling...upsets the delicate relationship between the states and the federal courts," the states said in their appeal.

New York, which also was sued by the tobacco companies, did not join the states' Supreme Court appeal.

Under the tobacco settlement, tobacco manufacturers that don't sign onto the master agreement must pay escrow funds based on the number of cigarettes they sell in annually in each state. The escrow funds are used to fund damage awards from tobacco litigation that could be brought against those companies because they aren't protected by the master agreement from lawsuits.

The three tobacco companies challenged the escrow requirements on federal antitrust and constitutional grounds. In court filings, the companies argued they didn't need to individually challenge each state's escrow arrangements under the national settlement. "The escrow statutes do not stand alone or apart from the master settlement agreement," the companies said.

The case is King v. Grand River Enterprises, 05-1343.

-By Mark H. Anderson, Dow Jones Newswires; 202-862-9254; mark.anderson@ dowjones.com

Supreme Court Won't Hear Tobacco Case (AP)

By Pete Yost, Associated Press Writer

AP, October 11, 2006

Supreme Court Declines to Hear Case of 3 Small Cigarette Companies Seeking to Avoid Payments

WASHINGTON (AP) -- The Supreme Court on Tuesday declined to hear an appeal by 30 states in a battle over payments by three small cigarette companies into accounts set up to help cover future damage awards in tobacco-related lawsuits.

The justices' decision allows the companies to continue to fight state laws requiring payments to accounts set up as part of a $206 billion financial settlement eight years ago with the largest tobacco companies. Each of the 30 states had passed a law requiring companies that didn't participate in that settlement to pay into the escrow funds to help cover future damage awards.

The three small companies sued, alleging the states violated antitrust law and the Commerce Clause of the U.S. Constitution. The laws each state passed were mostly identical to model legislation contained in an appendix to the settlement with the biggest tobacco companies.

The 2nd U.S. Circuit Court of Appeals in New York, the state where the settlement negotiations had taken place, allowed the small companies to pursue the antitrust claims.

In asking the Supreme Court to take the case, the state governments say the appeals court is treating a state's most sovereign act, the passage of legislation, "as though it were the culmination of a commercial antitrust conspiracy."

The states wanted the court to consider whether principles of due process and state sovereignty permit a federal judge in New York to exercise jurisdiction over the state attorney general in another state.

The major companies that were part of the tobacco settlement manufacture over 97 percent of all cigarettes sold in the country.

The cigarette companies are Grand River Enterprises Six Nations Ltd., Nationwide Tobacco Inc., and 3B Holdings Inc.

The case is Troy King v. Grand River Enterprises Six Nations Ltd., 05-1343.

Inside The Beltway (WT)

By John McCaslin

The Washington Times, October 11, 2006

File and run

"Or maybe the case has no merit."

So suggests the latest issue of the American Lawyer, citing one theory as to why Valerie Plame of CIA-leak fame suddenly parted ways with her attorney, Proskauer Rose partner Christopher Wolf -- her next-door neighbor, no less -- shortly after her civil action was filed against senior Bush administration officials, including Vice President Dick Cheney and White House aide Karl Rove.

"The breakup was a shock," writes the magazine's Elizabeth Goldberg, given that Mr. Wolf had filed the suit only "a month earlier."

Headlined "File and run," the article quotes lawyer Victoria Toensing, a former chief counsel to the Senate Select Committee on Intelligence, as saying: "I'm amazed Proskauer took the case in the first place."

Another theory: "Proskauer might have gotten cold feet," writes Ms. Goldberg. "The firm wants to beef up its D.C. practice ... [a]nd heading the Plame case was not likely to please the Bush administration."

Officials Challenge AIDS Funding Ruling (AP)

AP, October 11, 2006

WASHINGTON (AP) — The Bush administration sought Tuesday to overturn a court decision that lets nonprofit AIDS groups apply for federal funding without signing a pledge opposing prostitution and sex trafficking.

At least one of the groups, DKT International Inc., has refused to sign the pledge because it helps distribute condoms to prostitutes and other sex workers in Vietnam.

DKT last year sued the U.S. Agency for International Development, contending their free speech rights were violated by a 2003 law requiring that they explicitly oppose prostitution and sex trafficking to qualify for part of a $15 billion AIDS program.

In May, U.S. District Judge Emmet G. Sullivan sided with DKT, saying the funding conditions insist that groups "parrot" the U.S. government's position on prostitution.

But the Justice Department, in its appeal Tuesday, called the funding condition "highly germane" to the overall goal of fighting the spread of AIDS and HIV.

"Congress could reasonably determine that the government's efforts to stamp out prostitution and sex trafficking would be most successful if HIV/AIDS services are provided by organizations that affirmatively oppose two underlying causes of the disease," the government said.

The case now heads to the U.S. Court of Appeals for the District of Columbia. A date for arguments has not yet been set.

CIVIL RIGHTS:

U.S. Says Blacks In Mississippi Suppress White Vote (NYT)

By Adam Nossiter

The New York Times, October 11, 2006

MACON, Miss., Oct. 5 — The Justice Department has chosen this no-stoplight, courthouse town buried in the eastern Mississippi prairie for an unusual civil rights test: the first federal lawsuit under the Voting Rights Act accusing blacks of suppressing the rights of whites.

The action represents a sharp shift, and it has raised eyebrows outside the state. The government is charging blacks with voting fraud in a state whose violent rejection of blacks' right to vote, over generations, helped give birth to the Voting Rights Act of 1965. Yet within Mississippi the case has provoked knowing nods rather than cries of outrage, even among liberal Democrats.

The Justice Department's main focus is Ike Brown, a local power broker whose imaginative electoral tactics have for 20 years caused whisperings from here to the state capital in Jackson, 100 miles to the southwest. Mr. Brown, tall, thin, a twice-convicted felon, the chairman of the Noxubee County Democratic Executive Committee and its undisputed political boss, is accused by the federal government of orchestrating — with the help of others — "relentless voting-related racial discrimination" against whites, whom blacks outnumber by more than 3 to 1 in the county.

His goal, according to the government: keeping black politicians — ones supported by Mr. Brown, that is — in office.

To do that, the department says, he and his allies devised a watertight system for controlling the all-determining Democratic primary, much as segregationists did decades ago.

DOJ_NMG_0079189

Mr. Brown is accused in the lawsuit and in supporting documents of paying and organizing notaries, some of whom illegally marked absentee ballots or influenced how the ballots were voted; of publishing a list of voters, all white, accompanied by a warning that they would be challenged at the polls; of importing black voters into the county; and of altering racial percentages in districts by manipulating the registration rolls.

To run against the county prosecutor — one of two white officeholders in Noxubee — Mr. Brown brought in a black lawyer from outside the county, according to the supporting documents, who never even bothered to turn on the gas or electricity at his rented apartment. That candidate was disqualified.Whites, who make up just under 30 percent of the population here, are circumspect when discussing Mr. Brown, though he remains a hero to many blacks. When he drove off to federal prison to serve a sentence for tax fraud in 1995, he received a grand farewell from his political supporters and friends, including local elected officials; whites, on the other hand, for years have seen him as a kind of occult force in determining the affairs of the county.

Still, many whites said privately they welcomed the Justice Department's lawsuit, which is scheduled for trial early next year.

"In my opinion, it puts the focus on fair play," said Roderick Walker, the county prosecutor Mr. Brown tried to oust, in 2003. "They were doing something wrong."

Up and down South Jefferson Street, though, in the old brick commercial district, the white merchants refused to be quoted, for fear of alienating black customers. "There's a lot of voting irregularities, but that's all I'm going to say," one woman said, ending the conversation abruptly.

The Justice Department's voting rights expert is less reserved. "Virtually every election provides a multitude of examples of these illegal activities organized by Ike Brown and other defendants, and those who act in concert with them," the expert, Theodore S. Arrington, chairman of the political science department at the University of North Carolina at Charlotte, wrote in a report filed with the court.

Mr. Brown is coolly dismissive of the case against him. He has no office at the white-columned Noxubee County Courthouse, but that is where he casually greets visitors, in a chair near the entrance. A loquacious man, he both minimizes his own role and portrays himself as a central target. Far from being the vital orchestrator portrayed by the government, "when I was in Maxwell prison in '95 and '96, the show went right on," he said.

There are so few whites in the county, Mr. Brown suggests, that the tactics he is accused of are unnecessary to keep blacks in office.

"They can't win anyway unless we choose to vote for them," he said with a smile. "If I was doing something wrong — that's like closing the barn door when the horse is already gone."

He sees the lawsuit against him as merely the embittered reaction of whites who feel disenfranchised, and he scoffs at a consent decree signed last year in which county officials agreed not to harass or intimidate white candidates or voters, manipulate absentee ballots, or let poll workers coach voters, among other things. "I wouldn't sign my name," Mr. Brown said.

But the Justice Department is pressing ahead with its suit, and wants to force Mr. Brown to agree to the same cease-and-desist conditions as his fellow county officials.

The state's Democratic establishment has hardly rallied around Mr. Brown; privately some Democrats here express disdain for his tactics. Instead, he is being defended by a maverick Republican lawyer who sees the suit as an example of undue interference in the affairs of a political party.

"To do what they want to do, they would virtually have to take over the Democratic Party," said the lawyer, Wilbur Colom, adding that Mr. Brown's notoriety had made him the focus of the investigation. "I believe they were under so much pressure because of Ike's very sophisticated election operation. He is a Karl Rove genius on the Noxubee County level."

In Jackson, though, a leading light in Mr. Brown's own party, Mississippi Secretary of State Eric Clark, a longtime moderate in state politics, refused to endorse him.

"Anybody who tries to prevent people from voting is breaking the law," Mr. Clark said. "I certainly suspect some of that has been going on."

Back in Macon, in the shadow of the courthouse green's standard-issue Confederate monument, Mr. Brown spoke of history: "They had their way all the time. They no longer have their way. That's what it's all about." The case is "all about politics," he said, "all about them trying to keep me from picking the lock."

But Mr. Walker, the county prosecutor, insisted the past had nothing to do with the case against Mr. Brown. "I wouldn't sit here and pretend black people haven't been mistreated," he said. "I hate what happened in the past. But I can't do anything about it."

SC GOP, Democrats Agree To No Crossover Voting In '08 Primaries (AP)

By Jim Davenport

AP, October 11, 2006

COLUMBIA, S.C. - South Carolina Republican and Democratic party leaders have agreed to swap voter rolls in their 2008 presidential primaries to stop people from casting ballots in both contests.

Neither party likes the idea of voters casting a ballot in both primaries.

"I don't want people who have voted in their primary attempting to vote in ours," state Democratic Party Chairman Joe Erwin said Tuesday.

But that might not be an easy task in a state where the parties pay for and run the presidential primaries. Voters don't register by party and State Election Commission spokesman Chris Whitmire said the parties can set whatever rules they want.

"We don't view it as a real election. We liken it more to a straw poll" that guides delegates at national conventions, he said.

A quarter of presidential primary voters here describe themselves as independents. The Legislature has repeatedly refused to require party registration in the presidential primaries.

The first party to hold a primary will hand over the voter rolls to the other party, leaders said.

"There was no other way to be able to stop anybody from crossing over," state GOP Chairman Katon Dawson said.

Both parties are scheduled to hold first-in-the-South primaries.

Democrats are slated for Jan. 29, 2008, a week after New Hampshire's primary.

South Carolina Republicans have planned a Feb. 2 primary. However, that date could be moved earlier, Dawson says.

Erwin said he's having legal experts look at the plan.

"I want a legal opinion on whether or not a poll worker can deny anyone from voting because they are looking at a list," Erwin said.

Dawson said if the plan runs into a legal challenge, "we'll have to be able to take the arrows and legal backlash."

"If we had registration by party, that problem would be solved," he said.

A U.S. Justice Department spokeswoman on Tuesday could not immediately answer questions about the plan.

Lee Parks, an Atlanta lawyer and Voting Rights Law expert, said it doesn't appear to violate federal law.

"Under the law, you can only participate in one primary," Parks said.

State Rep. Todd Rutherford, D-Columbia, sued the state GOP in 2002 over its primary election plans because the party didn't plan to open every precinct, particularly those in black neighborhoods.

Rutherford is skeptical of the list-swapping plan.

"I think that's dangerous," he said. "What you've got is a non-government entity having a list of people's names saying that they're excluded from voting," Rutherford said. "It's almost like a 'do not fly' list.'"

This "is something we probably need to address legislatively," Rutherford said.

Report Skeptical Of Fraud At Polls (USAT)

By Richard Wolf

USA Today, October 11, 2006

WASHINGTON — At a time when many states are instituting new requirements for voter registration and identification, a preliminary report to the U.S. Election Assistance Commission has found little evidence of the type of polling-place fraud those measures seek to stop.

USA TODAY obtained the report from the commission four months after it was delivered by two consultants hired to write it. The commission has not distributed it publicly.

At least 11 states have approved new rules for independent voter-registration drives or requirements that voters produce specific forms of photo ID at polling places. Several of those laws have been blocked in court, most recently in Arizona last week. The House of Representatives last month approved a photo-ID law, now pending in the Senate.

The bipartisan report by two consultants to the election commission casts doubt on the problem those laws are intended to address. “There is widespread but not unanimous agreement that there is little polling-place fraud, or at least much less than is claimed, including voter impersonation, ‘dead' voters, non-citizen voting and felon voters,” the report says.

The report, prepared by Tova Wang, an elections expert at the Century Foundation think tank, and Job Serebrov, an Arkansas attorney, says most fraud occurs in the absentee ballot process, such as through coercion or forgery. Wang declined to comment on the report, and Serebrov could not be reached for comment.

Others who reviewed the report for the election commission differ on its findings. Jon Greenbaum of the liberal Lawyers' Committee for Civil Rights Under Law says it was convincing. The committee wrote to the commission Friday seeking its release.

Conservatives dispute the research and conclusions. Thor Hearne, counsel to the American Center for Voting Rights, notes that the Justice Department has sued Missouri for having ineligible voters registered, while dead people have turned up on the registration rolls in Michigan. “It is just wrong to say that this isn't a problem,” he says.

DOJ_NMG_0079191

That's one reason the commission decided not to officially release the report. “There was a division of opinion here,” Chairman Paul DeGregorio says. “We've seen places where fraud does occur.”

The consultants found little evidence of that. Barry Weinberg, former deputy chief of the voting section in the Justice Department's civil rights division, reviewed their work. “Fraud at the polling place is generally difficult to pull off,” he says. “It takes a lot of planning and a lot of coordination.”

New Voter Registration Laws Keep Thousands Off The Rolls (USAT)

By Richard Wolf, Usa Today

USA Today, October 11, 2006

WASHINGTON — Some of this year's elections could be decided by those who can't vote.

Across the country, new laws restricting who can register and vote have reduced the number of people who may have voted otherwise. Some of those laws have been blocked in court. Even so, critics say, the damage has been done:

·In Arizona, about 21,000 voter registration applications were rejected because of inadequate proof of citizenship, required under a 2004 law. Most who were affected lacked up-to-date driver's licenses, birth certificates or passports.

A federal appellate court blocked enforcement of the law — which also requires voters to show ID at the polls — last week, four days before the registration deadline. “We're looking at an enormous disparate impact on people of color,” says Linda Brown, executive director of the Arizona Advocacy Network.

·In Florida, a law setting up new requirements for independent groups that register voters prompted the League of Women Voters to suspend registration drives for five months until a court intervened. In that period, the league could have registered thousands of people, The registration deadline is Tuesday. “You've just got to assume it's going to have an impact,” says Dianne Wheatley-Giliotti, the league's state president.

·In Ohio, a law that made paid workers liable for the validity of the registrations they collect caused several groups to stop signing up voters for two months this summer. By the time courts intervened, the opportunity had been lost for thousands of registrations.

The group ACORN, which advocates for low-income families, wanted to sign up 138,000 Ohioans this year; now it will settle for 100,000. “Those were really the critical months,” head organizer Katy Gall says. “In past years, we've met or exceeded our goals.”

Advocates of registration and photo identification laws say they are needed to prevent fraud. They say the rules apply to all potential voters, regardless of race, ethnicity, income or ideology. “This is a matter of voter confidence, whether or not the fraud is real or perceived,” says Indiana Secretary of State Todd Rokita, whose state has one of the nation's strictest ID requirements.

Laws tightening the rules on registrations also have been passed in Colorado, Georgia, Maryland, Missouri, New Mexico and Washington. Laws imposing photo ID requirements at the polls were passed in Georgia and Missouri, but courts have intervened.

Paul DeGregorio, chairman of the Election Assistance Commission, says the laws should not discourage citizens from voting. Far worse, he says, would be for states to ignore problems that cause Americans to distrust the process.

Wendy Weiser of the Brennan Center for Justice at New York University School of Law disagrees. “All of them will have an impact in suppressing votes,” she says. “Even when courts have overturned them, they have ongoing impact.”

Supreme Court Rejects Gay Marriage, Abortion Cases (LAW/AP)

The Associated Press

AP, October 11, 2006

The Supreme Court refused to intervene Tuesday in a legal fight over same-sex marriage, declining an appeal from a gay California couple who were denied a license to wed.

The justices declined without comment to take the case of Arthur Smelt and Christopher Hammer of Mission Viejo, Calif. The men had sought a marriage license in southern California's Orange County in 2004 and, after they were turned down, filed a federal lawsuit that challenged federal and state laws against same-sex marriage.

A U.S. District judge said the federal Defense of Marriage Act was constitutional but declined to rule on the state ban because a separate legal challenge is making its way through California state courts.

The 9th U.S. Circuit Court of Appeals agreed in May that the couple should await the outcome of the state court challenge.

Last week, a California appeals court upheld the state ban on same-sex weddings. That case appears headed for the California Supreme Court.

A trial judge in San Francisco last year declared the state marriage ban invalid because it violated the civil rights of gays and lesbians.

DOJ_NMG_0079192

Major civil rights groups opposed the federal lawsuit, preferring to fight for recognition of gay marriage in several states before the Supreme Court is asked to weigh in.

The case is Smelt v. Orange County, 06-5742.

COURT REJECTS COMPANION CASE TO 'ROE V. WADE'

The Supreme Court on Tuesday turned aside the case of Sandra Cano, one of the women behind the legalization of abortion, who had sought to reverse the victory she won 33 years ago.

Cano says she never wanted an abortion and that her difficult early life resulted in her becoming the anonymous plaintiff in Doe v. Bolton, the lesser-known case which the justices ruled on the same day in 1973 as the landmark Roe v. Wade.

"We're very disappointed that the Supreme Court has not decided to protect women and children from the harm of abortion," said Allan Parker, one of Cano's attorneys. "The court has aborted the normal regulation of medicine in this area."

Cano says she was a 22-year-old victim of an abusive husband and that her children were in foster care when she sought legal assistance in getting a divorce and in getting her children back.

She said an aggressive attorney pushed her into the abortion case.

"What I received was something I never requested -- the legal right to abort my child," Cano said in an affidavit six years ago.

Her current lawyers' legal brief says that despite advances in medicine, science and technology, the justices have "frozen abortion law based on obsolete 1973 assumptions and prevented the normal regulation of the practice of medicine."

The 11th U.S. Circuit Court of Appeals ruled in January that neither it nor a U.S. District Court had the authority to reverse the Supreme Court's decisions in Doe v. Bolton or Roe v. Wade.

Giving Up Too Much On Choice (WP)

By Ruth Marcus

The Washington Post, October 11, 2006

At the Sioux Falls headquarters of the campaign to repeal Referred Law 6 -- better known as the South Dakota abortion ban -- is a handlettered sign that sums up the opponents' case: "This law simply goes too far."

Yes, it does. But I worry that those fighting to undo the abortion ban have, with the best of intentions, also gone too far in conceding the moral terrain of the abortion debate.

The South Dakota statute is chilling in its remorseless reach. The sole exception to the criminal prohibition on abortions -- doctors would face up to five years in prison for performing them -- is to save the life of the mother. Rape or incest victims, and women whose health would be jeopardized by carrying a pregnancy to term, get no leeway under the statute, passed overwhelmingly in February by the state legislature.

On one level, then, it's little wonder, especially in conservative South Dakota, that the effort to repeal the law -- it's on the November ballot -- has focused on its inflexibility. After all, exceptions for pregnancies that result from rape or incest are a staple of even the most conservative politicians' political platforms -- President Bush, for one; John Thune, South Dakota's Republican senator, for another. Federal law requires Medicaid funding for abortions in cases of rape or incest.

Given that consensus, it's alarming that the vote on repealing the law may be so close. An independent poll in July found 47 percent of voters opposed, 39 percent in favor. But a more recent poll, commissioned by an antiabortion group, showed the gap much narrower, 47 to 44 percent. Four of the eight Republican state senators who had opposed the ban were ousted in primary elections.

So if the campaign against the law echoes the rhetoric usually employed by antiabortion forces, that may be smart politics, at least in the short term. "South Dakotans agree: honor and protect human life, reduce the number of abortions," opens a new television ad by the South Dakota Campaign for Healthy Families. (If you're confused about which side they're on, this is the group opposing the ban.)

Here's the problem, though, with this apologetic approach: What happens next? The decision to submit the ban to voters, rather than challenge the law in court, where it would almost certainly be overturned, carries twin risks -- failure and success.

If the repeal campaign fails, that could incite antiabortion forces elsewhere, not that they need much prodding. The Louisiana legislature passed -- and the Democratic governor signed -- a similar statute this year, to take effect if Roe v. Wade is overturned. Mississippi came close to enacting a South Dakota-like ban; Ohio could be poised to do so in a lame-duck session.

But if, as is more likely, voters reject the law, what happens if and when antiabortion forces come back with a version more palatable to South Dakotans? The July poll showing 47 percent of voters opposed to the ban found that 59 percent would support it with exceptions for rape and incest.

"I've spent a great deal of time and thought wondering if it would have been wiser to write in the exceptions," House Majority Leader Larry Rhoden told the Associated Press. Next time around, I fear, Rhoden and his colleagues will.

DOJ_NMG_0079193

Nancy Keenan, president of NARAL Pro-Choice America, dismisses that worry as "hypothetical," saying that "once the people of South Dakota have spoken, elected officials are going to sit up and take notice." Perhaps, but the history of antiabortion forces hasn't exactly been that they give up easily.

And this is the flaw inherent in the South Dakota strategy. It abandons what for me is the essential question of the abortion rights debate: Who gets to decide? Instead, it silently concedes that this is a matter that can be determined by a legislative majority considering a more situational question: What excuse is good enough -- or, more precisely, what excuse does government deem good enough? Once the argument is framed in those terms, the right to choose as a bedrock guarantee starts to crumble.

Why does this matter? Because contraceptives fail -- and not only in ways that can be remedied by resorting to emergency contraception (not that abortion opponents want to make access to Plan B any easier). Because even the most wanted pregnancies produce tragic genetic anomalies. Because people, teenagers especially, take stupid risks that result in unwanted pregnancies.

Pregnant women in these circumstances face a difficult -- and, yes, even tragic -- decision. But it's a choice that should be theirs, not one that's up for majority vote.

And so I hope the advocates of repeal succeed in overturning the abortion ban. But after that, they will need to figure out how to argue against the next law -- one that, under the terms they have tacitly accepted, doesn't "go too far."

Report Alleges Bias By A Real Estate Giant (NYT)

By Janny Scott

The New York Times, October 11, 2006

The National Fair Housing Alliance, a consortium of 220 groups and individuals working against housing discrimination, charged yesterday that agents in the Brooklyn Heights office of the city's largest residential real estate brokerage, the Corcoran Group, had engaged in discriminatory sales practices, including racial steering and withholding information from African-American clients.

"During our 16 years of existence, the National Fair Housing Alliance has never seen such a literal and blatant example of sales steering," the group wrote in a report detailing its allegations. In that particular instance, the report said, an agent "produced a map of Brooklyn and drew a red outline of the areas in which the white home seeker should consider living." The agent used arrows to indicate neighborhoods that were "changing."

"This racial steering tactic is reminiscent of discriminatory conduct from the 1970's, when real estate agents would go into white neighborhoods with the specific intention of triggering white flight by showing on a map where an African-American family had bought a house," the alliance wrote. "This Corcoran Group agent applied a new trick — he used a map to tell whites instead where they should 'flee to.' "

Pamela Liebman, president and chief executive officer of Corcoran, said in an interview yesterday that her firm "has always been devoted to fair housing" and recently required all of its agents to undergo four hours of training in fair housing law and practices.

She said, "I have never been given the specific charges as they relate to the Corcoran Group and I anxiously await them as we intend to defend ourselves vigorously."

She said she could not comment further on the allegations because she had not seen them.

Shanna L. Smith, president of the alliance, said her group conducted the investigation under contract with the federal Department of Housing and Urban Development, following up on earlier housing discrimination findings in a 2000 H.U.D. report. She said the alliance has filed a complaint with the housing agency against Corcoran and its parent company, NRT Inc. NRT describes itself as the nation's largest residential real estate brokerage firm, with companies in more than 35 metropolitan areas and more than 1,000 offices.

In its report, the alliance said the investigation of the Corcoran office "uncovered blatant housing discrimination against African-Americans, as well as steering of whites away from neighborhoods of color and to Prospect Heights, Park Slope, Windsor Terrace, Cobble Hill, Brooklyn Heights and parts of Carroll Gardens." It said agents withheld from black clients information about incentives, like ways to reduce costs, that it gave to white clients.

The alliance said it conducted the investigation by sending white and African-American "testers" into the office posing as potential home buyers. The black testers were better qualified than the whites, based on income, employment and other factors.

Corcoran announced late last month that it was devoting the month of October to training its agents in the country's fair housing laws, which prohibit discrimination in housing based on race, color, religion, sex, national origin and other factors. Ms. Liebman, who said she received three days' worth of "diversity training" in 2003, said that month of training for agents was initiated before Corcoran knew of the alliance's allegations.

DOJ_NMG_0079194

300 Million (NYT)

The New York Times, October 11, 2006

America's 300 millionth person will be here any day now. The Census Bureau has combined birth, death and immigration rates and expects him or her to arrive in mid-October. No one knows where or how — squalling in a birthing room in Los Angeles, maybe, or darting out of the desert east of Phoenix.

That's too bad, because whoever it is should get a bouquet and a thank-you card. It should be signed by President Bush on behalf of a grateful nation that is buzzing with a youthful energy for which the aging powers of Europe would gladly trade their pension obligations. If the newcomer is an immigrant, he or she should also get an apology from Mr. Bush for the scarcity of worker visas, and a promise to get right on that problem.

Whenever the population odometer hits a huge round number, it creates unease, but we usually get over it. Predictions of planetary famine made the 1968 book "The Population Bomb" a raging bestseller, but today you find it only at garage sales.

The doomsayer's torch has lately been grabbed by cultural sentinels like Patrick Buchanan, whose new book warns that the United States is being reconquered by disease-carrying Latinos. Unless Americans of white European descent can Ziploc the borders and start churning out babies, he says, their age of civilizing domination is done for.

Mr. Buchanan's fantasy is a common one among social conservatives, a supposed era of cultural homogeneity that roughly corresponds with the postwar baby boom. But if you take the longer view of our nation, you will see that it has been fed and nourished by immigrants, and has an iron stomach for seemingly undigestible newcomers.

Mr. Buchanan wants us all to go back to Mayberry, but the retro-future he imagines would have the sedated stillness of a gated community. Or a nursing home, which the rest of the rich, industrialized world — Japan, Italy, Germany and Britain, for instance — is beginning to resemble.

In America, growth and vitality are the same thing. The engine of assimilation hums on, with immigrants' children trading their mother tongues for teenage upspeak with clockwork regularity. Annoyingly brilliant young people, of which we have lots, keep coming up with world-upending ideas like Apple, Google and YouTube.

Our teeming immensity keeps us from going stale, and despite some people's panic attacks, our population issues have mysterious ways of working themselves out. America has big problems, but it also has 300 million reasons to be hopeful.

ANTITRUST:

AT&T-BellSouth Merger Expected To Get OK (AP)

By John Dunbar

AP, October 11, 2006

WASHINGTON -- The Justice Department is expected to approve AT&T Inc.'s buyout of BellSouth Corp. without attaching any conditions to the deal, three people knowledgeable about the matter said Tuesday.

The proposed merger, now valued at about $78 billion, would create a telecommunications giant with both the largest landline and wireless networks in the nation. A Justice Department official declined to comment on the decision, and the sources who disclosed it declined to be identified because the action had not been formally announced.

The Justice Department is expected to approve the buyout Wednesday despite a plea from the chairman of the House Judiciary Committee, Rep. James Sensenbrenner, R-Wis., and other members of Congress that the deal not be allowed to go through until details related to two previous telecommunications mergers are settled and other concerns are addressed.

Critics say the government is well on its way to reconstituting the old Ma Bell monopoly, which was broken up after years of fighting in the early 1980s.

The department's approval, together with a green light from 18 state governments, would leave the Federal Communications Commission as the lone hurdle to the merger, which has been approved by shareholders of both companies.

An FCC vote is set for Thursday morning, and the outcome is far from certain. Republican Chairman Kevin Martin circulated an order recommending approval of the merger last month and will probably receive support from fellow Republican commissioner Deborah Taylor Tate. However, the two Democrats on the commission, Jonathan Adelstein and Michael Copps, are expected to ask that conditions be placed on the deal.

That leaves Robert McDowell, the third Republican on the commission, who has thus far recused himself in the case. Before joining the FCC, he worked in the telecommunications industry and lobbied in favor of competitors to companies like AT&T and BellSouth.

The combination of San Antonio-based AT&T and Atlanta-based BellSouth would create a company of 300,000 employees with operations in 23 states. AT&T estimates that about 10,000 redundant jobs would be phased out over three years.

DOJ_NMG_0079195

The anticipated Justice Department decision would come just seven months after AT&T announced its intentions on March 5 to buy BellSouth -- a breakneck pace for a merger of its size and scope.

AT&T is already the largest telecommunications company in the United States, reporting $62 billion in revenue in 2005 and serving customers in Texas, California and the Midwest. BellSouth provides service to nine states in the Southeast and reported $34 billion in revenue in 2005.

Both companies say the merger would help eliminate challenges they now face in their dual management of Cingular Wireless, 60 percent of which is owned by AT&T and the rest by BellSouth.

But critics charge the merger would reduce competition and drive up prices in the telecommunications industry.

Two consumers groups -- Consumers Union and the Consumer Federation of America -- have urged the Justice Department to block the deal, warning that increasing consolidation in the telephone industry would boost the prices for local, long-distance and cell phone services. Moreover, they argue, limited choices for phone service -- dovetailing with a similar merger trend in the cable industry -- threatens a reduced variety of broadband Internet services available to consumers.

BellSouth has struggled with recovering from equipment damage and disruptions to its customer base inflicted by Hurricane Katrina. The 2005 storm destroyed 11 of the company's central offices, downed 18,000 telephone poles and incurred costs to BellSouth of up to $900 million.

Associated Press writer Lara Jakes Jordan contributed to this report.

AT&T's BellSouth Purchase To Get Antitrust Approval, People Say (BLOOM)

By James Rowley

Bloomberg, October 11, 2006

Oct. 10 (Bloomberg) -- AT&T Inc.'s $67 billion purchase of BellSouth Corp. will receive U.S. antitrust clearance as early as tomorrow with few or no conditions, people familiar with the matter said.

AT&T, formed last year by SBC Communication Inc.'s takeover of AT&T, is the largest U.S. telephone company. The combination with BellSouth, the third-largest U.S. phone company, would provide service in 22 states.

The Federal Communications Commission is scheduled to vote on the deal two days from now. The FCC typically doesn't act on a takeover before the Justice Department has announced its decision. FCC Chairman Kevin Martin has pushed for approving the transaction without conditions.

Sprint Nextel Corp. and Global Crossing Ltd. have asked the FCC to allow equal access to high-speed networks. Cable operators, such as Cox Communications and Cablevision Systems Corp., have sought conditions from the FCC so their phone customers' calls can be easily connected to AT&T's network.

A Justice Department spokeswoman couldn't immediately be reached for comment.

Justice Near OK Of AT&T-BellSouth Deal With No Restrictions (USAT)

By Paul Davidson, Usa Today

USA Today, October 11, 2006

The Justice Department is expected to clear AT&T's (T) $67 billion purchase of BellSouth (BLS) as early as Wednesday without requiring any divestitures, say people with knowledge of the matter.

Justice could still shift course and require some last-minute concessions, these people say. But the department typically acts on telecom mergers before the Federal Communications Commission, which is scheduled to vote on the deal Thursday.

A Justice decision not to require concessions could embolden FCC Democrats to seek even tougher conditions than they might otherwise, say people with knowledge of the situation. They requested anonymity because Justice has not announced its decision.

FCC Chairman Kevin Martin, a Republican, has recommended approval without conditions.

In the SBC-AT&T and Verizon-MCI (VZ) mergers, Justice forced the companies to let rivals lease their spare fiber-optic lines serving business customers. The department was concerned about 800 or so buildings in which SBC and AT&T, or Verizon and MCI, were the only providers serving big businesses.

A federal judge is scrutinizing the consent decrees signed by the companies in those mergers after suggesting that the leasing requirements did not go far enough.

But AT&T has argued there are only 32 buildings in which both it and BellSouth have duplicate facilities. Even if Justice doesn't require divestitures, the companies could still agree to lease or sell facilities in those areas to win FCC approval.

FCC Democrats also have discussed imposing on the merger similar conditions to those imposed on the SBC and Verizon deals.

DOJ_NMG_0079196

For example, the agency prevented the companies from blocking consumers' access to rival Internet-based phone services or websites for two years.

In the AT&T-BellSouth deal, the Democrats could seek further concessions. For example, they could try to prevent AT&T-BellSouth from discriminating against video rivals, such as Google. That could hinder AT&T's plans to charge websites extra fees to ensure fast delivery of their multimedia content.

FCC Republican Robert McDowell has said he will recuse himself from voting on the merger because he formerly worked for a group that opposed the SBC and Verizon deals. A stalemate between the remaining two Democrats and two Republicans could force the FCC to postpone Thursday's meeting.

Spokesmen for Justice, AT&T and BellSouth declined to comment.

AT&T, BellSouth Expected To Clear Merger Review (WSJ)

By Amy Schatz

The Wall Street Journal, October 11, 2006

WASHINGTON -- The Justice Department is expected to approve AT&T Inc.'s $67 billion purchase of BellSouth Corp. as early as today with few or no conditions, lawyers close to the matter said.

Justice Department officials are expected to say that the merger of the two phone giants doesn't pose significant competitive threats that require divestures, conditions or a consent decree, the lawyers said. The Federal Communications Commission has scheduled a vote to approve the deal tomorrow. A Justice Department spokeswoman declined to comment.

The decisions by the Justice Department and FCC to approve the deal quickly come despite bipartisan requests from some congressional leaders to hold off until a federal judge rules on an antitrust review of the mergers last year of SBC Communications Inc. and AT&T Corp., and Verizon Communications Inc. and MCI Inc.

Opponents of the AT&T/BellSouth deal, including smaller phone companies and consumer groups, have complained the deal will result in higher prices for consumers and high-volume business customers. The fact that the government appears to have few qualms about approving the deal so soon after the Baby Bell mergers last year shows how much the communications industry has changed in the 22 years since the government broke up Ma Bell.

Only four of the five FCC board members are expected to vote; Robert McDowell is expected to be recused.

Microsoft Helped Utah Company Finance Legal Battle Over Linux, Investor Says In Court Filing (AP)

By Paul Foy, AP Business Writer

AP, October 11, 2006

SALT LAKE CITY (AP) Microsoft Corp. helped a Utah company raise money for its legal challenge to the open-source Linux operating system, an investor said in a court filing.

In a sworn statement, Lawrence R. Goldfarb, a founder of BayStar Capital Management of Larkspur, Calif., said he invested $50 million in The SCO Group Inc. at the urging of Microsoft executives who promised to guarantee BayStar's investment against any losses.

Goldfarb says Microsoft reneged on the promise. In a statement to The Associated Press, Microsoft denied making any such assurance.

Goldfarb's statement was filed in federal court last week by IBM Corp. as the tech company asked a judge to throw out what remains of a long-running legal battle. SCO sued IBM for $5 billion in 2003, accusing it of donating SCO's proprietary Unix code to Linux developers.

A magistrate, however, has dismissed 182 of SCO's 294 claims against IBM. U.S. District Judge Dale Kimball has scheduled an Oct. 24 hearing to hear SCO's appeal of that ruling.

Goldfarb said he was approached in 2003 by Richard Emerson, a Microsoft senior vice president for strategy, about investing in SCO, ``a company about which I knew little or nothing."

Emerson ``stated that Microsoft wished to promote SCO and its pending lawsuit against IBM and the Linux operating system. But Microsoft did not want to be seen as attacking IBM or Linux. For that reason, Microsoft wanted to further its interest though independent investors like BayStar," Goldfarb said in the five-page declaration.

Microsoft has reason to fear Linux, a freely distributed operating system that is gaining commercial acceptance and market share. Many companies are choosing Linux to power their computer servers. SCO maintains its Unix code has helped make Linux sturdy and reliable.

Goldfarb said he invested $50 million after Emerson and two other Microsoft executives ``assured me that it would in some way guarantee BayStar's investment," though they refused to put the pledge in writing.

SCO attorney David Boies was confident that IBM ``would settle the case fairly quickly," Goldfarb said.

But Goldfarb said he quickly became ``very concerned" about SCO's viability and its ``high cash burn rate."

He believed BayStar's funds were primarily being used to pay a law firm led by Boies, formerly the lead Justice Department lawyer in an antitrust case against Microsoft.

SCO's stock price declined, and Microsoft stopped returning phone calls and e-mails, Goldfarb said. So did Boies's firm.

Goldfarb took steps to salvage BayStar's investment. He said the firm sold preferred shares back to SCO for $13 million and SCO common stock. The court filing didn't make clear whether BayStar was taking a loss on the transactions.

Goldfarb's statement was filed in court to counter SCO's claim that IBM induced him to terminate their relationship.

SCO declined comment Tuesday. The AP could not locate a phone number for Emerson, who no longer works at Microsoft. A spokeswoman for Boies's firm didn't immediately return a message. Goldfarb also didn't answer a message left with his investment firm, now named LRG Capital Group LLC.

In a response to the AP, Microsoft said it had no financial relationship with BayStar and never agreed to guarantee any of the $50 million investment. The company notes that even Goldfarb conceded he had nothing in writing.

SCO's lawsuit against IBM has deepened its losses. The company has spent more than $40 million battling IBM, which shows no sign of agreeing to a settlement.

Buyout Firms Get Antitrust Inquiries, Person Says (Update2) (BLOOM)

By Brett Cole

Bloomberg, October 11, 2006

Oct. 10 (Bloomberg) -- The U.S. Department of Justice has begun an informal antitrust inquiry of private-equity firms and their collaboration on leveraged buyouts, a person familiar with the matter said today.

Justice officials in recent weeks sent letters to firms seeking information about deals and business practices, according to the person, who asked not to be identified because the probe isn't public. Kohlberg Kravis Roberts & Co. and Silver Lake Partners were among those contacted, the Wall Street Journal reported earlier today.

``It's very serious for the buyouts firms as this investigation could last up to a year," Sean Boland, co-chair of the antitrust practice at Washington-based law firm Howrey LLP, said in a telephone interview.

LBO firms have teamed up on $201 billion of acquisitions this year, compared with $31 billion in all of 2001, according to data compiled by London-based Private Equity Intelligence Ltd. In July, the industry's biggest deal was announced, the $33 billion takeover of hospital chain HCA Inc. by KKR, Bain Capital LLC, Merrill Lynch & Co. and HCA co-founder Thomas F. Frist Jr.

Buyout firms form partnerships to spread risk and increase the size of purchases they can make. The Justice Department may be concerned that cooperation among bidders is unfairly pushing down prices, said Robert Burka, an antitrust lawyer at Foley & Lardner in Washington and a former official the Federal Trade Commission.

``This is a new area for antitrust law enforcement," he said.

Legitimate Reasons

Collaboration among firms alone isn't anticompetitive, said Steven Sunshine, a partner at Cadwalader Wickersham & Taft LLP in New York and a former antitrust enforcer at the Justice Department.

``If a bunch of makers of some chemical get together in a room and fix prices, it's criminal," he said. ``The question is whether there is enough of a legitimate reason for private-equity firms to talk to one another such that it is not a naked cartel."

KKR spokeswoman Ruth Pachman and Silver Lake spokesman Matthew Benson declined to comment.

New York-based KKR and Silver Lake, which has offices in New York and Menlo Park, California, have together participated in $23.5 billion of acquisitions since 2005, including the takeover of Royal Philips Electronics NV's semiconductor unit for 7.4 billion euros ($9.4 billion) in August.

Last year, the firms bought Agilent Technologies Inc.'s semiconductor unit for $2.66 billion and joined with five others to acquire SunGard Data Systems Inc. for $11.4 billion.

Buyout firms raise money from institutions such as pension funds and endowments, and use debt to finance about two-third of the price of their acquisitions. Their goal is to improve a company's performance, often through layoffs and other cost reductions, and sell at a profit.

Buy-out Groups To Face Inquiry (FT)

By James Politi And Ben White In New York And Stephanie Kirchgaessner In Washington

Financial Times, October 11, 2006

The US private equity industry was hit on Tuesday by the revelation of a government inquiry into potentially anti-competitive behaviour by some of its top groups.

The Department of Justice investigation appears to focus on whether buy-out groups colluded to keep asset prices down in company auctions, according to industry executives.

In a letter to buy-out groups including Carlyle, Kohlberg Kravis Roberts and Silver Lake Partners the government demanded information about deals dating back to January 2003, people familiar with the requests said on Tuesday.

"The letter asks what deals did we do, who did we work with, when did we find out about them," one person said, suggesting the inquiry was broad and in its early stages.

The DoJ declined to comment, as did Carlyle, KKR, Silver Lake and other private equity groups.

The government inquiry risks damaging the credibility of the private equity industry at a high point of its influence in corporate America.

If it moves forward the inquiry could also raise questions about the role of a number of investment banks that provide advice and finance for private equity deals. The banks could have been witnesses or parties to collusion, or victims.

Buy-out groups have grown into vast private conglomerates but have rarely faced heavy government scrutiny, particularly in the US. In recent months groups such as Texas Pacific, Carlyle and Blackstone have considered creating a private equity trade association to represent their interests in Washington and elsewhere.

Henry T.C. Hu, a University of Texas law professor, said the justice department sent out similar requests for information in 1999 on potential antitrust violations by investment banks underwriting initial public offerings. Nothing came of the probe.

"A lot of these things never end up going anywhere," he said.

The issue of how much competition exists among the top groups in the industry has been debated for several years.

On the one hand private equity firms are in a constant battle to raise ever-larger funds from investors and spend the money as quickly and successfully as possible. On the other hand many of the large buy-out funds maintain that one of the attractions of investing in consortiums to buy large companies rather than midsized ones is that there is limited competition for the assets, which keeps prices down.

It is also extremely rare for private equity groups to bid against each other after the end of an auction. More often they will attempt to buy a slice of the equity from the winning bidder.

Equity Deals Attract Eye Of Justice (NYT)

By Andrew Ross Sorkin

The New York Times, October 11, 2006

Two rival leveraged buyout firms make bids for the same company. At the 11th hour, one firm drops out of the auction, unwilling to pay more.

The remaining buyout firm is declared the winner. A month later, another company is put up for sale — only this time the two firms that had just been fierce competitors have teamed up to bid together for it.

Friendly competition? Or collusion?

That question is what the Justice Department appears to be examining as part of a preliminary inquiry into possible anticompetitive behavior in the clubby private equity industry, according to people briefed on the investigation.

Several of the nation's largest firms, including Kohlberg Kravis Roberts & Company, the Carlyle Group, Clayton, Dubilier & Rice and Silver Lake Partners, have received letters from the Justice Department seeking broad information about their business practices and involvements in auctions going back to 2003.

The letters, sent within the last 10 days, appear to be the beginning of a wide-ranging inquiry into private equity, an industry that has become an increasingly powerful force on Wall Street in recent years but remains relatively unregulated. Of particular concern has been the emergence of consortiums in many big buyouts.

When firms get together to form consortiums, or clubs, as they are known in the industry, to bid on a specific company, that could have the effect of limiting competition and thus artificially depressing the price of takeover bids — and hurting corporate shareholders in the process.

And private equity firms have worked together on other fronts. Kohlberg Kravis and the Texas Pacific Group have been forming a trade association to represent the industry's views in Washington.

The inquiry comes at a time when private equity's grasp has reached into every corner of corporate America. Toys "R" Us, Hertz and Neiman Marcus are among the well-known names owned by private equity.

DOJ_NMG_0079199

Firms have spent hundreds of billions of dollars so far this year on buyouts. Yet that deal-making may have reached its peak. Leveraged buyout prices appear to be reaching record levels, leading some analysts and investors to suggest that valuations have become inflated.

The inquiry also comes only a month after a particularly brutal takeover battle spilled into public view when a group led by Kohlberg Kravis Roberts and Bain Capital tried to jump onto a nearly signed deal between Freescale Semiconductor and a rival private equity group led by Blackstone Group.

The last-minute bid by the Kohlberg Kravis-Bain group pushed the Blackstone Group to pay $1.6 billion more than it had originally agreed to pay.

It was unclear yesterday how widespread the inquiry could be. People who have reviewed the letters, sent by the New York regional office of the Justice Department, described them as being broad and without mention of any specific transaction or auction. They also described the letters as indicating a lack of familiarity with how the industry works.

A response to the letters is completely voluntary; the letters are neither subpoenas nor what is known as civil investigation demands. News of the inquiry was first reported on The Wall Street Journal's Web site.

The firms contacted are expected to hold separate meetings with the Justice Department within the next week to clarify the scope of the information being requested, people involved in the inquiry said.

It is unclear why certain firms received the letters and others — like the Blackstone Group — did not.

Some lawyers involved in the inquiry speculated that the list, which is likely to grow, started with firms mentioned in a newspaper column published in October 2005 that explored the subject of collusion in the industry.

Antitrust lawyers suggested yesterday that it could prove difficult to mount a case against the firms, but allowed that it was possible the Justice Department could find e-mail messages or other documentation of discussions among the firms about bidding.

Proving a case could be difficult because in most auctions the company being bid for, which is typically sophisticated and well advised, has the option to sell or not.

There are also several cases, including the landmark United States v. Morgan in 1953 that held that investors — in that case, underwriters — were allowed to band together to spread risk among several firms.

In many auctions, the seller takes great pains to prevent buyers from colluding. Some recent sellers, like Albertsons, have actually directed the formation of teams themselves to prevent the possibility of one group becoming too powerful.

Sellers have also taken steps to prevent private equity firms from locking up some of the biggest banks to finance their deals, which could make those funds unavailable to other buyers.

Sellers have also begun a practice called staple financing, which is when the bank advising the seller also offers financing to all of the buyers at the same rate. The practice has been questioned because it puts the bank on both sides of the deal, but it also levels the playing field for buyers in an effort to encourage spirited bidding.

Probe Brings 'Club Deals' To Fore (WSJ)

By Dennis K. Berman And Henny Sender

The Wall Street Journal, October 11, 2006

When hospital operator HCA Inc. announced a deal to be taken private by a trio of private-equity firms earlier this summer for $21.3 billion, the buyers worried that a rival bidding group would crash the party and force the price higher. But no such bid materialized.

At least some of these rivals held off, say people familiar with the decision making, because they feared a competing bid for HCA would open the door for other firms to jump in on the rivals' own, other buyout deals, these people said. (In other words, you don't bid on my deal, I won't bid on yours.)

Such calculations on whether to join forces or face off against competitors have been at the heart of private-equity investing over the last three years. Assessing these rules of engagement in the multibillion-dollar world of corporate buyouts is also part of a new Justice Department inquiry into private equity's auction practices since 2003, according to people familiar with the effort.

The inquiry, reported yesterday by The Wall Street Journal, centers on how groups of private-equity firms conduct their bidding in corporate auctions, according to people familiar with letters sent to buyout firms.

In many of these transactions, powerhouse private-equity firms -- which pool large sums of capital from wealthy investors and institutions -- team up to make bids to take companies private, hoping to cash in by selling them later at a higher price.

The inquiry, run by the Justice Department's antitrust division in Manhattan, is preliminary and like other such matters, may eventually lead in a different direction or nowhere at all. Those receiving letters include Kohlberg Kravis Roberts & Co., Silver

DOJ_NMG_0079200

Lake Partners and Carlyle Group, according to people familiar with the matter, and the list is likely to grow. All three firms declined to comment.

The two-page document is described by someone who has read it as being relatively generic, asking a general set of questions about the firms' bidding history, bidding partners and timing and nature of pricing changes in auctions.

The Justice Department has put a priority on combating business collusion and price-fixing in recent years. But such cases usually proceed as criminal investigations with subpoenas, and the letters that were sent in this instance were non-compulsory requests for information. That suggests the inquiry is at an early stage. The head of the antitrust division's New York office, Ralph Giordano, referred calls to a Justice Department spokesman, who declined to comment.

The Justice Department's antitrust record on Wall Street is mixed at best. Back in the 1950s the Justice Department sued 17 Wall Street investment banks -- then known as Club 17 -- on antitrust charges, but the case was thrown out of federal court.

Today, legal and economic scholars say it would be hard to prove that private-equity shops -- who actively bid share prices higher and not lower -- are colluding to suppress prices of the companies they buy.

Nonetheless, the firms were preparing yesterday for what could be a long legal challenge. The general counsel of one major buyout firm advised employees to preserve documents in case regulators send a request for information. In addition, private-equity attorneys held a conference call yesterday afternoon to discuss strategy and compare notes.

WHO'S WHO IN PRIVATE EQUITY

1 · See a rundown of high-profile private-equity firms, their histories, holdings and biggest deals.2

News of the letters touched off a range of reactions around Wall Street, where the buyout funds have become powerful presences, having paid out some $9.6 billion globally in fees to investment banks year-to-date for advice, capital raising and other activities, according to data analysis firm Dealogic.

If there is going to be any slowdown in deal making, it didn't show up in markets. In the latest multibillion-dollar deal, private-equity firm Texas Pacific Group and one of its investors clinched a deal to buy French television and cellphone transmission business TDF SA.

At least some described the inquiry as an "inevitable" outgrowth of the evolution of the big-ticket buyout game. Wielding smarts, ego and capital, elite firms have clustered at auctions for a virtual buffet of the nation's largest companies: movie chains, satellite operators, newspaper companies, and semiconductor-makers among others.

To pay for such large targets -- with total price-tags of upward of $30 billion -- the firms have in recent years begun to partner into what have come to be known as "club deals." These clubs are largely limited to a handful of buyout firms with roughly more than $10 billion each in capital, such as Kohlberg Kravis Roberts & Co., Blackstone Group, Texas Pacific Group, and the investment arm of Goldman Sachs Group Inc.

These clubbing arrangements present both opportunities and problems for companies on the auction block. On the plus side, they allow for the assembly of the immense pools of cash necessary to bid on a large target in the first place. That in turn helps buyers spread the risk of any one transaction, which is another essential ingredient to making a bid.

Yet inside these clubbing arrangements is a fraught dynamic. While often ferocious competitors, the firms are just as likely to end up co-owners of a number of targets. For instance, two of the buyout world's top firms, Blackstone Group and Carlyle Group, are often on different sides of transactions. For example, when Kinder Morgan Inc. was considering a management buyout involving Carlyle earlier this year, Kinder's board hired Blackstone's advisory arm to evaluate the bid. But they are also bidding together to buy Freescale Semiconductor Inc.

In all, Carlyle has done 20 club deals since 2005, and Texas Pacific Group 25 club deals, according to Dealogic data. Some 44% of all $1 billion-plus buyouts are done in club deals this year.

Legal scholars are far from convinced that any legal case may arise from the inquiry.

"These are hard [cases] to make for a variety of reasons. One of them is an evidentiary reason. There is not going to be a document where somebody says, 'What we really need to do is team up so we can keep the price down," said Todd Henderson a professor at the University of Chicago Law School.

Lauren S. Albert, an attorney at New York's Axinn, Veltrop & Harkrider said that a case was possible given a certain set of conditions. "If a bidder or group was able to bid on its own -- but to avoid competition joined with other bidders capable of bidding on their own -- that could be viewed as unlawful."

One area that could receive significant attention is the use of confidentiality agreements in auction situations. These agreements are designed to contractually hold competing parties to a vow of silence with each other, unless permission is granted by the seller.

Nonetheless, information can leak between these parties and their bankers, at times conveyed in media stories or via a third party. Attorneys suggested yesterday that one point of inquiry could be the investment banks and lending desks of major Wall Street firms who oftentimes will fund multiple bidders in the same auction.

It is these fulcrum points that could at least theoretically keep the flow of information going between two rival groups -- and potentially affect pricing of an auction.

Judge Delivers Split Ruling In Cell Phone Technology Case (AP)

AP, October 11, 2006

LOS ANGELES - Semiconductor maker Qualcomm Inc. violated parts of a patent held by rival Broadcom Corp. that helps cell phones conserve battery power when out of cellular network range, a judge ruled Tuesday.

However, Qualcomm did not infringe two other patents on chips used in cell phones and other wireless devices, according to Charles E. Bullock, an administrative law judge hearing the case in Washington, D.C., on behalf of the International Trade Commission.

Qualcomm had challenged the patents held by Broadcom, but the judge ruled all three patents were valid.

The case was brought to the commission by Broadcom, based in Irvine, Calif.

Qualcomm, based in San Diego, said it would appeal the decision to the full commission as it explored designs to replace the disputed technology.

The judge's ruling will go to the full commission next year for a final determination.

Broadcom said it would ask the commission to review the portion of the ruling that favored Qualcomm.

The rival chip makers have 10 suits and countersuits pending in courts from California to Europe over trade and patent issues relating to technologies that power cell phones, Bluetooth devices and wireless Internet equipment.

Last week, a federal court judge in San Diego ordered the billionaire founders of the feuding companies to face each other behind closed doors to try to resolve their differences. No agreement was struck and the judge was expected to order further sessions.

In August, a federal judge in New Jersey dismissed an antitrust lawsuit filed by Broadcom against Qualcomm. The suit accused Qualcomm of thwarting competition in the market for advanced cell phones and associated chips.

Broadcom contends that Qualcomm's licensing practices are unfair and violate antitrust laws. Broadcom, which has in the past focused on chips for TV cable boxes, is now trying to expand into the cell phone market and asserts Qualcomm is infringing on 18 of its patents.

Qualcomm claims Broadcom is infringing on 10 of its patents to create products using knowledge of stolen technical specifications.

Qualcomm Averts Sanction In Broadcom Chip Spat (WSJ)

By Don Clark

The Wall Street Journal, October 11, 2006

Qualcomm Inc. avoided a tough sanction in a legal skirmish with Broadcom Corp. But the chip makers continue to tangle on multiple fronts and face increasing pressure to reach a settlement.

An International Trade Commission administrative law judge ruled that Qualcomm's chips infringed on a Broadcom patent. Judge Charles Bullock stopped short, however, of recommending that cellphones containing the chips be barred from importation to the U.S. He also ruled that Qualcomm didn't infringe on two other patents that Broadcom had cited.

The possibility of import restrictions against Qualcomm-powered cellphones has spooked the telecommunications industry. Handset makers including Motorola Inc., Samsung Electronics Co., LG Electronics Inc. and Kyocera Corp. could be affected by such a ban. U.S. cellphone service providers also could be affected.

Although the full ITC could contradict the judge's recommendation in a commission ruling expected in February, Qualcomm investors breathed a sigh of relief after yesterday's ruling. Qualcomm's shares were up 83 cents, or 2.3%, to $37.07 in 4 p.m. composite trading yesterday on the Nasdaq Stock Market. Broadcom's shares were down 79 cents, or 2.7% to $28.80 on the Nasdaq.

Louis Lupin, Qualcomm's general counsel, said his company was pleased. The patent that the judge said Qualcomm infringed upon involves a feature for managing power in chips, and Qualcomm should be able to create new chips to avoid that issue, he said.

David Rosmann, Broadcom's vice president of intellectual-property litigation, said the finding of infringement was a victory. "We're very encouraged by that," he said.

Qualcomm, San Diego, sells chips based on a technology called CDMA, for code division multiple access, and licenses patents to cellphone makers and other chip companies.

Broadcom, an Irvine, Calif., maker of communications chips, is a relative newcomer to cellphones. It has unsuccessfully negotiated for a patent license from Qualcomm, which it accuses of demanding unreasonable terms.

DOJ_NMG_0079202

In the meantime, Broadcom has kept up the pressure by filing the ITC action and lawsuits that accuse Qualcomm of violating a total of 18 patents. Though a federal judge in New Jersey dismissed its antitrust suit against Qualcomm, Broadcom is appealing that ruling and is pressing a complaint about Qualcomm with antitrust regulators in Europe.

Qualcomm, which has said its licensing terms are fair, has filed suits that accuse Broadcom of infringing on 10 patents and improperly obtaining trade secrets. Last week, a federal judge in San Diego summoned Qualcomm Chairman Irwin Jacobs and Broadcom Chairman Henry Samueli for talks about settling the companies' legal disputes. The judge ordered the parties not to discuss the talks, but most observers expect a patent-licensing deal eventually.

"We are not trying to keep Broadcom out of the market," Mr. Lupin said. "One would expect a deal would ultimately be reached."

Broadcom's negotiating position could improve if it can convince the full ITC to issue an exclusion order. Lyle Vander Schaaf, an attorney with Bryan Cave LLP who has worked at the ITC, said the full commission regularly disagrees with recommendations of its administrative law judges. Qualcomm and its customers "cannot be popping champagne corks yet," he said.

Carriers that could be affected by restrictions on Qualcomm-powered telephones include Sprint Nextel Corp.; Verizon Wireless, which is a joint venture of Verizon Communications Inc. and Vodafone Group PLC; and Cingular Wireless, which is co-owned by AT&T Inc. and BellSouth Corp.

High Court Hears Case Pitting Telecoms Against Pay-Phone Providers (AP)

By Christopher S. Rugaber, The Associated Press

AP, October 11, 2006

The Supreme Court heard arguments Tuesday in a case that could force telecommunications companies to compensate pay-telephone providers billions of dollars for so-called 10-10-220 calls made by consumers, legal experts said.

The case stems from federal laws and regulations requiring long-distance telephone companies to compensate pay-phone providers for calls that consumers make using special dialing codes, commonly known as 10-10-220 or coinless calls.

Metrophones Telecommunications Inc., based in Washington state, sued Global Crossing Telecommunications Inc. in 2003, alleging that Global Crossing had not fully compensated it for phone calls made from Metrophones pay phones. Metrophones claims Global Crossing owed it $31,330.42 in fees and interest.

While the dollar damages in that particular case are low, at issue is whether companies can sue in federal court over regulatory violations or whether they can only sue over violations of federal laws.

Global Crossing has argued that federal law does not necessarily require long-distance companies to compensate pay-phone providers, but instead directs the Federal Communications Commission to issue rules governing how the pay phone providers would be compensated. Telecom providers Verizon Communications Inc., AT&T Inc. and Sprint Communications have filed briefs in support of Global Crossing.

Tobias Zimmerman, a telecom attorney at the Washington-based law firm Akin, Gump, Strauss Hauer & Feld, wrote on the firm's Web site that a ruling against the telecom giants could run into the billions.

The FCC, in a 2003 order, sided with Metrophones as did the U.S. Solicitor General. Federal appeals courts have issued conflicting opinions, however, with the 9th Circuit Court of Appeals ruling in 2005 that Metrophones could sue in federal court over violations of FCC regulations, while the D.C. Circuit, in a separate case in 2005, found that companies could not.

The justices questioned lawyers for both sides closely during oral arguments. Justice Antonin Scalia expressed concern that if all violations of the FCC's regulations were seen as "unjust and unreasonable" and therefore equivalent to violations of law, numerous suits could be filed in federal courts and could yield contradictory rulings.

The case is Global Crossing Telecommunications Inc. v. Metrophones Telecommunications Inc. (05-705).

Poor Reception After Sprint And Nextel Merge, Customers And Executives Leave (WSJ)

By Amol Sharma

The Wall Street Journal, October 11, 2006

With telecom deal making in full swing around him, Sprint Corp. chief executive Gary Forsee made his own big move last year. His century-old company paid $35 billion to buy a hot rival, Nextel Communications Inc. The deal gave the No. 3 wireless company a big new weapon in telecom's fastest growing market.

But since then, Sprint Nextel Corp. has been losing ground. Millions of its cellphone subscribers have defected to competitors. Its remaining customers have increasingly been switching to less profitable calling plans.

DOJ_NMG_0079203

Yesterday, amid mounting troubles at Sprint Nextel, former Nextel CEO Tim Donahue said he was retiring as executive chairman. The move came just two months after Len Lauer, Sprint's chief operating officer, was let go after the release of dismal financial results. The stock price has fallen more than 30% since the deal closed in August 2005.

The Sprint-Nextel saga shows the perils of consolidation in an intensely competitive field where technology and customer expectations keep changing quickly. Instead of each company fixing the other one's weakness, the problems have just added up.

Nextel executives say Sprint erred by downplaying the Nextel brand. Some top Sprint executives feel duped for buying an aging Nextel network that drops customers' calls. The two companies have yet to combine their cellular networks and management structures. Meanwhile, Sprint has been slow to catch on to important trends in the industry, such as the enormous popularity of Motorola Inc.'s ultrathin Razr phone.

Mr. Forsee concedes that Sprint has stumbled in the short term, though he says it is well-positioned for long-term growth. "We've got one more box left to check, and that's to execute," he said in a recent interview.

Mr. Forsee has had to put together two companies that couldn't have been more different. Sprint, based in Overland Park, Kan., before the deal, was founded at the turn of the 20th century as the Brown Telephone Co. It has its roots in the landline phone business, where many of its top executives, including Mr. Forsee, got their start.

Nextel, whose Reston, Va., offices became the headquarters of the new company, was a wireless pioneer when it started in 1987. Its phones with a walkie-talkie feature quickly became popular with construction workers and security guards. Its employees boasted of the company's entrepreneurial culture, fast decision-making, and penchant to take risks.

The 56-year-old Mr. Forsee moved from BellSouth to take over the top Sprint job in 2003, after Sprint's top two executives were forced out over their use of personal tax shelters. Mr. Forsee had been vice chairman of BellSouth and heir apparent to its chief, so the move came with a big handcuff for Sprint. At BellSouth's insistence, Mr. Forsee was barred from taking part in merger and acquisition discussions for a year.

The timing was tough: Mr. Forsee and Sprint were forced to sit on the sidelines at a crucial moment of consolidation in the industry. In the ensuing months, AT&T Wireless came on the block, and several U.S. and foreign carriers made bids. In early 2004, Cingular acquired AT&T and became the nation's leading carrier, measured by number of subscribers.

Mr. Forsee knew he needed a wireless partner to keep up with the scale of his rivals. Nextel, then the fifth largest carrier, was attractive, because its quickly expanding base of business customers spent, on average, more than $60 a month -- the highest in the industry. The timing of a merger also worked for Nextel's CEO, Mr. Donahue: His company's aging network would be especially hard to upgrade for Internet and data services, seen as the future of the wireless industry. Sprint thought it had the technology to solve that problem.

Problems emerged soon after the deal closed in August 2005. Though Sprint was bigger, Mr. Forsee accepted a "merger of equals," and key personnel and management decisions were made to appease both sides. For example, Nextel executive Barry West became the new chief technology officer, while Sprint executive Kathryn Walker was given the title of chief network officer. Both positions had responsibility for the future of the carrier's network. Such doubling up led to extra bureaucracy that sometimes slowed decision-making, former executives from both companies say.

The two companies also had vastly different organizational structures. Sprint's was divided by which clients were being served -- consumers, government or corporate. Nextel was divided by function, such as sales, distribution, and customer service, no matter what type of customer. Instead of favoring one model, Mr. Forsee combined elements of each, though he now is moving toward the Nextel model.

Friction between the Sprint and Nextel camps began to surface. Starting in the fall of 2005, a series of corporate bonding sessions were held in Overland Park and Reston to try to cultivate ties between the two camps. Nextel employees accused Sprint's managers of being too slow to make decisions and requiring too many layers of approval for everything from budgeting to new product initiatives. Sprint's people said they needed some time to show they could execute, a person who attended one of the sessions said.

One big decision early on was what brand name to use. Some Nextel executives and an outside consultant advised the company to keep the separate brand names, because Sprint and Nextel reached such different markets. But Mr. Forsee decided to blend them into one, with Sprint as the lead and "together with Nextel" as a smaller tagline. Some former executives say Mr. Forsee downplayed Nextel's brand to the company's detriment, contributing to the slow growth on the Nextel side of the business. Months later, acknowledging that the initial branding strategy wasn't working, Mr. Forsee reversed course and began pumping up Nextel's brand in ads once again: A recent print ad touts the brand "Nextel," with "only from Sprint" in a smaller font.

The company had other unforeseen complications. Small regional affiliates of each company, which offer service in small markets under the Sprint and Nextel brands, complained that the merger would violate agreements that barred the national

DOJ_NMG_0079204

carriers from competing in the affiliates' territories. After bitter legal fights, Sprint ended up buying out seven affiliates, costing more than $14 billion and forcing Sprint to incorporate thousands of new employees.

Sprint also inherited a swath of valuable radio spectrum that Nextel had acquired from the federal government. But it came with a price: The company had to meet a Federal Communications Commission mandate to resolve interference problems with emergency-services users such as police and firefighters -- mostly by switching them to other bands. The expected cost was $2.8 billion, but Sprint says it will have spent half that by the end of this year and analysts say the total could ultimately rise, given how much is left to do.

Since mid-2005 the company has been in talks with hundreds of state and local agencies over the costs and logistics. For instance, in the Washington, D.C., area, the carrier has to replace or update about 35,000 radios and negotiate with counties in Maryland and Virginia, several federal law-enforcement agencies, and even the Washington metropolitan transit system. It took almost a year for Sprint to strike an agreement with the lead county in the region, Fairfax, Va., just for $609,000 in planning money. Meanwhile, some of the old first-responder radios have receivers made of crystal. Replacing the crystals to retune the radios to a new band was so difficult that Sprint has begun growing them in a lab.

Worse, the reshuffling of frequencies makes it hard for Sprint to add customers on the Nextel network and is hurting phone reception in some regions because of reduced bandwidth, the company says.

Customers are increasingly complaining about dropped calls and reception problems. Frank McBride, a chauffeur in Los Angeles, says his limousine service started using Nextel phones a few years ago because of the Nextel walkie-talkie function, which allows users to press a button to reach a colleague without making an actual phone call. Mr. McBride says he got another Nextel phone for his personal use, but in the past year has seen a substantial deterioration in phone reception. "It's been dropping calls like crazy and it's getting worse," Mr. McBride says. He plans to change carriers when his phone contract is up next March.

Mr. Forsee has decided the best way to keep all Nextel subscribers happy is to bring them onto Sprint's more reliable network. But to do that he needs to add a Sprint walkie-talkie feature to match Nextel's. That isn't proving easy or cheap, and the company says it won't be able to abandon the Nextel network until at least 2012, instead of 2010 as forecast at the time of the merger. Meanwhile Sprint is scrambling to put out "dual mode" phones for Nextel customers that can take advantage of Sprint's network for phone calls and Nextel's for walkie-talkie functions.

Sprint also has been faulted by some customers and analysts for sparse choice of phone styles and features compared with rival carriers. Nextel phones "are a little short on what they offer," says Shaun Cannon, a Nextel subscriber from Newburgh, N.Y., who is switching to Verizon because he says its phones offer more.

Under Mr. Forsee, Sprint failed to latch onto a major trend in the handset market, the Razr phone. Cingular offered the phone first, in November 2004, heavily marketing it in TV ads. It caught on quickly, and as sales soared, other carriers took notice. By late 2005, Verizon Wireless put out its own Razr. In the past six months, the Razr has been the most popular handset on the U.S. market by far, getting a 10% overall market share, according to surveys conducted by Telephia Inc., which tracks data on the wireless industry.

Sprint decided to back two Razr look-alike phones. In late 2005, the company released the Samsung A900, dubbed "The Blade" by some bloggers. In July of this year, the company put out the Sanyo Katana -- named after the Japanese word for "sword." Both had the same sleek flip-phone design of the Motorola device. But now Mr. Forsee has decided to put the Razr in Sprint's stores later this year as well. "Obviously when that brand caught hold, that's something we wanted to pay attention to," Mr. Forsee says.

Sprint shares tumbled in August after the company reported its second-quarter results, including a 38% drop in earnings caused largely by integration costs. The company said its customer-turnover rate, a figure watched closely in the industry, had stayed flat at 2.1%, almost twice the rate of rival Verizon. Sprint also is signing comparatively few of its new customers to annual contracts.

Trying to calm angry investors, Mr. Forsee last month let go of Mr. Lauer, Sprint's chief operating officer, who oversaw merger integration and was responsible for improving subscriber growth and customer retention. Neither Mr. Lauer nor Mr. Donahue responded to requests for comment on Sprint's fortunes.

Mr. Forsee took on Mr. Lauer's responsibilities. He has ordered an image makeover to stress the reliability of Sprint's network -- under the new slogan "Power Up" -- and demanded higher deposits than before from customers who have a higher credit risk. He also is trying to change the way the company is organized, favoring Nextel's old playbook of giving local managers more autonomy to make important sales and marketing decisions quickly. He has vowed to make the new corporate culture "crazy competitive."

Yesterday's departure of Mr. Donahue, 57, may intensify concerns about the company. Many investors say they have more faith in the managers from the Nextel side of the business, because of the strong results their scrappy operation delivered prior to

DOJ_NMG_0079205

the merger. Mr. Donahue joined Nextel in January 1996 as president and chief operating officer, and is well respected among investors and company insiders. Prior to his position at Nextel, he held positions at AT&T Wireless and McCaw Cellular. As Mr. Donahue made his exit, Sprint also disclosed millions of dollars in deals with companies owned by his brother-in-law, Glenn Grella. The company said that the disclosure, which raised eyebrows among industry observers, wasn't related to Mr. Donahue's retirement and his departure was voluntary.

Mr. Forsee says Sprint has made some progress in the merger. It has closed 168 retail stores and slashed one-third of its directors and officers. By year's end, it will have achieved only $1 billion of the $14.5 billion in savings it has promised investors, but he points out most of the savings were expected to come later.

Mr. Forsee also spun off Sprint's local phone division as a new entity called Embarq Corp., bringing the company closer to focusing solely on wireless service. To try to distinguish Sprint Nextel from competitors, he has announced he plans to spend up to $3 billion to build an entirely new network for wireless data and Internet services using a nascent technology called WiMax. It's meant to deliver Internet connections to laptops, cellphones, PDAs, and other consumer-electronics devices at faster speeds than rivals.

Texas Pacific, AXA To Buy 60% Of France's TDF (WSJ)

By Jason Singer

The Wall Street Journal, October 11, 2006

LONDON -- U.S. private-equity firm Texas Pacific Group and one of its investors has clinched a deal to buy a 60% stake in French television and cellphone transmission business TDF SA for about €3.3 billion ($4.16 billion), according to people close to the deal.

TDF, or Telediffusion de France, transmits TV signals and mobile-phone calls across the country for all carriers. It is controlled by U.K. private-equity firm Charterhouse Capital Partners LLP and French state investment firm Caisse des Dépôts & Consignations, which will together retain a 40% stake, these people added. The deal will bring fresh money into the company, which is seeing strong growth from the transfer of analog TV signals to digital service. Television transmissions account for the bulk of TDF's business.

Get alerts for breaking news -- such as Fed moves, major world events and big mergers -- delivered straight to your desktop. Alerts will appear in a small window on your screen, much like an instant-messaging window. See a sample and get more information.2

Television and cellphone towers have attracted interest from financial investors as the business increasingly has been classified as an infrastructure asset that brings steadily growing revenue. The deal will value the company at about €4.8 billion, including TDF's existing debt. Texas Pacific Group is buying the 60% stake with one of its investors, French insurance giant AXA SA. The insurer is buying about a quarter of the stake, with Texas Pacific taking about a 75% share, these people said.

After the deal, Texas Pacific will hold 42% of the company, CDC will hold 24%, AXA Private Equity 18%, Charterhouse Capital 14% and management and employees 2%. A Texas Pacific spokesman declined to comment. Representatives for TDF, Charterhouse, CDC and Axa Private Equity couldn't be reached.

Dot-Com Boom Echoed In Deal To Buy YouTube (NYT)

By Andrew Ross Sorkin

The New York Times, October 11, 2006

A profitless Web site started by three 20-somethings after a late-night dinner party is sold for more than a billion dollars, instantly turning dozens of its employees into paper millionaires. It sounds like a tale from the late 1990's dot-com bubble, but it happened yesterday.

Google, the online search behemoth, agreed yesterday to pay $1.65 billion in stock for the Web site that came out of that party — YouTube, the video-sharing phenomenon that is the darling of an Internet resurgence known as Web 2.0.

YouTube had been coveted by virtually every big media and technology company, as they seek to tap into a generation of consumers who are viewing 100 million short videos on the site every day. Google is expected to try to make money from YouTube by integrating the site with its search technology and search-based advertising program.

But the purchase price has also invited comparisons to the mind-boggling valuations that were once given to dozens of Silicon Valley companies a decade ago. Like YouTube, those companies were once the Next Big Thing, but some soon folded.

Google, with a market value of $132 billion, can clearly afford to take a gamble with YouTube, but the question remains: How to put a price tag on an unproven business?

"If you believe it's the future of television, it's clearly worth $1.6 billion," Steven A. Ballmer, Microsoft's chief executive, said of YouTube. "If you believe something else, you could write down maybe it's not worth much at all."

DOJ_NMG_0079206

In a conference call to announce the transaction yesterday, there were eerie echoes of the late 1990's boom time. There was no mention of what measures Google used to arrive at the price it agreed to pay. At one point, Google's vice president, David Drummond, gave a cryptic explanation: "We modeled this on a more or less synergistic kind of model. You can imagine this would be hard to do on a stand-alone basis."

The price tag Google paid may simply have been the cost of beating its rivals — Yahoo, Viacom and the News Corporation — to take control of the most sought-after Web site of the moment. It was also perhaps the only price that two YouTube founders, Chad Hurley, 29, and Steven Chen, 28, and their big venture capital backer, Sequoia Capital Partners, were willing to accept, given that they most likely could have continued as an independent company. A third YouTube founder, Jawed Karim, left the company to pursue an advanced degree at Stanford.

The deal came together in a matter of days. After rebuffing a series of other overtures, YouTube's founders decided to have lunch on Wednesday with Google's co-founder, Larry Page, and its chief executive, Eric E. Schmidt. The idea of a deal had been broached a few days earlier. The setting was classic Silicon Valley start-up: a booth at Denny's near YouTube's headquarters in San Bruno, Calif. The Google executives threw out an offer of $1.6 billion and autonomy to continue running the business.

That set off a marathon of meetings and conference calls over the next two days, which kicked into even higher gear on Friday, when news of the talks began to circulate, putting pressure on Google to sign a deal before a rival bid emerged. In fact, the News Corporation sent a letter to YouTube seeking to start talks but never received a response.

"The Google-YouTube deal has to feel a little like the 1990's, but it isn't," said Dmitry Shapiro, chief executive of Veoh, a YouTube competitor that is backed by Time Warner and Michael D. Eisner, the former chairman of Disney. Arguing that online video represents an entirely new medium, he said, "If you knew then what you know now and you had the chance to acquire Amazon or eBay — which weren't making any money either — you would have bought them."

Of course, YouTube has also been compared to Napster, whose music-sharing service was eventually shuttered after a series of lawsuits. While YouTube has made some deals with content providers, including one yesterday with CBS, its users have uploaded millions of copyrighted clips, leading some to question whether Google is inheriting a legal minefield. YouTube has said it is different from the old Napster service because it removes content when a copyright holder complains.

"There are some issues with YouTube," Sumner M. Redstone, chairman of Viacom, said last week on "The Charlie Rose Show." "They use other people's products," he said, alluding to pirated video. "The only way they avoid litigation now is they stop doing it if you call them."

Mark Cuban, who founded Broadcast.com, an early audio and video site that was bought by Yahoo, is even more skeptical of Google's legal position, writing on his blog: "I still think Google lawyers will be a busy, busy bunch. I don't think you can sue Google into oblivion, but as others have mentioned, if Google gets nailed one single time for copyright violation, there are going to be more shareholder lawsuits than Doan's has pills to go with the pile-on copyright suits that follow."

Yet the deal with Google was announced hours after YouTube disclosed deals with entertainment companies that appeared to reduce the risk that it would become mired in copyright disputes.

YouTube is Google's first big acquisition after making a series of much smaller deals for companies, including Pyra Labs, creator of Blogger. Google now joins the Internet's establishment — Yahoo, eBay and Amazon.com, among others — which have all made giant acquisitions to expand their businesses beyond their traditional trade.

But those companies have had mixed results. Yahoo paid $3.6 billion in 1999 for Geocities, a company that allowed users to create their own Web sites; today, MySpace, a social networking site bought by Rupert Murdoch's News Corporation last year for only $580 million, far eclipses it. EBay, on the other hand, acquired PayPal, a rapidly growing start-up that lets people make payments via e-mail, for $1.5 billion in 2002. It now represents more than a third of eBay's revenue.

Rather than pursuing big acquisitions, Google has been known for plowing money into research and development, spending $483.98 million last year, an increase of more than 114 percent over the previous year.

The success of the YouTube acquisition will probably lie in embedding video advertising into the clips that millions of people watch everyday from their computers. So far, YouTube's management has been reluctant to include advertising within clips, for fear of alienating users.

Yesterday, however, Mr. Hurley, one of YouTube's founders, appeared more open to experimenting, saying that he was even considering testing what's known as a pre-roll — a 15-second ad before a clip — something he had long derided as potentially ruining the user experience.

While more marketers have been eager to advertise against online video, some big consumer companies have been reluctant to fully embrace advertising against user-generated content because it is difficult to differentiate good content from offensive material. YouTube has created an assortment of tools for users and content creators to police its site.

DOJ_NMG_0079207

YouTube said it had struck accords to license content from two of the four major music conglomerates — the Universal Music Group and Sony BMG Music Entertainment — and the CBS television network in exchange for a percentage of YouTube's advertising revenue.

YouTube is also expected to use new technology to identify copyrighted material that users have uploaded to the site without permission, and to share ad revenue with media companies that own the video or music content. (YouTube made a similar pact with the Warner Music Group last month, and had a previous advertising deal with NBC in June).

The deals reflect how media companies are rethinking the distribution of their entertainment content online.

The deal with Universal, the world's biggest music corporation, drew particular attention because the company had said it was contemplating a lawsuit against YouTube over copyright issues.

Phil Leigh, the president of Inside Digital Media, said the new arrangements represented "a strong endorsement that the major media companies are going to see YouTube as a legitimate business partner."

Mr. Leigh said that also suggested a rethinking of the approach the companies took to Napster. "It shows that very important, erstwhile reluctant media companies have got religion," he said.

The YouTube alliances also came the same day that Google announced separate deals to license music videos from Sony BMG and Warner.

Under the terms of the deal, YouTube, which has about 60 employees, will retain much of its identity and will keep its name and its office in San Bruno, more than 25 miles from Google's headquarters in Mountain View.

The transaction was announced after the stock market closed. Earlier, Google shares rose 2 percent, to $429, after DealBook, a Web log published by nytimes.com, reported that a deal would be announced at the end of the market day.

Benjamin Schachter, a UBS analyst, wrote in a note to investors. "The price tag of about $1.6 billion is difficult to justify on a spreadsheet and may be somewhat of a throwback to the days of paying for eyeballs and page views, but this is a strategic bet that Google would be placing for a long-term objective: to be the technology and distribution partner for content owners and publishers."

YouTubers Ponder Google (WP)

By Sara Kehaulani Goo

The Washington Post, October 11, 2006

On YouTube, where members are encouraged to express themselves through amateur video, it took only a few hours before they started chiming in on Google's $1.65 billion acquisition of the popular online video site.

Dozens of YouTubers turned their cameras on themselves to share their opinions on the sale, while thousands responded to a video posted yesterday by YouTube founders Chad Hurley and Steve Chen.

The reaction was mixed and displayed a range of emotions, from outrage and accusations that YouTube had sold out to corporate interests to admiration and optimism that Google will improve it.

From his bedroom in Britain, 15-year-old Clive Newstead appeared with his long brown hair hanging in his face, proclaiming that the deal is bad news for video amateurs like him.

"It just wouldn't be quite right. There are people fearing Web sites like Google have way too much influence over the Internet," Newstead said in his video, posted under the screen name "nuodai." He enjoys watching TV shows and movie clips on YouTube and fears that they will go away, he said. "Its good to watch stuff that's been on TV that you can't find anywhere else."

Joel McDonald, 22, of Virginia Beach disagreed, reasoning that Google is a good company that won't mess too much with YouTube. "Google's great at anything they do," McDonald said into the camera at his home. "Google would do a great job at managing YouTube. It would be wonderful and the features would be better."

How things will change has yet to be seen, though Hurley and Chen -- in a video that was recorded outside what appeared to be a T.G.I. Friday's restaurant -- said they were committed to developing a site that remains fun for its users.

"The most compelling part of this is being able to really concentrate on features and functionality for the community," Chen said.

But, in true YouTube fashion, the two founders -- overnight millionaires from a technology deal reminiscent of the late 1990s -- quickly turned silly as they poked fun at a recently posted video featuring hip-hip mogul Sean "Diddy" Combs inside a Burger King restaurant.

"Two kings have gotten together: The king of search and the king of video. We're going to have it our way, salt and pepper," Hurley says, mocking Combs.

Chen walks away from the camera, doubled over, laughing.

"You can't do that. Cut," Hurley says just before the video ends.

DOJ_NMG_0079208

Hurley, 29, and Chen, 26, are likely to make tens of millions of dollars by selling their company, which is just over a year old, to Google in an all-stock deal. Sequoia Capital LLC, the sole venture firm to invest in YouTube, is reported to have made $495 million from its $11.5 million investment in YouTube.

Hurley and Chen will stay with the company, Google said.

How the site will change under Google is unclear. Google executives said Monday that they planned to keep YouTube a separate Web site that would run independently of Google and its own video site, Google Video.

Google and YouTube offered vague descriptions of how they might work together to improve features for users and opportunities for advertisers.

When asked whether YouTube would continue to ban "pre-roll" advertisements that viewers are forced to watch before viewing the video they have selected, Hurley said YouTube was "going to be exploring a lot of options."

That prompted some YouTubers to predict that the site will have a more corporate feel in the coming months. After MySpace.com, the social networking site made popular by teenagers, was sold to Rupert Murdoch's News Corp. last year, some members of that site complained that it was becoming overrun with ads.

A member indentified as "crashomatic" wrote: "i think we are going to have to watch commercials after every 3 video clips or something, but hey its great -- for the guys who started this whole thing."

Another member, with the screen name "redstripedthinker," warned: "do not let youtube get TOO commercialized like myspace. The audience knows when they're being sold to . . ."

In buying YouTube, Google gains a huge social networking community on the Web, something it has been eager to develop without much success. Google's equivalent of MySpace.com, Orkut, is hugely popular in Brazil but not in the United States. Google Video gets about one-fourth the Web traffic as YouTube.

Jennifer Simpson, an analyst with the Yankee Group research firm, said Google should maintain the YouTube community and let its unique culture flourish.

"The younger audience who traditionally have been attracted to social-networking sites will always be fickle and will switch their allegiances to whatever site fits their needs," Simpson said.

A few members made it clear that they would leave the site if there are too many changes. A member who uses the name "peterhk69" wrote: "I see only a few things in the coming months -- more ads, more fees and less fun. Half of us will look for a new place."

Yahoo Feels Breath On Neck (NYT)

By Saul Hansell

The New York Times, October 11, 2006

As Google whips out its fat wallet to buy the video site YouTube, it is making Yahoo look even more out of step with the fast-changing Internet advertising market.

Yahoo itself tried to buy YouTube just a few weeks ago and got as close as negotiating price and terms, according to an executive briefed on the discussions. But the talks broke down, and Google swooped in and closed the deal quickly, just as it has in several recent partnership negotiations. Indeed, many Internet executives are noting just how often Yahoo appears to be late and slow, both in its own business and in negotiations with other companies.

Yahoo would seem to have a strong hand. It is the world's most popular Web site, with more than 400 million monthly users and a major seller of advertising for its own and other sites. It has top Web properties in areas like e-mail messaging and music. And its management team, led by Terry S. Semel, a former Hollywood executive, is well regarded for its skill and financial rigor.

But in recent months the company has suffered some embarrassing setbacks in its sales of both display and Web search advertising. Many advertising industry executives say Yahoo's lead in working with big marketers has eroded as other companies have built up popular Web sites, sales operations and advertising technology.

"Yahoo has lost the favor it enjoyed a year or two ago," said David Cohen, a senior vice president of Universal McCann, a media buying agency of the Interpublic Group. He said his clients were reducing the share of their budgets they allocate to Yahoo in favor of newer sites, like MySpace, and sites developed by big media companies like Viacom.

"There are more players in town, and the others are closing the gap relative to the things Yahoo is good at," Mr. Cohen said.

But the problems at Yahoo go beyond advertising. From video programming to social networking — areas of interest to users and advertisers alike — the company is losing its initiative. And each time a product fails in the market or is late, Yahoo loses some ability to do more deals and hire more talented employees. The shares are down 38 percent this year, sending some employees out the door in search of better shots at stock market wealth.

DOJ_NMG_0079209

Google, in the meantime, is taking advantage of Yahoo's problems to cement crucial deals that could make its rival's recovery even more difficult. Before Google agreed to buy YouTube for $1.65 billion in stock, it paid $1 billion for 5 percent of AOL, locking in the right to sell text ads that appear next to its search results. And it agreed to pay $900 million over three and a half years to sell ads on MySpace.com, giving it a huge number of pages where it can place banner ads. (Yahoo flirted with AOL and bid actively for MySpace.)

With these and other deals, Google has neutralized Yahoo's big competitive advantage on Madison Avenue: its ability to sell the full range of advertising, from splashy video campaigns to text ads on search results.

Joanna Stevens, a spokeswoman for Yahoo, said that no Yahoo executive would comment for this article.

"We feel our business is very strong, even if we are not growing at the rates at which the financial community is expecting us to," Ms. Stevens said. "Of course growth will slow when you already reach one out of two people on the Internet." She said that Yahoo frequently discusses business arrangements with other Internet companies, but declined to discuss any potential negotiations with YouTube.

Yahoo has been stymied because its text advertising business has been largely frozen until it completes a new software system. The upgrade is more than a year late and the delay has sucked up the company's engineering resources and prevented it from developing new advertising products. Yahoo's system produces much less money from every page than Google, a handicap in bidding for advertising deals.

Moreover, Google has grown so much wealthier and has so much more stock market value, it can afford to make deals that would be much more risky for Yahoo, said Jordan Rohan, an analyst for RBC Capital Markets.

Google has $11 billion in cash and a market value of $131 billion, while Yahoo has $4 billion in cash and is worth $34 billion. "In poker terms, Google is the dominating chip stack," Mr. Rohan said.

Some analysts argue that Yahoo needs some bold moves to signal to investors, advertisers and customers its commitment to innovation. Its growth in users is slowing. The United States audience grew just 6.5 percent in September from a year earlier, to 106 million unique visitors, while Google's grew 25 percent.

Yahoo has made several overtures to buy Facebook, a social networking site popular among college students. This would help compensate for the failure of Yahoo's own social network — Yahoo 360 — to find a place in the market. It could also expand Yahoo's appeal to young people, an area in which it has slipped.

But Mr. Rohan said it would be a mistake to respond to the Google-YouTube deal with a big offer for Facebook. "Facebook is a nice small business," he said. "I would prefer they spend less than $1 billion for it."

The company's stumbles are a puzzle, as Mr. Semel is widely considered to have built a mature and disciplined management team. He led the company out of the collapse of the Internet ad market and built a credible Internet search unit after it became clear that Google was more a rival than a partner. But in this market, what was once admirable discipline may now look like timidity.

Yahoo may well be slipping because of the sheer scope of its ambitions. It competes in news with CNN, in sports with ESPN, in e-mail with Microsoft, in instant messaging with AOL, in social networking with MySpace, and of course in searching with Google. And it does so in dozens of countries.

"It's hard to figure out what they want to be when they grow up, even though they are grown up now," said Tim Hanlon, a senior vice president of Denuo, the media futures consulting arm of the Publicis Groupe. "Are they a content company? Are they a services company? Or are they a portal to other things? You ask three people and you may get three different answers."

Current and former Yahoo employees say the company has been bogged down by bureaucracy and internal squabbling. For example, the media group, which handles video programming, and the search group, which has a system to find videos on the Web, both wanted to offer a service for users to upload their own video clips. The search group won, but the delay allowed YouTube, a start-up, to dominate the market.

"When you become Yahoo's size, you become a little complacent, a little fat and happy," said Youssef H. Squali, an analyst for Jefferies & Company.

Companies that try to do deals with Yahoo also say they find it to be slow, demanding and inconsistent in negotiations. The discussions with YouTube floundered, in part, over Yahoo's demands for assurances over how YouTube would handle copyrighted material, concerns that were not so important to Google, the executive briefed on the negotiations said.

"They can't close a deal," said a top executive of a large media company who said he was frustrated because negotiations over a partnership with Yahoo had bogged down. "They are smart guys, but they are having real problems," said the executive, who declined to be identified because his company has other dealings with Yahoo.

Yahoo's faltering image and plunging stock price may also be hurting its ability to recruit talented people. "A lot of entrepreneurs I talk to would rather work for a hypergrowth technology company than what they consider — and this is funny — a stodgy old Internet company," Mr. Squali said.

DOJ_NMG_0079210

Yahoo's existing employees are grumbling that with the stock price so low, many of their options have become worthless. Some Yahoo veterans have bolted for trendier start-ups. For example, Mike Murphy, a longtime ad salesman, is now the chief revenue officer of Facebook, and Gideon Yu, Yahoo's treasurer, quit last month to become chief financial officer of YouTube.

"They woke up and realized they had an attrition problem," said one executive who quit for a start-up this year.

Yahoo has responded by giving substantial raises to favored executives it wants to keep, according to one current executive who spoke on the condition of anonymity because he did not want to jeopardize the raise he received.

Yahoo has also had trouble developing many new offerings that capitalize on the latest trends on the Web and offer innovative formats for advertisers. Many marketers, for example, have become intrigued by the possibilities of weaving their products into the fabric of social networking sites. Even more, they are sponsoring original Internet content, especially video programs.

Two years ago, Yahoo made an expansion in Hollywood in an attempt to produce new video-focused Web sites, but it later backed off from the plan amid internal bickering.

Perhaps the biggest area of strategic confusion for Yahoo is its advertising network, which sells ads on other sites. Its Yahoo Search Marketing division has been falling further and further behind Google in selling text ads on other search sites. Yahoo lost a major source of attractive search pages when MSN began selling its own ads this year. And the Yahoo Publisher Network, which is meant to sell ads on blogs, news sites and other content pages, has languished. Dow Jones, for example, withdrew The Wall Street Journal and other sites out of the Yahoo network this spring, hiring Seevast, a small New York firm, instead.

Moreover, Yahoo has made few moves to expand its ad network to sell other types of advertisements like banners and video commercials, even though it is a leader in selling such ads on its own site. With a plethora of blogs and Web publishers looking to earn money from their efforts, there is a booming business in selling ads for these sites. AOL has made a major play in this field, buying the leading banner network, Advertising.com, and Lightningcast, a video network.

Google has moved to expand its network from text ads to selling banners and video ads, and the YouTube purchase will no doubt accelerate its push into video. Moreover, Google wants to sell ads in print, radio and soon traditional television as well.

"Google is so much ahead," said Peter Hershberg, a managing partner of Reprise Media, a search advertising agency. "Google is going into new channels like video and Yahoo is still trying to fix their core channel."

MySpace Seeks A Wider Relationship With YouTube Victor, Google (WSJ)

By Julia Angwin

The Wall Street Journal, October 11, 2006

News Corp.'s MySpace.com, rebuffed in its effort to bid for YouTube Inc., is seeking to expand its relationship with the company that snatched the video-sharing Web site away, Google Inc.

Google Chief Executive Eric Schmidt and Advertising Sales Vice President Tim Armstrong are expected to meet this week in Los Angeles with News Corp. executives, including Chairman Rupert Murdoch, to discuss new ways of working together. One possibility is to expand Google's recently signed ad deal with social-networking site MySpace to include video advertising on the Web.

"If we can figure out the ways to work with them or integrate with them, that could be really good for us," said Ross Levinsohn, head of News Corp.'s Fox Interactive Media division, which oversees MySpace. He declined to comment on specifics.

Plans for the meeting come just days after Google struck a $1.65 billion deal to buy YouTube, significantly boosting the search titan's presence in the fast-growing Web-video arena. But the deal poses a potential competitive threat to MySpace, which is a direct competitor with YouTube among Web sites that let users post their own content.

At the same time, though, the fates of the competitors are also intertwined. YouTube gets a substantial share of its audience from MySpace users who link to YouTube videos from their MySpace pages. Google also recently signed an ad agreement with MySpace.

Circumstances of the deal upset executives at News Corp. The media conglomerate had sniffed around YouTube several times in recent months, but never made a firm offer because the start-up's executives said it wasn't for sale, say people familiar with the matter.

On Friday, after the news of Google-YouTube negotiations broke, News Corp. sent a letter to YouTube asking for an opportunity to participate in the sale process, the people said. YouTube didn't respond.

In reaction, News Corp. executives over the weekend discussed cutting off the MySpace links to YouTube, according to a person close to the situation. YouTube says that less than 20% of video views on its site come from MySpace.

DOJ_NMG_0079211

It isn't clear whether News Corp. is still contemplating those threats. But a lot is riding on the outcome of Google's discussion with News Corp. executives this week.

Google and MySpace's recently signed joint advertising deal requires Google to provide a minimum of $900 million in ad revenue to News Corp. over the next few years in return for providing search technology and advertising on MySpace and other News Corp. sites. But the pact doesn't include video advertising. Online video advertising is in such hot demand from advertisers that the ad rates are sometimes higher than on broadcast TV. And as the one of the most popular online video sites, YouTube is poised to be a big beneficiary of the video advertising boom.

Although YouTube doesn't currently run advertising within the videos on its site, it has said it intends to expand the advertising it carries. In a conference call announcing the deal with Google, YouTube co-founder Steve Chen said, "We're going to be exploring a lot of options" in video advertising with Google.

News Corp. has also been trying to figure out how to capitalize on the video-advertising boom for some time. It has beefed up the video components of MySpace and even flirted with the idea of building a competitor to YouTube.

Over the summer, News Corp. held discussions with General Electric Co.'s NBC Universal and Viacom Inc. about building their own video portal, according to people familiar with the situation. But the talks are now dormant, these people say. This month, News Corp. announced it would put video clips from its Fox TV shows up on a MySpace section.

Viacom is currently in talks with YouTube about licensing its video content to YouTube. Viacom already has a video-advertising relationship with Google.

ENVIRONMENT:

No E. Coli In Calif. Lettuce, Company Says (WP/AP)

Associated Press

The Washington Post, October 11, 2006

Lettuce from California that was recalled over E. coli fears tested negative for a sometimes-deadly strain of the bacteria, company officials said yesterday.

Nunes Co. said multiple samples from among the more than 8,500 cartons of recalled green leaf lettuce tested negative for pathogenic E. coli O157:H7. That strain is the one responsible for the E. coli outbreak linked to spinach that killed at least three people and sickened 199 others.

The company ordered the recall after irrigation water tested positive for E. coli. Follow-up testing of water samples determined it did not contain the pathogenic strain of the bacteria.

"We are relieved that all results were negative, and we are confident our product is safe," company president Tom Nunes said in a statement.

The Food and Drug Administration is also testing the company's irrigation water. The results should be available late today or tomorrow.

Nunes is based in California's Salinas Valley, the agricultural region at the center of the contaminated-spinach outbreak.

By Monday, Nunes reported it had tracked down all but 250 cartons of the recalled lettuce.

As part of the investigation into the E. coli outbreak spread through spinach, investigators plan to catch wild boar this week and swab them to collect samples to test for the outbreak strain of E. coli, FDA spokeswoman Julie Zawisza said. Investigators have found "a lot of evidence of wild boar" on several of the farms being searched, Kevin Reilly, a top California food safety official, said yesterday.

Set Guidelines For E. Coli (LAT)

The Los Angeles Times, October 11, 2006

THE SALINAS VALLEY GROWER that recalled 8,500 cartons of lettuce this week did all the right things: The company tested its irrigation water, and when it found E. coli, it took its lettuce off the market even before the tests could show whether it was a dangerous strain. But the current E. coli outbreak, the 20th in a decade, indicates that not all farmers take all the steps they should.

Most farms are more careful than most people realize. They regularly test their soil and irrigation water for E. coli and follow other common safety practices. The companies that buy their produce insist on it, and they require audits to back it up. Growers and markets have a powerful built-in incentive not to poison customers.

But how often do farms perform the tests and follow other safety measures? Does every farm do them, and how much is enough? These questions are difficult to answer — but they shouldn't be. Different buyers sometimes require different practices;

DOJ_NMG_0079212

some farms fail to take all the necessary steps. Government-mandated, uniform protocols could go a long way toward avoiding health-related catastrophes.

As long as farming is done outdoors, there is no way to guarantee against E. coli getting on produce. Although the investigation into another recent case, involving spinach contamination, is not complete, agricultural safety experts suspect that it happened in the field, not at the packaging plant, and that it was not caused by the chance droppings of a bird or other wild animal. It appears to have come up through the roots, indicating that the soil or the irrigation water was compromised.

In addition to testing, common safety practices involve locating fields at a distance from livestock operations in order to avoid contamination from manure. If farms use manure as a fertilizer, it's supposed to be pathogen-free, and even then there's generally a waiting period between fertilizing and planting. But not all farms follow all these practices, or to the same extent. In the spinach contamination case, investigators are examining manure from a cattle pasture next to the field. The strain of E. coli found in the manure is the same as that implicated in the deaths of three people who ate the contaminated spinach.

Each time there is an E. coli breakout, the state and the U.S. Food and Drug Administration demand that the industry clean up its act. The industry asks for precise guidelines on what to do, and it gets no answers. Regulators can start by outlining mandatory, common-sense safety practices to protect both public health and farming's reputation.

Courts Mow Down Development Strategy (USAT)

By Tom Kenworthy, Usa Today

USA Today, October 11, 2006

DENVER — The Bush administration's push for more commercial development on federal land in the West is colliding with the environmental legacy of former president Richard Nixon.

In a half-dozen cases since August, federal courts have slapped down the administration's plans to drill for oil and gas in Utah and Alaska, to allow road-building and logging in federal forests, to ease regulation of livestock grazing on public rangeland and to divert water from a Colorado national park.

The judges in each case said the administration failed to comply with a landmark environmental law overwhelmingly passed by Congress and signed by Nixon in 1970 called the National Environmental Policy Act (NEPA).

The law requires government agencies to study potential environmental consequences of federal projects and to allow citizens to comment on those actions. Agencies must prepare "environmental impact statements" that can run hundreds of pages, or issue less extensive "environmental assessments" on minor projects.

In its nearly 40-year history, the law has had a broad impact on how government agencies decide on everything from constructing highways to logging forests to building dams. The Supreme Court noted in a 1989 case: "Simply by focusing ... attention on the environmental consequences of a proposed project, NEPA ensures that important effects will not be overlooked."

In recent months, the law has been an effective tool for environmentalists seeking to block initiatives that would allow commercial activities on hundreds of millions of acres of public land.

"This administration has taken some very risky positions that disregard (NEPA's) legal requirements, and those risks are now coming home to roost," says Robert Dreher, of Defenders of Wildlife, who wrote a 2005 study of the law at the Georgetown Environmental Law & Policy Institute.

James Connaughton, chairman of the White House's Council of Environmental Quality, which oversees implementing the law, says thousands of environmental reviews are performed each year, and less than 1% are challenged in court. "It's extremely rare that cases are litigated, and even rarer that the government loses," he says. The administration won recent challenges to oil and gas drilling in Alaska and New Mexico.

Some government plans blocked by federal courts since August:

· Rules covering nearly 50 million acres of national forest that could have led to road-building, logging and other development. U.S. Magistrate Elizabeth Laporte in California reinstated a Clinton-era ban on nearly all commercial and development activities on land mostly in the West. That leaves so-called roadless areas open to recreational use like hunting, hiking and horseback riding, but not to drilling and logging that require roads.

· Oil and gas drilling near 400,000 acres of wildlife habitat in northern Alaska. U.S. District Judge James Singleton ruled that the Interior Department's plan to drill in the Teshekpuk Lake area of the National Petroleum Reserve had failed to consider the impact on wildlife, particularly caribou.

· A plan by the Bureau of Land Management to sell oil and gas leases in parts of Utah was stopped by U.S. District Judge Dale Kimball. He ruled the agency did not consider an analysis by the Clinton administration that the undeveloped area was pristine and could qualify as wilderness with federal protection if Congress agreed.

DOJ_NMG_0079213

· Rules for grazing on federal land that would allow ranchers more time to correct environmental damage and give them title to improvements such as fences. U.S. District Judge B. Lynn Winmill said the Bureau of Land Management violated NEPA by limiting public comment and by ignoring evidence the rules could harm the rangeland.

· Commercial logging in California's Giant Sequoia National Monument. U.S. District Judge Charles Breyer said the Forest Service plan "trampled the applicable environmental laws," including NEPA.

The Justice Department could appeal these rulings.

Copper Plant Illegally Burned Hazardous Waste, E.P.A. Says (NYT)

By Ralph Blumenthal

The New York Times, October 11, 2006

HOUSTON, Oct. 10 — A bankrupt copper giant facing billions of dollars in pollution claims across the nation pretended for years to recycle metals while illegally burning hazardous waste in a notorious El Paso smelter, according to a newly released Environmental Protection Agency document.

The agency, in a 1998 internal memorandum, said the company, Asarco, and its Corpus Christi subsidiary, Encycle, had a permit to extract metals from hazardous waste products but used that as a cover to burn the waste until the late 1990's, saving the high costs of proper disposal.

Among the more than 5,000 tons the company was accused of misrepresenting as containing metals for reclamation were more than 300 tons of nonmetallic residues from the former Army chemical warfare depot at the Rocky Mountain Arsenal outside Denver. (It is not clear what the arsenal's material contained.)

"This activity, plain and simple, was illegal treatment and disposal of hazardous waste," the environmental agency said in the memorandum, long held confidential but recently obtained by two El Paso environmental groups opposed to the smelter. "Encycle's own business records provide compelling evidence of sham recycling."

There was no response to messages left for an Asarco spokeswoman at corporate offices in Tucson and for the El Paso plant manager. But a company history states, "Asarco is committed to responsible management of our natural resources."

Asarco was founded as the American Smelting and Refining Company in 1899 and was bought by Mexican interests in 1999. It has long faced complaints of contaminating broad swaths of downtown El Paso and borderland areas of Mexico with lead and other dangerous metals, and it has been the target of federal, state and local complaints involving at least 94 sites in 21 states.

But although the environmental agency reached a landmark national $20 million cleanup and penalty settlement with Asarco in 1999, the details of the violations had never been disclosed. The El Paso plant was shut down in 1999, but the company is now seeking permission to reopen it.

The long-confidential records were obtained from the Texas Commission on Environmental Quality through public information requests by the two citizens groups, the Get the Lead Out Coalition and the Sunland Park Grassroots Environmental Group, which provided copies to The New York Times.

"They were supposed to recycle reusable residues," said Heather McMurray, a teacher who requested the records. "They just burned them."

Ms. McMurray said the disclosure came as news to her and other activists who had been opposing Asarco for years with claims that pollutants released by the plant caused untold sickness.

"How could this not have been made public before?" said State Senator Eliot Shapleigh, Democrat of El Paso, who has long campaigned against the company and tracks developments on his Web site. "I was not aware of it."

Mr. Shapleigh added: "In the American West, the modern trail of tears is the lead and arsenic left behind from Asarco."

Michael D. Goodstein, who as a Justice Department environmental lawyer helped negotiate the 1999 settlement with Asarco, said the E.P.A. memorandum detailing Asarco's violations was for internal use and was not meant to become public.

"This was the E.P.A. position, and it was addressed in the enforcement actions and the settlement approved by the judge," Mr. Goodstein, who is out of the government, said in an interview. Although the 122-page settlement does not spell out misdeeds, it commits Asarco to lengthy remedies, including the proper recycling of hazardous waste.

Terry Clawson, a spokesman for the Texas Commission on Environmental Quality, also said, "You can't say this was unknown."

Mr. Clawson pointed to an E.P.A. news release in 1999 that announced the settlement of federal and state claims against Asarco. But the release, while citing the company for "failing to properly manage hazardous waste and otherwise engaging in unlawful recycling practices" and accepting "shipments of unmanifested hazardous waste," does not say specifically that the company burned the waste under a subterfuge.

DOJ_NMG_0079214

Although the company has filed for Chapter 11 bankruptcy protection, it is also awaiting action from the Texas commission on an application to renew smelting in El Paso, and it still faces a mountain of litigation and enforcement actions. As recently as August, the Justice Department filed a claim under the bankruptcy proceedings to assure Asarco's compliance with terms of the agreed-upon cleanup at Encycle.

At the same time, Mr. Shapleigh said a tabulation showed that legal claims filed against Asarco amounted to more than $21 billion.

Cleaner Diesel Fuel Is Set To Pump (WSJ)

By Mike Spector

The Wall Street Journal, October 11, 2006

Ultralow-Sulfur Formula Could Cut Reliance on Oil; Economy's 'Invisible Force'

Ultralow-sulfur diesel fuel will start hitting U.S. fuel pumps this month, opening the door for auto makers to expand the use of European diesel technology in U.S. cars and light trucks.

The Bush administration and the Natural Resources Defense Council, an environmental group, yesterday hailed the expected arrival Sunday of ultralow-sulfur diesel fuels and the potential for modern diesel engines to use such fuels to help the U.S. reduce its oil consumption. The new diesel contains 97% less sulfur than the old version, officials said, emitting only 15 parts per million of sulfur, compared with 500 parts per million.

Auto makers -- particularly those that have made substantial investments in diesel-engine technology for Europe -- are gearing up to try to take advantage of the arrival of ultralow-sulfur diesel fuel in the U.S., the world's largest single auto market. The exhaust-scrubbing technology that auto makers have developed to attack the soot and other pollutants that tarnished diesel's reputation in the U.S. needs almost sulfur-free fuel to work properly.

Strict State Rules

DaimlerChrysler AG's Mercedes-Benz brand will start selling its diesel-powered E320 Bluetec sedan in 45 states starting next week. The current model bests the stringent federal emissions standard but falls short of the standard in five states. Mercedes says it will offer further Bluetec models that will meet standards in all 50 states as early as 2008.

"Fuel that's cleaner initially, that's the key to getting more diesels on the road and also meeting emissions requirements," said Mercedes spokesman Rob Moran.

Volkswagen AG, currently the top seller of diesel-engine passenger cars in the U.S., plans to offer new diesel models in 2008 that will meet emissions standards in all states. Other auto makers, including Japan's Honda Motor Co. and U.S. market leader General Motors Corp., have recently announced plans to offer clean-running light-vehicle diesels for the U.S. market over the next two to three years.

Under the rollout, 80% of diesel pumped at U.S. retail stations must be the new ultralow-sulfur type. Officials said they expect as much as 90% of new diesel deliveries to be of the new variety. Ultralow-sulfur diesel will be the only diesel fuel allowed beginning in 2010.

"Diesel is the invisible force that moves the American economy, but until now it has also been a big polluter," said Richard Kassel, head of the NRDC's clean fuels and vehicles project. "Combining the new fuel with cleaner and more energy-efficient engines will mean healthier air and reduce our dependence on oil."

Environmental Protection Agency officials also predicted significant long-term health benefits, including $150 billion in annual health-care and welfare-related savings and 20,000 fewer premature deaths each year.

Until now, diesel has primarily powered trucks and buses in the U.S. Diesel trucks move more than 18 million tons of the nation's freight a day, according to the NRDC. About 14 million Americans ride half a million diesel buses to work and school, the group says.

Pollution vs. Mileage

Diesel has historically been viewed as an environmental problem because burning it produces more pollutants than gasoline. But diesel engines get better mileage than gasoline engines.

Now, Americans could see more diesel engines in passenger cars. Researchers at J.D. Power & Associates predict diesel sales will nearly triple in the next 10 years because of the engine's fuel efficiency -- typically 20% to 40% more miles per gallon than gasoline engines.

In Europe, diesel cars account for nearly half of the car market. In the U.S., diesel-powered passenger cars and light trucks are a niche market, despite recent efforts by VW and DaimlerChrysler to reignite interest in their European diesel engines.

Cost is an issue. In North America, diesel engines could add $2,000 to passenger-car prices, and possibly more, said Charles Freese, GM's executive director of diesel engineering. In addition, after-treatment technology to address nitrous oxide and particulate emissions can run thousands of dollars, he said.

DOJ_NMG_0079215

Large markets such as California and New York have tough emissions standards that many auto makers cannot yet meet. That will remain a major hurdle for production of new diesel-engine vehicles. Toyota, for example, doesn't plan any diesel rollouts in the near future because of those strict standards and will instead stick to its well-selling hybrid vehicles, said Wade Hoyt, a spokesman for Toyota Motor Corp. Toyota does sell diesel-powered passenger cars in Europe.

Low-Sulfur Diesel Fuel Is Reaching Market (NYT)

By Felicity Barringer

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — The biggest revolution in highway fuels since lead was removed from gasoline will be nearly complete on Sunday as a vast majority of trucks and buses will be able to fill their tanks with diesel fuel with just 3 percent of the sulfur content in the older fuel.

Like lead, sulfur generates air pollution that leads to severe health consequences. Like lead, it also gums up the works of fine-tuned pollution control devices, making it exceedingly difficult to produce cleaner-burning engines.

So the new fuel will pave the way for new generations of diesel engines that experts say will eventually cut lethal particulate pollution from diesel tailpipes an estimated 95 percent.

On Tuesday, the Bush administration embraced this signal accomplishment as its own, ignoring the origins of the underlying regulation in the 1990's and the fact that it became effective in December 2000, before President Bush took office.

In a news conference in Columbus, Ind., the headquarters of Cummins Engine, a major manufacturer of diesel engines, the environmental protection administrator, Stephen L. Johnson, said, "Under President Bush's leadership, the pumps are primed to deliver clean diesel and a cleaner future for America."

The new fuel contains 15 parts per million of sulfur, down from the standard of 500 parts per million, thanks to changes in the refining process. As of Sunday, at least 80 percent of the diesel available for trucks and buses has to meet the new standard.

Officials of the environmental agency said Tuesday that the changeover was occurring so swiftly that 90 percent of the fuel would be compatible.

Old diesel engines burning the cleaner fuel will reduce dangerous particulate emissions by 10 percent, experts say. New engines with improved controls, which have to be available by Jan. 1, will cut this particulate pollution by more than 95 percent. The rule mandates more improved engines in 2010. It is unclear how soon existing trucks and buses, which often are in use for more than 10 years, will be turned in for newer models.

The new fuel is expected to cost 3 cents to 5 cents more per gallon. Like many regulations that took effect in the twilight of the Clinton administration, the diesel rule, covering fuel and the seven million trucks and buses on the roads, was temporarily stayed by the Bush administration.

Then the Environmental Protection Agency allowed it to proceed and in 2004 supplemented it with a similar rule requiring tight controls on engines in off-road equipment like cranes, tractors and construction equipment.

Leading environmental groups linked arms with industry in a chorus of praise for the new fuel and engines to follow. They emphasized the health benefits and the novel wording of the rule. Unlike earlier regulations, the new rule links the development of the new fuel to developing cleaner-burning engines. Richard Kassel, a senior lawyer and air-pollution specialist with the Natural Resources Defense Counsel, said that when planning for the rule began in 1995, gasoline-powered cars outnumbered diesel-powered trucks and buses by 190 million to 6.7 million.

The diesel vehicles emitted 43 percent of the smog- and particulate-forming nitrogen oxides and more than two-thirds of the soot. Even though the diesel-produced particulates were 3 percent of the total particulate matter in the air, most of which was from industrial sources, Mr. Kassel added, "tailpipe particulates are coming out right where we breathe."

Mr. Johnson said diesel engines had been the workhorses of the economy and the vehicle fleet.

The relatively high sulfur levels in diesel have been a significant obstacle to producing diesel-powered cars that met federal environmental standards.

Several engine and automobile manufacturers have signaled that more high-mileage diesel-fueled cars, a fixture on European highways, may become available.

Allen Schaeffer, executive director of the Diesel Technology Forum, an industry group, said in a conference call Tuesday that the new standard was also significant because it "opens up the door of possibility" to a new generation of light-duty diesel cars and trucks in the United States in the near future.

The environmental agency estimates that when the current truck and bus fleets have been replaced and all are using the heavy-diesel engines that will become standard-issue next year, the new rule will prevent 8,300 premature deaths annually.

In the Clinton and Bush administrations, the development and roll-out of the diesel rule for trucks and buses has been notable for the cooperation among industry, the government and environmental groups, officials of the three groups have said.

DOJ_NMG_0079216

Margo T. Oge, director of the office of mobile sources in the agency's air division, said Tuesday that the speed with which the new fuel became available had exceeded the agency's expectations.

Carol M. Browner, the administrator who signed the original rule, bristled on Tuesday at the Bush administration's proprietary attitude.

"The best they can do in environmental policy," Ms. Browner asked, "is take credit for someone else's work?"

Biologist Bushwhacks His Way To Court (LAT)

By Bob Pool, Times Staff Writer

The Los Angeles Times, October 11, 2006

He has spent decades working to protect Los Angeles' endangered Ballona Wetlands.

But did environmentalist Roy van de Hoek go too far when he took his pruning shears to a nonnative tree and plants in the Westside nature preserve?

Los Angeles prosecutors say yes. They have filed six vandalism counts against Van de Hoek, alleging that he entered the wetlands without permission and destroyed city parks property when he cut down the invasive plants. If convicted, he could face six years in prison and fines of up to $15,000.

Conservationists who support the veteran ecologist disagree. They assert that the prosecution is simply payback from those who for years have felt the sting of Van de Hoek's activism. The case, they suggest, is designed to scare away others from actively harvesting invasive plants from local nature preserves.

Van de Hoek has not denied cutting the plants. Characterizing the eradication work as a continuation of his years of plant removal in the wetlands, he said he intends to plead not guilty to the charges Thursday in Los Angeles Superior Court. But for now, he has been banned from leading tours and doing rehabilitation work at the wetlands, where Ballona Creek meets the ocean south of Marina del Rey.

"My entire life has been dedicated to conservation, preservation and restoration of endangered species and wild lands," said Van de Hoek, 50, of Playa del Rey.

The proliferation of such vegetation in ecologically sensitive areas has become a major issue with conservationists, who worry that it squeezes out native plants. Though the trend in landscaping has been toward planting native foliage, even natural areas such as the Ballona Wetlands still have many nonnative plants that have taken root over the years, from seeds carried by birds and the wind.

The Friends of Ballona Wetlands, which has assumed a major role in the restoration of the onetime marshy area, has condemned what it calls "its continuing deterioration because of nonnative plant invasions."

The dispute illustrates the deep passions that continue to surround the 600-acre preserve despite what seemed three years ago to be a peaceful conclusion to an emotional 20-year campaign to save the wetlands.

The state agreed in 2003 to spend $140 million to purchase acreage in the wetlands from the developers of Playa Vista. As part of the deal, builders of the residential project scaled back their plans and donated hundreds of additional acres as open space.

But relations have remained strained among some of the nearly two dozen groups that have environmentalist-sounding "Ballona Wetlands" names. Some of the organizations favored a total ban on development to preserve all open space as part of the wetlands. Others preferred fostering a working relationship with developers that would focus preservation on the wettest parts of the land.

That has led to some groups being branded "radical extremists" and others "sellouts."

The misdemeanor criminal complaints were issued by Los Angeles City Atty. Rocky Delgadillo. They allege that Van de Hoek took shears to a pair of city-owned myoporum shrubs without authorization in August 2005 and to a city-owned ficus tree in March.

The charges are not the first for Van de Hoek, a trained biologist who has worked for the federal and local governments. Nine years ago he was convicted of misdemeanor vandalism for cutting down nonnative eucalyptus trees at the federally owned Carrizo Plain National Monument in Central California. He was sentenced to community service: removing nonnative plants from state parkland near Morro Bay.

As his arraignment approaches, the current case remains murkier than the brackish freshwater-saltwater mix that all hope will someday rejuvenate the Ballona Wetlands.

Van de Hoek's supporters insist that the city's parks department has no jurisdiction over the land where the myoporums were allegedly cut because it is owned by the state's Department of Fish and Game.

That agency has issued permits to two environmental groups to weed out invasive vegetation from wetland areas — something that would have covered Van de Hoek if he did remove any shrubs.

DOJ_NMG_0079217

Some suggest that the prosecution is political in nature, a reward to Playa Vista developers who have contributed to Delgadillo and whose project has been a target of Van de Hoek's activism over the years.

Playa Vista President Steve Soboroff scoffs at that notion.

"I donated to Rocky Delgadillo's campaign for attorney general," he said. "But I also donated to Jerry Brown. Playa Vista supported them both."

Soboroff said no one from the 5,846-unit Playa Vista project pushed for Van de Hoek's prosecution.

Nick Velasquez, a spokesman for Delgadillo, also denied that the plant-cutting case was rooted in politics.

Celebrity lawyer Thomas A. Mesereau Jr., who said he is representing Van de Hoek at a discounted fee, strongly disagrees. He complained that Delgadillo's office issued a news release touting the charges, followed by a city-produced "news report" on the city-run cable TV channel.

"It has to be political," Mesereau said. "Why in the world in a city as crime-ridden as Los Angeles, where the city attorney repeatedly talks of stopping gang violence, would something like this occur?"

The television segment riled Van de Hoek's supporters. It depicted a Ballona Wetlands expert condemning what was described as "the ugly shadow of vandalism." But it failed to identify the person as a former Playa Vista consultant, said Marcia Hanscom, a fellow activist who heads the Wetlands Action Network and is Van de Hoek's fiancee.

Others complain that Delgadillo's press statement inaccurately listed the state Department of Fish and Game as an agency that helped conduct a "thorough investigation" that led to Van de Hoek's prosecution.

"To my knowledge, there has been no communication between the city attorney and Fish and Game," said Brad Henderson, who is in charge of the Ballona Wetlands for the agency.

Henderson said officials don't condone plant eradication by rogue do-gooders. However, he did describe Van de Hoek as a "knowledgeable naturalist."

Invasive weeds are considered "one of the top threats to native biodiversity" and something he is seeking additional state money to combat, Henderson said.

Thin, intense and earnest-looking, Van de Hoek is a familiar presence in wetlands and coastal areas.

On sunny days he's often clad in shorts and a floppy straw hat as he makes his way across grasslands and sandy hillocks.

Those who support the city's prosecution say witnesses from the Department of Sanitation had no difficulty recognizing Van de Hoek cutting the shrubs during daylight hours. A nearby resident reportedly saw him cut the ficus, on city parkland at the edge of the wetlands, in predawn hours.

As for Van de Hoek, he said fast-growing nonnatives kill native plants by crowding them out. But he predicted that his own brush with the law won't smother environmentalists' weed-out-the-invaders campaign.

"It may encourage other people to stand up," he said.

bob.pool@latimes.com

Firm Must Pay Asbestos Costs (LAT)

By Sam Howe Verhovek, Times Staff Writer

The Los Angeles Times, October 11, 2006

The high court upholds the EPA's claim that W.R. Grace must clean up a Montana mine site.

SEATTLE — The Supreme Court on Tuesday let stand lower court rulings that require W.R. Grace & Co. to pay a $54.5-million federal bill for asbestos cleanup in a Montana mining town described by federal regulators as one of the nation's most contaminated Superfund sites.

The court rejected Grace's appeal of a decision in favor of the Environmental Protection Agency, which sued Grace five years ago to recover the cleanup costs at a vermiculite mine in the town of Libby.

The government is also pursuing a criminal case involving several former executives or managers of the mining company for allegedly concealing health risks at the mine.

That trial will not begin until next year at the earliest.

The asbestos-laden vermiculite, laced into the mountains around Libby, was used as insulation in hundreds of thousands of homes and office buildings.

The mine, which opened in 1939 and was purchased by Grace in 1963, once produced about 80% of the world's supply of the mineral.

Grace operated the mine until 1992, unleashing what the U.S. attorney for Montana, William W. Mercer, described as a "human and environmental tragedy" in the town.

Nearly two-thirds of employees with more than 10 years of service tested positive for lung ailments, according to accompany memorandum written in 1976 by one of the indicted men.

DOJ_NMG_0079218

The cleanup of the town continues, and some residents said the matter would wind up in court again because the ultimate cost of remediation would be much higher than the $54.5 million at issue in the case decided Tuesday.

"It's a small step, really, but it's another step forward," Gayla Benefield, a former bartender and a leader of Grace critics in Libby, said of the court's action. She and her husband have been diagnosed with asbestosis, and her parents died from it.

In its appeals, the company argued that the EPA's efforts in Libby amounted to a long-term rehabilitation of the area, rather than an emergency cleanup.

Under the law, toxic polluters can be forced to repay the EPA the full cost of cleaning up hazardous substances that pose an immediate risk to the public but face more limited charges for such long-term "remediation" of the area.

Grace argued that much of the agency's work was indeed remedial, but the federal courts disagreed and sided with the EPA, which contented that the public health crisis required ongoing action.

"The situation confronting the EPA in Libby is truly extraordinary," the U.S. 9th Circuit Court of Appeals said in December.

About 12,000 residents of Libby and nearby communities "face ongoing, pervasive exposure to asbestos particles being released through documented exposure pathways. We cannot escape the fact that people are sick and dying as a result of this continuing exposure."

For that reason the appeals court, based in San Francisco, upheld a judge's order requiring Grace to repay the EPA's cost for the emergency cleanup.

The EPA "is committed to making polluters pay, and today's decision allows us to continue holding W.R. Grace responsible for cleanup of the contamination in Libby," said Jessica Emond, a spokeswoman for the agency.

During its cleanup over the last several years, the EPA has used vacuum trucks and other equipment to remove vermiculate-laced soil.

Grace, which filed for bankruptcy protection in 2001 under the weight of thousands of asbestos-related claims across the nation, said it has spent millionsof dollars in Libby to help residents address health issues.

An EPA toxicologist once said people in the Libby area had experienced "the most severe residential exposure to a hazardous material this country has ever seen."

The criminal case, tied up in part over legal arguments about admissible evidence, centers on the question of whether company officials knowingly failed to warn workers of the dangers of prolonged exposure to vermiculite.

The 2005 indictments said the officials were criminally negligent, a contention Grace denied. "Though court rules prohibit us from commenting on the merits of the government's charges," the company said in a statement at the time, "we look forward to setting the record straight in a court of law."

W.R. Grace Must Pay EPA Cleanup Bill (BSUN)

By Allison Connolly, Sun Reporter

The Baltimore Sun, October 11, 2006

Having exhausted its appeals, W.R. Grace & Co. must pay $54.5 million to clean up land and buildings around its former Montana mine that has been linked to hundreds of illnesses and deaths from asbestos-related diseases.

The Supreme Court declined yesterday to consider Grace's appeal of lower-court decisions that sided with the Environmental Protection Agency. The EPA sued Grace in 2001 to recover cleanup costs related to the mine in Libby, Mont., which Grace and its predecessors operated between the 1920s and 1990.

The EPA's costs include cleaning or demolishing contaminated buildings, removing contaminated soil, and providing health screening for Libby residents and former mine workers.

Grace will pay the government with reserve funds the company has set aside, said Greg Euston, a spokesman for the Columbia company. The payment should have no bearing on the company's bankruptcy status or its reorganization plan, he said.

The specialty chemicals company filed for Chapter 11 bankruptcy protection in 2001 in response to a rising number of asbestos-related claims.

As of June 30, Grace estimated its environmental liabilities associated with the Libby mine - including the $54.5 million owed to the EPA - at $255.4 million, according to a filing with the Securities and Exchange Commission.

That price tag will likely grow, the company said, because it does not include the cost of cleaning up the mine itself.

The EPA began investigating reports of health problems among Libby residents and former mine workers in 1999. The government estimates 1,200 of 8,000 local residents have died or become sick from exposure to asbestos-laden dust. The vermiculite mined there also was used in insulation in residents' homes and public buildings.

DOJ_NMG_0079219

Criminal charges Grace and seven current and former executives face criminal charges of covering up the extent of the contamination. Their federal trial was supposed to start last month but was delayed until late next year at the earliest, after prosecutors appealed several pretrial rulings.

Grace doesn't dispute it has a financial obligation to clean up the contamination. However, the company challenged the EPA's method of calculating the cost. Grace argued that those costs are capped at $2 million unless an analysis is conducted before the cleanup starts to ensure it is done cost effectively.

The 9th U.S. Circuit Court of Appeals sided with the EPA, and wrote in its Dec. 1, 2005 decision that an "immediate, aggressive response" was necessary and exempt from any cap.

'Extraordinary' "The situation confronting the EPA in Libby is truly extraordinary," wrote Judge M. Margaret McKeown. "We cannot escape the fact that people are sick and dying as a result of this continuing exposure."

In August, Solicitor General Paul D. Clement issued a statement endorsing the appeals court's decision and urging the Supreme Court not to hear the case. The EPA referred calls yesterday to the Justice Department, which did not respond to a request for comment.

Grace stock closed up 5 cents yesterday at $12.70.

High Court Rejects Cleanup Costs Case (AP)

By Associated Press

AP, October 11, 2006

WASHINGTON – W.R. Grace & Co. lost its bid to the Supreme Court Tuesday to get out from under a $54 million bill to clean up asbestos in the Montana mining town of Libby.

Justices rejected without comment Grace's appeal of rulings that said the company was responsible for the entire cost of removing asbestos-contaminated soil in Libby.

The case pits Grace, which operated a vermiculite mine in Libby for 27 years, against the Environmental Protection Agency, which oversees the Superfund program for the nation's worst hazardous waste sites.

Grace argued in court papers that the EPA had no authority to hand the company the entire cleanup bill, as well as responsibility for future costs. The 9th Circuit U.S. Court of Appeals and a federal district judge sided with EPA, which sued Grace in 2001 to recover cleanup costs.

Grace said others appeals courts have ruled that companies can't be forced to pay the entire cost of cleaning a polluted site without being allowed to challenge whether the cleanup was necessary.

Abortion case reversal

The Supreme Court turned aside the case of Sandra Cano, one of the women behind the legalization of abortion, who had sought to reverse the victory she won 33 years ago.

Cano says she never wanted an abortion and that her difficult early life resulted in her becoming the anonymous plaintiff in Doe v. Bolton, the lesser-known case which the justices ruled on the same day in 1973 as the landmark Roe v. Wade.

Cano said an aggressive attorney pushed her into the abortion case.

Her current lawyers' legal brief says that despite advances in medicine, science and technology, the justices have "frozen abortion law based on obsolete 1973 assumptions and prevented the normal regulation of the practice of medicine."

The 11th U.S. Circuit Court of Appeals ruled in January that neither it nor a U.S. District Court had the authority to reverse the Supreme Court's decisions in Doe v. Bolton or Roe v. Wade.

Do-not-call challenge

A political polling firm lost a Supreme Court challenge to a North Dakota law that bars telemarketers from making prerecorded interstate calls to the state's residents.

The North Dakota "do-not-call" law says callers cannot use robo-call machines unless a live operator obtains the subscriber's consent before a prerecorded message is delivered.

The Virginia-based political polling firm, FreeEats.com, argued that the North Dakota law is preempted by the federal Telephone Consumer Protection Act, which allows prerecorded non-commercial calls. Justices declined to review a state Supreme Court ruling upholding the law.

Same-sex marriage fight

The Supreme Court refused to intervene in a legal fight over same-sex marriage, declining an appeal from a gay California couple who were denied a license to wed.

DOJ_NMG_0079220

The justices declined without comment to take the case of Arthur Smelt and Christopher Hammer of Mission Viejo, Calif. The men had sought a marriage license in southern California's Orange County in 2004 and, after they were turned down, filed a federal lawsuit that challenged federal and state laws against same-sex marriage.

A U.S. District judge said the federal Defense of Marriage Act was constitutional but declined to rule on the state ban because a separate legal challenge is making its way through California state courts.

Illegal immigration

Judges and prosecutors make mistakes, a Justice Department lawyer told the Supreme Court, but sometimes those errors are so minor that they don't warrant reversing a conviction in a criminal case.

A jury convicted Juan Resendiz-Ponce of attempting to enter the United States illegally from Mexico. But the 9th Circuit U.S. Court of Appeals overturned Resendiz-Ponce's conviction because his indictment by a grand jury did not set out any specific acts showing how he tried to enter the United States.

The omission was so serious that it required automatic reversal of the conviction, the appellate court said.

Deputy Solicitor General Michael Dreeben told justices Tuesday, however, that Resendiz-Ponce received a fair trial at which the government proved that he had displayed two false pieces of identification in an effort to enter the country. Resendiz-Ponce presented his cousin's green card and driver's license when he approached the border crossing at San Luis, Ariz., on June 1, 2003.

Dreeben conceded that prosecutors should have included more information in the indictment and, when they didn't, the trial judge should have dismissed the charge before the trial began. Even so, he said, the conviction should stand.

Congress Acts To Clean Up The Ocean (CSM)

By Mark Clayton

The Christian Science Monitor, October 11, 2006

A biologically rich coral island chain in the Pacific Ocean northwest of Hawaii, which President Bush designated as a marine national monument, is under assault from floating garbage ranging from plastic bottlecaps to baby diapers.

Hailed by environmentalists as one of the president's most enduring contributions to the environment, the Montana-sized monument includes uninhabited islands home to some 7,000 marine species, at least a quarter of which are found nowhere else on earth.

But the new national monument also resides on the edge what marine scientists call the great "eastern garbage patch": a section of slowly rotating Pacific Ocean currents - or gyre - double the size of Texas that acts as a giant garbage collector.

Sitting between Hawaii and northern California, the patch's sluggish currents wash onto the Northwestern Hawaiian Islands Marine National Monument. That 1,200-mile-long island chain north of Kauai acts as the teeth of a giant comb, straining onto its otherwise pristine beaches and coral reefs floating trash, such as syringes, bags, six-pack rings, and tons of fishing nets and other gear.

Concern about the problem has risen to such a level that Congress has acted on it. On Sept. 27 the House passed a bill that would give a lift to struggling ad-hoc efforts to clear debris from the Northwestern Hawaiian Islands. Their move follows the Senate's approval of the legislation last year. Observers are optimistic that the bill will be finalized, and Mr. Bush will sign it into law after the November election.

It would not be a moment too soon, experts say. About 3 million tons of the trash floating in the garbage patch is plastic, estimates Charles Moore, founder of the Algalita Marine Research Foundation in Long Beach, Ca., who has traversed the gyre on research expeditions.

Samples he collected in a recent study showed that there were more tiny bits of plastic by weight than there were plankton per cubic meter of sea water.

"It's a toilet that never flushes, but just keeps accumulating," he says of the patch. "If you're an organism in this area you have six times as much chance of bumping into something plastic as you do something natural."

Globally, millions of tons of trash enter the ocean each year. Between 60 and 80 percent of it is land-based, washing into streams and rivers and finally the ocean from landfills, storm water discharges, litter, and sewage overflows.

The rest is from ocean-based operations, including fishing gear, junk from oil and offshore mineral exploration, illegal offshore dumping, and shipping containers washed overboard.

A container of thousands of plastic yellow toy ducks bound from China to the US was lost in the Pacific Ocean in 1992, but made news in 2003 when the ducks began washing up in Europe. Examples of trash slopping onto US beaches have included Nike running shoes, Lego building blocks, umbrella handles, and hockey gloves, experts say.

DOJ_NMG_0079221

Old "ghost" fishing nets adrift in the sea and smaller plastic objects are special hazards for marine birds and mammals because birds tend to gobble colored plastic until they die. These hazards can have lasting effects on the monument since many species call the region home.

"Marine debris has a tremendous impact on the monument because of what's there in terms of wildlife," says Seba Sheavly, coordinator of the National Marine Debris Monitoring Program, a program funded by the Environmental Protection Agency. "We have a critical situation for Hawaiian monk seals that are horribly depressed in number. In the very place where the young are learning to fish and play, it's where these old nets get caught."

Animals are not all that get snared. In August 2005, a Russian minisubmarine became snagged in an old fishing net 625 feet below the Pacific Ocean surface before being rescued. Cargo ships with propellers bound up in miles of old net pull into Hawaii for repairs, says Christine Woolaway, the Kalaeloa, Hawaii-based coordinator for the Northwestern Hawaiian Islands cleanup.

But it was the heart-wrenching pictures of animals snarled in plastic packaging and old fishing lines that first grabbed public attention in the 1970s.

As of this past summer at least 130 countries including the US had ratified international agreements. Hundreds of thousands volunteer for regular worldwide beach cleanups sponsored by the Ocean Conservancy, an environmental group that tracks marine debris.

Yet political action, public attention, and cleanup funding have waned in the past decade, overshadowed by issues such as climate change and declining global fisheries. But hurricane Katrina, which pushed tons of debris into the Gulf of Mexico, and the new national monument, have helped give the issue some attention.

A debris-marine bill sponsored by Sens. Daniel Inouye (D) of Hawaii and Ted Stevens (R) of Alaska, was approved by the Senate last year.

Then, last month, the House unanimously approved the legislation, which sends $15 million and a mandate to the National Oceanic and Atmospheric Administration, US Coast Guard, and other agencies to rev up their garbage compactors.

It also provides modest grant funds for research, sets up a trash-tracking database, and mandates that federal agencies educate the public.

"We need some help, that's for sure, because there's more debris out there on those islands than any one agency can handle," says Ms. Woolaway.

Since 1995, at least 680 tons have been removed in the cleanup along the islands - much of it in old nets. With little landfill space in Hawaii, an automotive salvage company shreds the nets with the residue burned to make electricity in an electric company boiler.

But even after a thorough cleanup, the next year tons more debris wash ashore from the eastern garbage patch.

"Every single piece of trash on the beach or in the water has a person's face behind it - it's that simple," Ms. Sheavly says. "The cigarette lighters, shampoo bottles - the animals on the island didn't do that. It comes from improper waste management practices. This is a fixable problem, and the answer is simple: We've got to have more awareness and give people an opportunity to change their behavior."

FBI/DEA/ATF/USMS:

Police Officer Among 6 Charged In Drug Sting (SLPD)

By Heather Ratcliffe

St. Louis Post-Dispatch, October 11, 2006

Bobby Wood figured he could make more money if he stole dope from his supplier rather than pay for it, federal officials said Friday, so he enlisted a corrupt cop and a towing company owner to intercept couriers carrying cocaine.

The FBI spent more than a year watching them, officials revealed Friday in announcing charges against six men that accuse them of trafficking in more than $2.4 million worth of cocaine.

U.S. Attorney Catherine Hanaway said the alleged leader, Wood, 37, arranged for out-of-state couriers to drive through Hillsdale, where police Sgt. Christopher Cornell would stop the vehicles and arrest the drivers.

Bruce Gales, 36, owner of Galez Towing and Recovery in Wellston, took the couriers' cars away and then stole the drugs from hidden compartments, the indictments say. Gales allegedly received at least $35,000 for his role.

Wood paid Cornell $200 to $1,000 each time the officer detained a drug courier, according to the indictments.

Wood arranged to steal the drugs so he would not have to pay the couriers, Hanaway said.

"It saddens me a great deal any time we have to charge a police officer with abusing his authority," Hanaway said at a news conference. "It's sad when we find a police officer cooperating with drug dealers."

Wood, Cornell and Gales were named in the indictments, along with their alleged distributors - Mark Bonds, 43, and Mario Lucas, 35, both of north St. Louis County, and Christopher L. Jones of O'Fallon, Mo. Each is charged with one felony count of conspiracy to distribute cocaine.

In addition, Wood, of the 1300 block of Woodruff Avenue in Pagedale, was indicted on a charge of conspiracy to commit money laundering. Gales also faces charges of attempting to possess cocaine with intent to distribute, using a communication device to facilitate a felony and conspiracy to commit money laundering. Cornell was charged with attempting to possess cocaine with intent to distribute and use of a communication device to facilitate a felony.

Gales, of the 200 block of Houshang Lane in St. Louis County, is also under investigation by the Missouri attorney general's office for unrelated accusations of overcharging customers.

Federal prosecutors are seeking forfeiture orders against several of the defendants to recover cash and expensive vehicles allegedly purchased with the drug profits - including a 2003 Mercedes-Benz, 2003 Land Rover and several customized cars.

Hanaway said the group bought and sold cars and motorcycles to launder their money so authorities did not know it was tied to drugs. Investigators with the Internal Revenue Service said they dissected the suspects' financial affairs to find the drug money.

Roland Corvington, the FBI special agent in charge at St. Louis, said the probe began in the spring of 2005, after an informer tipped off a St. Louis city police officer assigned to work with the FBI. Authorities used a wiretap and surveillance to document drug activities for more than a year, Corvington said. The drug ring used safe houses to store and distribute the cocaine, according to the indictments. The suspects communicated with cell phones in other people's names.

In August, a federal agent videotaped a pre-arranged traffic stop in which Cornell stopped an FBI informer posing as a drug trafficker. After the officer took away the driver, agents watched Gales and Wood take a duffel bag from the car.

On Friday, all but one of the defendants were arrested or surrendered to federal authorities. Police were still looking for Jones, of the 100 block of Jacobs Way.

Hillsdale Police Sergeant, Five Others Indicted On Drug Charges (SLBIZ)

St. Louis Business Journal, October 11, 2006

Galez Towing and Recovery owner Bruce Gales, Hillsdale Police Sgt. Christopher Cornell and four others were indicted on multiple drug trafficking charges, federal officials said Friday.

The indictment alleges that beginning in January 2005 and continuing to the present, six defendants -- Robert Wood III, Mark Bonds, Mario Lucas, Christopher Jones, Gales and Cornell -- were involved in the distribution of about 120 kilograms of cocaine throughout the St. Louis area, generating about $2.4 million in drug proceeds.

Wood would arrange for the transportation; Bonds, Lucas and Jones were local distributors, according to a release from U.S. Attorney Catherine Hanaway.

As a part of the conspiracy, Wood, Gales and Cornell allegedly would, on occasion, steal cocaine from couriers by arranging for Cornell to arrest the couriers, and while the courier was being processed by Cornell, would break into the vehicle and take the cocaine. A money laundering count of the indictment alleges that transactions were made by Wood to conceal the nature, location, source and control of the proceeds of the conspiracy.

There is also a forfeiture count that seeks a money judgment of $2.4 million and certain specific property including a 2003 Mercedes Benz, a 2003 Land Rover, several customized cars and more than $140,000 in cash.

All defendants were indicted on one felony count of conspiracy to distribute cocaine. Address information and additional charges for some defendants are listed below:

Robert Wood, III, also known as Bobby Wood, 37, of the 1300 block Woodruff in Jennings, Mo.; one felony count of conspiracy to commit money laundering and a forfeiture count;

Mark Bonds, also known as Marco Bonds, 43, of the 5100 block Delcastle in Florissant, Mo., a forfeiture count.

Mario Lucas, also known as Mooney, 35, of the 1200 block Spartina in Florissant, Mo.;

Christopher Jones of the 100 block of Jacobs Way in O'Fallon, Mo.;

Bruce Gales, 36, 200 block of Houshang, Florissant, Mo; one felony count of attempt to possess with intent to distribute cocaine, one count of use of a communication device to facilitate a felony, one count of conspiracy to commit money laundering and a forfeiture count; and

Christopher Marcel Cornell, 44, 5400 block of Maple, St. Louis, one felony count of attempt to possess with intent to distribute cocaine and one count of use of a communication device to facilitate a felony.

If convicted, each defendant faces up to life in prison and/or fines up to $4 million.

ACROSS MISSOURI (KCS)

The Kansas City Star, October 11, 2006

ST. LOUIS | Grave for fetus found at defendant's home

Investigators have found a marked grave for a baby at the home of the woman accused of attacking a mother in her east-central Missouri home and kidnapping her baby. Franklin County Sheriff Gary Toelke announced Friday that the marked grave at Shannon Torrez's home near Lonedell was for a fetus that apparently died in 2000. Torrez, 36, remains jailed on $1 million bond after pleading not guilty. She allegedly slashed the throat of Stephenie Ochsenbine, 21, and abducted her week-old baby, Abby.

JEFFERSON CITY | SOS for mental health workers

The state's mental health director said Friday he was turning to temporary workers to help fill an "alarming" number of employee vacancies at a facility for the developmentally disabled. Ron Dittemore, interim director of the state Department of Mental Health, said about 70 of the 460 direct-care positions are vacant at Marshall Habilitation Center. The department has been unable to fill them through advertising, job fairs and recruitment efforts.

ST. LOUIS | Charges in shooting of officer

A St. Louis man was charged Friday with aggravated assault, armed criminal action and unlawful use of a weapon for allegedly shooting and wounding a St. Louis police officer. Patrick Moore, 22, was arrested Thursday at his girlfriend's house in the shooting of Officer Justin Johnson, 30. Police were seeking at least two others in the case.

ST. LOUIS | Indictments allege cocaine conspiracy

A suburban St. Louis police officer and a tow truck company owner have been indicted for allegedly running a cocaine distribution conspiracy. U.S. Attorney Catherine Hanaway announced Friday that Hillsdale Police Sgt. Christopher Cornell and businessman Bruce Gales carried out a scheme to steal cocaine from drug runners and then sell it.

SPRINGFIELD | Preliminary hearing could be delayed

Prosecutors said Thursday they would ask a court to delay a Monday preliminary hearing in a child sex abuse case against two southwest Missouri church leaders. The move came after the defense filed a motion to dismiss the charges because of the statute of limitations. Four church leaders in McDonald County and the pastor of an affiliated church in neighboring Newton County face felony counts for allegedly abusing girls from their congregations as far back as the late 1970s, sometimes as part of a ritual or ceremony. Defense attorney Robert Evenson is seeking dismissal of charges against brothers Tom Epling, 51, and Paul Epling, 53, arguing the counts were past the statute of limitations.

Online Pill Sales Lead To Arrests (BSUN)

By Matthew Dolan, Sun Reporter

The Baltimore Sun, October 11, 2006

Baltimore pharmacy accused of selling Vicodin without valid prescriptions

Before federal agents arrested its owners yesterday, Baltimore's Newcare pharmacy appeared to be a phenomenal success.

The prescription drug distributor ordered 4,200 doses of the painkiller hydrocodone in 2003. In 2004, the orders bumped up slightly, prosecutors said in federal court.

Suddenly, sales skyrocketed into the millions. And this year, authorities said, the Northeast Baltimore company had already bought 4.8 million doses of the drug, commonly known as Vicodin.

But according to prosecutors, the amazing performance concealed a lucrative cybercrime: The company sold more than $20 million worth of the painkiller to Internet customers without legitimate prescriptions.

Federal drug agents fanned across the region early yesterday, charging Newcare's owners, seizing their expansive suburban homes in Harford County, locking up their luxury cars and shutting down their multiple bank accounts.

Carl J. Kotowski, assistant special agent in charge of the Drug Enforcement Administration's Baltimore office, said the operation at Newcare sparked the largest federal pharmaceutical drug investigation in the state's history.

"It's not like [they had] to go out onto the street," Kotowski said of Newcare's customers. "Everything is very discreet. You just go online. It's no different than buying a book on Amazon."

Like Quaaludes and Valium in the 1970s, Vicodin's illicit use has been treated recently by playwrights, novelists and screenwriters as a less dangerous, and more socially acceptable, way for characters to relieve life's pressures without resorting to heroin or cocaine.

On the Fox television show House, the irritable but brilliant Dr. Gregory House has suffered from chronic pain and battled an addiction to Vicodin.

DOJ_NMG_0079224

But the increasing problem of illegal sales of prescription drugs online has also worried drug enforcement agents and anti-drug abuse advocates alike.

DEA Administrator Karen P. Tandy told Congress in April that her agency had initiated 100 new Internet investigations involving the online sales of prescription drugs during the last fiscal year, arresting 62 people and seizing $44 million in cash, property, computers and bank account assets.

In the DEA's Operation Cyberchase, agents targeted about 200 Web sites alleged to have illegally sold prescription drugs and arrested 25 people in the United States, Asia, Europe, and the Caribbean.

Some advocates for more regulation said not enough has been done.

For the third year in a row, the number of Web sites selling controlled prescription drugs such as OxyContin, Vicodin, Xanax, Valium and Ritalin has increased, according to a June report released by the National Center on Addiction and Substance Abuse at Columbia University.

The report found that 89 percent of those Web sites selling controlled prescription drugs do not require prescriptions. Of those sites not requiring prescriptions, 30 percent advertised that no prescription was needed, 60 percent offered "online consultations" and 10 percent made no mention of a prescription.

"Any child can get, without a prescription, highly addictive controlled substances like OxyContin, Valium and Ritalin from Internet drug pushers," CASA Chairman Joseph A. Califano Jr., a former U.S. health secretary, said at the time. "The trend of teen 'pharming parties' will continue to increase as long as these drugs are so easy to obtain."

Califano's organization is calling for tighter federal laws to prohibit Internet sale or purchase of these drugs without original prescriptions based on a physician's examination. CASA also wants Internet search engines, financial institutions and shipping companies to help establish a national clearinghouse to catch rogue Internet pharmacies.

Now shuttered, Newcare is in the 3400 block of Sinclair Lane at a busy industrial intersection across from an auto parts store and flanked by a medical office and a heating-cooling business.

Yesterday, its owners - pharmacists Steven Abiodun Sodipo, 50, of Forest Hill and Callixtus Onigbo Nwaehiri, 48, of Jarrettsville - made an initial appearance in U.S. District Court in Baltimore on drug and money-laundering conspiracy charges.

According to state records, Sodipo has been a licensed pharmacist in Maryland since 1988 and Nwaehiri since 1986.

They were joined in the indictment, which was unsealed yesterday, by Ahmed Alhaji Abdulrazaaq, 48, of Forest Hill. Federal authorities described Abdulrazaaq as one of two people who assisted with the illegal financial transactions.

Sodipo, Nwaehiri and Abdulrazaaq were held in custody until a detention hearing scheduled for tomorrow.

A fourth defendant, Nannette C. Patterson, 48, of Baltimore, is expected to turn herself in to authorities today.

Outside Newcare, DEA agents worked into the evening yesterday near a U-Haul truck and about 10 cars parked at the rear of the light-brown, one-story brick building. Blinds on the building's windows were closed, and the double-door entrance was locked.

More than 308,000 hydrocodone tablets were confiscated from Newcare with a estimated street value of $1.5 million, law enforcement officials said. The pharmacy, which was not opened to walk-in retail customers, was the top buyer of hydrocodone in the state, according to the DEA.

Also yesterday, federal agents in New Orleans shut down an Internet pharmacy they allege bought and sold millions of doses of hydrocodone last year. DEA officials in Baltimore said they could not comment on whether the two investigations are connected.

Prosecutors in Baltimore moved yesterday to seize assets equal to $20 million in illegal drugs sales they say were sold at a 300 percent markup since 2005.

As part of the forfeiture, they targeted 18 bank accounts; 10 vehicles, including a Jaguar, Lexus and Mercedes-Benz; and five properties - three in Baltimore and two in Harford County. Kotowski described the pharmacists' suburban homes - one is more than 8,000 square feet and the other almost 6,000 square feet - as plush.

"When I worked in Miami, I saw some wild places. But this one was up there," he said of Sodipo's eight-bedroom house on Nora Court.

Hydrocodone, the drug at the center of the joint local and federal investigation of Newcare, is also sold under brand names that include Lortab, Lorcet and Zydone. An orally active analgesic, it can be as powerful as morphine.

Legitimate production of the drug increased fourfold in the 1990s, triggering a concurrent rise in illegal use, according to the DEA. About 20 tons of hydrocodone products are used annually in the United States.

Maryland has seen substance abuse treatment admissions for narcotic pain relievers, including hydrocodone, nearly triple in recent years, according to a May report from the Center on Substance Abuse Research at the University of Maryland, College Park.

DOJ_NMG_0079225

Armas Bond Hearing Today (RNT)

Rome (GA) News-Tribune, October 11, 2006

A bond hearing is set in federal court today for Rome businessman Mario Enrique Armas, who pleaded not guilty Oct. 5 to charges of money laundering and possession with intent to distribute more than a ton of marijuana.

Beginning at 4:15 p.m. Armas and his defense team will present witnesses to U.S. District Magistrate Judge Walter L. Johnson showing reason why he should be allowed to return home before his trial.

A federal indictment and search warrant accuses Armas, aka Mario Doninelli, 45, who owns multiple businesses and properties in the Rome area, of conspiring with two Rockmart men in trafficking more than 2,200 pounds of marijuana and money laundering at least $2 million generated by Northwest Georgia drug sales.

Armas was arrested last Thursday, culminating what officials said was a two-year investigation by the Federal Bureau of Investigation, the Drug Enforcement Agency and the Internal Revenue Service's Criminal Investigations Division.

To transport the marijuana, according to court documents, the coconspirators traveled with a horse trailer to Arizona, where hundreds of thousands of dollars allegedly provided by Armas were used to buy marijuana that was then transported back in the trailer to Georgia and sold.

Armas allegedly was the principal financier for the purchases, using his business, N&A Corporation, as a front for illegal activity, according to U.S. Attorney David E. Nahmias.

Kevin Redstrom and Lonnie Merren, both of Rockmart, have also been indicted. Prosecutors say they were money couriers for Armas. Neither of the pair has been arrested, but they are not considered fugitives, authorities say.

Here are some legal documents in this case. Some names in these documents have been redacted by the federal government.

Border Crossing Goes Awry When Man Gets Stuck In Tunnel Exit (SDUT)

By Debbi Farr Baker, Angelica Martinez, And Karen Kucher, Union-tribune Breaking News Team

The San Diego Union-Tribune, October 10, 2006

SAN DIEGO – Fourteen people trying to enter the United States through a storm drain tunnel in Otay Mesa ran into a glitch Tuesday morning, when the third person exiting the narrow opening became stuck.

Border Patrol agents using a stationary surveillance camera near the tunnel's exit in an industrial lot on Via De La Amistad spotted the first two people as they emerged from the tunnel shortly after 7 a.m.

They then discovered a man stuck in the tunnel, his hips wedged tightly in the concrete opening.

San Diego Fire Department crews, responding to a request that came in at 7:14 a.m., covered the man in blankets and chipped away at the opening. "The challenge was that the tunnel itself was partly concrete," said Maurice Luque, a fire department spokesman.

Around 8:48 a.m., crews pulled the man out of the hole and then helped two other men and two women out of the tunnel. All were covered with gray dust.

They were checked by medical personnel. One of the women was taken to a hospital for evaluation, while the rest were taken to a detention center.

Officials said the other seven people in the tunnel went back to Mexico. Officials on that side of the border checked and found that all of them had made it out.

Border Patrol officials suspect the seven who emerged from the tunnel are undocumented immigrants, said Lauren Mack, Immigration and Customs Enforcement spokeswoman. The group will be processed for deportation, she said.

Officials say the group broke into the storm drain system on the Mexican side of the border and traveled through the pipe into the United States.

The incident began when Border Patrol agents spotted a group of about 14 people gathering on the south side of the border fence, in Mexico, around 6:50 a.m. The group appeared as though they were getting ready to cross.

Shortly thereafter, agents spotted two people coming up out of the ground north of the secondary border fence, said Border Patrol spokesman Robert Harvey. Those two were apprehended, he said.

"At that point, we realized there were people still stuck in the tunnel," Harvey said.

The group traveled some 40 yards from the U.S. border through the narrow opening, which was only about two to three feet high and wide. Most of the tunnel's length is on the U.S. side.

It is not known how long they were in the tunnel. They came out in a lot on the property of Air Liquide company.

In recent months, several undocumented immigrants have been found using the sewer system to illegally enter the U.S.

DOJ_NMG_0079226

The illegal crossers “are digging small gopher-type holes on the Mexican side of the border and they are climbing into the holes and tapping into the storm drain system,” Mack said. “Then they are using the system to find a manhole to get out on the U.S. side.”

The San Diego Tunnel Task Force has been working with Mexican authorities to investigate the crossings since they learned of them about three months ago, she said. The task force is made up of agents from the Border Patrol, Immigration and Customs Enforcement and the Drug Enforcement Administration.

Border Patrol spokesman James Jacques said the Border Patrol has discovered 23 tunnels in the last 10 years in the San Diego sector, with 12 of those found in the last 12 months, not counting the one found Tuesday.

The rescue caused a significant delay for cargo trucks that were trying to enter the U.S. from Mexico.

Border Patrol agents asked that northbound cargo trucks be stopped at 7:45 a.m. due to safety concerns, said Vince Bond, a U.S. Customs and Border Protection spokesman.

Authorities feared that the trucks would travel on the road over the tunnel while the group was still trapped inside, Bond said.

The trucks were rerouted and allowed through at 8:15 a.m.

“This is a very busy time for us. We have 2,500 trucks or more a day enter. Sometimes there are as many as 2,900 trucks a day during a peak time like this,” Bond said.

Ariz. Pair Resigns Pot Church Leadership (AP)

AP, October 10, 2006

TUCSON, Ariz. -- A Pima, Ariz. couple has stepped down as leaders of a church that considers marijuana a sacrament and deity.

Dan and Mary Quaintance say pending federal charges against them have made it impossible to properly lead the church. In February, the two were arrested in a car that contained 172 pounds of marijuana in the New Mexican town of Lordsburg near the Arizona state line.

The Quaintances are facing 40 years in prison if convicted on federal charges of conspiracy and intent to distribute marijuana.

Dan Quaintance, 53, said the church is now fractured, explaining that the 45-member congregation he and his wife founded in 1991 no longer has its spiritual leaders.

The Quaintances are scheduled to go on trial Oct. 30 in Las Cruces, N.M., though they hope the case will be dismissed before the end of the month. They're awaiting a decision from U.S. District Judge Judith C. Herrera on whether she'll dismiss the case on the grounds that religious freedom should allow them to use the illegal drug.

The government contends the church is a front for drug trafficking.

The couple's lawyers cite a February decision by the U.S. Supreme Court ruling that the government has no right to seize hallucinogenic tea containing a federally banned substance from members of a New Mexico church.

The tea, called hoasca, contains the substance dimethyltryptamine, or DMT, known for its hallucinogenic properties.

Members of the O Centro Espirita Beneficiente Uniao Do Vegetal, or UDV, said using the hallucinogenic tea during worship helps them gain union with God.

Prosecutors with the U.S. Attorney's Office in New Mexico, which also prosecuted the UDV case, do not comment on pending matters.

But in court documents, they say the Quaintances are "obsessed and focused on marijuana," and Dan Quaintance's writings about his worship are "disjointed, poorly supported, illogical ramblings." They conclude that the couple's "lack of sincerity is patent."

The Quaintances are out on bond and remain under court supervision. They must submit to weekly urine tests. They have been living without marijuana since their arrest.

"We're being deprived the benefits of connection _ health-wise and spiritual-wise," Dan Quaintance said. "I think the judge is going to have a hard time ruling against us on the sincerity of our religious practice. If there isn't a favorable ruling on our religious freedom, then I don't believe there is a justice system in America."

Since the church was founded, at least 20 members have been prosecuted on possession and conspiracy charges, and some have served time in prison, said Mike Senger, a church member who lives in Florence and provides legal assistance to group members.

"Usually, we never win," Senger said. "But we may perhaps win in Mary and Dan's case because it is federal court, and there is quite a bit at stake. They are getting some reasonable due process in that court.

DOJ_NMG_0079227

"It is a hellish, torturous experience for people who are peaceful and not criminals, who possess marijuana," he added. "We don't look at ourselves as criminals."

Trial Of Senior Colombian Rebel To Start Thursday In US (AP)

AP, October 10, 2006

BOGOTA (AP)--The most senior member ever captured from Latin America's largest rebel army goes on trial in a U.S. courtroom Thursday for the kidnapping of three Americans - a case that some fear could scuttle moves for the Americans' liberation.

The fate of Ricardo Palmera, better known by his nom de guerre Simon Trinidad, is to be decided by a federal jury in Washington. Extradited in late 2004 after his capture in neighboring Ecuador, he was indicted on charges of providing material support to a terrorist group and hostage-taking.

The case could have profound repercussions in Colombia, where tentative steps are being made toward talks between Palmera's guerrilla group, the Revolutionary Armed Forces of Colombia, or FARC, and the government on a prisoner swap.

The FARC is demanding the release of all its imprisoned comrades, including Palmera, in exchange for the release of 62 hostages, including former presidential candidate Ingrid Betancourt and the same three U.S. defense contractors Palmera is charged with kidnapping.

"I am hoping this (trial) may put pressure on the FARC," said Jo Rosano, mother of Marc Gonsalves, one of the kidnapped Americans. "On the other hand, I worry they may retaliate against the Americans."

Rosano intends to fly from her home in Connecticut to attend at least part of the trial.

The main charge against Palmera relates to the February 2003 downing of a small U.S. airplane that authorities say was on an intelligence-collecting mission over a FARC stronghold in southern Colombia.

Palmera is charged with conspiring to kidnap three American contractors who were on the plane: Thomas Howes, Keith Stansell and Gonsalves. He also is charged in the killings of U.S. pilot Thomas Janis and Sgt. Luis Alcides Cruz, a Colombian soldier, who were found near the crash site apparently shot to death.

There is little to suggest that Palmera, a frequent face of the FARC in peace talks, participated in or planned the kidnapping. Rather the prosecution argues he belonged to a group that stated it would target U.S. officials and has subsequently used the hostages as leverage for talks to free imprisoned rebels, including Palmera.

The only proof the Americans are alive came on July 2003, when the FARC released a video of the men.

Despite the silence, Rosano is confident.

"I know in my heart that he's alive," she said.

Some observers believe the FARC already may have decided to concentrate on a straight swap of the three Americans in exchange for Palmera and another FARC member, Nayibe Rojas, known as Sonia, who soon faces trial in Washington on drug trafficking charges.

"Basically, Simon Trinidad and the three U.S. contractors are out of this swap ... now the exchange will have to be directly between the FARC and the U.S. government," said Gustavo Duncan, a researcher with the Bogota-based think tank Security and Democracy Foundation.

The Palmera prosecution is the latest sign the U.S. government is stepping up its pressure on the FARC, listed by the State Department as "foreign terrorist organization" in 1997.

The U.S. has given more than $4 billion to Colombia since 2000 to fight the world's largest cocaine industry and the more than four-decade insurgency.

In March, the U.S. government announced drug indictments against 50 leaders of the FARC and a combined $77.5 million in reward money.

Scion of a wealthy family from the Caribbean coast, Palmera abandoned high society to became Simon Trinidad, one of the most notorious guerrillas in Colombia. In an organization that comprises mostly recruits from the countryside, Trinidad stood out as an articulate intellectual.

Palmera's 2004 capture in Ecuador was celebrated by Colombian authorities, who have shown few results in apprehending the FARC's leadership.

But convictions in Washington could complicate any possible exchange of Palmera and Rojas for the Americans.

"Given the policy we don't negotiate with hostage-takers, politically this could be very difficult," said Paul Wolf, a lawyer who specializes in international law and has followed Palmera's case.

DOJ_NMG_0079228

He added that if Palmera is convicted and the U.S. government wanted to free him in exchange for the three Americans, one of the few mechanisms available would be a pardon by U.S. President George W. Bush.

"It's hard to imagine," said Wolf.

Colombian Guerrilla Fighter Goes To Trial In US (PRENSAL)

Prensa Latina, October 11, 2006

Bogota, Oct 10 (Prensa Latina) The trial of Ricardo Palmera, alias Simon Trinidad, leader of Colombia's Revolutionary Armed Forces (FARC), began Tuesday following a protest for his liberation by mostly US citizens.

The protesters consider the trial interference in Colombian affairs and Tom Burke, head of the pro-release committee, says the administration lacks the legal and moral authority to judge him.

He added that US taxpayers contribute five billion dollars to Plan Colombia, but they do not wish their country's involvement since they consider it a violation of Colombian laws.

In addition, the DEA denied FARC involvement in drug trafficking to the US or terrorism in statements to the Bush Administration, he said.

The rebel leader was extradited in December 2004 despite appeals to President Alvaro Uribe, and will be tried in Washington D.C. for terrorism, drug trafficking and the death of a US citizen.

FARC called Trinidad a revolutionary and anti-imperialist fighter and claims his extradition was immoral and unpatriotic, an opinion shared by most Colombians.

Public prosecutor Bob Tucker said the case is delicate because Trinidad belongs to a rebel group at war with the Colombian government, therefore deserves immunity under the Geneva Convention.

ATF, Police Team Up To Get Guns Off New Orleans Streets (AP)

By Mary Foster, The Associated Press

AP, October 11, 2006

NEW ORLEANS (AP) — A day after four people were wounded by gun violence that continues to mar this city's hurricane recovery, local and federal authorities announced their latest attempt to crack down on criminals with guns.

A hot line for reporting illegal firearms is being relaunched, they said at a Tuesday news conference. A similar hot line operated in the 1990s but was eventually discontinued as the city's murder rate declined, police said. The murder rate has picked up this year as the city has repopulated, reaching 113 so far.

Federal law prohibits anyone convicted of a felony from possessing a firearm, U.S. Attorney Jim Letten said.

"And there's no early release in federal cases," Letten said. "If they're convicted they're going to serve the time."

Police Chief Warren Riley is counting on that.

"We have found that through the federal system once they are convicted we don't see them again," Riley said. "We have to get the guns and the people with them off our streets if this city is going to come back."

In 2005 law officers confiscated 2,787 illegal firearms in New Orleans. Since January, 1,522 have been confiscated, even though the city has only about 40 percent of the population it had before the storm.

"Everyone knows the problem New Orleans has with gun violence," Bureau of Alcohol, Tobacco, Firearms and Explosives special agent Robert Browning. "We're going after the illegal guns and the criminals who have them."

Tuesday's news conference had been scheduled several days ago but fell, coincidentally, after another night of gun violence.

A restaurant dish washer who was taking a break, and a friend standing next to him, were seriously wounded when a man walked up and began firing two guns.

A bystander across the street was grazed by a stray bullet.

Also, two National Guardsmen shot a man who refused to stop and drop an object in his hand.

The Guard has been helping police patrol the city since June. The shooting was being investigated, Riley said. The man, who was not identified, was wounded in the upper torso near his back, and his injury was not considered life-threatening.

After the announcement of the gun hot line Tuesday, ATF agents and police officers went door to door in the city, handing out flyers and explaining the program to residents.

"I think it's wonderful, especially with all this shooting that's been going on," said Earline Smith, 76. "I hope everyone will call if they see something. We need to do something in this city."

Lawyer Receives Six Months In Prison (CHASGAZ)

By Tom Searls, Staff writer

DOJ_NMG_0079229

Charleston Gazette, October 11, 2006

Federal judge calls di Trapano decision 'extremely close call'

Dante di Trapano was sentenced to six months in prison Tuesday, after pleading guilty earlier to being a drug addict in possession of firearms.

Chief U.S. District Judge David Faber gave di Trapano the maximum time for the crime, after deciding government prosecutors could not prove the seven handguns found in di Trapano's Johnson Road, Charleston, residence were not collector's items.

He also sentenced di Trapano to three years of supervised release that will include special criteria to be worked out with the federal probation office and a $10,000 fine.

"I think this is an extremely close call," Faber said in ruling di Trapano had purchased the guns as collector items. He added, "I believe [di Trapano] has just made the preponderance test."

Di Trapano, a Charleston lawyer and former agent for National Football League wide receiver Randy Moss, has already served about three months in jail, time that he will be given credit for by the federal Bureau of Prisons.

Monica Dillion, the assistant U.S. attorney handling the case, had called several witnesses in an effort to show di Trapano used the guns for protection because he had a large stash of drugs in his residence.

Prosecutors also failed to show there were drugs in the residence when it was raided last April. Initially, the government said field tests showed a white powder residue on a laptop computer was cocaine. Laboratory tests, however, showed that was not so.

But Faber also showed his disdain for the defendant, noting he did not tell the truth when testifying in September about cocaine use. Faber had released di Trapano on bond in August to receive drug treatment, but revoked that after an initial urine tests showed he had used cocaine.

"The lab test came back and showed he tested positive for cocaine," Faber said.

When di Trapano's attorney, Charleston lawyer Michael Del Giudice, tried to refer to his client's testimony, Faber interrupted him.

"He's testified falsely before me one time before and I'm not likely to believe him," the judge said.

Dillion told Faber that di Trapano also lied when he filled out a federal form in order to purchase firearms, which he bought at a South Charleston gun show. On that form, di Trapano said he was not a drug addict.

"He lied on the form and he's a liar," she said.

"At the time I purchased it I was in denial [of being a drug addict]," di Trapano said of the February purchases.

Di Trapano had pleaded guilty to the charge in July.

His law license was temporarily suspended by the state Supreme Court last month, when Del Giudice said he would not be in the West Virginia predicament if his last name were not di Trapano.

"We don't single people out because of who they are," U.S. Attorney Chuck Miller said following the 90-minute sentencing hearing.

Di Trapano, 43, had been a member of a prominent Charleston law firm headed by his father, Rudolph DiTrapano, a former state Democratic Party chairman. He has since been dismissed from the firm.

Di Trapano appeared to be at the pinnacle of success until last March when he, his wife and three others were arrested in a Tampa, Fla., hotel room. Police said crack cocaine was scattered across the bed and around the floor.

He was then arrested in Georgia a short time later for felony cocaine possession and misdemeanor marijuana possession.

Del Giudice produced 2005 letters from di Trapano to his wife, Teri, who was not in court Tuesday, where he wrote about receiving drug rehabilitation in Florida then. At the time of his Florida arrest, di Trapano said he was there to get drug rehabilitation help.

In a statement prior to his sentencing, di Trapano apologized to the court.

"I'd first like to apologize to the court for the disrespect I've shown you," he said.

He said he had drug and alcohol problems when he was young, then spent 15 years sober. Recently he had personal problems and had begun to use drugs again. "I began to use and it got out of control," he said.

Di Trapano said he had lost most of his material goods — his houses are for sale, he said — and added he has lost his reputation in the community as well.

More Than Three Dozen Gang Leaders Arrested (SEATIMES)

By Sara Jean Green, Seattle Times staff reporter

The Seattle Times, October 11, 2006

Federal and local law enforcement officials today announced the arrests of 40 violent gang leaders, half of whom were taken into custody in the last week.

In a four-month investigation dubbed "Operation Crackdown," members of the Violent Gang Task Force - which is led by the local office of the federal bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) targeted violent gang members suspected in a rash of drive by shootings, narcotics deals and other offenses. The task force also includes members of Seattle police, the King County Sheriff's Office and the FBI.

At a news conference in the Henry M. Jackson Federal Building in downtown Seattle, ATF Special Agent in Charge Kelvin Crenshaw gestured to an assortment of assault rifles and pistols laid out before him.

"What's so unique about these firearms is that they were actually found in the possession of individuals," he said. "They weren't lying on a bed or leaning against a chair… these people were carrying them around."

Of the 40 people arrested, 10 are facing federal charges, including two who will be charged as armed career criminals; a federal statute that carries a mandatory 15-year prison term for anyone caught with a firearm after previously being convicted of three violent crimes or drug distribution charges, said Andrew Friedman, an assistant U.S. Attorney who is coordinating the office's gang prosecutions.

In addition to 10 firearms, police and federal agents seized $38,000 in cash, six vehicles and a large quantity of drugs including crack cocaine, ecstasy, marijuana and heroin, Friedman said.

Over the last year, and particularly, over the summer, law enforcement agencies throughout the region have noticed an increase in gang-related violence, said Crenshaw.

King County Sheriff Sue Rahr, who commanded her office's gang unit in the early 1990s when gang violence was at its peak, said recent "data clearly confirms there's a second wave coming." Just as in the '90s, gang violence, she said, is spreading from Seattle into communities throughout the greater metropolitan area.

Unlike other task force investigations, Operation Crackdown didn't focus on a particular gang, Crenshaw said. Instead, task force detectives gathered intelligence from officers on the street to identify suspects responsible for the kind of intimidation, posturing and violent acts that spread fear through communities. Officials believe that those arrested are affiliated with at a dozen different street gangs that span the area's racial spectrum, he said.

"It's the violence across the board. Their motivation is money. This is all about making money by selling drugs and guns," Crenshaw said.

IMMIGRATION:

Ex-Nazi May Be Deported From Michigan (MCT)

By David Ashenfelter, Detroit Free Press

McClatchy Newspapers, October 11, 2006

DETROIT - An 86-year-old former Nazi concentration camp guard who lives in Michigan and has Alzheimer's disease could be deported following the U.S. Supreme Court's refusal to review his case Tuesday.

It remains to be seen, however, whether the Justice Department will follow through with deportation proceedings against Iwan Mandycz of Sterling Heights, given his age and medical condition. Court records say Mandycz is incompetent.

His lawyers did not return calls Tuesday, and a woman who answered a phone number listed under Mandycz's name referred calls to his daughter, who did not return messages.

Mandycz was stripped of his citizenship last year for not telling U.S. authorities before emigrating that he was a guard at two Nazi labor camps in Poland during World War II, including one where 14,000 Jews were murdered in a single day.

Mandycz, who emigrated in 1949, has denied being a Nazi camp guard.

Joseph McGinnis, a Cleveland lawyer who has handled cases similar to Mandycz's, said the government may choose to not deport him, or it could obtain a deportation order but allow him to remain in the United States. Even if it obtains a deportation order, McGinnis said, it must find a country willing to take him before he could be kicked out.

A Justice Department spokeswoman declined to say whether prosecutors will seek to deport Mandycz.

Supreme Court Turns Down Case Of Former Guard At Nazi Slave Camp (AP)

AP, October 11, 2006

(AP) - WASHINGTON-The Supreme Court on Tuesday turned down the case of a former guard at a Nazi slave camp suffering from Alzheimer's Disease.

DOJ_NMG_0079231

The Justice Department succeeded in revoking the U.S. citizenship of 86-year-old Iwan Mandycz. He could face deportation. His lawyers say the right that prevents the U.S. government from prosecuting a mentally incompetent person also should apply to citizenship cases, which are civil proceedings.

"The accused should be able to assist in the preparation of his defense and consult with his attorneys before he may be punished by the government," Mandycz's lawyers said in a filing that had asked the Supreme Court to take the case.

The Justice Department, which wants to remove him from the United States, initiated denaturalization proceedings, saying Mandycz had concealed that he worked for the Nazis.

Officials said that Mandycz was a guard in 1943 at the Trawniki and Poniatowa labor camps in Poland, where prisoners were starved, beaten and executed en masse.

Mandycz has denied working at the camps and has said he spent World War II working at his parents' farm in Poland and, later, as a forced laborer at a farm in Austria.

The 6th U.S. Circuit Court of Appeals in Cincinnati had ruled there was considerable evidence that Mandycz was Guard 3308 and an absence of competing evidence that he was not.

Ex-Nazi May Be Deported (DEN)

Detroit News, October 11, 2006

Court won't hear case of Sterling Hts. man identified as a guard at a concentration camp.

STERLING HEIGHTS -- Fifty-one years ago, Iwan Mandycz became a U.S. citizen. On Tuesday, his last chance at remaining one appeared to slip away.

The U.S. Supreme Court declined to hear the case of the 86-year-old Sterling Heights resident, whom the U.S. Department of Justice has targeted for deportation because of his past as a Nazi prison guard.

Mandycz's attorneys have argued he should be spared deportation because he suffers from Alzheimer's disease and lacks the capacity to participate in his own defense.

His attorneys could not be reached for comment.

Federal prosecutors believe Mandycz was a guard for six months in 1943 at the SS prison camp Poniatowa in Poland. In that year, the Nazis conducted "Operation Harvest Festival" -- a plan to kill Jews. A total of 42,000 Jews were killed.

Mandycz arrived in the United States in 1949 and became a citizen six years later. He has denied being a Nazi prison guard despite being identified as such by two former guards.

In March 2005, a U.S. District Court judge ruled Mandycz was in fact a guard at the prison and stripped him of his citizenship.

"I can't imagine what would be accomplished by deporting him at his age," said Mandycz' neighbor, Eugene Winowski. "But at the same time, I also understand the flip side -- everything (Jewish prisoners) went through -- you can't ignore that."

Jaclyn Lesch, a Justice Department spokeswoman, told the Associated Press federal officials were weighing their options on how to proceed.

The Associated Press contributed to this report. You can reach Jim Lynch at (586) 468-0520 or jlynch@detnews.com.

Judge Asked To Free Immigrant Detainees (AP)

AP, October 11, 2006

(AP) - LOS ANGELES-Several legal advocacy groups asked a federal judge to order the immediate release of four immigrants who have been detained for months or years without receiving a hearing on why they're being held so long.

The motion filed Friday asks U.S. District Judge Terry Hatter to release the detainees under conditions of supervision or grant them hearings.

The move followed a class-action lawsuit filed Sept. 25 on behalf of six detainees by the American Civil Liberties Union of Southern California, the ACLU Immigrants' Rights Project and the Stanford Law School Immigrants' Rights Clinic. Two detainees have since been released.

The lawsuit alleges the U.S Department of Homeland Security held immigrants for long periods despite court rulings that banned indefinite detention.

"They're flouting the courts," said Ahilan Arulanantham, an ACLU attorney.

A spokeswoman for U.S. Immigration and Customs Enforcement declined to comment on the lawsuit.

Detainees are typically held for six months but can be held longer if they have previous criminal convictions or if the government believes they pose a threat to the public, agency spokeswoman Virginia Kice said.

"People need to bear in mind that under the law, if they have criminal convictions, we're required to hold them while their immigration cases are adjudicated," she said.

DOJ_NMG_0079232

The detainees include a 37-year-old Nigerian man, a 31-year-old Senegalese man, a 38-year-old Chinese man from Indonesia and an Ecuadorean man.

Of the four, only the Ecuadorean immigrant has a criminal record. The ACLU argues his burglary and petty theft convictions aren't serious felonies and that he poses no serious threat if released.

Bush Mum On Immigration As GOP Candidates Vow To Be Tough (WT)

By Stephen Dinan

The Washington Times, October 11, 2006

SCOTTSDALE, Ariz. -- Immigration is a dominant issue in congressional races from Arizona to Michigan to Pennsylvania -- just about everywhere but where President Bush is on the campaign trail.

After having pressed all year to get a broad immigration bill, including legal status for illegal aliens from Congress, Mr. Bush now ignores the issue at campaign events and fundraisers, and Vice President Dick Cheney has even dropped what used to be a regular reference to immigration from his campaign stump speech.

It's an odd mixed message, given that many Republicans are running heavily -- and in some cases almost exclusively -- on the issue, promising an enforcement-first approach and attacking Democrats for supporting citizenship for illegal aliens.

White House deputy press secretary Dana Perino said they think the election will be decided on other issues.

"While immigration is an important issue, this election is also about the philosophical choices facing voters this November when it comes to national security and keeping taxes low," Mrs. Perino said.

She added that Mr. Bush has been consistent in pushing for a broad approach "because he believes that that is the only way to solve any of the individual immigration reform bills."

But most Republicans in Congress disagree, preferring an enforcement-first approach, of which the border fence is crucial.

One incumbent locked in a tight battle for re-election, Rep. J.D. Hayworth of Arizona, said the issue is a no-brainer and pointed to the House vote last month on a provision making it illegal to tunnel under the border.

"In the midst of a contentious election season, despite great wailing and gnashing of teeth, when that bill was offered as a stand-alone provision the final vote was 422-to-nothing. That means every congressman in every district understands the primacy of enforcement," Mr. Hayworth said.

Still, immigration is complicated for Republicans.

The National Republican Senatorial Committee has criticized some Democrats for their support of the same Senate bill that 23 Republicans supported. That also puts them at odds with Mr. Bush, who labeled that legislation a "good immigration bill."

But Republicans across the country see it as a way to rally conservative voters and to win over some Democrats and independents.

In Pennsylvania, Sen. Rick Santorum, a Republican, repeatedly has turned to the issue to attack his Democratic opponent, Bob Casey Jr..

"Bobby Casey Jr. has been doing anything and everything in an attempt to deceive and distract voters from the fact that he supports amnesty for illegal immigrants," said Mr. Santorum's campaign manager, Vince Galko.

Rep. Tom Tancredo, the Colorado Republican who has come to symbolize the House's enforcement-only position, said Republicans should use the immigration issue "as often as possible."

"Immigration can be tied to national security, inflation, health costs and even traffic congestion, among others, and Republicans have the opportunity to champion the issue as Democrats embrace the images of illegal aliens staging protests in American cities," Mr. Tancredo said.

He said candidates must push the message on their own, in part because Mr. Bush has blocked any chance for a national Republican message.

"Bush's own push for amnesty has damaged his credibility on the issue and has made it difficult for the GOP to come up with a cohesive message which says we are the party that respects the rule of law," Mr. Tancredo said.

Polls show border security to be a tremendously popular issue, which has helped win primaries in Arizona and the special election for an open congressional seat in California earlier this year.

Rep. F. James Sensenbrenner Jr., Wisconsin Republican and chairman of the House Judiciary Committee, said the issue appeals to the parties in different ways.

"Republican base voters are more concerned about illegal immigration than on other issues, whereas Democrat and independent base voters agree with what the Republicans are doing, but think other issues, principally the war, are more important," he said.

Mr. Bush has tackled the issue off the campaign trail.

DOJ_NMG_0079233

On Friday, he pressed for legalization of illegal aliens as part of his Hispanic Heritage Month celebration. And in Scottsdale last Wednesday, he signed the homeland-security spending bill, touting the increases in spending as a measurement for the progress made in border security.

It's indicative of the issue's popularity that Arizona's Gov. Janet Napolitano, a Democrat, joined Mr. Bush and four other Republicans for the signing ceremony, even though her party has made it a priority to try to unseat two of those Republicans.

Fence Funding In Budget Just The Start (WT)

By Jerry Seper And Stephen Dinan

The Washington Times, October 11, 2006

President Bush has signed off on a small down payment for a 700-mile fence along the U.S.-Mexico border, but legislators and fence advocates worry the barrier will never be fully funded and fear a lack of White House commitment.

Lawmakers -- including Rep. Duncan Hunter, California Republican and chairman of the House Armed Services Committee -- are forcefully reminding the Bush administration and Homeland Security officials that Congress' "directive" that the fence be built is not optional.

"We didn't put the fence as a goal or an option or something that should be mixed with other solutions, we made it mandatory," Mr. Hunter told The Washington Times yesterday.

"It is not an option for the Department of Homeland Security. What part of 'shall' don't they understand?"

The $33.8 billion Homeland Security funding bill, signed by Mr. Bush with much fanfare during ceremonies in Arizona last week, proposed $1.2 billion for fencing along with lighting, roads, sensors, cameras and other security devices. It does not include actual authorization on how, when or where it should be built.

The House- and Senate-approved Secure Fence Act does that. It outlines specifics on the fence's construction but has not been sent to the president, who has vowed to sign it.

Most proponents and opponents agree that the proposed $1.2 billion allocation is far short of the up to $12 billion it will take to build 700 miles of fencing, and some advocates have questioned both the White House and Congress' commitment to it.

"Where the fence is concerned, to borrow a quote from the movies, 'Show me the money,' " said Michael W. Cutler, a 31-year Immigration and Naturalization Service veteran who spent most of his career as a criminal investigator and intelligence specialist.

Members of Congress said they will have to revisit the funding every year.

"It's one thing to authorize. It's another thing to actually appropriate the money and do it," Sen. John Cornyn, Texas Republican and a supporter of fencing, said last week.

In a terse, three-paragraph note Friday to Homeland Security Secretary Michael Chertoff, Mr. Hunter noted that Homeland Security has been given flexibility on the exact location of the 700 miles of fencing, but that its actual construction "is not in dispute."

"Congress has explicitly stated that border fencing is a critical component of our national border security plan," wrote Mr. Hunter, the act's lead proponent. He also reminded Mr. Chertoff that he is required within 60 days of the bill's passage to submit to the House Appropriations Committee "an expenditure plan for establishing a security barrier along the border of the United States."

In a report accompanying the bill, Congress said it will withhold $950 million of the allocation until that plan is received and approved.

Yesterday, Mr. Hunter said Congress went through a similar fight with the Clinton administration in the 1990s, when he fought for fencing between San Diego and Tijuana, Mexico.

"With each administration, you have a new set of administrators who don't have a lengthy experience on the border and tend to be duly impressed with the sales pitches made by the high-tech companies," he said. "Those sales pitches usually don't include something as mundane as a fence. But fences work."

The funding bill was touted by the administration and many Republicans as a way to crack down on illegal immigration, drug smugglers and would-be terrorists.

"It's what the people of this country want -- they want to know that we're modernizing the border so we can better secure the border," Mr. Bush said as he signed the bill before a bipartisan group of elected officials in Arizona.

Mr. Chertoff has voiced his support for what he has described as a "virtual fence," which would rely on cameras, motion detectors and other security devices to detect people illegally entering the United States.

During a press briefing last month to announce the award of a contract with the Boeing Co. for sophisticated border-detection technology, Mr. Chertoff said the department was looking to build "a 21st-century virtual fence" along the U.S.-Mexico border.

DOJ_NMG_0079234

Mr. Hunter and other legislators say a virtual-fence proposal is fine, but not at the expense of an actual fence.

"If you have 400 high-school kids drowning in a canal, what's the first thing you do? You fence off the canal," he said.

The bill, which would close off about a third of the 1,951-mile U.S.-Mexico border, does not require the government to show any results on the proposed new fence construction until May 2008. State legislatures, governors, and city and county governments, along with Indian tribal councils, have veto power over fencing locations.

While it calls for the construction of "at least 2 layers of reinforced fencing to prevent unlawful entry by aliens into the United States," the bill does not specify what type of fencing to build.

But Mr. Hunter said that because the bill modifies the law that built a fence between San Diego and Tijuana, that is the type of fence Congress wants to be built. He said engineers at Sandia National Laboratories designed the San Diego fence.

U.S. Banks Woo Migrants, Legal Or Otherwise (WSJ)

By Miriam Jordan

The Wall Street Journal, October 11, 2006

As U.S. leaders craft policies to curb illegal immigration from Mexico, the U.S. Federal Reserve is devising programs to extend banking services to undocumented immigrants. A new remittance program aims to bring Mexican migrants who send money home into the mainstream U.S. financial system, regardless of their immigration status.

Dubbed "Directo a Mexico," the remittance program enables U.S. commercial banks to make money transfers for Mexican workers through the Federal Reserve's own automated clearinghouse, which is linked to Banco de Mexico, the Mexican central bank.

To use the service, a Mexican need only possess a matricula consular, an I.D. issued by the Mexican consulate in most major U.S. cities to those with proof of Mexican birth or citizenship, or a picture I.D. card issued by the U.S. or another foreign government. The idea is to make it cheaper and safer for Mexican workers to send funds to their relatives.

"We offer an extremely competitive exchange rate," says Elizabeth McQuerry, an Atlanta-based assistant vice president for the Federal Reserve Bank's retail payments office. "We cost a third of other providers."

The majority of immigrants currently make transfers, which average $350 each, through companies like Western Union or a hodgepodge of wire-transfer firms, couriers and others that operate out of storefronts in Hispanic enclaves. Family members then collect the wired cash at a shop in their town or village.

The Federal Reserve Bank and Banco de Mexico launched a cross-country road show over the summer to promote the new funds-transfer program to commercial banks. Banks that offer the service hope to attract new customers. Indeed, one of the Federal Reserve Bank's goals is to use the program as a springboard for drawing hundreds of thousands of immigrants into the formal U.S. banking system since commercial banks require that those wanting the service first open a savings account.

"People who didn't have bank accounts establish a relationship with us," says James Maloney, chairman of Mitchell Bank in Milwaukee, one of the first banks to offer the Federal Reserve Bank's remittance plan. "It's great for our business."

Acknowledging that many Mexicans sending money home are illegal immigrants, the Federal Reserve's brochure poses the following frequently asked question: "If I return to Mexico or am deported, will I lose the money in my bank account?" The answer: "No. The money still belongs to you and can be easily accessed at an ATM in Mexico using your debit card."

A team at the Federal Reserve Bank in Atlanta joined forces with a team at the Mexican central bank to design the Directo a Mexico program in response to a mandate by President Bush, following the U.S.-Mexico Partnership for Prosperity struck by Mr. Bush and Mexican President Vicente Fox in 2001. One of the stated objectives was to lower the cost paid by Mexican workers to send money to their native country.

The Federal Reserve Bank's brochure touts the favorable foreign-exchange rate, based on the official rate, and a low transfer fee. "In addition, your money is safer in the bank than in your pockets or underneath the mattress," the brochure says.

Retail banks that participate in the program charge as little as $2.50 a transfer compared with $40 charged by some transfer services. Retail banks in the program pay the Federal Reserve 67 cents per transfer.

Most immigrants operate in a cash economy outside the formal banking system, where they have neither credit nor identity. In a post 9/11 era, bringing immigrants into the banking system -- and tracking their remittances -- is vital to security, supporters say.

Critics, however, say the Federal Reserve Bank is coddling illegal immigrants and helping them engage in capital flight. "Anything that makes it easier for people to live in this country illegally is an inducement for illegal immigration," says Ira Mehlman, a spokesman for the Federation for American Immigration Reform, an immigration-restrictionist group. "On top of that, it is draining money out of our economy."

DOJ_NMG_0079235

Latin American migrants in the U.S. transferred $53 billion to $55 billion to their native countries last year, according to the Inter-American Development Bank. About $20 billion went to Mexico, $12 billion to Central America and the Dominican Republic and the rest to South American countries.

Remittances sent by Mexicans topped $15.5 billion in the first eight months of this year, 20% higher than the amount sent during the same period in 2005, according to Mexico's central bank, and this year's annual figure is expected to hit a new record. Savings scraped together by nannies, painters and others working abroad are now Mexico's second-largest source of foreign revenue, after oil exports and ahead of tourism.

Since the Federal Reserve launched the program last year, about 150 U.S. financial institutions have enrolled. While most Mexicans continue to avoid banks, consumers using the program seem happy with it. Julian Gimenez, who works for a landscaping company in Milwaukee, for years had sent money to his wife, Catalina, in Jalisco, Mexico, through a wire-transfer company in his Latino neighborhood. Now, Mr. Gimenez uses Mitchell Bank. "It's cheaper to send the money and it arrives faster than any other place," he says.

Last month, the program was expanded to enable migrants in the U.S. to open an account for relatives to whom they plan to send money. A bank teller in the U.S. can open the account remotely on a Web site set up by Mexico's Banco del Ahorro Nacional y Servicios Financieros, the development bank known as Bansefi, which has a vast network of branches in urban and rural areas.

The beauty of the program, says Bansefi's chief executive Javier Gavito, is that the "unbanked population" on both sides of the border gets into the formal banking system. In Mexico, only half of all adults hold a bank account.

Directo a Mexico "revolutionizes the remittance market," says John Herrera, co-founder of Latino Community Credit Union, which has five branches in North Carolina and participates in the remittance program.

"U.S. banks have realized that these working-class folks are sending real money back home," says Mr. Herrera.

Illegal Immigrants Become Stuck In Pipeline (LAT)

By Richard Marosi

The Los Angeles Times, October 11, 2006

San Diego — More than a dozen illegal immigrants were briefly trapped inside a cross-border pipeline structure Tuesday after a man got stuck in the narrow passageway and had to be rescued by San Diego firefighters.

The immigrants were crawling through a passageway connecting a Mexican-based industrial gas supplier with a holding tank on the U.S. side, according to Lauren Mack, spokesperson for Immigration and Customs Enforcement.

The concrete-encased passage was used to protect piping that once carried liquefied oxygen, Mack said.

The immigrants had crawled nearly to the exit point in the United States when a man wearing a puffy, woolen sweater got stuck, Mack said. Firefighters had to break through concrete to extract the man.

Authorities with the U.S. Border Tunnel Task Force have been keeping a close watch on the area just east of the Otay Mesa Port of Entry, where many immigrants crawl through vast storm drain networks to get into the country. This is believed to be the first time in the San Diego area that migrants have been caught using an existing subterranean passageway that appears to be privately owned, Mack said. The passageway, which was at least 120 feet long, was extremely narrow and filled with water, Mack said.

"It's really, really dangerous, and they're lucky nobody died," she said.

Seven migrants were apprehended on the U.S. side; the rest are believed to have returned to Mexico.

TAX:

U.S. Expatriates Puzzle Over New Tax Rule (WSJ)

By Tom Herman And Jane Spencer

The Wall Street Journal, October 11, 2006

The U.S. Treasury Department removed part of the sting from a recent law that boosted taxes for many Americans working overseas, but many U.S. expatriates still are facing sharp tax increases this year.

A new Treasury notice allows Americans to deduct or exclude from their U.S. taxes more of the cost of housing in many foreign locations, where rents frequently are higher than in the U.S., than they otherwise would have. Accountants say this new relief varies widely from place to place.

Still, the revised rule, announced by Treasury in a notice issued Friday, offsets only a fraction of the higher tax bills that many individuals must pay this year. Among those hit the hardest are Americans with relatively high incomes working in places

DOJ_NMG_0079236

with high housing costs and low taxes, such as Hong Kong, and whose employers don't protect them from the additional tax cost of working abroad.

The new law already is affecting many companies, as some employers guarantee that their workers don't pay more in taxes than they would if they were living in the U.S. Business groups continue to lobby Congress to change the law, which was enacted in May and is retroactive to the beginning of this year, because they say it undermines U.S. business competitiveness abroad.

Robert Keys, a tax partner in Hong Kong for PricewaterhouseCoopers, says the rule granting a higher housing exclusion will save him several thousands of dollars a year on his U.S. taxes. That is a relatively small gift, because the law enacted in May drove up his U.S. tax liability to $40,000 a year from about $10,000 previously, he says.

"I came here because I thought I could make a bit more money," Mr. Keys says. "But when the costs keep going up, it makes you give some serious consideration to whether it's the place to be."

Americans working in Singapore also will get some relief from the latest change, according to Carol-Ann Simon, expatriate services leader of BDO Seidman LLP in San Jose, Calif. For example, suppose an American in Singapore earned about $200,000 in 2005 and paid around $45,000 in housing expenses. Under the new law enacted in May, that person's U.S. federal income-tax bill would be about $8,700 more for 2006 than in 2005. Thanks to the new Treasury notice, that person's bill now would be about $6,800, a saving of about $1,900, Ms. Simon says.

Americans working in high-tax countries, such as Germany and other European nations, are likely to feel much less effect, or possibly even none at all, from the recent tax law and the latest change to the housing exclusion. How much of an impact will depend on several factors, such as where they are living and the details of their pay and other income. That is because those workers already pay large sums in their host countries that can be used to offset any U.S. tax liability.

Under the new Treasury rule, the amount that can be excluded for housing costs also can vary within the same country. In London, for instance, an American expat can receive $58,916 in housing benefits before having to pay tax to the U.S. on it, according to Deloitte & Touche LLP. In Surrey, a picturesque district just south of London with two U.S. schools, the exclusion is just $21,916, even though property prices aren't much lower in Surrey than London.

"It could make you think, 'I better live on the very edge of London if I want to send my children to the American school in Surrey'," says Lynne Rennie, a Deloitte partner and chairman of the tax group at British-American Business Inc., the former American Chamber of Commerce.

The recently enacted tax law allows Americans working abroad to exclude as much as $82,400 of their foreign-earned pay this year, plus certain foreign housing expenses, when they are filing U.S. taxes. That $82,400, which is a bit higher than before, is known as the foreign earned-income exclusion. In a controversial change, income above that level now is subject to higher rates than before. This change isn't affected by last week's Treasury notice.

Kathy Chiron, who moved to Hong Kong from Washington, says the recent tax increase had a major impact on her family's finances. "It's a huge chunk of money and a real change in our tax bill," says Ms. Chiron, whose husband works for a Hong Kong telecommunications company. "It was like suddenly having another child in college." Ms. Chiron, who has two children attending universities in the U.S., says the latest change to the housing exclusion amount will help somewhat.

American business groups are continuing lobbying efforts to reverse the law, says Nicholas de Boursac, executive director of American Chamber of Commerce in Singapore. "No other civilized country in the world taxes earned income of citizens abroad," he says. "It means you're going to have fewer American expats."

"We have seen candidates turning down offers to come out here" to Hong Kong because of the higher taxes on U.S. expats, says Monica Levine, a consultant at Hudson, an executive recruitment company that is a division of Hudson Highland Group Inc. of New York. "It's less attractive than it was a year ago."

Some companies are unhappy with the tax increase but say it won't affect hiring. Eli Lilly & Co., which offers a tax-equalization package to Americans working overseas, says "we remain firmly committed to using expatriates to develop our global leadership. This won't stop us." General Motors Corp. says it has no plans to change the number of Americans it sends overseas. "Considering that we sell to so many countries, it's important that U.S. employees get experience in an overseas market," a GM spokesman says.

A U.S. congressional committee estimates the recent tax increase on expats will raise about $2.1 billion in additional revenue in the next decade. The Internal Revenue Service estimates Americans working abroad filed about 295,000 individual income-tax returns for 2004 claiming the foreign-earned income exclusion. Of those, about 139,000 had any U.S. tax liability.

--Anjali Athavaley, Laura Santini, Loretta Chao and Aaron O. Patrick contributed to this article.

The fight continues in a high-profile courtroom battle over whether certain types of awards are taxable.

A federal appeals court ruled recently that a woman doesn't owe taxes on a $70,000 award paid to her by her former employer for "emotional distress" and "loss of reputation." The U.S. Court of Appeals for the District of Columbia Circuit said the

DOJ_NMG_0079237

award didn't represent "income," and thus wasn't taxable -- and that a 1996 tax-law change was unconstitutional insofar as it permitted taxation of awards for mental distress and loss of reputation. The decision was handed down by a three-judge panel that included Chief Judge Ginsburg.

Now, the Justice Department is asking the full appeals court to review the decision in a legal maneuver known as a petition for "rehearing en banc." The question raised in the case is "one of exceptional importance to the administration of the nation's tax laws," the government said. The appeals court panel's decision "represents the first time in over 85 years that an exercise of Congressional income-taxing power has been declared unconstitutional."

The winner of the recent decision was Marrita Murphy, represented by the law firm of Kohn, Kohn & Colapinto in Washington.

The winner of the recent decision was Marrita Murphy, represented by the law firm of Kohn, Kohn & Colapinto in Washington.

BRIEFS: Procrastinator alert: Monday is the filing deadline for taxpayers who received automatic six-month extensions this year, an IRS spokesman says.

Religion-Based Tax Breaks: Housing To Paychecks To Books (NYT)

By Diana B. Henriques

The New York Times, October 11, 2006

For tens of millions of Americans, the Rev. Rick Warren is best known for his blockbuster spiritual guide, “The Purpose Driven Life,” which has sold more than 25 million copies; his success as the founder of the 22,000-member Saddleback Church in Lake Forest, Calif.; and his efforts on behalf of some of the world’s neediest people.

But for tens of thousands of ministers — and their financial advisers — Pastor Warren will also be remembered as their champion in a fight over the most valuable tax break available to ordained clergy members of all faiths: an exemption from federal taxes for most of the money they spend on housing, which typically represents roughly a third of their compensation. Pastor Warren argued that the tax break is essential to poorly paid clergy members who serve society.

The tax break is not available to the staff at secular nonprofit organizations whose scale and charitable aims compare to those of religious ministries like Pastor Warren’s church, or to poorly paid inner-city teachers and day care workers who also serve their communities.

The housing deduction is one of several tax breaks that leave extra money in the pockets of clergy members and their religious employers. Ministers of every faith are also exempt from income tax withholding and can opt out of Social Security. And every state but one exempts religious employers from paying state unemployment taxes — reducing the employers’ payroll expenses but also leaving their workers without unemployment benefits if they are laid off.

Another religion-based tax break — the only one consistently defeated in the courts in recent years — is an exemption from state sales taxes for religious publications but not for secular ones.

This sales tax break has been struck down as unconstitutional in at least five states, most recently in Georgia in February, when a United States District Court judge, Richard W. Story, ruled that “the unique and preferential treatment the state provides to ‘religious’ literature raises serious constitutional concerns” under the First Amendment clause prohibiting an “establishment” of religion.

Yet a few states still have a sales tax exemption for religious publications. One of them is Florida, where state officials, lawyers for two religious publications and a national religious liberty advocacy group have joined forces to defend the tax break from a constitutional challenge waged almost single-handedly by an Orlando lawyer named Heather Morcroft.

Ms. Morcroft is a Legal Aid staff lawyer who works with foster children. She is a believer in Wicca, which she described as a neo-pagan faith loosely based on the traditions of ancient earth-centered religions, and serves as president of the state’s small Wiccan Religious Cooperative.

The cooperative is the formal plaintiff in the pending lawsuit Ms. Morcroft filed almost five years ago to challenge the constitutionality of the Florida exemption. Her arguments echo those that have prevailed in other states: that by exempting religious publications from the sales tax, the government is favoring religious ideas over secular ones, and that tax officials should not be in the business of deciding what publications are sufficiently religious to be exempt.

In contrast to Ms. Morcroft’s lonely fight in Tallahassee, Pastor Warren, who declined to be interviewed for this article, had a host of allies when he went to battle to defend the special tax deduction for housing expenses of clergy members. Ultimately, the allies included both houses of Congress and the president of the United States.

The Housing Exemption

DOJ_NMG_0079238

The one small passage in the vast federal tax code that originally conferred the housing-expense exemption on clergy members did not cap the deduction. But in 1971, the Internal Revenue Service limited it to the "fair market rental value" of the furnished home, utilities included.

During a routine audit in 1996, according to court documents, the I.R.S. decided that Pastor Warren's housing deduction exceeded the rental value of his new home on Via Del Sol in the rugged Trabuco Canyon, southeast of Los Angeles.

That's when the fireworks began.

Pastor Warren, who gives 90 percent of his considerable income to charities, later explained in an open letter to other ministers that he decided to sue because the housing allowance was the only way small churches could pay their pastors enough to live — and he knew that those ministers could not fight the I.R.S. as he could.

The deduction, usually called the parsonage exemption, is available to ministers, rabbis and other clergy members of all faiths working at houses of worship. It allows them to live in congregation-owned housing without being taxed on the imputed value of their free housing, as almost all other employees are when they live in company-paid housing.

Since 1954, the provision had also shielded clergy members from taxes on the entire portion of their paycheck designated by their congregations as a housing allowance, whether they spent it on renting an apartment or buying their own home. But the rules the I.R.S. adopted in 1971 limited the deduction to the smallest of three amounts: the "fair market rental value" of the home, the housing allowance paid to the minister or the minister's actual housing expenses.

That ruling lighted the long fuse that, decades later, propelled Pastor Warren into court.

It took four years — and far more of Pastor Warren's money than the $55,300 disputed in the audit — but on May 16, 2000, the United States Tax Court struck down the I.R.S.'s cap and ruled that clergy members could deduct "the amount used to provide a home," however much that might be.

If the story had ended there, Pastor Warren's battle would have been an unequivocal victory for the clergy. But the I.R.S. appealed to the United States Court of Appeals for the Ninth Circuit in San Francisco. And in March 2002, that court raised an unexpected question: was this tax break constitutional? Or did it treat the clergy so favorably that it violated the First Amendment?

The court appointed Erwin Chemerinsky, a law professor then on the faculty at the University of Southern California, to research the constitutional issue and file a friend-of-the-court brief. The court was immediately pelted with defending arguments from lawyers representing almost every religious organization in the country, from the Central Conference of American Rabbis to the Church of the Nazarene.

Some defenders noted that employees required to live in certain places for the convenience of their employer, as pastors are, had long been eligible for tax relief. (A similar exemption is available to some military and diplomatic personnel. But only clergy members can apply it so broadly — for example, applying it even when they work for a church they themselves founded at a location of their own choosing, as was the case with Pastor Warren.)

Others argued that tax deductions favoring religion had been granted for more than 200 years without any objections from the Supreme Court, and this one was no exception. And a few simply pleaded that clergy members deserved the deduction because they were so poorly paid for their contributions to society.

Professor Chemerinsky studied the relevant First Amendment case law, especially the 1989 case Texas Monthly v. Bullock in which the Supreme Court had drawn the line at government's granting a "tax break to those who spread the gospel that it does not also give to others." He urged the appeals court to find the tax break unconstitutional.

Under I.R.S. rules, he noted, this benefit is available to all clergy members who administer sacraments, conduct worship and direct the spiritual life of a religious institution. "The government thus has to determine what constitutes 'sacraments,' 'religious worship' and the 'spiritual life' of a religion and then to evaluate whether the clergy member is sufficiently engaged in these tasks," Professor Chemerinsky continued.

"It is difficult to imagine a greater entanglement with religion than this evaluation," he wrote in his brief for the court.

Moreover, "the parsonage exemption is a subsidy for religion" and is therefore unconstitutional, he argued. Current Congressional budget records show that the exemption has cost the government as much as $500 million in tax revenue a year, shifting that much of the national tax burden onto other taxpayers.

He did not address the pastoral poverty argument in his court briefs, but in an interview, he noted that poorly paid inner-city teachers and day care workers do not benefit from the parsonage exemption, despite their service to society.

Nor do people at secular nonprofit organizations engaged in humanitarian work. Action Against Hunger U.S.A., based in New York, finances relief programs in Africa, but its director, Cathy Skoula, pays taxes on her entire salary, including what she spends on housing. So does Lawrence Rosenblatt, executive director of the Bowery Residents' Committee, which provides food, shelter and counseling to sick, needy people in Lower Manhattan.

DOJ_NMG_0079239

Even amid the distractions of the year after Sept. 11, the constitutional challenge to the clergy housing deduction inspired wide coverage in religious publications and some heated words on radio. Pastor Warren quoted comments made to him by a conservative radio commentator, Hugh Hewitt, who said the issue arose because of "the implacable hostility of the political left to the role of God in the world and the country."

But in fact, the political left and right joined forces with "almost miraculous" speed to defuse this constitutional time bomb, according to Richard R. Hammar, a lawyer and accountant who edits the Church Law and Tax Report newsletter. Within 40 days, the Clergy Housing Clarification Act of 2002 had been approved unanimously in both houses of Congress and signed into law by President Bush.

"It was like the parting of the Red Sea," Mr. Hammar said.

The new law, in Solomonic fashion, affirmed the unlimited deductions ministers like Pastor Warren had taken in the past, but imposed the I.R.S.'s "fair market rental value" restriction on deductions going forward. Satisfied, the tax service withdrew its appeal, ending the constitutional challenge in San Francisco.

Ministers of every faith are also exempt from income tax withholding. And they can opt out of Social Security — an exemption that Mr. Hammar said was probably widely abused.

Until 1968, clergy members were exempt from Social Security unless they joined voluntarily. Since then, they have been automatically covered — but, unlike other citizens, they are allowed to drop out as conscientious objectors if they assert, by a certain point early in their ministry, that they have a religious opposition to receiving public welfare benefits.

"Few people, outside of the Amish, could plausibly say that," said Mr. Hammar, an accountant who also has a law degree from Harvard and attended its divinity school.

Yet his research shows that 3 of every 10 ministers in America have opted out of Social Security. "The only conclusion is that the conscience-based objection is usually really a financial decision," he said.

Because the exemption is irrevocable, why would so many ministers take such a drastic step? Clergy members are considered self-employed and therefore pay a 15.3 percent contribution to Social Security, Mr. Hammar explained. So young ministers on tight budgets sometimes decide, or are persuaded, to drop out and thereby give themselves a 15.3 percent raise.

"The vast majority of clergy who did opt out of Social Security never replaced it with another retirement scheme," he added.

Several times since 1968, religious denominations have urged Congress to rescue these potentially destitute ministers. On three occasions in the last 20 years, most recently in 1999, Congress has done so, opening a two-year window during which ministers who "irrevocably" dropped Social Security could return.

Mr. Hammar said federal law and the laws of every state except Oregon also exempt religious employers from the unemployment compensation laws that cover other employers. Court rulings widened this exemption to include religious-operated schools, he said, and in 1997 Congress expanded it further to include schools "operated for a religious purpose" but not actually controlled or affiliated with a religious denomination or institution.

As a result, he said, state courts have generally determined that workers who are laid off from these exempt religious employers cannot collect jobless benefits.

Breaks on Sales Taxes

In her 20 years as a lawyer, Heather Morcroft had never argued a case before the Florida Supreme Court.

But there she was, on June 9 — standing alone on her side of the lofty courtroom in Tallahassee to challenge the constitutionality of a Florida law that exempts "religious publications" from the state sales tax.

As Ms. Morcroft sees it, this exemption not only infringes on the liberty of those faiths with writings that may not be deemed sufficiently religious to be exempt, but it also puts government in the role of defining a religious publication and then favoring that publication over secular ones.

None of that, she says, should be allowed under the First Amendment, which provides, in part, that "Congress shall make no law respecting an establishment of religion."

Indeed, in that 1989 case in Texas, the United States Supreme Court ruled that the government could "not place its prestige, coercive authority, or resources behind a single religious faith or behind religious faith generally" without violating the Constitution.

Some legal scholars argue that there was no clear majority opinion, and hence no clear judicial guidance, in the Texas case.

But Ms. Morcroft noted in her lawsuit that since the Supreme Court decision in the Texas case, federal and state courts in North Carolina, Pennsylvania, Rhode Island and South Carolina, as well as Georgia, had "found that a sales tax exemption for items based on their religious content is unconstitutional."

Florida is one of several states that still have some sort of sales tax exemption for religious publications.

DOJ_NMG_0079240

Lawyers defending the exemption, which costs the state just under $10 million each year, say it is consistent with a long list of laws, adopted and upheld since the nation's birth, that have benefited religion in some way. Governments "have found it prudent to avoid entanglement of religion with the state taxation process by providing exemptions," argued Kevin Shaughnessy, a lawyer in the Orlando office of Baker & Hostetler who represents The Florida Baptist Witness and The Florida Catholic, which benefit from the exemption. Similar arguments were made by Liberty Counsel, a religious freedom advocacy group in Orlando.

Most states give religious groups some sort of broad sales tax exemption, but most do so simply by including religious organizations in omnibus exemptions that cover sales to, and sometimes purchases from, nonprofit groups of all sorts.

But a few states go further, exempting specific kinds of religious publications from sales taxes no matter who buys or sells them, said John L. Mikesell, a professor at Indiana University and the co-author of a widely used primer on sales taxation. They include Florida, Massachusetts and Texas, which revised its statute after the Texas Monthly case.

Several other states grant special treatment to sacramental equipment and supplies, and to materials a private contractor buys for use on many religious construction projects.

The difficulty of applying these exemptions in real life was revealed in Tallahassee, when Justice Barbara J. Pariente quizzed James A. McKee, the state attorney defending the Florida statute, about how the state went about "deciding whether my Bible is really a religious text, or if it is historical or something else."

Mr. McKee quickly assured her that the revenue department left those constitutionally sensitive "content" decisions to the booksellers. "It's similar to a statute that exempts certain food items," he explained. "The grocery store is actually the one that makes the determination."

Sounding a little shocked, Justice Pariente asked, "So they can say anything is religious and there is no challenge to it?"

Mr. McKee did not directly respond to her question — but booksellers have.

While there is no way of knowing how small bookshops decide what is an exempt "religious publication," big national booksellers have developed definitions to guide their stores in Florida and other states with similar exemptions.

The problem is, their definitions are different.

Barnes & Noble recognizes a narrow category that includes the Bible and a short list of other "sacred texts," including the Talmud and the Koran, according to Mary Ellen Keating, a company spokeswoman.

At Borders, the exemption is broader, including books on theology and religious history as well as Bibles, hymnals, prayer books and the sacred texts of all religions, according to Anne Roman, a spokeswoman there.

Hearing that, Ms. Morcroft said she was not surprised at the disparities. "I have friends who shop at a local Christian bookstore," she said. "They say the only thing that's ever tax-exempt there is the Bible."

Like the many other tax and regulatory exemptions that have become available to religious organizations in America, the tax breaks for clergy housing expenses and religious publications benefit religion in ways that some critics say go beyond the limits of the Constitution.

Until several years ago, "it was inconceivable for most to think that religion might well be aggressively expanding its power in a way that is harmful to the public good," said Marci A. Hamilton, a law professor at the Cardozo law school at Yeshiva University in New York and the author of "God vs. the Gavel: Religion and the Rule of Law," which is critical of many religious exemptions, particularly in the areas of land use and family law.

But now, Professor Hamilton said, the power of religious entities "is at its apex."

Defenders of these exemptions deny that they raise any questions of excessive power or constitutional violations. "Government deregulation of religion is consistent with a broader pattern of American government going back to the founding," said Anthony R. Picarello Jr., vice president and general counsel of the Becket Fund for Religious Liberty, a legal advocacy group in Washington.

"Providing special treatment is not always constitutionally required," he said, "but it is constitutionally permissible."

In The Congressional Hopper: A Long Wish List Of Special Benefits And Exemptions (NYT)

By Diana B. Henriques

The New York Times, October 11, 2006

For all their gains, some advocates for religious freedom see the last 15 years not as a time of increased accommodation for religious groups but as a long battle in which religious groups have had to fight hard just to hold their own against a tide of unsympathetic policies. Indeed, they say government must do more to protect religious institutions of all kinds from the hostile environment of modern America.

A Congressional wish list supported by some religious leaders and other advocacy groups would accomplish that.

One bill, H.R. 235, would exempt churches and other religious institutions — but not secular nonprofits — from the I.R.S. rule against partisan political endorsements by tax-exempt organizations. Another, H.R. 27, would grant religious employers

DOJ_NMG_0079241

even more leeway to discriminate on religious grounds in their hiring, specifically in job training programs paid for with federal tax dollars.

There's also H.R. 2679, which passed in the House on Sept. 26 by a vote of 244 to 173. It would prohibit the courts from awarding damages, lawyers' fees or costs to any plaintiff who successfully sues over possible violations of the establishment clause of the First Amendment, cases involving things like the erection of crosses or nativity scenes on public land.

The Public Prayer Protection Act, H.R. 4364, would protect the right of government officials "to express their religious beliefs through public prayer" by barring federal courts, including the Supreme Court, from hearing lawsuits raising constitutional objections to those prayers.

The list also includes the Workplace Religious Freedom Act, H.R. 1445 and S. 677, introduced last year with bipartisan support in both houses, which would amend the Civil Rights Act of 1964 to require employers to be more accommodating to the religious observances of their employees. The bills do not say whether religious employers would be exempt, as they are from the Civil Rights Act's prohibition on discrimination based on religion.

Another bill, H.R. 1054, would transform into law the executive orders that created President Bush's "faith-based initiative," to make federal grants and contracts more available to religious groups.

Among those who think more should be done is Anthony R. Picarello Jr., vice president and general counsel of the Becket Fund for Religious Liberty in Washington, one of a growing roster of law firms and legal advocacy groups ready to provide free legal help for religious groups or individual believers involved in First Amendment litigation or disputes.

"I don't think we can say the climate for religious freedom is so dramatically improved that we don't need these laws," Mr. Picarello said.

There are still fierce battles over individual religious practices and the display of religious symbols on public property, he noted. And religious organizations — especially those outside the nation's mainstream traditions, like small Latin American or Asian sects and non-Christian houses of worship like mosques, Orthodox synagogues and Hindu temples — still face discriminatory zoning decisions in towns across the country.

He is also concerned that the sexual abuse cases pending against the Catholic church will erode the longstanding judicial doctrine that protects religious employers from lawsuits by disgruntled clergy members and other employees.

"I don't necessarily view the climate as improving," he said, adding a few moments later: "The idea that special protection in the law for religion is unconstitutional has been rejected over and over and over. Yet all these statutes are under continuous attack."

"A lot less frequently, perhaps," he added, "but it hasn't stopped."

Given the broad and expanding benefits available to religious organizations, from tax breaks to government contracts, what explains the continuing complaints about a nationwide hostility toward religion and religious organizations?

A number of legal scholars say some justifiable discontent is warranted over the erratic path the Supreme Court has followed on First Amendment cases since 1990. Derek H. Davis, formerly the director of the J. M. Dawson Institute of Church-State Studies at Baylor University, said that although the courts had clearly become more accommodating to religion, "the whole landscape is in disarray about what the law is."

But at a more human level, specialists on religious law said, basic changes in the workings of government — more lenient rules on revenue bonds, new tax breaks for faculty housing at church schools, higher barriers to workplace lawsuits, beneficial exemptions from licensing rules — just don't attract the emotional lightning that flares over same-sex marriage and religious symbols on public land.

For example, a federal court ruled that a giant cross on city-owned land at the Mount Soledad Veterans Memorial in San Diego was unconstitutional and ordered it removed by August of this year. The public reaction was so fierce that Congress took less than six weeks in the summer to approve a law providing for the federal government to buy the site and preserve it intact.

Much of the angry talk about a national war on religion "is a reaction to modernity and the pace of change in our society," said Edward R. McNicholas, a director of the religious institutions law practice at Sidley Austin. "People want to cling to their religious values as they encounter more cultures that are different and foreign to them. So the language of exclusion has been taken up in the political rhetoric."

Beyond just the talk, the Becket Fund and other religious freedom advocacy groups can cite what they say are examples of unfair attacks on people of faith: a devout librarian fired for refusing to work on Sunday; a local zoning law that allows no churches; a student rebuked for saying "God bless you" to a classmate who sneezed. With the involvement of these advocacy groups, battles like these are getting far more attention, adding to the public concern about threats to religious freedom.

While many of these cases are quickly resolved with a single warning letter or sometimes just a telephone call, they leave a bitter aftertaste in the political arena, said the Rev. Barry Lynn, president of Americans United for Separation of Church and State.

DOJ_NMG_0079242

Some scholars and leaders of faith worry that the real threat to religious vitality in the United States is not the "hostility" of a secular culture.

"What's happening with all these tax breaks and exemptions is a soft, subconstitutional establishment of religion returning to the country," said John Witte Jr., director of the Center for the Study of Law and Religion at the Emory University law school. That increasing level of indirect support and patronage, he said, "breeds a level of dependency that I think is dangerous for both religion and government."

Professor Davis, now the dean of humanities at the University of Mary Hardin-Baylor in Belton, Tex., agreed with that view, but said he was also troubled that religious organizations were pursuing more regulatory exemptions even as more government money is heading their way through contracts, vouchers and grants under the faith-based initiative.

"That suggests to me that they don't want government involved in monitoring religious institutions, but they want the benefits that government is dispensing anyway," he said. "To me, that's unfair. If you're going to take government money, you should abide by the rules, like everyone else."

CONGRESS-ADMINISTRATION:

Bush Says Democrats Would Raise Taxes (AP-Y)

By Jennifer Loven

AP-Yahoo, October 11, 2006

President Bush portrayed Democrats on Tuesday as the party of big spending and high taxes, aiming to give increasingly endangered Republicans an edge in a midterm election debate dominated recently by congressional scandal and overseas crises.

"If you want to keep your tax cuts, vote Republican on Nov. 7," Bush said at a fundraiser for former Republican Rep. Mac Collins, who is seeking a comeback to Congress. He is challenging Rep. Jim Marshall, seen as one of the most vulnerable Democratic incumbents.

"Next month, our nation has got this choice to make," the president said. "Do we keep taxes low so we can keep this economy growing? Or do we let the Democrats in Washington raise taxes and hurt the economic vitality of this country? ... This decision will have a huge impact on the working people all across the United States of America."

Bush is hoping to help Republicans retain control of both houses of Congress against ever steeper odds by convincing voters that Democrats would raise taxes and compromise Americans' safety if handed the majority. But the taxes-and-terrorism pillars of the GOP midterm election strategy, the mainstays of Bush's campaign-trail speeches, have been partially drowned out of late.

The revelation of a Republican lawmaker's online sexual advances toward male congressional pages has sparked a fierce debate about whether the GOP leadership did enough to protect teenagers working on Capitol Hill. North Korea's reported test of a nuclear bomb has given Democrats ammunition to argue that Bush focused on going to war in Iraq, a country without weapons of mass destruction, while the threat from the communist regime in Pyongyang expanded.

The degree to which the White House is struggling to regain control over the political conversation was demonstrated Tuesday when Bush aides distributed excerpts of the president's tough-on-Democrats speech before he landed in Georgia. Unlike previous administrations, the Bush White House keeps tight control over the president's speeches, usually handing out only the most significant ones in advance and even then only a few minutes beforehand.

On Tuesday, though, the parts of Bush's remarks that went after Democrats on taxes were given to the reporters traveling with the president on Air Force One and also, to maximize their exposure, disseminated by e-mail to hundreds more on the White House press list.

The event at the Macon Coliseum raised $300,000. Outside, there were demonstrators from both sides. About 150 people waved American flags and signs that said "God bless President Bush," while others held placards asserting that the president is a war criminal.

Bush singled out the voting record of House Democratic leader Nancy Pelosi to ridicule her declaration that Democrats "love tax cuts." The president said Pelosi, likely to be House speaker if Democrats win control of that chamber, voted against reducing the so-called marriage penalty, phasing out the inheritance tax and cutting taxes for small businesses and families with children.

"Given her record, she must be a secret admirer" of tax cuts, Bush said of Pelosi, earning appreciative laughs from the friendly audience of GOP donors. "If this is Democrats' idea of love, I wouldn't want to see what hate looks like."

DOJ_NMG_0079243

Pelosi, in a statement, fired back: "Democrats have a strong record fighting for tax relief for middle-class families and small businesses that would spur economic growth and expand opportunity for all Americans, not just the privileged few." She said Democrats would "restore fiscal responsibility with pay-as-you-go budgeting, reducing the budget deficits that have exploded as a result of President Bush's failed economic policies."

With some conservatives in the Republican Party's base of support restive about increased federal spending under Bush's watch, the president defended his record on the budget deficit. He said he is making faster-than-expected progress on his goal of cutting the annual deficit in half by 2009, because of higher tax receipts.

"The Democrats' approach to cutting the deficit is taking more of your money to pay for their spending," he said. "The Republican approach is to restrain spending."

Dangerous Thinking In Compromise On Treatment Of Captive Terrorists (WSJ)

Wall Street Journal, October 11, 2006

The attempt by Sens. John W. Warner, John McCain and Lindsey O. Graham to explain their compromise with the president on treatment of terrorist war prisoners ("Look Past the Tortured Distortions," editorial page, Oct. 2) did more to perpetuate distortions and misconceptions than clarify anything. We have the Geneva Convention, the Detainee Treatment Act, and now the Military Commission Act. Sounds like we are desperately trying to make a square peg fit snuggly into a round hole using a lot of grease known as political mumbo jumbo with a heavy dose of political correctness and pseudo nobility thrown in.

The last I heard, the Geneva Convention applies to the fair and humane treatment of POWs. I believe POW stands for "prisoner of war." How did we get from POWs to "detainees," "suspected terrorists" or "enemy combatants," all used interchangeably in this article? How did we get from "captured' to "arrested"? Are we dealing with people who are trying to destroy America and kill Americans, or armed convenience store robbers who may have killed somebody? Since when do POWs get Supreme Court review on anything?

If I am an American service member in a conflict/battle in Iraq (or wherever) and someone is shooting at me and I shoot back and kill him, whom have I killed -- a potential detainee, a suspected terrorist, the enemy or a non-resident unabomber with distorted religious perceptions? If I capture/arrest a person on my airplane with a bomb in the heel of his shoe that didn't explode, subsequent to an attempt, is he a suspected anything or is he a prisoner of war?

Those who think being kind to terrorists is going to provide any protection to our men and women in uniform, now or ever, needs to update their thinking to a post 9/11 status. While we need not and should not be barbaric and cruel (i.e. pulled fingernails, cigarette burns, humiliation for entertainment, etc.), trying to find a way to be rational and civilized to those who are irrational and uncivilized is tantamount to treating a three-year-old like an adult. It ain't gonna work.

My big question is, are we inadvertently perpetuating a mindset of "kill 'em but for God's sakes don't capture them"? If we have to plead with them or persuade them with flowers and candy to tell us anything after we capture them, what's the net difference, militarily speaking, of course? Somebody, somehow needs to clear up the confusion, quickly. Not for the president or senators, but for those in the middle of a firefight, wherever and with whomever that may be. God save America. If we can't stop the infighting in Washington, He may be our only chance.

James H. Godwin
Lt. Cmdr., USAF (Ret.)
Vietnam Veteran 1968-69
Cold War Veteran 1955-67, 1970-74
Simpsonville, S.C.

When one of the depraved monsters we are fighting considers whether or not to behead a captured American soldier, I doubt that the fact that we will now reveal secret evidence to terrorist defendants will give him pause. Furthermore, this legislation concerns procedures for unlawful combatants. A U.S. Marine wears a uniform with insignia, carries weapons openly, has a chain of command, and does not target civilians. Why would a group that ludicrously declares such Marines unlawful combatants then feel compelled to follow any international strictures or moral norms concerning their treatment?

Sadly, this foolish and dangerous thinking is unlikely to have any bearing on the treatment of our captured military personnel, but is far more likely to result in more of them dying in the field while placing civilians at greater risk here at home.

Matthew Commons
Lt. Cmdr., USN
Jacksonville, Fla.

Regarding habeas corpus for terrorists, the senators say, "These challenges are in excess of what our soldiers would be afforded as prisoners of war."

DOJ_NMG_0079244

What a strange statement by three former military officers, since we have never seen, nor should we ever expect to see, captured Americans treated as prisoners of war by the very same terrorists.

William D. Allen

(Another former military officer)

Placentia, Calif.

By publishing this piece you perform a public service by illustrating how far detached from reality and the sentiment of the American people these senators are. Americans know that the best way "to give protection to our men and women in uniform" is to kill as many of the enemy as fast as we can. Americans also know that none of the people held in Guantanamo or anywhere else, nor anyone being surveilled by the NSA, is even remotely subject to the protections of the Geneva Conventions, nor are they entitled to or covered by the Constitution of the United States.

Democrats Want to Assure Middle-Income Tax Relief

In response to your Oct. 3 editorial "An Honest Democrat":

President Bush and Republican campaign committees have attacked Democrats with a claim that we would raise taxes if elected to a majority in Congress. That's not true. Democrats have a long history of supporting targeted relief for middle-income families. In fact, many of the tax benefits extended by this administration began as Democratic initiatives.

Democrats have developed a pay-as-you-go platform for our nation's budget that will not saddle our children and grandchildren with more, unbearable debt. We want to start by closing the "tax gap," collecting the $345 billion owed each year in unpaid taxes. We also believe we should use our tax code to encourage investment and job creation here in America. We would make it a priority to close tax shelters and eliminate benefits for companies that move jobs overseas.

During a recent fund-raiser in Florida, President Bush seized on a statement in the press that I could not support the extension of all of his tax cuts. He said "that's one way of saying they're going to raise your taxes because, you see, if you do not extend the tax cuts your taxes go up." Well, the president is talking about his big rate tax cuts that aren't going to expire until 2010. That's light years away from the debate before us, and we have no way of knowing what the economy or even our leadership will look like then. Democrats want to pursue new priorities to strengthen relief for middle-class families that have been left behind during the Bush administration.

What's done is done. America needs to seek new ways to help middle-income families improve their lives. The only way to achieve this is with cooperation between Republicans and Democrats. I know the president and I agree that comprehensive tax reform is a priority. Further, we both realize that any tax reform proposal signed into law must not increase the national debt. In order to do that, there must be winners and losers. Americans have a choice on the policies we'll pursue; Democrats would work to ensure that middle-income families are not the losers in the tax-reform debate.

Rep. Charles B. Rangel (D., N.Y.)

Ranking Democrat

House Committee on Ways and Means

Washington

The president, the majority party in Congress, and now your editorial page are attempting to convince the American public that Democrats are intent on increasing their taxes.

We find it curious that Democrats are being accused of planning to increase taxes on middle-income families when decisions made by the current majority have already done so. Those in charge of the Congress now deliberately chose not to extend middle-class tax relief -- such as the deductions for college tuition, state and local sales taxes, and teachers' out-of-pocket classroom expenses -- before Congress adjourned for the elections. And President Bush's fiscal year 2007 budget failed to include relief beyond 2006 from the increasingly middle-class Alternative Minimum Tax.

The majority party in Congress has proven it is ready and willing now to increase taxes on American families.

Sen. Harry Reid (D., Nev.)

Sen. Max Baucus (D., Mont.)

Privatizing Drives Up Cost Of Administering Medicare

Your Oct. 4 editorial "Markets and Medicare" implies that the private sector is more efficient than Medicare. Medicare trustees suggest the opposite, finding that administrative costs for the new prescription drug program's private drug plans average 12% -- six times Medicare's historic 2% ratio.

You also claim that "competition" is responsible for a decline in the drug program's cost. But these reductions are primarily a result of a trend of lower drug spending that is unrelated to Medicare.

And you allege that the Veterans Administration limits drug access. But the VA covers 16,000 prescription drugs on its formulary, and ensures access to other drugs when necessary. VA patient satisfaction is high and the VA negotiates price discounts far below those in Medicare's private plans.

On one point you are correct: I am unhappy with the GOP agenda to privatize Medicare. Why? At the behest of Republicans, the government now pays Medicare-sponsored HMOs and other private plans 11% more than would be spent in the traditional fee-for-service program. If the private sector is so efficient, why do we have to pay it more to do the job?

South Carolina Schools Top Improvement Lists

Your Sept. 27 editorial "Change Comes to a Carolina" seriously misreprents the picture of education in South Carolina.

On the SAT -- always the favored whipping boy of public education critics in our state -- South Carolina holds the top 10-year improvement in the country, gaining 31 points while the nation has gained only eight.

On the National Assessment of Educational Progress (NAEP), the test preferred by the U.S. Department of Education for state-to-state comparisons, South Carolina exceeds the national average in math and is approaching it in reading. Our fourth-graders and eighth-graders are ranked No. 1 in the nation for improvement in math, our fourth-graders are No. 1 for improvement in science, and our eighth-graders are No. 3 for improvement in science.

It is true that too few of our students score "proficient" on state exams. But it is also true, as eight independent national studies have confirmed, that our standards for proficiency are among the toughest in the nation. What most states pass off as "proficient" earns only a "basic" score in South Carolina, making other states look better without actually achieving betterscores.

South Carolinians for Responsible Government, the organization mentioned in your editorial, has a single agenda: to dismantle public education and replace it with private school vouchers. The group has distributed inaccurate information and exerted pressure on legislators. And now it has filed a lawsuit against the South Carolina State Ethics Commission because the commission suggested that SCRG should comply with state election laws and disclose the source of its funding for campaign ads that targeted public school supporters for defeat.

Columbia, S.C.

Golden Memories

What a delight it was to read Meghan Cox Gurdon's article "The Other Golden Years" (Weekend Journal, Taste, Friday Oct. 6). The illustrated cover of "The Saggy Baggy Elephant" really took me back to my early childhood and my dear grandmother. After spending hours reading the Little Golden Books to me, I picked up her wrinkled hand and said "Grandma, you have skin just like the saggy baggy elephant." Fortunately for me, her reply is lost in time.

Because my grandmothers and parents read me the Little Golden Books and other wonderful stories I have had a lifetime love affair with reading. Thanks to Little Golden Books and Ms. Gurdon for bringing back such wonderful memories.

Beverly Holland Polant

Eyes on Romania

I disagree with your editorial suggesting that Romania and Bulgaria must finally be accepted into the European Union ("The End of Enlargement," Sept. 28). As a Jewish Holocaust survivor from Romania, I wish to emphasize that to this day, Romania has not paid restitution to Jews whose properties were confiscated and who were enslaved in forced-labor camps during the Holocaust.

Despite assurances of having established a Holocaust curriculum in schools and universities, Holocaust education in Romania remains optional, not obligatory. Random lectures on the subject given in Lasi University or in Cluj-Napoca University is not what the education law supposedly requires.

Much depends on the attitude of those in power and their willingness to bring about change. As George Orwell wrote: "Those who control the past, control the future. Those who control the present, control the past."

Romania, hoping to join the EU, is expected to clean up its act on a range of issues. It should be made clear that if Romania does not, the country will be at risk of losing its place among the western nations. The world is watching!

Hong Kong Wrong

With reference to Milton Friedman's Oct. 6 op-ed, "Death of the Hong Kong Model":

I always thought that the big story on Hong Kong was missed. Its steady decline was the natural result of liberalism and political correctness. It should have never been given back to China. Hong Kong is just about gone, and no one is really noticing. What a shame.

Brian Grayson

Albuquerque, New Mexico

Mr. Tsang obviously thinks the collective intelligence of his small advisory group is greater than that of 6.8 million Hong Kong residents. What is so surprising about that? The U.S. has 535 members of Congress who believe they know more than 300 million Americans, and every day provides further evidence regarding who knows more.

J. H. Colter

Lindon, Utah

Mr. Friedman wrote in defense of laissez-faire capitalism that "if there are any obvious imperfections, the market will eliminate them." Really? I thought that it was government who took care of "imperfections" such as WorldCom, Adelphia and Enron. And let us not forget how many Wall Street firms a few years ago paid hefty fines and were forced to change the way they do business when the SEC went after them for misleading investors. If in a laissez-faire economy the only thing that matters is making money, then it can be amazing how much "imperfection" can be tolerated by the market.

David P. Graf

Chatham, Illinois

Does this mean that capitalism cannot work outside a democracy? There are countries that are socialist internally but have a government acting as a capitalist in the global market to pay for the cost of internal social policies. France is one such example. Is China trying to use Hong Kong in a similar way?

Painting A Rosy Budget Picture (WP)

By Michael Abramowitz And Peter Baker

The Washington Post, October 11, 2006

MACON, Ga., Oct. 10 -- The federal budget deficit shrank from $318 billion to less than $260 billion in the fiscal year that concluded in September, officials disclosed yesterday. It marks the second year in a row that the deficit has declined after ballooning in the early years of the Bush administration.

White House officials hailed the improving short-term budget picture as a vindication of President Bush's tax-cutting agenda, though the long-term prospects are considerably bleaker, given the escalating costs of health-care and retirement programs and, in the view of many economists, the red ink produced by tax cuts.

Bush pointed to the declining budget deficit in remarks Tuesday evening at a fundraiser in Georgia, where he once again sought to frame next month's midterm elections in part as a referendum on tax cuts that he says have stimulated revenue. The nation "has got this choice to make," Bush told donors here. "Do we keep taxes low so we can keep this economy growing, or do we let the Democrats in Washington raise taxes and hurt the economic vitality of this country?"

The president will step up his efforts to tout the economy at a White House event Wednesday, when officials said he will announce that he has met his target of cutting the deficit in half over five years -- three years ahead of schedule.

That promise was based on what officials once projected would be a $521 billion deficit in 2004. One senior White House official, who spoke on the condition of anonymity because the president has not officially announced the numbers, said the deficit for 2006 will be less than $260 billion, "with a significant margin." The Congressional Budget Office estimated last week the deficit would be $250 billion.

One reason the goal was achieved is that the bar was set low. As the economy improved, the $521 billion deficit never materialized, and the government ended 2004 with a $412 billion deficit. Moreover, Bush's policies, including the tax cuts and war spending, helped wipe out the surplus that his administration inherited from the Clinton administration in 2001; Democrats

DOJ_NMG_0079247

point out that the government was supposed to be running a $300 billion surplus this past year, so in effect, they say, there has been a downward swing of more than half a trillion dollars.

Sen. Kent Conrad (N.D.), the ranking Democrat on the Senate Budget Committee, said the deficit numbers mask the broader problem, which is that the government is using so much in surplus Social Security taxes that it eventually must repay. When that is added to the official deficit numbers, Conrad said, the country had an additional $550 billion in debt last year. "It's amazing how word games have been used to hide from the American people how serious our fiscal situation really is," Conrad said in an interview. "All of the happy talk is just that."

Still, the budget deficit is declining, in large measure because corporate and individual tax receipts have surged at a much faster rate than the government originally projected. The Congressional Budget Office estimated last week that government receipts were up 11.8 percent in 2006, to $2.4 trillion, the second-highest increase since 1981, surpassed only by the 14.5 percent increase last year.

Meeting with reporters last week, White House budget director Rob Portman said: "This economy is strong and growing. The president's pro-growth policies, including the tax relief, are working."

But Robert D. Reischauer, former director of the Congressional Budget Office and now president of the Urban Institute, gave the tax cuts little credit because the economic effect of putting that money back into the economy was offset by the debt incurred from extra spending on the wars in Iraq and Afghanistan and relief from Hurricane Katrina. "The consensus among economists is that the tax cuts of 2001 and 2003 and the extensions have done little to boost economic growth, having been offset by increased spending," he said.

Reischauer agreed that revenue is stronger than most observers expected. "But what we're seeing is the calm before the storm," he said. "Everyone knows that the current revenue and spending structures taken together will be unsustainable as the baby-boom generation begins to enter its retirement years."

Administration officials said the president will continue to talk up the economy as he tours the country in the weeks before the Nov. 7 elections, hoping to overcome voter anger about the war in Iraq and congressional scandals. "In some of the key states and some of the key districts, even within these states, the economy remains the number one issue," said Portman, a former Ohio congressman who remains close to his House colleagues.

Bush was campaigning Tuesday for Mac Collins, a former congressman who is trying to unseat Rep. Jim Marshall in one of the few House races in which the GOP has hope of defeating a Democratic incumbent. Collins aides said they expected the campaign to take in more than $400,000 from Bush's appearance.

Baker reported from Washington.

Medicaid Spending Rises Only Slightly (WP)

By Christopher Lee

The Washington Post, October 11, 2006

Medicaid spending rose by 2.8 percent in fiscal 2006, the smallest increase in a decade, according to a study released yesterday by the nonprofit Kaiser Family Foundation.

At the same time, state tax revenue grew by 3.7 percent as the economy continued to improve, the survey of 50 states and their Medicaid directors found.

Together those trends signal that the state-federal program that pays for health care for the poor and disabled is emerging -- at least temporarily -- from a period in which many states limited eligibility, benefits and reimbursement rates for health-care services in a drive to corral costs. For 2007, only five states plan to restrict eligibility, while 26 indicated they will restore benefits, relax application and enrollment restrictions and undertake new outreach efforts.

"The program continues to grow, but it is not out of control," said Diane Rowland, executive director of the Kaiser Commission on Medicaid and the Uninsured.

"We now see that as the economy is improving that the states are looking at how they can best meet the needs of their citizens using the tools they have available to them."

With total annual costs of more than $300 billion, Medicaid serves more than 50 million people and its fortunes rise and fall with the economy. In tough economic times, when more people are out of work and hurting financially, Medicaid rolls swell. But that is when it is hardest for states to pick up their 40 percent of overall Medicaid costs, because a slumping economy also sends state tax revenues plummeting. (The federal government pays the balance of the costs.) The crunch typically leads Medicaid officials to scramble to impose cost-containment measures as part of broader efforts to rein in overall state spending.

Everything tends to turn around when the economy improves, with state coffers more flush and fewer people eligible for Medicaid. While 2002 and 2003 were lean years for states, the past two were better.

DOJ_NMG_0079248

The slower growth in Medicaid spending documented by the Kaiser report was a product of both the improving economy and continued cost-containment efforts, Rowland said. Spending growth would have been even slower, but states had to fork over billions of dollars to help pay for the new Medicare drug benefit, which covers about 6 million low-income people who used to get prescriptions through Medicaid, the report found.

Even in good times, there is upward pressure on enrollment as the population ages and an increasing number of people lack health insurance. Medicaid enrollment grew by 1.6 percent in fiscal 2006, the lowest rate since 1999, the survey found. It does not take many people to drive up costs, however. About 4 percent of the Medicaid population, generally the elderly and disabled, accounted for 48 percent of the program's expenditures in 2001, the survey showed.

Anne Marie Murphy, Medicaid director for Illinois, said officials there have combined expansion and outreach in recent years with a new emphasis on prevention and managing health-care services.

"We have been very focused on controlling utilization," she said. "We want people to get health care, but to get necessary health care. We want to spend our money wisely and be a prudent purchaser of care."

Although pressure to hold down costs continues, many states plan to expand coverage in 2007.

In California, about 95 percent of Medicaid-eligible children are already enrolled -- but officials will go after the uninsured 5 percent, said Stan Rosenstein, the state's deputy director of medical care services. "The governor has put in major funding for outreach, and we are making major simplifications to our application and redetermination process," he said.

Pump Is Not Only Place For Lower Gas Prices (WP)

By Tomoeh Murakami Tse

The Washington Post, October 11, 2006

As consumers revel in plummeting gas prices, a federal government report released yesterday offered another pleasant surprise: lower heating bills this winter.

For the first time since the 2001-02 season, natural gas bills are expected to drop by an average of 13 percent, or $119, from the previous year, according to the Energy Department's Energy Information Administration. Nearly six out of 10 households in the country rely on natural gas.

Consumers using other fuels won't fare as well, according to the report. Households heated by electricity are likely to see their bills increase by an average of 7 percent, or $58, because of the higher costs late last year for fuels for electricity generation and the loosening of caps on rates. People who use heating oil can expect to pay 6 percent, or $91, more this winter. Users of propane, however, can expect an average decrease of 1.1 percent, or $15, in their heating bills.

The chief reason for the reversal in consumers' natural gas costs is the high level in storage -- near full capacity -- which has caused prices to plunge. Inventory is plentiful, analysts said, because of last winter's mild weather, which significantly cut consumption, and a normal summer season that did not strain resources.

"The winter of 2006 was just off-the-charts warm," said Paul Flemming, director of power and gas at Energy Securities Analysis Inc. in Massachusetts. "We started what we call the inventory-building season in April with a very high starting point."

Last year, natural gas prices were also pushed up by hurricanes Katrina and Rita, which affected pipelines and natural gas processing plants. The estimated bills for this winter are still higher than 2004 levels. Heating oil supplies were also disrupted by the hurricanes, but their prices last year were not as affected as those for natural gas because the International Energy Agency released some reserve supply, said Doug MacIntyre, senior oil market analyst at the U.S. Energy Information Administration. Heating oil prices are continuing on their upward trend this year, while natural gas prices are adjusting to their sharp increases last year.

In the South region that includes the Washington area, natural gas bills would have been about 20 percent lower than last year, said Tancred Lidderdale, senior economist with the EIA. But because this winter is expected to be about 6 percent colder than last season, according to the National Oceanic Atmospheric Administration, the decline in heating bills works out to about 14 percent. "Unfortunately, the lower price is going to be offset somewhat by the expected colder winter," Lidderdale said.

Roger Cooper, executive vice president for policy and planning at the American Gas Association, a D.C.-based trade group, cautioned against reading too much into the forecasts, which were adjusted through the heating season last year as the winter turned out to be warmer than expected.

Still, "I think the direction is right," he said, adding that "I think we will see lower" natural gas bills.

Agency Expects Lower Costs For Gas Heat (NYT/AP)

By The Associated Press

The New York Times, October 11, 2006

DOJ_NMG_0079249

WASHINGTON, Oct. 10 (AP) — Families using natural gas can expect their heating bills to drop an average of $119 this winter, the government predicted Tuesday. But those who heat with oil or electricity are likely to see their bills rise.

The government based its predictions on its forecast of a mild winter for most of the nation and its assessment of energy supplies and costs as the nation's oil and natural gas production and refinery output recover from hurricane damage in 2005.

"This is a very different scene than we had a year ago in the wake of Hurricanes Katrina and Rita," said Guy Caruso, who heads the Energy Information Administration, the Energy Department's statistical agency.

The hurricanes knocked out 20 percent of the nation's gas production, severely damaged Gulf Coast gas processing facilities and shut more than a dozen refineries — an impact "we're only now recovering from," Mr. Caruso said.

"The greatest beneficiaries will be those who use natural gas because prices went up 29 percent last year" and have since fallen back, he said. Natural gas stockpiles are expected to be near capacity by Nov 1.

The Energy Department forecast that the average household using natural gas would pay $826 for home heating this winter, down $119 or 13 percent from last winter.

Natural gas is the largest source of home heating in the United States. It is the primary fuel for 58 percent of all households, including almost four out of five in the Midwest.

A third of households rely on electricity as the primary heating fuel. The government estimates they will pay an average of $839 for heat this winter, up $58 or 7 percent from last winter. Electric heat is most prevalent in the South, where 52 percent of households use it.

Fuel oil users can expect to pay $1,522 on average this winter, up $91 or 6 percent from last winter. They represent only 7 percent of the nation's households but about half the homes in New England.

Households that rely primarily on propane are expected to pay an average of $1,265 this winter, down $15 or 1 percent from last year. Propane is the primary heat source for only 5 percent of households.

Heating Costs For Some Expected To Drop This Winter (USAT)

By Barbara Hagenbaugh

USA Today, October 11, 2006

WASHINGTON — Most, but not all, Americans will pay less to heat their homes this winter than last year, the government said Tuesday in a report that offered good news for natural gas users.

If realized, the drop in average winter bills will be the first in five years.

"The trend is down, and that's the good news," Guy Caruso, head of the Energy Department's Energy Information Administration, said at a winter heating conference.

Prices for natural gas, the most popular heating source in the USA, are expected to be down dramatically from last year, when costs jumped following Hurricanes Katrina and Rita. The average retail natural gas price is expected to be about $1.22 per therm this winter, down from $1.46 last year.

Although this winter is expected to be warmer than normal in most of the USA, it is still expected to be colder than last year, which was exceptionally mild, says Michael Halpert, lead forecaster at the National Oceanic & Atmospheric Administration's Climate Prediction Center. January 2006 was the warmest January on record.

Colder weather means consumers this year will have to use more energy to heat their homes, partially negating some of the price drop for natural gas, Caruso said. He also cautioned that consumers' winter bills will vary widely based on location, fuel source, home size and heating habits.

The agency's expectations:

·Natural gas. Users of natural gas, which heats 58% of U.S. homes, will pay an average $826 this winter, down 13% from last year.

·Electricity. Users of electricity, which heats 30% of U.S. homes, will pay an average $839 this winter, up 7% from last year. Price and usage are expected to rise.

·Heating oil. Users of heating oil, which heats 7% of U.S. homes, will pay an average $1,522 this winter, up 6% from last year. Although prices are forecast to be unchanged from last year, consumers are expected to use more.

·Propane. Users of propane, which heats 5% of U.S. homes, will pay an average $1,265 this winter, down 1% from last year.

Although bills will likely be lower this winter for most households, the average tab will still be up 15% from two years ago and 64% from five years ago, according to the EIA. That means many low-income consumers will continue to struggle to pay their heating bills this winter, says National Energy Assistance Directors' Association Executive Director Mark Wolfe. "These are really not affordable bills for low-income families," Wolfe says.

DOJ_NMG_0079250

Also Tuesday, a barrel of crude oil trading for November delivery fell $1.44 to $58.52. EIA predicted oil prices would rise to $67 by January based on tight supplies and demand for heating oil.

Winter Heating Likely To Cost Less (WT)

By Patrice Hill

The Washington Times, October 11, 2006

The government projected a decline in winter heating bills yesterday, adding to the already sizable benefit to consumers from falling energy prices.

The Energy Information Administration yesterday predicted that for the first time since 2001, home heating bills will stay the same or decline from last year's levels, thanks to plunging oil and natural gas prices and forecasts of a mild winter ahead.

Add that to rapidly dropping gasoline prices -- pump prices have plunged 75 cents to $2.26 since August, the fastest decline on record -- and consumers are set to enjoy an energy dividend just in time for the holidays, economists said.

"We expect a powerful surge in discretionary income will lift spending, courtesy of the recent plunge in energy quotes," said Richard Berner, chief economist at Morgan Stanley. He estimates consumers' discretionary income has jumped at a $100 billion annual rate since August because of falling gasoline prices, and will grow by another $20 billion to $30 billion because of lower heating bills.

This should give a small boost to economic growth, he said, but he cautioned that much of the windfall could be wiped out if the weather turns out to be colder than expected.

"We already know that consumers celebrated the drop in gas prices by going shopping in September," said Gina Martin, economist with Wachovia Securities, who predicted gas prices will bottom out between $2 and $2.25 on average this winter before heading up again in the spring.

But consumers may not spend the windfall too wisely, she said. Wachovia expects consumers to blow some of their spare change simply by driving more, leaving about $12.6 billion for spending at shopping malls and stores -- not enough to make a major impact on the economy.

The fall in pump prices already has prompted consumers to revisit their love affair with sport utility vehicles after a flirtation with more fuel-efficient cars brought on by $3 gasoline in the spring and summer, said Patrick Olsen, a managing editor at Cars.com.

"Consumers have a short memory," he said. "It has been less than a month since gas prices dropped below $3 a gallon, and we have seen a surge of consumers looking for SUVs on Cars.com."

Energy analysts expect the drop in energy prices to be temporary, as crude oil prices remain high and world supplies remain fairly tight. Despite the renewed enthusiasm for big cars, surveys show that consumers also are skeptical that gas prices will remain low.

Consumers are enjoying the windfall from lower gasoline prices right now, but the benefit they will receive from lower projected heating bills will not be felt fully until December and January.

The energy agency said the majority of Americans who use natural gas to heat their homes will see a 12.5 percent drop in heating costs this winter as a result of a decline in gas prices and a mild winter. The agency said the winter will be 2 percent warmer than normal but 6 percent colder than last year's extraordinarily balmy winter.

Natural gas prices have plummeted since last year because of the unusual warming trend, which caused a record buildup of stored gas at utilities. People who heat with propane also will see a 1.1 percent decline from last year's prices.

But oil prices are higher than last year, and electricity rates are up, so those who heat with electricity and heating oil will see increases of 7.4 percent and 6.3 percent, respectively, the agency said.

Bill Cooper, executive director of the Center for Liquefied Natural Gas, said he is concerned that consumers will be lulled into a false sense of energy security because of the break from high gas bills that is occurring largely because of abnormally warm weather. Gas prices, while down, are still double what they were five years ago.

"We are at the mercy of the weather, and that's a dangerous place to be as we saw when Hurricanes Katrina and Rita knocked out much of the Gulf of Mexico's natural gas production and prices spiked" last year, he said. "To rely on one of the most unpredictable elements ... to determine whether we'll be able to heat our homes and power our industries -- that's no way to run a railroad."

Forecasts Call For Lower Home Heating Costs (CHIT)

By Robert Manor

Chicago Tribune, October 11, 2006

It is by no means a sure thing, but your heating bill this winter could be a bit more reasonable than last year.

DOJ_NMG_0079251

Natural gas prices are down compared with last winter, and weather experts are forecasting a somewhat warmer-than-usual heating season, despite the blast of autumnal cold forecast for Thursday.

"It's likely that [residential] heating bills will be lower than last year," said Elizabeth Castro, spokeswoman for Peoples Energy Corp., noting that natural gas prices this month are half what they were a year ago.

The federal Energy Information Administration said in a report Tuesday that Midwest "households can expect to pay nearly 14 percent less in natural gas expenditures relative to last winter."

Meanwhile, the National Oceanic Atmospheric Administration is projecting this winter will be 2.1 percent warmer than normal in the lower 48 states.

Such long-term forecasts are notoriously unreliable.

But there is no denying that natural gas prices are down from last year, when Hurricanes Katrina and Rita disrupted production in the Gulf of Mexico, which provides much of the U.S. supply. As a result, last year's heating prices were far above normal.

This year, falling oil prices also have contributed to the decline of gas costs, as some industrial users can switch from one to the other.

"Nicor does expect natural gas prices to be considerably lower than last year," said spokeswoman Margi Schiemann. "But they still remain historically high."

The Citizens Utility Board tracks natural gas prices charged by utilities. In January, CUB said, Peoples Gas was charging a little more than $1.13 per therm, a standard measure of gas consumption. By historical standards that was a very high price.

This month Peoples Gas is charging a little more than 56 cents, CUB said. That is its lowest price since October 2003.

Nicor customers were charged $1.09 a therm in January. This month the price is 44 cents, Nicor's lowest price since October 2002, CUB said.

Gas sold for as little as 30 cents a therm during much of the 1990s. Increased use of natural gas to generate electricity has helped propel prices higher.

Peoples and Nicor earn no profit on the price of natural gas, which they provide to their customers at cost. They earn money through delivery fees. Neither company would predict how much overall bills would drop this year.

During the October-through-March heating season of 2005-06, the average Nicor customer spent $1,018 for gas, compared with $775 the previous year. For Peoples, the numbers were $1,257 and $979 a year earlier.

Of course, weather is fickle, and if this winter is bitterly cold, demand for gas will drive up the price and the amount consumers use.

Illinois residents got something of a break in January, which was unusually mild and held down consumption at a time when prices were high.

So if the predictions are right, consumers should have more money in their pockets. Might that give a boost to the economy, perhaps jolting retail sales during the holiday season?

Paul Kasriel, chief economist for Northern Trust, doesn't think so.

"If they don't spend as much on heating, there is income left over," he said. "The question is whether they might want to save it or go out to eat more?"

His opinion is that consumers, squeezed by many months of spending more than they are earning, will be more likely to save or invest the money, or use it to pay essentials like a mortgage. Mortgage defaults have been increasing as variable rate mortgages reset to higher interest rates.

Diane Swonk, chief economist at Mesirow Financial, said higher-income households likely will spend the money. But households with less money are in a different situation.

"Middle- and low-income [families] have to unburden themselves of some debt they incurred when prices were higher," she said.

The Low Income Home Energy Assistance Program can help out with heating bills for households that qualify. Peoples Gas customers and Nicor customers should call 312-456-4100 or 800-252-8643 to inquire about the program. North Shore gas customers should call 847-249-4330.

Natural Gas Bills Far From A Bargain (HC)

By David Ivanovich

Houston Chronicle, October 11, 2006

WASHINGTON - Though American consumers are likely to get some relief in their heating bills this winter, they should still expect to pay substantially more than they did just two years ago.

DOJ_NMG_0079252

In fact, if the government's energy forecasters are correct, ratepayers will still be paying nearly 30 percent more this winter than they did on average between 2000 and 2005, the Energy Information Administration said Tuesday.

"It's good news that prices are anticipated to be lower than last year," noted Kateri Callahan, president of the Washington-based Alliance to Save Energy, "but they were record-setting last year."

"The trajectory is definitely up," Callahan said.

A year ago, natural gas prices were high, as the energy industry struggled to restore gas production in the Gulf of Mexico that was knocked off line by hurricanes Katrina and Rita.

Back then, energy forecasters were predicting an extremely harsh winter for rate payers. But consumers were spared the worst, thanks to a very mild winter that featured the warmest January on record.

This year, the National Oceanic & Atmospheric Administration is calling for another mild winter, albeit slightly cooler than last year's balmy temperatures.

The typical American household can expect to save about $45 on its heating bill this winter compared with last year, the Energy Information Administration said.

"Natural gas prices are certainly the story," said Guy Caruso, the agency's administrator.

But that's not to say the winter heating will come cheap.

Consumers, using a variety of different sources of energy, will spend an average $902 on heating from October through March, the agency said. That's down nearly 5 percent from the $947 average total last year.

But back in the winter of 2004-2005, the typical household spent $786. And for the five-year period between 2000-2005, the average cost was $697.

More Americans heat their homes with natural gas than with any other fuel.

And with gas prices down dramatically from their highs last year, and storage levels poised to reach a record high, households heating with gas stand to save $119 on average this winter, the Energy Information Administration said.

Natural gas users are expected to spend $826 this winter, down from $945 a year ago, the agency said.

"While U.S. households using natural gas are expected to get a modest break on their winter heating bills relative to last year, this is cold comfort when costs are nearly double those of just five years ago," said Jack Gerard, president of the American Chemistry Council.

"Make no mistake, the natural gas crisis hasn't gone anywhere," Gerard added.

The Chemistry Council represents petrochemical makers, which were hard hit by the rise of natural gas prices.

In the nation's southern tier, which includes Texas, natural gas expenditures are expected to drop to $765, down from $887 last winter, the agency said.

Officials at CenterPoint Energy have made no predictions about what Houstonians should expect in their heating bills this winter.

Houston customers saw their gas bills go down in February, August and again just last week because of lower natural gas costs. CenterPoint officials, at least at this point, do not contemplate any further adjustments before February.

A typical CenterPoint customer, using 2,000 cubic feet of gas, can expect to be billed for $29.08 this month, compared with $38.38 in October 2005.

Lower Heating Bills Expected This Winter (LAT)

The Los Angeles Times, October 11, 2006

Winter heating bills are expected to be lower for most families across the nation, with natural-gas customers getting the steepest reductions, the government said Tuesday.

In Southern California, the average monthly cost of home heating could drop as much as 18%, according to Southern California Gas Co., which serves 5.6 million customers. The average monthly bill will be about $80 to $85 this winter, compared with $98 a month last winter, said the utility, which is owned by San Diego-based Sempra Energy.

Families using natural gas — 58% of U.S. households — should expect to pay an average of $119 less during the coming winter compared with last year, a decrease of 13%, the Energy Department said.

The 30% of U.S. households that rely primarily on electricity for heat are expected to pay an average of $58 more, up 7.4% from last winter.

Those heating their homes with fuel oil — 7% of U.S. households — are likely to pay $91 more, a 6.4% jump. The 5% of homes that use propane for heat can expect to pay $15, or 1.2%, less.

Government officials cautioned that if parts of the country experienced an unusually cold winter, heating costs could be much higher than forecast.

DOJ_NMG_0079253

The National Oceanic Atmospheric Administration projected Tuesday that most of the country would see above-normal winter temperatures, though slightly cooler than last year's.

Homes that use natural gas are expected to see their heating costs average $826 this winter, compared with $945 last winter. Electric households could pay an average of $839 for heat this winter, up from $781 last winter.

Homes using fuel oil are expected to pay $1,522 this winter, an increase from $1,431 last winter. Propane users should pay $1,265 this winter, compared with $1,280 last winter.

Gas Consumers To Pay Less For Heat This Winter, Government Says (BLOOM)

By Geoffrey Smith, Robert Tuttle

Bloomberg, October 10, 2006

Oct. 10 (Bloomberg) -- Homeowners in the U.S. can expect to pay an average 13 percent less for natural gas this winter than they did a year earlier, as prices have fallen and inventories surged, the government said in an annual winter-fuels report.

Natural gas consumers will spend $826 this winter to heat their homes, down from $945 last winter, the U.S. Energy Department estimated in its Short-Term Energy Outlook, released today in Washington.

Households that heat with gas will experience the greatest drop in fuel costs, the report from the department's Energy Information Administration showed. Natural gas is the most widely used heating fuel in the U.S., firing the furnaces in 58 percent of all U.S. households.

Consumers of heating oil and electricity can expect to pay more than last winter, the report showed. Households reliant primarily on heating oil will pay $1,522 this winter, a 6.4 percent increase, the department said. Those with electric heat can expect to pay $839, 7.4 percent more than last winter.

Weather that will be 5.9 percent colder than a year earlier will boost demand for all heating fuels, the department said, citing government forecasters at the National Oceanic and Atmospheric Administration. Benchmark natural-gas futures fell as much as 74 percent from a record $15.78 last December, easing the strain on households that rely on the fuel for heat.

Propane consumers will also pay less because of lower prices. Residential propane is expected to cost $1,265 per household, 1.2 percent lower than a year ago. Propane is used by 5 percent of U.S. households as a primary heating fuel.

Natural gas inventories are 14 percent above last year and are headed toward a record, according to Energy Department data. Heating oil supplies are up 13 percent from the average and at their highest since 1999.

Far From Big City, Hidden Toll Of Homelessness (NYT)

By Randal C. Archibold

The New York Times, October 11, 2006

TRINIDAD, Colo. — As the Bush administration promotes a widely praised multibillion-dollar effort to end chronic homelessness in cities like Washington and San Francisco, a growing outcry is rising from rural areas that worsening problems far away from urban centers are being overlooked.

Rural homelessness has always taken a back seat to the more glaring problems in cities. Most studies estimate homeless people in small towns account for about 9 percent of the 600,000 or so homeless nationwide. But local officials and advocates for the homeless in small towns say that economic distress in recent years, including closing plants, failing farms, rising housing costs and other troubles, has left more people without homes and in greater need of help.

Real numbers are hard to come by because most rural areas, where homeless services often means ad-hoc help from church groups or volunteers, are far behind a parade of cities taking head counts.

“We are concerned that the focus on chronic homelessness may have the unintended consequence of shifting services away from families and rural communities,” said John Parvensky, executive director of the Colorado Coalition for the Homeless, one of several groups pushing the federal government to turn more attention to rural areas.

Among the homeless here is John Lobato, who offered a tour of his surroundings — the abandoned shuttle bus where he sometimes sleeps, the makeshift assortment of pallets, mattresses and blankets where he and other men pass time, often drinking, and the Purgatoire River, where he bathes.

Sometimes he takes his medicine for schizophrenia, Mr. Lobato said, sometimes not. Sometimes he sobers up for a while, but then the bottle calls.

“I know I need help,” he said, before embarking on a search for a liquor fix at midday in this isolated town 180 miles south of Denver. “But I don’t know where to get it.”

Until recently, many small towns like Trinidad coped with those who panhandled or set up makeshift encampments in the woods with what Lance Cheslock, director of La Puente, a shelter in Alamosa, near here, calls “Greyhound therapy.” They handed out bus tickets.

DOJ_NMG_0079254

"They just send them up to the cities and let them deal with the problem there," said Mr. Cheslock, among the advocates pushing for a new way to finance rural homeless programs.

The growing visibility of the problem has made some towns reconsider that attitude and push for local solutions, although they can be expensive and difficult.

Rural homelessness "doesn't get enough attention," said Philip Mangano, the executive director of the United States Interagency Council on Homelessness and the Bush administration's chief coordinator of homeless services. But Mr. Mangano said the problem had been difficult to assess because rural communities by and large had not chronicled their problems with the data-heavy planning documents the Housing and Urban Development Department and other federal agencies increasingly demand.

"Like any profile of the homeless, there is a lot of anecdote and hearsay, but you need data and research to create policy," Mr. Mangano said.

To confront the problem, he cited the examples of Washington and Michigan, where every county, many of them rural, has committed to writing a plan to end homelessness.

Here in Trinidad, a former old West coal town of 9,000 near the eastern slopes of the Sangre de Cristo mountains, people have long struggled through hard times. The downtown is pockmarked with shuttered storefronts, but new cafes and galleries have opened as the town tries to refashion itself as an artists' colony.

Interstate 25, dotted with motels of various quality and shopping centers, slices through Trinidad, leaving tidy Victorian homes rising on a hill on one side and modest ranches, several in disrepair, on the other.

Sandi Espinoza, who directs the Open Door Soup Kitchen, in space borrowed from a church, said the organization was serving more meals than ever — families, veterans, men just released from prison and a wide assortment of people smelling of liquor before noon. Some 85 people come daily for lunch, double the number from a few years ago, Ms. Espinoza said.

"We need shelter here," said one wobbly man, who when asked where he sleeps, replied, "down under the bridges."

There is no homeless shelter, only a few drug, alcohol or mental illness treatment programs for the indigent, and a loose group of church pastors, volunteers and other concerned citizens striving to look after people who have no home.

"Pastor helps me out," Mr. Lobato said. "The soup kitchen helps me out and these guys" — he motioned to his disheveled companions — "help me, too."

A couple of weeks ago, officials here cheered the establishment of a "transitional housing unit," a single-family home leased from the government for $1 a year where a displaced family can live for a year or so until they get back on their feet, the first such project started here. The organizers say several families, doubled up with relatives or friends, need a place like that.

There is nothing for the men living in the tents and shacks that have popped up behind the Wal-Mart, near the river.

To seek more stable solutions, a small group was recently formed. With guidance from Becky Vanderslice, an organizer with Housing Justice, a group based in Denver, they gathered around a church conference table and discussed problems that included the need for rehabilitation programs and families unable to make ends meet.

Finally, said Cary T. Nelson, pastor at First Christian Church, the group decided to start with the single-family home. Churches and volunteers will subsidize the costs of running the house, a foreclosed property held by the local office of the federal Agriculture Department.

They called the house Haven of Hope and have begun searching for a family to occupy it. One applicant, Brenda Holguin, said she hoped to move in with at least two of her four children, who are living with her estranged husband. A domestic dispute has left her homeless, living in a nearby domestic violence shelter, and such a house would help set her on a steady path, Ms. Holguin said. "Having a house, my family in one place, would give me more self-esteem," she said.

Ms. Espinoza, who runs the soup kitchen, said she was hoping that local businesses or churches would step forward with donated space for an emergency shelter.

The National Coalition on Homelessness, an advocacy group, is considering mounting an effort to make the Agriculture Department, with its many field offices and staff members in rural areas, the lead agency for financing homeless programs outside urban areas. The task currently falls to the Department of Housing and Urban Development.

"It should be the department of housing and urban-only development," said Michael Stoops, the executive director of the coalition. "We should not give up on HUD, but we need to get other federal agencies involved."

Last year, he said, HUD provided $120 million for 700 projects in rural areas, an amount that has remained constant for several years, federal officials said.

This year, the federal government has increased direct spending on homeless programs to about $4 billion, up from $2.9 billion and double the spending of five years ago. About 10 percent of that has gone toward a new focus on ending chronic homelessness, Mr. Mangano said.

DOJ_NMG_0079255

The approach has fired up hope in Denver, San Francisco, Washington and other cities that headway is being made, but it has dismayed advocates in rural areas, where grant-writing expertise and the Talmudic knowledge of federal regulations are lacking.

Small towns also lack the network of nonprofit organizations and corporations that often underwrite efforts.

"The government wants matching funds and the big city funders only fund the big cities," said Donna Haddow, a member of the Trinidad-Las Animas County Economic Development Board. "There's nothing left by the time we come knocking."

Ms. Vanderslice of Housing Justice said a prominent foundation would not finance the new housing program in Trinidad because it had decided to focus most of its resources on Denver.

"There is a lot of money to end homelessness in the state," she said. "But a lot is going to the Denver metro area because the mayor there has a 10-year plan."

Here, she added, "they are going on open faith."

Defense Contractors Weigh Majority Leader Murtha (HILL)

By Roxana Tiron

The Hill, October 11, 2006

The defense industry is assessing the impact that Rep. John Murtha (D-Pa.) will have on its fortunes if the Democrats retake the House in the midterm election.

The sector has benefited from increased military spending in the past five years, but several lobbyists and industry insiders argue that long-term profits depend on steady defense budgets and predictable investment in next-generation weaponry.

And some within the industry believe that Murtha could be the man with whom to hedge their bets.

He is a longtime supporter of the industry and a hawk, but has emerged in the past year as his party's most vocal critic of the Iraq war — urging withdrawal of U.S. troops.

And despite heightened focus on curbing congressional pork-barrel spending, Murtha has opposed earmark reform.

He finds himself in an interesting position — a vehement critic of a war that has boosted defense contractors' coffers, but also a staunch supporter of a military and defense industry fed on big-ticket programs and well-placed earmarks.

"We are mortgaging our future on this war," said one lobbyist, who represents several major defense companies. "Most people want to see the war over to go to the next-generation weapons."

Military contractors benefited when Congress approved the $448 billion 2007 defense appropriations bill, which included $70 billion in emergency spending for Iraq and Afghanistan.

The Bush administration has spent about $507 billion on Iraq, Afghanistan and the rest of the war on terror since 2001.

Much of the emergency money is spent on troops and supplies, but lawmakers also made allocations for weapons programs.

"A lot of the money is spent replenishing systems," said the lobbyist. "War is not good for business. The industry wants to produce the new stuff rather than see the money go to the war."

Big-ticket defense items, such as the F-22 fighter, the multi-national Joint Strike Fighter, the Army Future Combat Systems and the Navy's next generation DD (X) destroyer and Littoral Combat ship, have nothing to do with the current war, said Steve Ellis, vice president for programs at watchdog organization Taxpayers for Common Sense.

Lucrative war business comes to those who produce counter-improvised explosive devices, armored vehicles, bullets and other personnel protection systems, said Ellis and other defense industry insiders.

"Part of the reason the defense industry has not rebelled as much is that the defense budget has grown and there's a lot of money to go around," said Ellis. "The money we spend on the defense industry is enormous and they have not felt the pressure."

But if tension builds between traditional defense spending and war spending, "then we would start hearing some mumbling in the defense industry."

Analysts expect the purse strings to tighten on defense in the coming years. For the first time since Sept. 11, 2001, President Bush did not receive his full budget defense request.

Murtha knows how to spread the wealth. "The defense industry wants someone who supports a healthy defense budget and who supports bringing new technology," said a defense lobbyist. "Most of the defense industry would want to see the war end tomorrow."

Murtha's support of a well-fed defense industry is paying off for him and his party. He is again the top recipient of defense industry money in Congress. The defense industry contributed $371,700 to Murtha's campaign.

In 2004, he ranked third only to presidential candidates Sen. John Kerry (D-Mass.) and George Bush, but in 2002 he was No. 1.

DOJ_NMG_0079256

By comparison, Rep. Bill Young (R-Fla.), chairman of the defense appropriations panel, ranks as No. 18 with $99,000 in his coffers from the defense industry.

Young consistently has ranked towards the bottom of the top 20 recipients of defense money. But unlike Murtha, Young, a stalwart supporter of the military and the defense industry, is not an avid fundraiser and when he holds an event he is known not even to print a ticket price.

Not so Murtha, a leading Democratic fundraiser who has doled out money to the party.

Because he has been a hawk and a supporter of the military, Murtha's criticism of the Iraq war and his call for troop "redeployment" gave Democrats political cover.

If the Democrats win back the House this year, Murtha is throwing his hat in for the Majority Leader position, banking on his close relationship with Minority Leader Nancy Pelosi (D-Calif.). Murtha faces staunch competition from Minority Whip Steny Hoyer (D-Md.).

Some in the defense industry hope Murtha becomes majority leader, while others say he would be better suited at the helm of the defense appropriations committee.

As a majority leader, Murtha would bring defense to the forefront and stave off cuts that the Democrats have traditionally made, some industry insiders say.

In such a position, Murtha would determine how the budget is put together and the amendments that would come to the floor, but he would lose the day-to-day touch on the appropriations committee, which to the defense industry is more important, said an industry source.

Hoyer would not be a bad bet for the defense industry as majority leader, because he has also been a strong supporter of the sector and is in close contact with the Pentagon and the military branches, said the source.

Sen. DeMint To Head-up Key Group (HILL)

By Jonathan Allen

The Hill, October 11, 2006

Sen. Jim DeMint (R-S.C.) is in line to take the reins of the Republican Steering Committee, a cabal that serves as the base for conservative activism in the upper chamber.

"That's where things are headed," said a Senate Republican aide familiar with discussions about a successor to Sen. Jeff Sessions (R-Ala.), whose term will expire at the end of the 109th Congress. The aide requested anonymity because DeMint's ascension will not be made official until the committee meets and confirms him after the November election.

The Steering Committee would play a much different role in the institution if Republicans are cast into the minority. The secretive committee now seeks to pressure GOP leaders to adopt more conservative policies, but it once served to block the liberal priorities of a Democratic majority.

DeMint, chosen for the job through an informal process, is a fierce partisan warrior who has one foot in leadership circles and the other in conservative circles. That combination could make him an effective leader whether Republicans retain control of the Senate or not.

A former market researcher, DeMint was tapped this year by party leaders to combat a quick-slinging Democratic communications operation on the floor of the Senate.

"He's always very aware of how things are perceived and he has a talent for how to sell the message without selling out on the policy," said an aide to a conservative Republican senator.

DeMint's unflinching conservatism on tax cuts and restructuring Social Security have won him praise from Republicans who view him as a principled leader. Like many of his contemporaries, he brought with him a taste for the House's bitter partisan warfare when he was elected to the Senate in 2004.

But even as he fights Democrats, DeMint straddles the Republican divide between conservative rabble-rousers and party leaders. That could be a double-edged sword under GOP rule, according to Republican aides.

He "fits in both worlds in a good and bad way," one aide said.

Even if DeMint drifts toward leadership, the Steering Committee has an anchor in Sen. Tom Coburn (R-Okla.). Aides say Coburn aggressively takes on conservatives' toughest battles on the floor.

When Republicans are in the majority, the Steering Committee's success is dependent upon its ability to affect policy without forcing its members, who generally feel allegiance both to conservative ideology and to the GOP's electoral fortunes, to openly defy Republican leaders at every turn.

"It's very influential; it's quiet, though," said Brian Darling, head of Senate relations at the conservative Heritage Foundation and an attendee of off-the-record weekly meetings of conservative congressional aides, lobbyists and activists that are organized by the Steering Committee.

DOJ_NMG_0079257

The Steering Committee and a series of affiliated staff-level organizations intentionally keep a low profile to avoid sabotaging their own work.

"Leadership would be very upset if it was perceived that a subgroup of the caucus were trying to drive policy," Darling said. "It is a challenge to leadership to have conservatives doing things that are inconsistent with some of the policies that the leadership is promoting."

In the minority, Steering Committee members have used every tool available to stand in the way of Democratic legislation, which explains why some conservative activists advised Republicans against exercising the "nuclear option" to circumvent filibusters and why there has been resistance to doing away with "holds."

Under Sessions, the Steering Committee has been a thorn in the side of establishment Republicans at times, particularly on spending and immigration.

Sessions pressured the White House to issue a veto threat against the Senate's $107 billion "emergency" spending bill in May by sending the president a letter endorsed by enough Republican senators to ensure a veto would be sustained. As support mounted, Majority Leader Bill Frist (R-Tenn.) and Majority Whip Mitch McConnell (R-Ky.) signed Sessions's letter, putting the top Senate leaders in the unusual position of begging the White House to veto legislation that their majority produced.

The letter was the culmination of weeks of below-the-radar plotting by senators and conservative aides who were determined to reverse a committee-level spending spree. The measure's price tag was subsequently pared back and Bush signed it into law.

Sessions also was a leader among conservatives in trying to amend and block the Senate's immigration bill, which in addition to border-security measures would have created a temporary-worker program and a means for illegal immigrants currently in the country to become citizens. The battle between Republican moderates and conservatives has stalled legislation that conservatives find anathema because they say it would grant amnesty to people who entered the country illegally.

The FAA Corrals Its Brand (WP)

By Al Kamen

The Washington Post, October 11, 2006

Federal Aviation Administration chief Marion C. Blakey worries that people have been confusing her agency with the Food and Drug Administration (FDA), or worse, the Federal Emergency Management Agency (FEMA).

So Blakey last month signed an order establishing the FAA "Branding Identity Program" (FAABIP) to clarify matters. The FAA does so many wonderful things, she notes in a cover message to the order, "but it has not received proper credit for all the good work it does in so many areas because it does not have a strong brand identity."

And why is this? Because "dozens if not hundreds of different" logos have been used "in materials of all kinds." Blakey said she's heard that if you collected business cards at an agency meeting, "you would never guess that they all work for the same agency."

No more. From now on, there will be rules and regs. We will have "a circular gold border, a blue background bearing the white letter near its outer rim the words 'Federal Aviation' at the top and 'Administration' at the bottom."

An agency newsletter the next day noted that there probably "will be messages from some who will ask if we don't have bigger things to think about than cosmetics." Apparently not.

"One of the hallmarks of a successful business or organization is a strong single brand," the newsletter explains, "not separate brands for various parts of the organization; BMW, IBM, Boeing, Airbus, McDonald's, to name just a few."

" Phyllis Preston , who is the branding guru," the newsletter says, "likes to use the example of McDonald's. She says you don't see a separate logo for French Fries, and another for the hamburgers, and still another for milk shakes."

Well, there you have it.News From the Front

This just in from the Green Zone in Baghdad: The hot new polo shirt in the zone is white with a diplomatic security badge on it and stitching below that says "Resistance Is Futile."

Secretary of State Condoleezza Rice , stuck last week on a runway in Irbil, Kurdistan, because of engine trouble, was working trade sanctions to impose on Iran. A reporter offered her a bottle of a popular brand of water -- imported from Iran. Rice quipped she wasn't sure she could get it through customs.Phish Story

It is now clear there is no depth to which scam artists will not sink. The Congressional Budget Office sent out an e-mail recently warning that someone is using the CBO mailing list to get private information about those on the list.

"Several people have reported receiving an e-mail message that appears to have been sent from the Congressional Budget office," the e-mail said. "The message is actually Phish and appears to come from outside the U.S." (CBO stopped short of accusing our friend Madame Miriam Abacha from Nigeria.)

DOJ_NMG_0079258

"We are not sure how many people received the message or how the address list was obtained [but] if you received an email message from: Budegt Office

" and using a subject line that says "The Budget and Economic Outlook Fiscal Years 2007 to 2016," then "please delete it. Also, DO NOT click on the link at the bottom of the message. It could possibly infect your computer with spyware or a virus."

Most folks surely didn't need the warning. A government document purporting to know the "economic outlook" in 2016? Obviously phony.The Bill That Keeps on Billing

The bills won't stop coming in from the 11-year-old independent counsel investigation of former housing secretary Henry G. Cisneros , who pleaded guilty in 1999 to a misdemeanor for understating the amount of money he had been giving his mistress.

The independent counsel, David M. Barrett , filed his final 474-page report in January, conceding he couldn't say for sure "whether any criminal laws were broken" by government officials when he went after Cisneros on tax charges. At that point, Barrett had billed the taxpayers $21 million.

Barrett's office closed May 3. His latest bills, according to a GAO report, totaled nearly $850,00 for the six months ending March 31. Personnel costs of $375,000 and utilities at $239,000 were the biggest items. Unclear whether there's another bill coming for April.

Communication Breakdown Cited In Failed Postal Legislation (WP)

By Stephen Barr

The Washington Post, October 11, 2006

It's no fun being on the hot seat.

"I feel badly," William H. Young , president of the National Association of Letter Carriers, said yesterday about blocking legislation to overhaul the U.S. Postal Service. But he emphasized that his union members were his highest priority, making it impossible for him to accept a provision that would single out injured postal employees for different worker compensation rules than other federal employees.

Young said that he was trying to contact Sen. Susan Collins (R), the chief sponsor of a compromise bill, who is traveling in her home state of Maine, "to determine where our communications failed."

Although the bill has drawn little public attention, it represented a decade-long effort to revamp Postal Service business operations.

Companies that rely on the post office to distribute products are eager for a restructuring that would make increases in mail rates more predictable. Congressional auditors, meanwhile, have warned that the Postal Service needs to rethink its business practices, in part because revenue is being lost as fewer first-class letters are mailed in the Internet age.

The bill pushed by Collins and others would have reshuffled multibillion-dollar pension and health-care costs to ease budgetary pressures on the Postal Service, a change initially opposed by the White House.

During negotiations on the bill, the NALC, which has 300,000 members, created the impression that it would be in Collins's corner. But as Collins tried to move the bill last month, in the hours before Congress recessed for the campaign season, Young announced his opposition.

That earned him a round of finger-pointing by lobbyists in the mailing industry and congressional aides. It also raised questions about why the union would want to take credit for defying Collins, chairman of the Senate Homeland Security and Governmental Affairs Committee and a Republican who keeps her door open to federal employee groups.

"We are all left scratching our heads," the Alliance for Nonprofit Mailers said in an Oct. 4 newsletter. "Why did the National Association of Letter Carriers use a minor issue to bring down a bill that contained so much good for their members? They had beaten back every attempt to include provisions harmful to their members and won every important legislative battle. They had won the war. So why did they pull the plug?"

In a telephone interview, Young acknowledged that he had not tried to block an earlier version of the bill, which was approved by the Senate without debate, even though it contained the provision he opposes.

The provision would require a three-day waiting period before injured postal workers could begin accruing workers' compensation benefits. Under current practice, they do not face a break in pay when moving to the injury rolls. The proposed change, Young said, would adversely affect about 11,000 letter carriers who are injured every year.

By most accounts, the provision grew out of calls to cut postal labor costs and to mirror how the states provide such benefits. But, Young said, "if this is legislative reform and there is a reason it needs to be done, then it should be done to everyone in the federal workers' compensation program."

Young said he received signals from Postal Service headquarters and from mailers that they did not consider the benefits provision an essential part of the legislation. Postal Service executives were traveling yesterday and could not be reached for comment.

DOJ_NMG_0079259

He also denied allegations by critics that he was fronting for postal executives who are uneasy about more rigorous oversight proposed in the bill or that he wanted to see if Democrats could regain power in the November elections and perhaps offer the union a better deal.

Young said he had repeatedly directed union lobbyists to inform members of Congress, including Collins, about NALC's concerns with the legislation. He hopes to figure out how communications broke down when he speaks with Collins, Young said.

Photos And A Fair Trial (NYT)

The New York Times, October 11, 2006

When Mathew Musladin went on trial for murder, members of the victim's family sat near the jury every day wearing buttons with the dead man's photograph. A federal appeals court held that those buttons in the courtroom deprived Mr. Musladin of a fair trial. The Supreme Court is hearing arguments in his case today. It should affirm the appeals court's ruling.

Mr. Musladin shot his estranged wife's fiancé in an altercation that he argued was justifiable self-defense. Before the trial began, Mr. Musladin's lawyer asked the judge to tell the family to remove the buttons. Mr. Musladin was convicted on all counts.

Mr. Musladin went to federal court to argue that he had been denied a fair trial. The San Francisco-based United States Court of Appeals for the Ninth Circuit agreed, holding that the jury's sympathies may have been unfairly swayed by the photos of the victim worn by his grieving relatives.

The court relied on a Supreme Court ruling that a defendant's right to a fair trial was denied when he was forced to wear prison garb and shackles in sight of the jury, with its subliminal message of guilt. It also relied on its own earlier decision that a defendant in a sexual assault case was denied a fair trial when courtroom spectators were allowed to wear buttons proclaiming "Women Against Rape."

As those cases recognized, physical materials in a courtroom that send a message run the risk of prejudicing the jury against the defendant.

At Mr. Musladin's trial, the key question was whether he or the man who died was the aggressor. As the appeals court recognized, the buttons were effectively an argument by the people who wore them that the dead man was the victim. The correct place for that argument to be made was on the witness stand, by competent and duly sworn witnesses. It should not have been allowed from the audience.

The most difficult legal issue in the case involves the standard that federal courts use in second-guessing state court convictions. Under the relevant federal statute, the state court's decision can be set aside only if it was an unreasonable application of "clearly established" federal law. The government argues that the appeals court's ruling that the photographs were prejudicial was not clearly established.

It is true the Supreme Court has not ruled directly on the issue of photographs worn by courtroom spectators. But the court's decision in the prison garb case laid down a standard clear enough for the trial judge to have known that the buttons worn at Mr. Musladin's trial denied him his constitutional rights.

Globalization And Schools (WP)

The Washington Post, October 11, 2006

BACK IN 1979, the average worker with a college degree earned 75 percent more than the average high school graduate. Because of technology and globalization, the gap has leapt to 130 percent. This rising "college premium" does much to explain the growth of inequality over the past generation, so any serious response to inequality must make access to college broader and fairer. It should be broader because a higher rate of college attendance would share the fruits of globalization more widely. It should be fairer because, if the prizes for attending college are growing, it's essential that everyone begin life with a decent shot at winning them.

Because education boosts economic growth, and because it threatens no powerful lobby, virtually everyone claims to support it. The question is how it should be improved. Some commentators, pointing to the fact that schools in low-income districts already spend more per pupil than schools in affluent ones do, argue that failures at poor schools reflect complacent management rather than a lack of resources. Signaling at least partial acceptance of that theory, the Bush administration has tried to improve schools by holding them accountable and subjecting them to competition. Choice and accountability are attractive in principle, but studies of voucher programs in New York City, Milwaukee and Cleveland have found negligible gains from them. Costlier interventions must also be part of the solution.

The first opportunity for extra investment in education comes when children are young. That's when they are most malleable and when poor children start to fall behind: Even at age 3, researchers find class-based differences in linguistic and emotional maturity. The federal Head Start program, bolstered by a variety of state preschool programs, has succeeded in reaching many poor 3- and 4-year-olds. In 2001, 49 percent of 4-year-olds whose mothers were high school dropouts attended

DOJ_NMG_0079260

some type of preschool program, up from 36 percent a decade earlier. But that participation was still way below the 70 percent rate for children of college graduates. And the quality of many preschool programs is poor.

Head Start requires that only half of its teachers have two-year college degrees. In contrast, a 1960s experiment in Michigan known as the Perry Preschool program provided a fully qualified teacher for every six or seven students, and teachers visited each child at home weekly. The program raised IQ test scores by eight to 10 times the increase achieved by Head Start. It also reduced the likelihood that a student would require special education (by 43 percent), drop out of high school (by 25 percent) or be arrested (by 50 percent). A range of other studies, including recent ones in Michigan and Chicago, confirms that high-quality programs have lasting effects on poor children. Upgrading the 900,000 children in Head Start programs to something like the Perry program might require around $2 billion a year, according to W. Steven Barnett of Rutgers University. But quality preschools reduce spending on special education, jails and welfare, saving money for society in the long term.

Early intervention would help schools from kindergarten through 12th grade do their job properly, since teachers would face fewer students who can't keep up. But it also makes sense to invest in K-12 education directly. Although it's true that low-income districts already spend more per pupil than do rich ones, this slight advantage is swamped by the challenge of teaching poor children, who on average have more discipline problems and require more remedial attention -- and will continue to do so even if preschool is improved. Because of the challenge of teaching poor children, the higher cost of special education and other factors, schools in low-income neighborhoods have less-experienced teachers and worse facilities than do schools in affluent ones, according to research by Cecilia Rouse of Princeton and Lisa Barrow of the Federal Reserve. These schools might spend more money per pupil, but they lack more money per pupil, too.

Which K-12 investments would be effective? Smaller classes are a leading candidate: A Tennessee experiment that divided pupils into classes of differing size in kindergarten and then returned them to regular-size classes in third grade found benefits from smaller classes that persisted to high school. Improving the quality of teachers is also likely to boost performance, though teacher quality is not necessarily linked to teacher certification. Publicly funded summer school could make a difference. The performance gap between privileged and poor children appears to be linked to the way they spend their summers, with the privileged attending enrichment programs while the poor are underoccupied.

Nearly 30 years ago, Martin Luther King Jr. declared that the challenge for schools is "to teach so well that family background is no longer an issue." By increasing the rewards for education, globalization has added urgency to King's argument, but globalization paradoxically creates a temptation to ignore him, too. By driving down the cost of tradable goods such as cars and DVD players, it leaves untradable ones such as education looking expensive. There's a tendency for policymakers to say that education spending is growing a bit faster than inflation -- isn't that generous enough? But inflation is low partly because globalization brings us goods from cheap foreign suppliers. The economic challenge posed by those cheap foreign suppliers is precisely the reason we should invest more in our children.

OTHER NEWS:

For Voters, Time To Check Wallets (CSM)

By Mark Trumbull

The Christian Science Monitor, October 11, 2006

As Election Day nears, the health of the economy is the subject of a major clash in which voters are hearing starkly different views.

The battle may be overshadowed in the news by the Iraq war, nuclear tensions in Asia, and a congressional scandal, but pocketbook issues are - as usual - very much on voters' minds.

"Today we got more good news," President Bush said Friday, citing lower unemployment, rising wages, and the creation of 6.6 million new jobs since August 2003.

"The Bush economy has been marked by falling wages and anemic job numbers that don't even keep up with population growth," the Democratic National Committee fired back in a statement.

Americans are accustomed to economic spin, but that makes it harder to sort out the underlying reality. Is this a good economy or not? Or, as Ronald Reagan once asked, "Are you better off" now than the last time Congress was up for election?

The numbers, shorn of partisan interpretation, point to an economy that is neither collapsing on its own weakness nor lifting all Americans to new heights of prosperity. In this climate, marked by the subsidence of an epic housing boom, personal debt may be the dividing line between those who are better off and those who are falling behind.

"Homeownership has increased, but through lots of leverage," says Mark Zandi, chief economist at Moody's Economy.com in West Chester, Pa. The economy is "certainly not bad," he says.

DOJ_NMG_0079261

But it could be especially tough on people who stretched to buy a home. A cooling real estate market means that rising home values have stopped adding to families' net worth, for now. Meanwhile, their monthly payments can jump by several hundred dollars as adjustable loan rates reset.

"There are two distinct economies," Mr. Zandi says. Higher income households - say, the top 10 percent by income - have relatively low debt burdens and, often, a fixed-rate mortgage.

"The other is lower middle-income households, who have struggled," he says. For these households, a much larger group that Zandi reckons may include more than 1 in 3 Americans, incomes have been stagnant. They have debt and, often, an adjustable rate mortgage that's now adjusting higher.

Before Mr. Bush took office, consumer debt and mortgages in America totaled less than the sum of all personal income. Since then, that debt-to-income ratio has surged from below 100 percent to above 125 percent.

This election cycle, Democrats hope to capitalize on that edge of anxiety, the darker side of a housing-fueled economic expansion.

Republicans, struggling to maintain a majority in Congress and their governorships, are playing up brighter aspects of the economy, including a recent drop in energy prices.

In polls, the economy ranks high among voter concerns - generally No. 2 or 3 after the Iraq war. Even the current furor over inappropriate e-mails sent by a Republican lawmaker to young congressional pages won't overshadow concerns like gasoline prices and mortgage rates.

In a new survey by the Pew Research Center, 22 percent of registered voters ranked the economy as their top issue, second to the situation in Iraq at 24 percent.

Against that backdrop, here are some benchmarks of whether the economy has slackened or perked up since Fall 2004, when voters last went to the polls, and Fall 2002, when Republicans regained full control of Congress:

Energy. Prices of oil, natural gas, and gasoline are up since recent elections - but down sharply in the past two months. July's $3-a-gallon gasoline has given way to hopes of a $2 pump price.

"Everybody benefits across all income groups," says Brian Bethune, US economist at Global Insight, a consulting firm in Lexington, Mass.

Jobs. Jobs are being created at a pace steady enough to keep the jobless rate below 5 percent. "If somebody wanted to change jobs right now, it would be actually a pretty good time," Mr. Bethune says.

That's what Deborah Dutcher did recently. A travel photographer, she left a job in San Francisco to move to Boston, and launched a freelance career. Her hope: that Boston's real estate market, priced a bit better than the Bay Area's, will fulfill her dream of homeownership. She feels better off in a place where dollars - and mortgage debt - will go a bit further.

Income. Wages - a long-time sore point for workers - have barely kept pace with inflation during Bush's presidency. But the picture isn't as bad as it may seem. A broader measure of income that's adjusted for inflation - real hourly compensation - is up 10 percent since Bush took office and 3.5 percent since 2002.

Housing. After soaring since 1999, home prices are in correction mode, retracing some of their heady gains. It's an economic trouble spot, especially if it makes consumers feel less able to spend. But many economists say the housing slowdown is manageable. Most homeowners don't have to sell in a weak market, and won't.

'Values' Decline As Issue In Ohio (WP)

By Michael A. Fletcher

The Washington Post, October 11, 2006

COLUMBUS, Ohio -- Two years ago, Ohio Secretary of State J. Kenneth Blackwell was a driving force in the triumphant campaign for a state constitutional amendment to outlaw same-sex marriage. That helped cause a surge in turnout of "values voters," who helped deliver this pivotal state to President Bush's successful reelection effort.

As the Republican candidate for governor, Blackwell has been counting on values voters to do for him this year what they did for the party in 2004. But the culture wars are being eclipsed as a voting issue by economic worries and Republican scandals that have altered the political dynamic here in striking ways. Several polls find Blackwell trailing his Democratic opponent, five-term Rep. Ted Strickland, by double digits with less than four weeks to go until the Nov. 7 midterm elections.

The difficulty Blackwell is experiencing winning support for his socially conservative message reflects the anxiety evident this year among voters in Ohio and elsewhere, some pollsters say.

"It is harder to run on wedge issues when voters have huge concerns on their minds regarding war in Iraq, economic issues and a Congress they perceive as doing little," said Michael Bocian, a vice president at Greenberg Quinlan Rosner, a Democratic polling firm in Washington.

DOJ_NMG_0079262

Strickland, 65, an ordained but non-practicing minister, has built his lead by speaking about the economic distress of this manufacturing state and by painting his opponent as a loyal soldier of a scandal-plagued Ohio Republican Party. At the same time, he is directly challenging Blackwell for values voters in ways that many analysts believe Democratic presidential nominee John F. Kerry did not two years ago.

"What I call the bread-and-butter issues probably are more prominently on the minds of people today than two years ago," Strickland said in an interview. "I think a lot of Ohioans are feeling economically insecure. Consequently, they are less willing to be distracted by issues that don't involve the economic security of their families."

His observation is borne out by a recent survey by the University of Cincinnati's Ohio Poll, which found that 63 percent of likely voters in the state are basing their choice of candidates on the "issues" rather than "character." The poll found that seven in 10 Strickland supporters were most concerned about "issues," including the economy and education; just over half of Blackwell supporters felt that way.

"Character can be everything from a voters' evaluation of a series of issues as a package, to notions as to whether they think a candidate agrees or disagrees with their values," said Eric W. Rademacher, co-director of the survey. Two years ago, exit polls found that "moral values" edged out the "economy and jobs" to top a list of concerns that Ohio voters said most influenced their Election Day choices. The exit polls found that at least a quarter of voters identified themselves as born-again Christians, and three-quarters of their votes went to Bush.

Leaders of the religious right here promised to build on that success to reshape Ohio's political landscape. They pledged to support candidates determined to "bring spiritual revival and moral reformation to the state," in the words of Reformation Ohio, an evangelical outreach effort.

No one better embodied that promise than Blackwell. An experienced and articulate politician, he is given to quoting Scripture on the campaign trail and is unambiguous about his opposition to abortion and same-sex marriage. "I don't know how many of you have a farming background, but I can tell you right now that notion even defies barnyard logic," Blackwell has said of same-sex marriage.

As in 2004, conservative religious leaders have been registering thousands of voters across the state, talking from the pulpit about the need to vote and leading rallies to drum up enthusiasm among values voters.

"Politicians in Ohio certainly are focusing more on economic issues, but our focus is on encouraging members of our church and the Center for Moral Clarity to support the candidates that best reflect their values on issues of righteousness and justice," said Rod Parsley, a Columbus televangelist. Parsley is pastor of World Harvest Church, which has 12,000 members, and leads Reformation Ohio and the Center for Moral Clarity, another outreach group.

Parsley, who faces an Internal Revenue Service investigation prompted by a complaint by a group of ideologically moderate ministers who allege he has crossed a line barring political advocacy from the pulpit, has not endorsed Blackwell. But he is quick to add: "I'm sure Ohioans will recall which candidates have stood with them in the past."

So far, it seems that the efforts of Parsley and other evangelical leaders are being overshadowed by this state's recent record of job losses and the resultant economic concern. The unemployment rate in Ohio is 5.7 percent -- a full point above the national figure. Meanwhile, the Ohio Poll found that 82 percent of Ohioans believe that the economy is in poor or fair shape, and two-thirds say things are getting worse.

For his part, Blackwell, 58, has offered a string of proposals that he says would revive Ohio's economy. He wants to do away with the graduated state income tax and implement a flat tax. He has proposed looking at ways to de-couple school financing from local property taxes and cap educational administrative costs, while allowing students greater freedom to attend schools of their choice. "I think the big issues in the campaign are jobs, education and health care and getting our economy growing again so we can break out of the growth deficit we've been in," Blackwell said.

John C. Green, a senior fellow at the Pew Forum on Religion & Public Life and a professor at the University of Akron, said that in this campaign Blackwell's biggest problem has not been his policy ideas but his arch-conservative profile. "Ohio leans to the right. But he is way to the right, and some Republicans are quite unhappy with his relationship with religious conservatives," Green said.

Strickland has advocated greater investment in public schools and has targeted state support for growing sectors of the Ohio economy. Meanwhile, he has brandished his own socially conservative credentials, including his support of gun ownership. Although he told the Dayton Daily News that he is now an occasional churchgoer, Strickland touts his background as a minister.

"When you have a candidate who is pretty conservative in Strickland, that makes drawing distinctions between the candidates difficult," Bocian said. Republicans control every statewide office in Ohio and both chambers of the legislature, but, given the voter pessimism this year, that is proving to be a political disadvantage. Then there are the scandals that have ensnared two of the leading Republicans in the state: Gov. Bob Taft was convicted of illegally accepting gifts, and Rep. Robert W. Ney admitted taking bribes in the Abramoff scandal and is not seeking reelection.

DOJ_NMG_0079263

Through the years, Blackwell has worked to cultivate an image of independence, opposing state tax increases and supporting the ban on same-sex marriage, which both Taft and Sen. Mike DeWine (R) opposed. Blackwell, an African American, served as state treasurer, mayor of Cincinnati and a deputy secretary of the federal Department of Housing and Urban Development before being elected Ohio's secretary of state in 1998. He was in charge of the problem-plagued 2004 election in Ohio, an issue of particular importance to some black voters who felt disenfranchised. But through multiple recounts and lawsuits, Blackwell has been cleared of playing a role in any irregularities.

He says that his support of values issues involves not just opposing same-sex marriage and abortion but also ensuring that the poor receive health care and educational opportunities -- positions he said are warmly received by black audiences. Also, as the campaign winds toward Election Day, Blackwell said he plans to close ground by sharpening his attacks on Strickland's record as a congressman, which earned him a ranking as one of the least influential members of the House from the nonpartisan Web site Congress.org.

Meanwhile, Strickland plans to challenge Blackwell among his base of values voters. During a recent debate, Strickland talked about how his community and church helped him become the first member of his family to go to college. Then he reminded the audience of another stop in his career path: "I've been able to be a minister in the United Methodist Church."

Fed Rethinks View Of Housing-led Slowdown (FT)

By Krishna Guha And Michael Mackenzie

Financial Times, October 11, 2006

Influential voices inside and outside the Federal Reserve are challenging the notion that the US economy is heading for a deepening housing-led slowdown, cheering equity investors and sending bears in the bond market into retreat.

The thesis, put forward by Fed vice-chairman Don Kohn last week, and endorsed by Alan Greenspan, the former Fed chairman on Friday, argues that the trough in housing market activity could be near, and that the economy should come through it in reasonable shape.

Fed officials have also sought to lower expectations that rate cuts are imminent.

With financial conditions more broadly strongly supportive, energy prices falling and unemployment touching a new low of 4.6 per cent, financial market economists are reviewing their calls. Morgan Stanley has upped its growth forecast and predicted a rate rise early next year. Goldman Sachs still expects rates to be cut by 125 basis points next year.

The argument between economists mirrors a tug-of-war between different financial markets on the outlook for growth.

“The bond market has appeared more bearish on the economic situation than the stock market and the credit markets,” says Peter Hooper, chief US economist at Deutsche Bank. “Credit spreads are narrower than you would expect if you thought we were going into a significant bout of economic weakness.”

For the moment, bears in the bond market have been forced into retreat. A week ago, the Fed funds futures market was pricing in a 50 per cent chance of a rate cut in January, and three quarter-point cuts in total by the end of next year.

After a sharp reappraisal of expectations, the market is now pricing in little chance of a rate cut in January and between one and two quarter-point cuts by the end of 2007. The debate, though, is far from resolved.

Mr Kohn argued that a sharp correction in construction activity and new home price inflation could soon bring down inventories and stabilise residential investment – which will subtract 1 percentage point from growth in the second half of this year. Mr Greenspan, meanwhile, cited the flattening out of new mortgage applications as a sign that “we are coming to the end of this downturn”.

Some housing market experts, though, are sceptical. David Berson, chief economist at Fannie Mae, the government-supported home finance institution, said inventories remained high, and there could be a significant decline in investor demand.

But the big question is what will happen to consumer spending as house price gains stabilise or even fall – reversing a positive wealth effect on consumption – and non-transaction related mortgage equity withdrawal diminishes.

Jan Hatzius, chief US economist at Goldman Sachs, says he estimates that the decline in mortgage equity withdrawal alone could push up the savings rate “by 1 to 2 percentage points over a period of one to two years”.

By contrast, Dick Berner, chief US economist at Morgan Stanley, sees little effect from mortgage equity withdrawal and predicts real income will grow rapidly enough to support a modest rise in savings while keeping consumption reasonably strong. Since the data have not even begun to answer these questions, it would be premature to take a soft landing for granted. But it does seem that the risks are not only in one direction.

Home Is Where The Worry Is (WP)

By Robert J. Samuelson

The Washington Post, October 11, 2006

DOJ_NMG_0079264

We are at the endgame for housing. Until recently our national motto has been "In real estate we trust." Just last week the Census Bureau reported that median home prices after inflation rose 32 percent from 2000 to 2005. In some places, the gains were huge: 127 percent in San Diego, 110 percent in Los Angeles and 79 percent in New York. But real estate -- which has acted as a national piggy bank, with homeowners borrowing and spending against rising house prices -- no longer looks so trustworthy. On this, more than on falling oil prices or a record Dow, hangs the economy's immediate fate.

The boom sowed its own destruction. Coupled with modestly higher interest rates, rising home values have priced more potential buyers out of the market. In 2003 a family with an income of $40,320 could buy the median-priced existing home of $180,200, estimates the National Association of Realtors (NAR). By August 2006 an income of $56,544 was required to buy the median-price home, now $225,700. (The assumptions: Purchasers make a 20 percent down payment and devote 25 percent of their income to mortgage payments at the prevailing interest rate.)

With fewer buyers, home construction, sales and prices have weakened. In August housing starts were 20 percent lower than a year earlier. Last year, sales of new and existing homes totaled almost 8.4 million; next year the NAR expects 7.4 million. Construction workers, real estate agents and mortgage bankers will lose jobs. Consumer spending will also suffer as the borrowing and buying against rising real estate values subsides. Indeed, the end of the cheap credit that fed the boom means that many borrowers will face higher monthly payments.

Adjustable-rate mortgages (ARMs) represent a quarter of the nearly $10 trillion in single-family mortgages, says economist Michael Fratantoni of the Mortgage Bankers Association. ARMs typically change rates annually and are 2 to 2.5 percentage points above, say, a one-year Treasury note. But "hybrid" ARMs made in 2003 and 2004 provided low fixed rates for three to five years; many of these rates are now rising. Consider a borrower with a 4 percent ARM of $200,000 lent in 2003. The monthly payment had been $955, says Fratantoni. Now the ARM would reset at 7.5 percent; the payment increases to $1,362. Switch to a 30-year fixed-rate loan and the rate would be 6.25 percent, with a monthly payment of $1,164.

To service their loans, some consumers will curb their shopping. Susan Sterne of Economic Analysis Associates says that debt payments will absorb a record 15.6 percent of personal disposable income in 2007. Sterne expects growth in consumer spending and the overall economy to weaken, though she's not predicting a recession. But some forecasters think one is possible.

Uncertainties abound. How much will falling oil prices cushion consumer spending? More important: How much do higher home prices reflect a temporary speculative "bubble"? Among experts, there's a wide range of views. Economist Richard Green of George Washington University thinks much of the run-up of home prices is permanent, reflecting lower long-term interest rates. As rates dropped, buyers could afford to pay more. I largely agree with this view. Growing confidence in low inflation has gradually reduced long-term rates. In 2005 rates on 30-year fixed-rate mortgages averaged about 6 percent, compared with 7.5 percent in 2000 and 8 percent in 1995. Restrictive zoning regulations have also pushed up prices in some areas, Green says. High demand pressed on a limited housing supply.

Still, evidence of speculation is undeniable. For a while, there was a buyers' panic. By one survey, about 40 percent of houses bought in 2005 were second homes (28 percent for "investment," 12 percent for "vacation"). Dubious new mortgages -- interest-only or less -- aimed to maximize what a buyer could afford. A survey by Global Insight and National City Corp. estimates whether home prices in 317 metro areas are reasonable. In early 2000, 63 metro areas were judged overvalued -- but by no more than 13 percent. In mid-2006, 236 were thought overvalued, 79 by more than 34 percent. The survey considers interest rates, local incomes and housing densities.

Even a leveling of home prices suggests that Americans will save more from current income and spend less. Up to a point, that's okay, especially if the lost spending is offset by higher exports and business investment. But one recent survey shows a 1.7 percent year-over-year price decrease for existing homes. Moody's Economy.com forecasts falling prices in 100 metro areas and an average decline of 3.5 percent next year -- the first annual drop since the Great Depression, says chief economist Mark Zandi. There's the endgame's true danger: If prices drop too much or too persistently, the damage to confidence and spending won't be easily neutralized.

Dow Inches Higher To Another Record; Dollar Hits High For Year Against Yen (WSJ)

By Peter A. McKay

The Wall Street Journal, October 11, 2006

Stocks nudged higher, helped by cheaper crude oil but hobbled by falling bond prices.

The Dow Jones Industrial Average gained 9.36 points, or 0.1%, to finish at a new closing high of 11867.17, up 10.7% on the year. It was the fifth gain in six days.

As has often been the case in recent days, crude prices fluctuated amid shifting expectations about a possible production cut by the Organization of Petroleum Exporting Countries.

DOJ_NMG_0079265

Traders increasingly suspected that Saudi Arabia, OPEC's largest producer, opposes a cut. Crude futures for November delivery plummeted $1.44, or 2.4%, to $58.52 a barrel, off 4.1% on the year at the New York Mercantile Exchange.

The decline in bond prices pushed yields higher. Such moves usually hurt stocks because they make bonds a more attractive investment compared to shares.

The broad Standard & Poor's 500-stock index rose 0.2%, or 2.76 points, to 1353.42, up 8.4% on the year. The technology-heavy Nasdaq Composite Index crept up 0.2%, or 3.66 points, to 2315.43, up 5% on the year.

The U.S. dollar hit its highest level against the yen this year, as worries about North Korea's reported test of a nuclear weapon pressured the Japanese currency (though Asian stock markets have held up well). The greenback rose to 119.73 yen, up from 119.12 yen Tuesday.

After the stock-market close, aluminum maker Alcoa, one of 30 components of the blue-chip Dow industrials, announced third-quarter profits that fell short of analysts' expectations, and the stock fell 6% in after-hours trading. Traditionally the first Dow stock to report third-quarter earnings, its announcement represented the kickoff of the broader earnings season on Wall Street.

For now, Wall Street's consensus expectation is that aggregate earnings of companies in the S&P 500 will grow 14% in the third quarter, according to Thomson Financial. However, Mike Thompson, research director at Thomson, predicts actual earnings growth will likely fall between 16% to 17%.

Before every earnings season, expectations tend to be low, because corporate chief executives often are overly cautious in their statements to investors and analysts.

Mr. Thompson said the performance of financial companies, whose earnings are expected to grow 29%, could translate into a boost for stock prices, since such companies constitute a large chunk of the market-capitalization-weighted S&P 500. "It's hard to have really solid earnings season without the financials doing well," said Mr. Thompson. In particular, he said, many insurers are poised to do well, based on comparisons to weak year-earlier earnings due to claims from Hurricane Katrina.

In major U.S. market action:

Stocks rose, and bond prices fell. The 10-year note fell 14/32 point, or $4.38 for each $1,000 invested, pushing the yield up to 4.756%. The 30-year bond fell 23/32 to yield 4.886%.

The dollar strengthened. In addition to dollar's rise on the yen, the euro fell against the dollar to $1.2537 compared with $1.2601.

History Of Foley Messages' Release Clarified By Players (WP)

By Jonathan Weisman

The Washington Post, October 11, 2006

Two of the news media's sources of Mark Foley's sexually explicit instant messages to former House pages said this week that they came forward to expose the Florida congressman's actions, not to help the Democrats in the midterm elections.

But there are indications that Democrats spent months circulating five less insidious Foley e-mails to news organizations before they were finally published by ABC News late last month, which prompted the leaking of the more salacious instant messages. Harper's Magazine said yesterday that it obtained the five e-mails from a Democratic Party operative, albeit in May, long before the election season.

The genesis of the Foley story has become the subject of heated debate, as Republicans try to shift attention away from Foley's misconduct and the slow reaction of House Speaker J. Dennis Hastert's office to what they call a political hit just ahead of the midterm elections.

"Are we saying that a 15-year-old child would've sat on e-mails that were XXX-rated for three years and suddenly spring them out right on the eve of an election? That's just a little bit too suspicious, even for Washington, D.C.," Rep. Jack Kingston (R-Ga.) said on "Fox News Sunday" last weekend. On the same day, Rep. Rahm Emanuel (Ill.), chairman of the Democratic Congressional Campaign Committee, said he "never saw" the e-mails. "What you guys want to do is take your dirty laundry and throw it over the fence and try to blame other people," he said.

But new information suggests that the story of the release of Foley's communications with male ex-pages is more complicated than either side asserts.

The most sexually explicit material -- the instant messages that forced Foley's abrupt resignation on Sept. 29 and turned his actions into a full-fledged scandal -- appears to be disconnected from politics. The two former pages who revealed the correspondence to ABC News and The Washington Post, however, may never have come forward had Democratic operatives not divulged the five more benign e-mails that Foley had sent to a Louisiana boy.'Over-Friendly' E-Mails

The communications that would eventually trigger the scandal were written by Foley in 2004. Foley's e-mails asked a former page from Louisiana for a picture and told him he had just finished a long bike ride and was going to the gym.

DOJ_NMG_0079266

Those 2004 e-mails -- dubbed "over-friendly" by House Republican leaders -- originally leaked out of the office of Rep. Rodney Alexander (La.), a Republican. But, Republicans say, they still may have come from a Democrat on his staff. Alexander changed parties in 2004.

The timing of the e-mails' release appears to be more of a coincidence than an "October surprise," designed to affect the outcome of the elections. It took more than a year for the e-mails to be published because one publication after another decided not to print them.

The one media outlet that did, ABC News, took them public in late September only because the lead reporter, Brian Ross, had put the story on hold for more than a month as he pursued stories commemorating the anniversaries of the Sept. 11, 2001, attacks and Hurricane Katrina.

"There was never a plan to undermine the GOP or to destroy Hastert personally, as the speaker has vaingloriously suggested," Ken Silverstein, Washington editor for Harper's, said on the magazine's Web site yesterday. "I know this with absolute certainty because Harper's was offered the story almost five months ago."

Silverstein said his source was a "Democratic operative," the same source that had provided the e-mail exchanges to the St. Petersburg Times in November 2005. Both the magazine and the paper declined to publish a story. But the source "was not working in concert with the national Democratic Party," Silverstein added. "This person was genuinely disgusted by Foley's behavior, amazed that other publications had declined to publish stories about the emails, and concerned that Foley might still be seeking contact with pages."

A second source emerged, however, just last month, peddling the e-mails to several other publications, including The Post. And Ross of ABC News has stressed that his initial source was a Republican.More Explicit Messages

The instant messages between Foley and two former pages were much more sexually charged. Once ABC News obtained them and confronted the Florida Republican with the documents, Foley immediately resigned.

Two of the primary sources who delivered the instant messages came forward this week to clarify their motives. Both spoke on the condition of anonymity for fear that exposure would leave them open to harassment, especially from bloggers.

One of ABC News's sources, a former page, said he went public with his knowledge of the instant messages on Sept. 29 only after the network, the day before, published the questionable e-mails that Foley had sent to the Louisiana boy. The former page and current college student stressed that he is a "staunch Republican" who "wouldn't vote for a Democrat ever." He also said that he is not calling for the resignation of Hastert or any other Republican leader.

"I in no way knew or intended to have all the brouhaha about what the GOP leadership knew and when they knew it," he said in a detailed e-mail to The Post. "Truthfully, I am very troubled about what it seems has gone on behind the scenes, but that in no way affects my wish to have a continued GOP control of Congress. There are bad apples everywhere."

The Post subsequently received the instant messages from a Democratic college student who had served as a page with the two teenagers who had corresponded with Foley and had shared their instant messages.

Unlike the ABC News source, The Post's source conceded that he would like to see the Democrats seize control of the House in November, but when approached by a Post reporter about the instant messages, he was reluctant to provide them. Days later, he did so.

The two sources said they had conferred about the instant messages, which they had known about for months.

The Republican former page said he had decided it was up to the victims to come forward with them, but once ABC News published the e-mails, "I knew everything I had already known about Foley was finally going to come out. His attraction to young men. His sexual conversations with them, etc."'Interests of Kids'

"I decided that it was in the best interests of kids in general, pages and my friends specifically that Foley be dealt with quickly and swiftly so that he couldn't hurt anyone else," the Republican student wrote in his e-mail. "We've seen how long the Justice department and every other government bureaucracy can take to deal with criminal issues and abuse. I knew the media would be the fastest way to get Foley the justice he deserved."

As for The Post's source, Foley's initial response to the disclosure of the e-mails finally persuaded him to share his information, he said.

"When the first e-mails came out, Foley's campaign came out saying it was all a well-timed Democratic smear. Those rumors were unfounded, and I knew that to be untrue," the Democratic former page said. Before the ABC News report, "we were reluctant to take on Congress as young politicos ourselves, but when first blows were made, there was no harm in coming forward," he added.

Democrats Gain From Republican Chaos (FT)

By Holly Yeager

Financial Times, October 11, 2006

DOJ_NMG_0079267

Republican leaders scrambled on Tuesday to contain the fallout from a Capitol Hill ethics scandal amid growing evidence that the episode, and deepening dissatisfaction with the war in Iraq, will lead voters to support Democrats in the next month's midterm elections.

A Washington Post-ABC News poll on Tuesday showed registered voters favoured Democratic candidates over Republican candidates in House races by 54 per cent to 41 per cent, an advantage matched in several other new studies of public opinion.

Democrats need to pick up 15 seats in the House of Representatives on November 7 to take over the majority, and six seats in the Senate. While the national polls do not predict the outcome of individual races, they do reflect a growing sense of crisis facing Republicans.

Party officials had hoped to use the final month of campaigning to highlight Republicans' stance on national security. But the public appears to be increasingly displeased with President George W. Bush's handling of Iraq, with strong majorities saying the war was not worth fighting.

At the same time, Republicans have been in disarray for 10 days, plagued by questions about the handling of explicit electronic messages sent by Mark Foley, a member of the House from Florida, to teenage pages who worked on Capitol Hill.

Mr Foley resigned when confronted with the messages. But voters appear dissatisfied with the Republican leadership's handling of the episode.

A New York Times/CBS poll published on Tuesday found that 79 per cent of registered voters thought House Republican leaders were more concerned about their political standing than about the safety of the teenagers who work as congressional pages.

Dennis Hastert, speaker of the House, has been under particular scrutiny, facing charges that he and his staff were aware of Mr Foley's advances towards the young men but failed to act. Some prominent conservative activists have called for his resignation and several Republican congressional candidates who had planned events with Mr Hastert have asked him to stay away.

"I don't think that anybody at any time in my office did anything wrong," Mr Hastert said on Tuesday in Illinois. But he vowed to investigate the matter thoroughly and fire anyone who helped to cover up the messages. "If anybody is found to have hidden information . . . they really should be gone," he said.

Tony Snow, White House spokesman, acknowledged the Foley scandal had "had an impact" on public opinion. It was too soon to gauge whether the North Korean nuclear test would help Republicans to remind voters about their traditional advantage in the public mind when it came to national security.

Polls show that advantage has eroded recently, and the tests could instead increase voters' anxieties about the Bush administration's conduct of foreign policy.

Republicans In Trouble A Month Before Elections: Polls (AFP-Y)

By Charlotte Raab

AFP, October 11, 2006

Polls out four weeks before US Election Day showed Democrats wielding a solid lead in the race to control the US Congress, sending Republicans who now control the legislature scrambling.

"Now is the time for all good men -- and women -- to come to the aid of the party," conservative commentator Bill Bennett told the National Review.

On the heels of a scandal involving a Republican lawmaker's lewd e-mails to underage congressional aides, and the response of Republican leaders, the party of US President George W. Bush is worried socially conservative voters may stay home.

"Don't do it. Please don't do it," Bennett implores followers on his website.

Democrats have opened their biggest lead over Republicans in 20 years this close to an election, amid public discontent with the Iraq war and Bush's handling of it, an ABC News/Washington Post poll found.

The scandal over Florida lawmaker Mark Foley's sexual overtures to teen aides has also taken its toll: 75 percent of those polled by CNN said Republicans mishandled the matter.

"A Capitol Hill sex scandal has reinforced public doubts about Republican leadership and pushed Democrats to a huge lead," USA Today concurred in coverage of its own USA Today/Gallup poll.

And Republicans have lost their edge on national security, a New York Times/CBS News poll showed. Asked which party "was more likely to make the right decisions when it comes to dealing with terrorism," 41 percent said Republicans, and 40 percent said Democrats.

DOJ_NMG_0079268

All four polls gave Democrats a lead, ranging from 13 to 23 points, when voters were asked whether they planned to pick a Republican or a Democrat for Congress on November 7.

US voters will elect 33 of 100 senators, all 435 members of the lower House of Representatives and 36 of 50 state governors.

Democrats must win at least six seats to gain control of the Senate, and at least 15 seats to get control of the House. Capturing both could hobble the final two years of Bush's presidency.

The White House put on a brave face Tuesday, with spokesman Tony Snow confidently quipping: "We certainly look forward to working with a Republican House and Senate" after the vote.

But he acknowledged the challenge. "The Foley scandal certainly hasn't been a lift."

Snow said the White House will work over the next month to turn sentiment back in Republicans' favor. "What the White House is going to do is talk about what's important. We're going to talk about the issues."

Other Republicans were less sanguine.

"This adds to a very difficult atmosphere for Republican candidates going into the last 30 days," said Virginia lawmaker Tom Davis.

The polls do not indicate how many districts the Democrats could win, but they are a gauge of the national political mood.

The 23-point lead in the USA Today/Gallup poll was "double the lead Republicans had a month before they seized control of Congress in 1994," the newspaper said.

Danny Diaz, a Republican Party spokesman, said the party was employing a very detailed database to target potential supporters.

"We're targeting voters from every walk of life. You can identify a Republican voter in the most liberal neighborhood," he said.

"It's something that we've only improved upon over the past two years and expect to continue to make more effective, and expect to make it an important part of retaining Republican majorities on November 7," Diaz added.

Republican lawmaker Ray LaHood said Sunday: "There's a very little window of opportunity, but it's closing on us fast."

In Minnesota, Voters Tune Out Scandals And Infighting To Focus On Issues (NYT)

By Lynette Clemetson

The New York Times, October 11, 2006

ANOKA, Minn. — Merrywayne Elvig is a registered Republican who voted twice for President Bush. But these days Ms. Elvig says she “has a lot of problems” with the president, his administration and Congress, most notably on Iraq. She now prefers to identify herself as a conservative rather than a Republican.

When she goes into the voting booth in November, Ms. Elvig said, she will be paying more attention to the candidates than their party affiliations. She said she would not consider voting Republican just to keep the party in power.

“Everything is about politics now rather than real issues,” Ms. Elvig, a fourth-generation Anokan, said. “I think they need to clean house up there on a lot of things. ”

She is leaning toward the Republican running for Congress because of the candidate’s understanding of housing issues that effect older Americans. But she is volunteering for a Democrat in a local City Council race because she believes that the candidate will address traffic congestion in this fast-growing area north of the Twin Cities.

For Ms. Elvig , 75, and roughly two dozen other residents interviewed here over two days at coffee shops and bars, schools and small businesses, on sidewalks and at kitchen tables, the topics that have had Washington hopping in the final weeks before the midterm elections — Congressional scandals, new books saying there was administration in-fighting over the war in Iraq — were little more than distant political chatter, best tuned out.

The conclusions drawn by Republicans and Democrats alike sounded a similar theme: People craved substance and not rhetoric, wanting to hear about the nuts and bolts of national issues like health care, local ones like a proposed light rail system and international concerns like a better strategy for the war in Iraq.

Anoka, which sits at the confluence of the Rum and Mississippi Rivers, is in the Sixth Congressional District, and voters here take their elections seriously. In 2004, 84 percent of eligible residents in the city voted, well above the national average. Its competitive House race between the Republican Michele Bachmann and the Democrat Patty Wetterling, as well as the United States Senate race between Mark Kennedy, a Republican, and Amy Klobuchar, a Democrat, factor heavily in both political parties’ national strategies.

President Bush won 52 percent of the vote in Anoka County two years ago. But the county was also an important base of support for Jesse Ventura, who was elected governor as an independent in 1998. The political mix here, and more broadly across the state, led Republicans in September to select the Twin Cities for their 2008 national convention.

DOJ_NMG_0079269

Randi Barbour is one of the independent-minded voters who have made the state fertile ground for both parties. A waitress at Billy's Bar and Grill and onetime supporter of Mr. Ventura, Ms. Barbour said she planned to vote Democratic in November because health care was her top concern. She voted for John Kerry, the Democrat, and Ralph Nader, the Green Party nominee, in the last two presidential races.

Divorced with three adult children, Ms. Barbour, 51, lost her health insurance in 2003, when requirements were tightened for MinnesotaCare, the state insurance program for low-income workers. She said that she now put money away to pay for one comprehensive medical examination a year, and that she kept her fingers crossed for continued good health.

"Everybody wants lower taxes and that's all they care about, when what we really need to be doing is making sure Americans have insurance," Ms. Barbour said.

She said that she was disheartened that the Republican Party had chosen her state for their 2008 convention and that she planned to make a bumper sticker by then that read, "Save Our Blue State."

At Billy's, political views among the happy-hour crowd ran the gamut.

Doug Scanlon, 61, a Vietnam veteran and political independent who recently retired from a career laying floors, said he believed the state was going to lean Democratic in coming elections because of the quagmire in Iraq. Ron Langer, 65, a business owner, said he thought critics of the war had too quickly forgotten the Sept. 11 terrorist attacks.

"I'd rather see the war over there than over here," Mr. Langer said.

A short walk from Billy's in the old post office building on Main Street, Carol Thompson said she was thrilled that Republicans chose her state for their next convention. Next to the cash register in her educational supply store, Teacher's Pet, she keeps a picture of herself standing with President Bush.

It was taken in 2004 when Mr. Bush stopped for a chicken salad sandwich at the deli that shares basement space with her store. Without question, said Ms. Thompson, 53, she would vote Republican in next month's elections because she believes the party is uniquely committed to doing whatever it takes to protect the country.

She said she was paying little attention to the Congressional page scandal. But she said she was somewhat troubled that Republican leaders might have known about Representative Mark Foley's sexually graphic messages to pages and done nothing to remove him from office.

Ms. Thompson, a born-again Christian, said she could never support a gay politician or anyone who knowingly covered up his identity. But she would also never skip voting, she said. She trusted that her candidates in Minnesota were far removed from the taint of the scandal.

"I'll be praying a lot about it between now and the vote," she said. "If the party leaders tried to hide things about Mr. Foley, they will have to answer to the Lord."

Tom Kobelinski, 52, said that at times he felt like a member of a minority in Anoka. Mr. Kobelinski is a Roman Catholic and committed to social justice advocacy; his political philosophy can be easily gleaned from the assortment of books scattered across the dining room table of the modest three-bedroom Cape Cod where he and his wife, Christine, have raised four children.

In addition to "Homegrown Democrat" by Garrison Keillor, who was born in Anoka, there is a book commemorating the life of Paul Wellstone, the progressive Democratic senator from Minnesota who was killed in a plane crash in 2002.

Mr. Kobelinski, a physical education instructor for developmentally disabled children, said he supported Senator Mark Dayton, a Democrat who is retiring, because he pushed for increased educational spending for students with disabilities. He said he believed that Ms. Klobuchar would continue that commitment and work to bring balance to an educational system that now leans too heavily toward standardized testing.

"Not everything that counts can be counted, and not everything that can be counted counts," he said, paraphrasing a quote from Albert Einstein. "Testing alone is not enough."

Many Anokans find themselves somewhere in between Ms. Thompson and Mr. Kobelinski.

Vickie Wendel, 50, who has worked for the Anoka County Historical Society for 17 years, said she was intensely focused on state and local issues like a proposed new sales tax to finance construction of a stadium for the Minnesota Vikings in Anoka County. She is critical of the sales tax but supportive of a plan that would build a light rail system through the county, easing access to the Twin Cities.

Ms. Wendel said she had yet to make a decision in the governor's race, where the Republican incumbent, Tim Pawlenty, is in a close contest with his Democratic challenger, Mike Hatch, the state's attorney general. She is also undecided in the Senate race.

"I still am looking at the issues one by one," she said. "Honestly, I am looking for the box marked 'none of the above.' "

People Like Foley Are Gays' Worst Nightmare (USAT)

By Steve Kluger

DOJ_NMG_0079270

USA Today, October 11, 2006

Thirty years ago, singer, former beauty queen and human being Anita Bryant sat before Florida's Dade County Metro Commission and demanded the repeal of the recently passed ordinance that prohibited discrimination on the basis of sexual orientation.

"Homosexuals cannot reproduce, so they must recruit (our children)," she warned. With those few words, we lost our brand new civil rights — and it took us 20 years to get them back. What we really needed was somebody in the Sunshine State who was on our side.

Enter Mark Foley instead. Theoretically, it's easy to spot the politician whose mailing address is the closet. He's usually the one who's gleefully foaming over the most Draconian of anti-gay measures at the same time he's supporting, say, a jockstrap fetish, an itch to hang around truck stops, or a Calvin Klein model he's got stashed in a secret Brazilian love nest.

Foley was no different. From the day he was sworn in as the representative from Florida's 16th District, all he was missing was Bryant's hair. There was the matter of his very public Christianity, his endorsement of the so-called Defense of Marriage Act (which, incidentally, puts adult same-sex couples who wish to pledge lifelong fidelity into a category with national security threats), his authorship of numerous Internet restrictions to protect children from homosexuals and others online, and his repeated use of the word "revolting" to describe rumors that he's gay.

Then he became Bryant's worst nightmare. And ours, too.

Foley appears to be a sexual predator who exploited the adolescent thrall he engendered in House pages by pursuing teenage boys through explicit e-mails. He's also an unwitting poster boy for all gay men and lesbians who envision a career in politics: If you're ready to run for office, you'd better be ready to come out. And act like a responsible grown-up while you're at it. Spot Barney Frank in a gay bar onP Street and nobody's going to bat an eyelash. But if you're a married governor of New Jersey like Jim McGreevey who's discovered to have his clandestine male lover on the payroll, or gay-bashing Spokane Mayor James West who secretly prefers his male interns young and cute, you'd better start checking out Craigslist under "Employment Opportunities."

And yet, what else do you do when your entire career hinges on pretending you're something you're not? The religious fundamentalists and their political pod people might not always see eye-to-eye, but they seem to agree that the decline of Western civilization is due exclusively to gays and Bill Clinton. Indeed, if Foley's e-mails had been sent by a straight congressman to a 16-year-old girl — 16 being the age of consent in Washington, D.C. , and in many states, by the way — the TV anchors would have been sure to remind viewers that "the young lady was legally of age," and the word "pedophile" never would have flashed across cable news.

Yet Foley can't be let off that easily. When cornered with his fingers on the keyboard, he thinks it's enough to come clean. "OK, you caught me. I'm gay." But that's not what being gay is about. In fact, not only is Foley's behavior the excuse that has been used over and over again to deprive accountable gay adults of their human rights, his glib defense soils even his own community. "I'm also an alcoholic." "And a priest abused me." "The devil made me do it." Shame comes in many disguises. Foley has worn all of them.

"Being right-handed or left-handed doesn't dictate whether you punch or steal," says Jennifer Pizer, senior counsel at Lambda Legal, the nation's oldest gay-rights law firm. "Your behavior is your choice. There's nothing shameful about being gay. But abusing power to seduce teenagers is wrong whether they're male or female, and whether you're a lefty or a righty."

So who's really responsible for the Mark Foley mess? Foley himself? The Republicans? The religious right? The closets in capitol buildings across the country? All of the above? Ah, hell. Let's blame Florida. Again.

Rove Raises $12M In The 2006 Cycle (HILL)

By Alexander Bolton

The Hill, October 11, 2006

White House politico Karl Rove, whose legacy as a strategist hinges on Republicans' fate at the polls on Nov. 7, has raised more than $12 million for GOP candidates this election cycle.

The total is remarkable for a White House staffer, more than any aide has been known to raise before, and confirms Rove's place among the most celebrated strategists in American political history.

And while Rove has raised the money to promote Republican policies by protecting the GOP majorities in Congress and building party infrastructure around the country, his personal stake in the upcoming election is undeniable.

If Republicans hang on to power, Rove's reputation as a political genius will be secure, say political observers. But if they lose, Republicans may look back at Rove's ambitious and unsuccessful efforts to reform Social Security and immigration policy with bitterness.

DOJ_NMG_0079271

To be sure, Rove's contribution is a drop in the bucket of what White House officials have raised for Republicans in the past 21 months.

President Bush, Vice President Dick Che-ney and first lady Laura Bush have raised a combined $239 million since the start of Bush's second term, as of last week.

Just last week during a fundraising trip through Nevada, California, Arizona, and Colorado, Bush raised $2.36 million for four congressional candidates and one gubernatorial candidate and $1.3 million for the Republican National Committee (RNC). Also last week, Cheney raised $1.23 million for eight candidates during a swing through Wyoming, Montana, Texas, Michigan, Florida, and Virginia.

"I sure don't know of a staff person who's ever done it," said a Republican strategist Charles Black of Rove's fundraising total. "In the past some chiefs of staff did fundraisers but no one was as well-known or popular as Rove among the givers.

"He's got an incredible winning streak going — three major election wins since 2000," said Black, commenting on Rove's stake in November's outcome. "If the party were to hold both houses, he would have an unprecedented winning streak as a strategist."

Norm Ornstein, a scholar of politics at the American Enterprise Institute, said Rove has had more impact on politics than any White House aide in recent memory.

"I can't recall anyone who is in a staff position raising that much," said Ed Gillespie, who served as RNC chairman for the 2004 election. "I don't know of a cabinet secretary who has raised that much on behalf of candidates. It reflects the respect he commands in the party and reflects the Democrats' six-year effort to demonize him."

Adding to the personal pressure on Rove is his prediction in May that Republicans would be "just fine" in the fall.

Other political experts don't think the GOP's prospects are nearly so rosy.

"Rove has lost the golden touch: he didn't deliver on Social Security reform and the president's party has an uphill battle in this midterm. He's going to be lucky if this doesn't become a debacle for this party," said Darrell West, a political science professor at Brown University who said Rove's legacy is at stake. "If they lose control of one or both chambers, nobody is going to think Rove is such a genius."

Rove appears to have stepped up his fundraising appearances since special prosecutor Patrick Fitzgerald told his lawyer in June that he is no longer under investigation for leaking the name of CIA operative Valerie Plame to the press.

Rove's fundraising total also shows that despite Democrats' persistent efforts to demonize him, most recently by publicizing the number of contacts he had with convicted lobbyist Jack Abramoff, Rove remains very popular with rank-and-file conservatives.

White House officials have sought to keep Rove's campaign activity quiet in part because of a prevailing belief that staff should stay behind the scenes and not compete for attention with Bush and Cheney. And Rove, whom Bush has nicknamed "turd blossom," has carefully adopted a self-deprecating posture.

Rove has hit the fundraising circuit hard this election cycle, attending more events than Bush and his wife. But Bush remains by far the biggest fundraiser. He has raised more this election cycle than the Democratic Senatorial Campaign Committee (DSCC) and the Democratic Congressional Campaign Committee (DCCC) combined.

As of last week, he had raised $185.7 million at 77 events for Republican candidates this cycle, according to an RNC official. Rove, by comparison, has raised over $12 million at 92 events. Only Cheney has attended more events, 111. The first lady has appeared at 41.

Rove has long been a lightening rod for criticism from Democrats and liberal activists. He has often been the subject of Democratic fundraising letters and stump speeches.

"Karl Rove is a key player in the Republican culture of corruption," said Karen Finney, spokeswoman for the Democratic National Committee, who noted that a recent House Government Reform Committee revealed frequent contacts between Rove and convicted lobbyist Jack Abramoff.

Last week a senior aide to Rove, Susan Ralston, resigned because of the report.

"He is the architect of their divisive campaign tactics," said Finney. "People are rejecting the politics of division. To a degree, the GOP, by continuing to send him out there, is trying that same old playbook. What they're not realizing is that Americans have seen it for what it is and are rejecting it."

But conservative Republicans don't seem to be among the people Finney is talking about.

"Karl Rove is still the guy who can excite the base," said West of Brown University. "When you're raising the money, that's the type of guy you want."

Congress As 'The Broken Branch' (WP)

The Washington Post, October 11, 2006

DOJ_NMG_0079272

Even before the Mark Foley scandal broke, the 109th Congress was suffering from intense partisanship, legislative impasses and near-record-low public approval ratings. Incumbents are scrambling for reelection in the Nov. 7 general election, in which the Republican majorities in both houses are at risk. Regardless of the outcome, few lawmakers expect to rack up enough triumphs in the Nov. 13 lame-duck session to send the 109th Congress into the history books with high marks.

Two of the most knowledgeable congressional scholars are Thomas E. Mann of the Brookings Institution and Norman J. Ornstein of the American Enterprise Institute. Their new book is "The Broken Branch: How Congress Is Failing America and How to Get It Back on Track." They recently answered questions about their findings and views.

-- Charles Babington

Q Is the current Congress demonstrably more partisan than those in the past? Why does it matter?

MANN : Partisanship particularly increased after the 1994 elections and then the appearance of the first unified Republican government since the 1950s. Now it is tribal warfare. The consequences are deadly serious. Party and ideology routinely trump institutional interests and responsibilities. Regular order -- the set of rules, norms and traditions designed to ensure a fair and transparent process -- was the first casualty. The results: No serious deliberation. No meaningful oversight of the executive. A culture of corruption. And grievously flawed policy formulation and implementation.

Congress has been rocked by the Foley scandal. Was the House GOP leadership's response an example of reflexive partisanship? Are there larger lessons to learn from it?

ORNSTEIN : Part of the response to Foley was undoubtedly human nature -- lawmakers wanting to take Foley at his word that he wouldn't write any more improper e-mails. But it is hard to look at the responses of the collective majority leadership, including Speaker Dennis Hastert, GOP campaign chair Tom Reynolds and Page Board chair John Shimkus, without putting them into a context that makes it more damning.

The entire leadership team made sure that there was no significant ethics or lobbying reform in this Congress. They knew their majority was hanging in the balance, that the Duke Cunningham-Jack Abramoff-Tom DeLay scandal problem had not coalesced into an electoral catastrophe. The last thing they wanted was another embarrassing scandal. There is a lot to suggest that there was a systematic state of denial here, and an indifference to the possibility of a bigger problem that Foley might represent.

One party has controlled the White House, Senate and House for most of the past six years. Why have Republicans found it so hard to enact priorities such as comprehensive immigration changes, a Social Security overhaul, and even nuts-and-bolts legislation such as a budget bill?

ORNSTEIN : One answer is the small majorities that Republicans have had in both houses; it is hard to command perfect party unity in both houses for any length of time in our political system. But the Democrats had much larger margins for the first two years of Bill Clinton's presidency and also had immense difficulty making anything major happen. United government in an age of fierce partisanship and sharp ideological polarization between the parties does not work very well for very long. . . .

Congress is meant to check and balance the other branches, especially the executive. How have members' attitudes changed in recent years about Congress's institutional role?

MANN : It is striking, the extent to which the Republican majority in Congress deferred to the president in the face of one of the most aggressive and ambitious assertions of executive authority in American history. . . . They are now paying a political price for the policy consequences of their inattention. In Iraq, for example, it has meant flawed planning, poor implementation and no midcourse corrections. . . .

Few incumbents of either party face a serious risk of electoral defeat. How has this affected Congress's work? Does it make House members bolder, less inclined to blow with the political winds?

MANN : The last five congressional elections have produced fewer incumbent defeats and seats changing party hands than any comparable period in American history. Congressional districts have become safer for one party. . . . Those recruited, elected and reelected from such districts tend to reflect the ideological pole of their party rather than the center of public opinion.

Incumbency adds a layer of advantage on top of this party dominance. But rather than foster an environment in which members of Congress feel free to buck popular sentiment and wrestle seriously with the problems confronting the country, it reinforces the ideological divide between the parties. Incumbents are safe, but party majorities are not. This fosters symbolic votes, message politics and little serious legislating in Congress.

Don't voters deserve some blame -- maybe a lot -- for Congress's shortcomings? Do we get the government we deserve?

ORNSTEIN : Sure, voters -- and even more, non-voters -- deserve some of the blame. The low turnout we get exaggerates the power of the ideological activists who do turn out, skewing the system away from the middle.

But voters do not create the system that shapes the districts into noncompetitive ones, nor do they play a meaningful role in recruiting the candidates we get. . . . And we cannot expect voters to pay close attention to the ins and outs of the legislative process, until some crisis demands it.

DOJ_NMG_0079273

It is the voters' surrogates, including the press, who have to alert them when something is seriously wrong. But ultimately, only a credible threat that the public is prepared to throw the rascals out will change the ways in which politicians in Washington operate.

Democrats Aim At The Red (LAT)

By Ronald Brownstein

The Los Angeles Times, October 11, 2006

KENNETT, Mo. — By her own admission, Claire McCaskill did not spend enough time campaigning in rural Missouri two years ago, when she narrowly lost the governorship to Republican Matt Blunt.

This year, as the Democratic nominee for U.S. Senate challenging GOP incumbent Jim Talent, McCaskill is making up for lost time. She's barnstorming down country roads in a bright blue RV, stopping in small towns such as this one, the birthplace of singer Sheryl Crow.

"A lot of it is sending a message to rural Missouri that … I want to try hard to get their support," McCaskill said after shaking hands with seemingly every moving object at the Delta Fair.

Her ability to win votes in rural Missouri may determine whether she topples Talent. More broadly, it probably will signal whether Democrats can overcome the principal obstacle in their drive for a Senate majority: the Republican dominance of Senate seats in states that President Bush carried in 2000 and 2004.

To gain the majority, Democrats must win at least four, and maybe more, GOP-held seats in red states such as Missouri. Recent polls have buoyed their hopes. Democrats are running about even with or slightly ahead of Republicans in each of the hotly contested red-state Senate races except Arizona's.

From disenchantment over the Iraq war to the sex scandal surrounding former Rep. Mark Foley (R-Fla.), a national tide may be gathering behind Democrats. But for Republicans, the red states loom as the sea wall against that force.

Election day will decide whether discontent over the nation's direction overrides entrenched GOP advantages, especially among rural voters, in these culturally conservative states.

One of the most powerful trends in U.S. politics has been the growing alignment between the way states vote in presidential and Senate elections.

In the past, states often would support one party for president while sending members of the other party to Washington as one or both of their senators. But in a highly polarized era, more voters are supporting Senate candidates who are in the same party as their choice for president.

The GOP holds three-quarters of the Senate seats from the 29 states that twice voted for Bush for president. Democrats hold about three-quarters of the Senate seats from the 18 states that voted for Al Gore in 2000 and John F. Kerry in 2004.

Democrats need a net gain of six seats to win the Senate. Only two of their top targets this year are Republicans in states that the Democratic presidential candidates carried in 2000 and 2004: Sens. Lincoln Chafee of Rhode Island and Rick Santorum of Pennsylvania.

Red states are home to all of the other targets: Sens. Mike DeWine in Ohio, Conrad Burns in Montana, George Allen in Virginia and Jon Kyl in Arizona, as well as Talent in Missouri and a seat being vacated in Tennessee.

Amid the bad political news that has battered the GOP this year, Republican strategists take comfort that so many of the crucial Senate fights are being waged on what amounts to the GOP's home turf.

"I would much rather have a playing field that was predominantly red states than predominantly blue states," said Terry Nelson, field director for Bush's 2004 reelection campaign.

In most of these contests, Democrats express confidence that antipathy toward Bush will spark a large turnout by their core voters. They also believe that concern about the Iraq war — as well as anger over other matters, capped by the Foley scandal — will improve their showing among relatively well-off, socially moderate suburban voters.

But in all but one of the key red-state Senate races, rural voters constitute a larger share of the population than they do nationally (Arizona is the exception). And that means that to gain Senate seats, Democrats need to minimize the GOP edge among culturally conservative exurban and rural voters.

Missouri embodies this dynamic.

Talent, a smart, low-key politician, won his seat in 2002 by fewer than 22,000 votes over the Democratic incumbent, Jean Carnahan. (She had served the first two years of the term won by her late husband, Mel Carnahan, in 2000.)

McCaskill is an accomplished foe. A former county prosecutor in Kansas City and a former state legislator, she is now state auditor. She is gregarious and focused on the campaign trail as she delivers a sharp-edged populist message.

Experts in Missouri politics think McCaskill is likely to post strong showings in the Kansas City and St. Louis metropolitan areas, partly because she supports, and Talent opposes, a state ballot initiative to authorize stem cell research.

DOJ_NMG_0079274

But in her 2004 gubernatorial race, McCaskill won only eight of the state's 109 rural and exurban counties, noted Kenneth Warren, a St. Louis University political scientist. To win this year, he said, McCaskill's main challenge "is to get more of the rural vote."

Both the opportunities and barriers in that effort were on display as McCaskill and Talent crossed campaign paths recently in rural southeastern counties, a region known as the Bootheel.

McCaskill's biggest obstacle, by far, is her liberal views on social issues: She supports abortion rights and opposed state amendments banning gay marriage and allowing residents to carry concealed weapons. Talent's campaign has run ads in rural markets highlighting these positions.

"It's a question of who believes in these heartland values and who doesn't, and that is a set of issues in the race," Talent said.

At the end of September, when McCaskill appeared at the 62nd annual Cotton Carnival Parade in Sikeston, several along the route said they did not need to know her opinions beyond abortion and gay rights to conclude they could not vote for her.

"I mostly vote Republican because of the Christian values side of it," said Jim Holt, a foreman at a trailer manufacturing company, as he leaned against his pickup truck.

Holt said economic issues — what he called "the money side of it" — took a backseat to his other concerns. "I worry more about abortion and gay marriage and all that crazy stuff."

Joe Hester, an accountant, said he would vote for Talent because the incumbent "supports family values and I think McCaskill is too liberal for our state…. I'm a strong Christian, and I believe if you take care of the values, God will take care of the rest."

Several days later, Hester said the unfolding Foley scandal had not changed his view that "overall, Republicans are more in tune with my values."

McCaskill has sought to highlight her own faith and family — one day early this month she stopped at three churches before lunchtime, and she is running an ad in which her 78-year-old mother testifies to the candidate's "integrity, hard work [and] guts."

But mostly, McCaskill is trying to persuade more rural voters to consider "the money side" of the race. In the Bootheel's major counties, the poverty rate is substantially higher than the state average.

She spotlights her support for an increase in the minimum wage; denounces last year's energy bill for providing tax breaks to oil companies; and proposes new tax credits for college education, child care and first-time home buyers.

She's also unambiguous in her criticism of the Iraq war, urging the withdrawal of U.S. troops over the next two years.

Talent, meanwhile, is focusing on legislative measures requiring increased use of ethanol and cracking down on methamphetamine production.

"I'm not interested in being an international senator," he said. "I'm interested in making things better for my people."

But insulating the race from larger tides won't be easy.

During McCaskill's recent visit to the Bootheel, Dizer Capps interrupted her morning coffee at a restaurant in Caruthersville to say he would be voting for her. Capps, who runs a dry-cleaning business, voted for Bush in 2000 and 2004, and supported Talent in 2002. But he's lost faith in the president, largely because of the Iraq war.

"I voted for Bush because I thought he was a good man, but he ain't worth a damn," Capps told McCaskill. "I'm 76 years old and I've seen a lot of presidents, and this is the worst I've ever seen. He's worse than Jimmy Carter."

Such sentiments are welcome news for McCaskill. Yet Capps' comments also underscore the stakes in November's election.

If the Democrats can't loosen the GOP grip on enough culturally conservative voters to win the races in this climate, it's not clear when they will.

Democrats Veer To The Right In Fight For House (WT)

By Ralph Z. Hallow

The Washington Times, October 11, 2006

In North Carolina, former Washington Redskins quarterback Heath Shuler is running for a House seat, declaring himself a pro-life member of the pro-gun National Rifle Association, and accusing his opponent, Rep. Charles H. Taylor, of supporting amnesty for illegal aliens.

What's wrong with this picture? Mr. Taylor is a conservative Republican, and Mr. Shuler is the Democratic challenger trying to outflank him on the right -- a not uncommon move this election year, even before the Mark Foley scandal increased the midterm vulnerability of House Republicans.

DOJ_NMG_0079275

It's happening across the South and Midwest, as Democratic congressional candidates from Illinois to Georgia are casting aside liberal loyalties to compete in conservative districts where they hope to gain the 15 seats needed for Democrats to take control of the House.

Democrats "have adopted a different kind of candidate, out of the traditional political sphere," said Charlie Gerow, a Pennsylvania-based Republican strategist.

"There are especially strong cases of 'blank slate' candidates with no voting records, trying to hedge on every issue -- in Pennsylvania, Illinois and Virginia, for example -- and other Democrats running like they're Republicans, in Georgia, Indiana and North Carolina," says National Republican Congressional Committee (NRCC) spokesman Jonathan Collegio.

A few snapshots from the campaign trail:

·In Indiana, Vanderburgh County Sheriff Brad Ellsworth, running for a House seat, says flatly, "I'm pro-life. I believe in a traditional marriage and the Second Amendment." And, yes, Mr. Ellsworth is the Democrat in this race, challenging Republican Rep. John Hostettler.

·In Georgia, Rep. John Barrow has publicly denounced a "cut-and-run strategy" in Iraq. He favors a federal constitutional amendment to ban same-sex "marriage," and he opposes amnesty for illegal aliens. Mr. Barrow is also a Democrat -- being challenged by former Rep. Max Burns, the Republican he defeated to win the seat in 2004.

·Another Georgia Democrat, Rep. Jim Marshall, voted to block House Minority Leader Nancy Pelosi's motion last year to investigate possible prisoner abuses in the Iraq war and says he is pro-gun and mostly pro-life. Mr. Marshall is defending his redistricted seat against former Republican Rep. Mac Collins.

·In Kentucky, former Rep. Ken Lucas is yet another Democrat running like an all-out conservative in his challenge to Republican Rep. Geoff Davis.

The reasons for the plethora of rightward-running Democratic candidates? Polls show Democrats will have a hard time winning in strong Republican and swing districts if they spout traditional Democratic positions.

Democrats occupy seats in 41 congressional districts that voted for Mr. Bush in 2004, while Republicans hold 18 seats in districts that voted for John Kerry. That means that there are more than twice as many Democrats running in Bush-Republican districts than Republicans running in Kerry-Democrat districts.

To make a successful play for House control, Democrats have to win in Republican districts. But voter surveys consistently show that the national Democratic Party's liberal positions on taxes, abortion and other issues do not go down well in districts that supported Mr. Bush by 10 percentage points or more.

Therefore, the Democrats have recruited two types of candidates: those who often sound like their Republican opponents on abortion, guns, homeland security or taxes -- and those who simply don't talk much at all.

"It took 12 years in the minority for Democrats to realize that they couldn't win elections by running like Democrats -- so they've drafted candidates who either masquerade as conservatives or keep mum on the issues as long as politically possible," Mr. Collegio said.

Democrats' blank-slate candidates usually have not held public office, and thus have no voting record for their Republican opponents to use against them.

In Pennsylvania, for example, Republican Rep. Jim Gerlach faces challenger Lois Murphy. Though she is a former state director of NARAL Pro-Choice America, Mrs. Murphy has never been a legislator and thus has no voting record for Mr. Gerlach to challenge. The Democrat has hedged on issues ranging from taxes to Iraq to immigration.

In Virginia, Democratic challenger Phil Kellam is running in a district that went heavily for Mr. Bush two years ago. The tax commissioner in Virginia Beach, Mr. Kellam has avoided going on record on major issues and has turned down debates with the Republican incumbent, Rep. Thelma Drake.

Like many other Democrats, Mr. Kellam was quick to exploit the political opening afforded by the scandal surrounding Mr. Foley's reported involvement with teenage congressional pages. In an Oct. 3 statement, Mr. Kellam denounced House Republican leaders for failing to "act decisively" to "protect" pages.

In Illinois, Democratic candidate Tammy Duckworth, a disabled veteran of the Iraq war in her first bid at public office, straddles the line on major issues such as taxes, human cloning, same-sex "marriage," the USA Patriot Act and health care. To keep her policy slate blank, she has dodged debates four times with her Republican opponent.

There's not much Republicans can do about Democrats avoiding debates or appropriating basic Republican campaign themes, although the NRCC spokesman says the trend validates conservative arguments.

"If Democrats make headway this cycle, it's not because America has moved leftward, but because Democrat candidates have moved rightward," Mr. Collegio said.

As Election Nears, Groups Plan Negative Ads (NYT)

DOJ_NMG_0079276

By John Broder

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — A previously unknown group led by a Republican political consultant in Houston is financing television advertisements against nine Democratic House candidates from North Carolina to Arizona.

The group, Americans for Honesty on Issues, is spending more than $1 million on the advertisements, which accuse Democratic candidates of carpetbagging, coddling illegal immigrants, being soft on crime and advocating cutting off money for troops in Iraq.

The television spots appear to be the first wave of a boatload of negative political advertising that will appear in the weeks before the Nov. 7 election. Many of the advertisements will be produced by independent organizations known as 527 groups, after the provision in the tax code that allows such groups to spend virtually unlimited sums on political activity as long as it is not formally coordinated with parties or candidates.

The 527 groups had raised nearly $200 million as of June 30, much of which appears to be available to be spent on pre-election activities. And if past trends hold, the total raised and spent by the groups on this election will surpass $300 million, eclipsing the $258 million spent by such groups in the last midterm election, in 2002.

The increase is striking because the campaign finance law enacted in 2002 now forbids federal elected officials and candidates from operating their own 527 groups. In 2002, committees maintained by such officials raised about a third of the total dollars for the groups.

The leader of Americans for Honesty on Issues is Sue Walden, a close ally of Tom DeLay, the former House majority leader who left Congress amid questions on ethics and fund-raising. Ms. Walden has also raised money for President Bush and served as an adviser to Kenneth L. Lay, the former chief executive of Enron who died in July.

She referred a call seeking comment to Glenn M. Willard, a lawyer with Patton Boggs in Washington, who drew up the papers establishing the organization. Mr. Willard confirmed that Ms. Walden was the nominal head of the committee, but he declined to identify the group's donors or say how much it planned to spend.

The group's Web site does not give an address or phone number, nor does it list any of the officers or sponsors. It says only, "Americans for Honesty on Issues is organized to engage in political issue communications in compliance with federal and state laws."

Democrats, generously financed by labor unions and rich individuals like George Soros, dominated the 527 field in the presidential election of 2004, when such groups raised and spent more than $650 million. But Democratic groups have been relatively quiet this year, in part because big donors like Mr. Soros are giving much less money.

One Democratic 527 group, Majority Action, announced this week that it would run advertisements in four Congressional districts criticizing incumbent Republican House members for voting against federal financing for stem cell research.

The advertisements will focus on Representatives Chris Chocola of Indiana, Thelma Drake of Virginia, Don Sherwood of Pennsylvania and James T. Walsh of New York.

Total spending on the 60-second advertisements will be about $500,000, said Bill Buck, spokesman for Majority Action. The group's founders include Joe Andrew and Don Fowler, former chairmen of the Democratic National Committee.

Another Democratic 527 organization, the September Group, founded by the longtime party operative Harold M. Ickes, is planning a late burst of anti-Republican spending, said Howard Wolfson, a political consultant working with the group. But Mr. Wolfson would not say how much money the group had raised nor how it intended to spend it.

Emily's List, which supports Democratic candidates at the state and federal level, reported raising $3 million and spending nearly $2 million from July through September. Among its major donors are Linda Pritzker, a member of the family that owns the Hyatt hotel chain; Alida Messinger, a Rockefeller; Lee Fikes, a Texas oilman; and Mr. Soros.

Among the most active Republican 527 groups is the Economic Freedom Fund, which was formed this year and received a $5 million contribution from Bob J. Perry, a major Bush donor and an underwriter of the Swift boat veterans group in 2004. The fund is running advertisements on behalf of Republican candidates in Georgia, Indiana, Iowa, Oregon and West Virginia.

Dems Hunt For Drop-off Voters (HILL)

By Jonathan E. Kaplan

The Hill, October 11, 2006

The clash between Democratic Party chairman Howard Dean and Rep. Rahm Emanuel (D-Ill.) over how much money the national party would spend to help congressional Democrats ended last month. But the heart of the disagreement, whether the national party has identified new and drop-off voters, could determine whether the Democrats retake the House and Senate in November.

DOJ_NMG_0079277

Emanuel, chairman of the Democratic Congressional Campaign Committee, and Dean agreed last month that the Democratic National Committee would spend $2.6 million on GOTV efforts; Dean reportedly reached a deal Monday with Sen. Charles Schumer (D-N.Y.), chairman of the Democratic Senatorial Campaign Committee, to direct $5 million to state parties to help Democratic Senate candidates.

In the months preceding these agreements, the DSCC and DCCC set up their own field programs, which is something the DNC would have done in the past, said several Democratic strategists.

"Did they [the DNC] waste a year and a half not targeting drop-off voters? Yes," Emanuel said, referring to voters who cast ballots in presidential years but not in off-year elections. But he said House Democratic candidates would be fine, because, "It's not like we have slouches over there … they [the DCCC] know what they're doing."

Realizing that voter turnout could determine whether the Democrats control the House or spend another two years in the minority, Emanuel hired Michael Whouley and Jack Corrigan, longtime Democratic field operatives, to implement the DCCC's strategy. The committee has worked with 70 campaigns devising a field strategy; it is helping pay for field programs in several campaigns, said a senior Democratic aide.

Stacie Paxton, a DNC spokeswoman, said, "Unfortunately, the congressman is misinformed. We've been targeting drop-off voters for more than a year and we contacted three million drop-off voters this Saturday at the DNC's third national organizing day."

Turnout is especially crucial in midterm elections. In 2000 and 2004, for example, 55 percent and 61 percent of eligible voters, respectively, cast ballots. In 1998 and 2002, just 39 percent of eligible voters participated, according to the U.S. Elections Project at George Mason University. Those who don't show up to vote in an off-year election are known as "drop-off" voters. They are the midterm swing voters.

Still smarting from their losses in 2002 and 2004, Democrats have worked to match the Republican Party's successful get-out-the-vote operations. Republicans used technology to identify new Republican voters based on lifestyle choices, a practice known as microtargeting.

"Just because microtargeting was used in 2004 to find new voters doesn't mean that's its only use," said Jano Cabrera, a Democratic strategist who is advising Democrats on microtargeting efforts, "The same techniques are being used to identify base and drop-off voters during this midterm cycle, the two core groups that will determine the makeup of the next Congress."

But party strategists said in interviews that the Democratic Party has spent too much money rebuilding the party in red states and has not made any real inroads mining new voters. Democratic allies such as MoveOn.org, America Votes, and EMILY's List, have made the most progress in mining new Democratic voters, they said.

The Republican National Committee's (RNC) get-out-the-vote efforts, known in campaign jargon as GOTV or field, proved effective this year in California and Rhode Island. The National Republican Congressional Committee's (NRCC) $5 million effort helped former Rep. Brian Bilbray (R-Calif.) succeed Duke Cunningham (R-Calif.), who is now in prison. In Rhode Island, the RNC and National Republican Senatorial Committee (NRSC) rescued Sen. Lincoln Chafee (R) in his competitive primary.

While Democratic field ops are undertaken by the DCCC, DSCC and state parties, the Republicans have centralized their efforts. The RNC abruptly assumed control of the NRSC's field program this week. The NRCC turned its field program over to the RNC this summer.

Meanwhile, the DSCC had invested $10 million in field ops as of Aug. 30 and expects to spend $10 million to $20 million more this fall, said another senior Democratic aide. That money is in addition to what the state parties and DNC will spend.

The DSCC also has sought "to identify and court Republican voters in rural and exurban areas, places that we have all too often ignored (at our own peril) in recent elections," Schumer wrote last May in a memo to his colleagues.

Schumer and several candidates in states with large rural populations are targeting potential voters in "micropolitan" areas, or small clusters of population in rural areas, wrote Schumer, adding that he would analyze the demographic composition of "drop-off voters who usually fail to vote in midterm elections but in 2004 mostly supported George Bush."

In races where the DCCC is not spending money, House Democratic candidates will piggyback on what is called a coordinated campaign, or the collective resources of the DNC, DSCC and state party to get voters to the polls.

In Nebraska, for example, the DNC and DSCC have kicked in several million dollars to augment the Nebraska Democratic Party's and Sen. Ben Nelson's (D-Neb.) voter-contact program. Nelson is running for reelection against Pete Ricketts, a multimillionaire businessman.

Although the DCCC placed former Lt. Gov. Maxine Moul (D-Neb.) on its "Emerging Races" list, indicating that Emanuel believes Moul has an outside shot of winning in a heavily Republican congressional district, Emanuel has not spent money on the race.

"The DCCC has been noticeably absent in spite of all their chest pounding," said Barry Rubin, the executive director of the Nebraska Democratic Party.

Democratic Senate Group Backs Webb In A Big Way (VAPILOT)

By Tony Germanotta

Hampton Roads Virginian-Pilot, October 11, 2006

It's official: Virginia's Senate seat is in play.

Forget about the polls, what really sends a message is money, and on Tuesday the Democratic Senate Caucus' political arm bought in big-time with an anti-George Allen ad.

It's the first time the national party has ponied up on behalf of Democratic hopeful Jim Webb, and his is one of only six races nationwide that the committee is currently targeting, according to Democratic Senatorial Campaign Committee spokesman Phil Singer.

Singer declined to give details on where and when the commercial will run.

"It's up on the air," he said Tuesday afternoon. "We don't like to advertise our advertising."

As for how much ad support the committee is offering to Webb?

"I've seen people report $1 million," Singer said, adding, "I won't deny it, and I won't state it on the record."

Webb started his race well behind incumbent Allen in fundraising. At the last official reporting deadline this summer, Allen had $6 million in the bank, compared with Webb's $424,000.

But last week, Webb reported raising nearly $3.5 million during July, August and September.

That left him with about $2.7 million on hand at the start of October, his campaign said. Webb and Allen are expected to spend a combined total of well more than $1 million per week on television advertising before the Nov. 7 election. That does not count the money spent by other groups such as the Democratic Senatorial Campaign Committee.

The 30-second ad lumps together a number of anti-Allen charges.

"George Allen, scandals, slurs and insults," it begins, with references to Allen's calling a Webb campaign worker of Indian descent "macaca," a term for a monkey that is used as a racial slur in some cultures, as well as citations of stories that have emerged during the campaign about Allen not reporting stock options and of having used racial slurs while in college.

Last week, Allen bought two minutes of airtime statewide to ask that the campaign focus on issues instead of attacks.

"Now after Allen's dark side is exposed, he wants the race to be 'decided on the issues,' " the ad's narrator intones. "Well here's his record."

What follows is an old-fashioned political parsing of votes and contributions.

Allen's campaign issued a retort Tuesday afternoon to what it called "the deceitful DSCC attack ad, funded through Hillary Clinton's latest $1 million donation."

Webb was on the campaign trail in Richmond on Tuesday to accept the endorsement of the Virginia Education Association, the state's largest teachers' group.

He said he had not seen the ad but welcomed the party's support.

"Since Day One, we've been vastly outspent," he said. "I was outspent 3-to-1 in the primary. And I'm grateful that we're going to get some help here."

He said he had no role in the ad and didn't know how much the committee would spend.

"We are legally precluded from cooperating in any way with the DSCC," he noted.

The Democratic committee also is targeting races in Ohio, Montana, Missouri, Rhode Island and Tennessee, Singer said.

Democrats need a net gain of six seats to take control of the Senate.

National Dem Group Airs Independent Ads Attacking Allen (DPHR/AP)

By Bob Lewis

Daily Press, October 11, 2006

RICHMOND, Va. -- With the first major national cash infusion into Virginia's pivotal, closely contested Senate race, a Democratic group launched a major round of television ads across Virginia Tuesday lashing Republican Sen. George Allen.

Democrat Jim Webb also continued rebutting claims Allen had pressed in their Monday night debate that Webb would reinstate federal taxes that have been cut, including the estate tax and the so-called marriage penalty.

The Democratic Senatorial Campaign Committee ad, on a nine-day, $950,000 run, attacks Allen on issues as diverse as his "macaca" moment and new reports that he failed for five years to disclose stock options to Congress as required by ethics rules.

The ad, run independently from but in support of Democrat Jim Webb, is among the largest yet in a race the latest polls indicate is tied or very close.

DOJ_NMG_0079279

Allen's campaign quickly labeled the DSCC's ad as "deceitful" and immediately sought to tie it to national Democrats, particularly New York Sen. Hillary Clinton, whom Allen's conservative Virginia voting base detests.

The ad opens mocking Allen's appeal last week for restoring the campaign to issues--an appeal he made even as he launched a second ad attacking Webb for a 1979 magazine article in which he questioned the fitness of women to lead men in combat and lamented their admission to U.S. service academies.

In rapid succession, the ad references Allen's applying the obscure racial slur "macaca" to a man of Indian descent in August, allegations by former college football teammates that he used a six-letter epithet for black people and a report that Allen did not report stock options he got for his service as a director of a high-tech corporation on his personal financial disclosure forms as Senate rules direct.

It accuses him of voting against body armor for U.S. troops, favoring tax breaks for energy companies that gave his campaign $322,000, and voting to boost his own salary while opposing increases in the minimum wage.

Allen's campaign released a list of rebuttals to each point, particularly the claim he opposed body armor for American troops. The ad accurately notes a party-line vote on Oct. 2, 2003, in which Allen and the GOP majority tabled a Democratic amendment to provide $322 million in spending on new battlefield equipment. However, it ignores several other votes Allen subsequently cast on funding for military equipment, including his concurrence in a near unanimous Senate vote on Aug. 2 to appropriate $6.7 billion the effort in Iraq.

At a news conference Tuesday where Webb received the endorsement of an organization representing Virginia's 63,000 public school teachers, he battled back on Allen's claims from Monday's debate that Webb wants to reinstate taxes on about 3 million Virginians.

"I would be opposed to raising taxes in any of the situations that affect the broad swath of Americans. So, programs like the marriage penalty, ... I've not talked about going after that," Webb said.

Simultaneously, Webb began airing a new ad that opens with the claim that "George Allen is lying again" about Webb's tax record. The ad is airing for a week in rotation with another 30-second Webb spot on Iraq policy at a cost of about $728,000.

On the tax applied posthumously to the estates of wealthy people, Webb said there should be some sort of tax on the largest of estates, but supported exempting smaller ones.

Webb accused Allen of increasing the tax burden on the poor and middle class while protecting tax breaks for corporations and the wealthy. He said Allen supported ending the tuition tax credit for families with college students.

"Quite frankly, with a Republican-controlled government, the benefits that go to corporate America, I think, are beyond fairness," he said.

Allen, meanwhile, began airing a radio ad making his strongest link yet to groups supporting a referendum on the Nov. 7 statewide ballot that would write a ban on same-sex marriages or anything resembling it into the Virginia Constitution's Bill of Rights.

"There are those who would like to change the definition of marriage. Jim Webb is one of those people," an announcer says as the ad opens. "This Election Day you'll have an opportunity to stand up to the Jim Webbs of the world, to the people who want to weaken marriage."

The ad, in rotation with an ad blasting Webb on taxes, is running in rural areas, Norfolk and Roanoke at a cost of about $60,000. Allen, who supports the amendment, expects a substantial turnout boost from religious conservatives also drawn to the polls in large numbers to support the measure.

Webb is clear that he opposes the amendment, but on the same grounds as Gov. Timothy M. Kaine, a fellow Democrat. Both say marriage should be limited to one man and one woman, but they contend that in its zeal to outlaw any legal arrangement approximating marriage, the amendment could endanger the right of people to enter into personal contracts.

Taxes Take Center Stage (WP)

By Michael D. Shear And Tim Craig

The Washington Post, October 11, 2006

RICHMOND, Oct. 10 -- Taxes have moved to the forefront of Virginia's Senate race, with Republican Sen. George Allen accusing Democrat James Webb of plotting to raise taxes on millions of Virginians.

Allen made the allegations at the candidates' final debate Monday and is repeating them in a statewide television commercial. But the accusations are based almost entirely on Webb's support from national Democratic leaders and on two vague statements by Webb questioning whether Congress should make federal tax cuts permanent.

Webb, who has never run for public office or cast a vote on taxes, has angrily denied the charge and on Tuesday began airing a commercial defending his views. The Democrat's ad also examines Allen's voting history to accuse him of raising taxes

DOJ_NMG_0079280

on retirement savings, increasing the cost of tuition and giving tax breaks to oil companies. Webb also told reporters which tax cuts he would keep and what tax loopholes he would consider closing.

"This is one more chapter in this ongoing saga about taxes in Virginia now," said Virginia Commonwealth University professor Robert D. Holsworth. "What the senator is doing is to paint Webb as a knee-jerk, liberal tax-and-spender. What Webb wants to suggest is that his position is far more nuanced."

Taxes have been at the heart of political struggles in Virginia since 2000. The issue has divided the state's Republican Party as its members struggle to finance government operations and road-building. And it has dominated most of the statewide elections.

But it has not always been successful for the state's Republicans. Former attorney general Jerry W. Kilgore (R) opened his first gubernatorial debate with Democrat Timothy M. Kaine last year by warning voters, "You can take to the bank what he's going to do: He's going to raise your taxes." Kilgore lost.

In the current campaign, Allen is hoping to do better, putting Webb on the defensive with an ad that says Webb will "bring back the death tax, the marriage penalty tax and cut the child tax credit from $1,000 to $500."

Those charges are based on comments Webb made about the tax cut package enacted during President Bush's first term, including tax breaks for parents, married couples, investors and many businesses. During an interview with George Stephanopoulos on ABC's "This Week" program, Webb said he would seek to roll back "some" of the Bush tax cuts for the wealthy but didn't elaborate. In a blog interview, with http://MyDD.com , he questioned the wisdom of cutting taxes while paying for a costly war and wrote that "the tax cuts that come up for renewal in '08 -- I would want to take a very hard look at that."

Allen campaign aides Tuesday stood by their charges against Webb, saying that they are fair extrapolations from Webb's comments and his links to such national Democratic leaders as Sen. Hillary Rodham Clinton (D-N.Y.), whom they described as favoring higher taxes. Allen declined to be interviewed.

"When [Webb] goes out and talks about taxes, he attacks the tax relief plan," said Allen spokesman Dan Allen, who is not related to the senator. "When you're talking about rolling back tax cuts . . . you are talking about a tax increase."

In a meeting with reporters yesterday, Webb accused Allen of misrepresenting his view on taxes. "What they have done in those ads is taken a statement or statements I made in a general way, saying the extensions of the Bush tax cut should be looked at, and [Allen's campaign] applied them to every single tax," Webb said.

Webb also said he opposes raising taxes "that affect a broad swath of Americans," including proposals to reverse efforts to close the so-called marriage penalty.

"I have not talked about going after them," he said.

Webb said he also supports President Bush's plan to reduce taxes on small and middle-sized estates, but he thinks it is all right to tax multimillion-dollar estates. But Webb, who frequently rails against the size of the federal budget deficit, conceded that "more revenues" are needed to finance the war in Iraq and pay down the debt.

"The area I would strongly focus on right now -- and I feel very strongly on this -- is the corporate tax structure," Webb said. "Not to raise rates, per se, but to examine all the loopholes built into the corporate tax code -- and there are a lot of them."

Webb has embraced a populist economic philosophy that includes bridging the gap between the rich and the working class. On Tuesday, he referenced a report by the Citizens for Tax Justice that states 46 of the Fortune 500 companies pay no taxes.

"In terms of how you begin to fix the problems of the tax structure, there are loopholes that exist that will throw billions of dollars of income back in before we have to look at anything else," said Webb, who added that some companies receive tax breaks when they relocate jobs overseas.

Holsworth said Webb has invited some of the Allen attacks by adopting a more populist tone than many of the state's recently successful Democrats. Kaine and former governor Mark R. Warner (D) often talked more about personal responsibility than economic justice.

"On economics, Jim Webb sounds more like [former vice presidential candidate] John Edwards than Mark Warner," Holsworth said.

But like Kaine and Warner, Webb walks a careful line when it comes to taxes. At the news conference, Webb declined to be boxed into a "no-new tax" pledge, saying he isn't ruling anything out if he is elected.

Webb's accusations about Allen in the commercial that aired Tuesday are based on votes Allen took in the past six years in the Senate and on comments he has made in newspaper articles while a public official.

Dan Allen, the senator's spokesman, offered specific rebuttals to Webb's ad: He cited numerous votes Allen made to increase tuition assistance, pass the Pension Protection Act of 2005 and vote for bipartisan tax breaks to encourage production of renewable fuels.

DOJ_NMG_0079281

Allen described Webb's ad as a "baseless attack" that will not work with voters. "George Allen has a past record. Everyone knows he helped lower taxes as governor," Allen said. "It's going to fall on deaf ears."

Allen Allies Urge A Focus On Taxes (WT)

By Christina Bellantoni

The Washington Times, October 11, 2006

RICHMOND -- Virginia conservatives say an unrelenting focus on taxes will give U.S. Sen. George Allen a win over Democratic challenger James H. Webb Jr. in next month's election.

During a debate Monday night, Mr. Allen, a Republican, hammered Mr. Webb on taxes and yesterday kept up the attack. The Allen campaign Web site yesterday declared: "Hillary Clinton gave James Webb Jr. 1,000,000 reasons to raise taxes on 3 million hard-working Virginians."

"He showed he was the conservative choice and that it would be too dangerous to let the Democrats get control of the Senate," said Steve Rossie of Richmond, who yesterday attended a meeting of the anti-tax Tuesday Morning Group.

Conservatives irritated with national Republicans on fiscal issues say Mr. Allen finally has landed on a winning strategy in the final weeks of the race, one of the hottest in the nation with the major candidates nearly tied in the polls.

The charge that Mr. Webb opposes making President Bush's tax cuts permanent echoes the theme of an Allen attack ad that features images of Mrs. Clinton and Democratic Sens. John Kerry and Edward M. Kennedy of Massachusetts, all of whom support Mr. Webb.

During the debate, Mr. Webb called corporate-tax loopholes unfair and noted that Mr. Allen allowed the tuition tax credit to die, costing families $4,000 per year.

"We have huge deficits, we kid ourselves if we don't say that we need more revenues," he said.

Mr. Webb released an ad responding to Mr. Allen's tax accusations, calling them lies and saying that his plan would cut taxes for the middle class and veterans.

"Virginians have a choice: George Allen's political sewage or Jim Webb's new direction," the ad concludes.

The tax theme will continue through Election Day because "when you've got a Republican versus a Democrat debating on taxes, we win the issue," Allen adviser Chris LaCivita said.

Mr. Allen today is expected to receive the endorsement of several anti-tax groups, including the National Federation of Independent Business and the American Family Business Institute.

Mr. Webb, who was endorsed by the Virginia Education Association yesterday, also got a boost when the Democratic Senatorial Campaign Committee announced a $1 million television ad buy in Virginia.

The DSCC ad features a clip of Mr. Allen calling an Indian-American Webb volunteer "macaca" and says that Mr. Allen's "scandals, slurs and insults" have exposed his "dark side."

"He wants the race to be decided on issues ... here's his record," the announcer says, going on to tell voters that Mr. Allen took campaign contributions from big oil companies and then gave them tax breaks.

It also states he voted against raising the minimum wage.

"George Allen is wrong on the issues, too," the announcer says.

Both men could claim victories after Monday's televised debate, the last face-to-face meeting of the campaign.

Political observers said Mr. Webb performed solidly by touting his military credentials that make him a better choice to lead the nation out of Iraq.

Mr. Webb, a decorated Vietnam veteran and former Republican who served as President Reagan's secretary of the Navy in 1987 to '88, told voters that Mr. Allen is "one of the administration's blindest supporters" and votes with the president 100 percent of the time on foreign affairs.

Mr. Webb said the election is a chance for disaffected Republicans who aren't comfortable with the majority party's position on social justice and economic fairness to vote for a Democrat.

"Just remember that the Republican Party has lost its way in the area of national security," he said. "I would hope that many of you would decide to come home."

Social conservatives applauded Mr. Allen's response to a debate question on the congressional page scandal -- saying that as a father he finds the situation "deplorable."

"If ... anybody put politics ahead of the protection of these children, then they should not be in a position of leadership and ... no taxpayer should be paying for the pensions of anyone so dishonorably discharged from Congress," Mr. Allen said.

Kevin Rollins of Woodbridge, a libertarian and former Republican, said he will vote for Mr. Webb because the majority party should be taught a lesson on Nov. 7.

"Giving the Republicans another victory won't reduce the size of government," he said.

DOJ_NMG_0079282

A Contest Of Character (WP)

By Robert Barnes

The Washington Post, October 11, 2006

If Virginia voters want to pick their next U.S. senator based on issues, Democratic challenger James Webb and Republican incumbent George Allen give them plenty to work with. They disagree on taxes, the war in Iraq, support for the Bush administration, the deficit, how the government should fight terrorism, and a constitutional amendment aimed at same-sex marriage.

If Allen had ever heard of them, they might also disagree about what Webb thinks is the vitally important subject of the Senkaku Islands.

But if the character of the candidate is the deciding factor, Virginians are entering murkier territory in the four weeks before they decide one of the nation's most competitive and high-stakes Senate contests. Will they choose Webb, a man they're still getting to know, or Allen, a man they're having trouble recognizing?

Some Democrats privately worry that Webb -- war hero, military expert, noted novelist, a former Republican who broke with his party over the war in Iraq -- is still an attractive résumé in search of a campaign persona. His appearances on stage with Allen have been described by party professionals as feisty but chilly. And, strapped for cash, he was not able to introduce himself to voters on television before Allen put him on the defensive, especially with women, key voters for any Democratic candidate.

As for Allen, his campaign for reelection is unlike the "insurgencies" he ran as an underdog to become governor in 1993 and turn out Sen. Charles S. Robb (D) in 2000. "I don't recognize this George Allen," said Virginia Tech political scientist Robert Denton.

The gregarious, self-described "rebel" has not looked comfortable defending his lead, which polls show may be down to almost nothing. "Oh, the campaign got off on other things that were not issues, that were not ideas," Allen said with a sigh when Monday night's debate moderator asked what had happened to his lead. "Some of it I brought on myself; some of it was just smears in the campaign."

Allen was caught flat-footed by Webb's Senkaku debate question, payback for when Allen had stumped him in a previous debate.

Allen, who had counted on the conservative base to be key to his presidential ambitions, is now talking about different mentors.

On Monday night, he neglected to mention his record of loyal support to President Bush. But he intoned the endorsement of Virginia's senior Republican, Sen. John W. Warner, who more regularly bucks his party's leadership, at least three times.

How Virginians decide between Allen and Webb is likely to be complicated, influenced by national politics, great demographic changes in the commonwealth and a souring mood about the direction of the country. And although both sides profess a longing to talk about the "issues," they also have made it clear in their advertising and campaign strategies that character will be just as important.

So it is that the Democratic Senate Campaign Committee began a nearly $1 million TV blitz yesterday to revive the moment when Allen turned on a dark-skinned volunteer for the Webb campaign and uttered the campaign-altering word "macaca." (Democratic consultants in Virginia and Washington must have smacked their foreheads when Webb declined, during Monday night's debate, an invitation to address Allen's alleged insult, saying it had been "discussed ad nauseam.")

Allen has had as difficult a time as any Senate incumbent this year. The campaign was thrown off track by the macaca incident, reacted awkwardly to reports of his unacknowledged Jewish heritage and was roiled by allegations that Allen, while a student at the University of Virginia in the early to mid-1970s, routinely used an insulting epithet for blacks.

At the debate, Allen called the charges "baseless allegations." Asked whether the acquaintances and former teammates who have made the charges are lying, Allen responded: "What I've said is, I don't recall using that word. But the stories were portraying it as if that word were part of my vocabulary, which it was not, and that was what's inaccurate."

Webb's own past, especially his prolific writings on everything from military strategy to the Clinton administration, has been a gold mine for opposition research. The Allen campaign has spent more than $1 million on two ads that show female military officers denouncing a 1979 article in which Webb objected in inflammatory language to the idea of women in combat and their presence at the U.S. Naval Academy.

He has apologized for some of the language -- his description of a dormitory as a "horny woman's dream" is fast becoming part of the campaign lexicon -- but not for contributing to the "debate" about the role of women in the military.

"I think most voters have a basic threshold question of whether something [from the past] is relevant today," said Scott Reed, a Republican strategist who managed former senator Bob Dole's 1996 presidential campaign. If the past behavior seems relatable to voters' current views of a candidate, he said, it becomes a problem.

DOJ_NMG_0079283

"The repetition really starts to take its toll," he said. "That's the death by a thousand cuts."

Webb's response has been to point to what he says are thousands of Navy assignments he opened to women when he was secretary of the Navy under President Ronald Reagan and to a crackdown he instituted on sexual harassment. He has countered Allen's ads with ones that have other female military officers making his case, and one radio ad warns, "If George Allen thinks this election is about something someone said 30 years ago, he's the one that has a lot of explaining to do."

Allen has answered the charges that he's racially insensitive by pointing to the civil rights pilgrimages that he has taken as a senator, his support for historically black colleges and universities, and several endorsements from African American Democrats.

How voters will weigh all of that is a mystery. "Character is always a factor in how people make up their minds," said Vic Fazio, a former California congressman and Democratic strategist. He added that voters are forgiving of past actions they might not have liked, as long as the candidate has "atoned."

Tenn. Senate Candidates Trade Barbs (CCT)

By Beth Rucker

The Contra Costa Times, October 11, 2006

CHATTANOOGA, Tenn. - Tennessee's U.S. Senate candidates traded caricatures during a debate Tuesday night that painted a grim choice for voters: rubber stamp or political insider.

"If you want a rubber stamp, don't vote for me," said Democrat Harold Ford Jr., suggesting his opponent would lock step with the Bush administration.

Counterpunching, Republican Bob Corker accused the Memphis congressman of being a Washington insider who benefited from the "machine-style" politics of his politically connected family.

The candidates' second debate came in a neck-and-neck race that could help determine whether Democrats gain control of the Senate.

If elected, Ford would be the first black U.S. Senator from the South since Reconstruction.

Corker, a former Chattanooga mayor, questioned the work of Ford's father, former U.S. Rep. Harold Ford Sr., as a lobbyist for Fannie Mae while Ford Jr. sat on the House committee overseeing its activities.

Ford said no one in his family has ever lobbied him on congressional issues and he would refuse them if they did.

"I work for the people of the 9th District," he told the audience at the University of Tennessee at Chattanooga.

Ford attacked his opponent's support for the Bush administration's "stay the course" policy in Iraq.

"If you want to stay the course, I'm not your guy," Ford said. "If you believe America is better than what they've given us this past six years, then I ask for your vote."

Ford said reducing dependence on foreign oil would help keep the country from getting caught up in foreign conflicts and said his opponent was an advocate for "big oil."

Corker said "new strategies" are needed in the war but he disagreed with Ford's suggestion to divide Iraq by ethnic and religious lines.

"That's something European countries did after World War II," Corker said.

Ford blamed the Republicans for not doing anything to rein in federal spending during their 12 years of power in Congress. He also said he supported going to a two-year budget cycle.

Corker said his experience as a business executive, state finance commissioner and mayor would help him during budget discussions.

I've lived a Tennessee life, my opponent has lived a Washington life," Corker said. "Our world views couldn't be any more different."

Poll: Lieberman Leads Lamont (HARTC)

By Mark Pazniokas

The Hartford Courant, October 11, 2006

Sen. Joseph I. Lieberman leads Ned Lamont by eight percentage points in the Senate race, although a majority of voters agree with Lamont on the war in Iraq and the need for change in Washington, a Courant/University of Connecticut poll says.

Lieberman leads Lamont among likely voters 48-40 percent, with 8 percent undecided and roughly 15 percent of both candidates' supporters saying they still could change their minds before Nov. 7.

The poll by the Center for Survey Research and Analysis found that 60 percent of voters believe going to war was wrong, and a slim majority favors a deadline for withdrawal, issues Lamont used to defeat Lieberman in the Democratic primary.

DOJ_NMG_0079284

But Lieberman, who stayed in the race as a petitioning candidate, enjoys a 57 percent approval rating and has managed to capture 67 percent of Republican vote, while keeping 35 percent of Democrats in his camp. Unaffiliated voters prefer him over Lamont 45-37 percent.

With the GOP leadership tacitly backing Lieberman, Republican Alan Schlesinger is favored by only 4 percent of voters. Also in the race are Ralph Ferrucci of the Green Party and Timothy Knibbs of the Concerned Citizens party.

"Lieberman has managed to do exactly what he set out to do after his primary loss. His goal was to finesse the party issue by appealing to independents and Republicans without completely alienating Democratic voters," said Monika L. McDermott, the research director at the center. "He's pulled it off so far."

After screening for likely voters, the telephone poll of 637 registered voters found Lieberman favored, 46-39 percent. When undecided voters were asked toward whom they lean, Lieberman's lead grew to 48-40 percent. Schlesinger's number rose from 3 percent to 4 percent.

The survey was conducted Oct. 4-9 and has a margin of error of plus or minus 3.9 percentage points.

The poll strongly suggests that the war is not enough for Lamont to win the general election, since Lieberman is supported by nearly one-third of anti-war voters and 70 percent of those who supported the invasion.

"The Iraq war should be Lamont's area of strength, given its unpopularity in Connecticut, Lieberman's staunch support of it and its importance relative to other issues," McDermott said. "The problem for his campaign, however, is that convincing general-election voters to turn on Lieberman because of Iraq is much harder than convincing Democratic primary voters."

McDermott said Lieberman is enjoying the benefits of being seen in some quarters as the de facto Republican candidate, without suffering the animosity voters are expressing toward the GOP majority in Congress.

"He has managed to walk this fine line of attracting support on all sides," she said.

The poll suggests a potential upside for Lamont, a cable-television entrepreneur who has been arguing that an outsider's willingness to fight for change in Washington outweighs Lieberman's experience as an 18-year incumbent.

By a margin of 53-29 percent, voters said they generally favored challengers and the promise of change over incumbents and experience.

"I think, overall, what the poll shows is that voters clearly are for Ned's message for change in Washington," said Tom Swan, Lamont's campaign manager. "Our challenge is to make sure that between our superior organization and our public messages, that we get these differences out there."

The poll also found that voters, by 2-1 ratios, prefer a legislator who does what the public wants, even if the action goes against the lawmaker's personal beliefs, and a candidate who believes in a distinct separation of religion and government.

By 47-42 percent, voters dislike the No Child Left Behind Act, which was supported by Lieberman. But 53 percent were unaware of Lieberman's position, despite Lamont frequently raising the issue in campaign speeches.

Favoring Lieberman, who has downplayed party affiliation to emphasize his ability to work across party lines, is a voter preference for a willingness to compromise: 70 percent said they hoped their party would compromise with the other party.

"We are pleasantly surprised by these results," said Dan Gerstein, Lieberman's communication director. "We fully expected the race to tighten over the last few weeks with all the negative attack ads that Ned has been running."

The poll found that 41 percent of voters preferred a candidate whose campaign is financed mostly with money from individuals, lobbyists and PACs, compared with 34 percent who preferred a self-funded candidate who avoids special interest money.

Lieberman and Lamont have clashed repeatedly over the source of their campaign finances -- Lamont is largely self-financed, while Lieberman accepts money from lobbyists and political action committees. (On Tuesday, Lamont contributed another $2 million to his campaign, bringing his personal total to $8.7 million.)

Richard Foley, the campaign manager for Schlesinger, said his candidate will outperform the polls -- all of which show Schlesinger mired in single digits.

"It's not going to happen that way," Foley said. "I am not questioning anybody's methodology or anybody's sanity, but I will tell you there is almost no situation I envision where Alan Schlesinger gets less than 15 or 20 percent. That is the minimum vote."

Schlesinger's profile will rise as the result of three televised debates, beginning Monday; he also is expected to benefit from being on the top line of the ballot next to Gov. M. Jodi Rell, while Lieberman will be no higher than the 5th line.

The new poll is generally consistent with recent Quinnipiac University polls, though it shows weaker support for Lieberman among unaffiliated voters.

Lamont Writes $2 Million Check To Own Campaign (NSDY/AP)

By Andrew Miga

Long Island Newsday, October 11, 2006

DOJ_NMG_0079285

HARTFORD, Conn.(AP) _ Wealthy Democratic businessman Ned Lamont is pumping another $2 million of his personal fortune into his bid to unseat three-term Sen. Joe Lieberman, whom he trails in a recent statewide poll.

Lamont wrote the check Tuesday, his campaign confirmed. With less than a month left before the Nov. 7 election, Lamont has personally contributed $8,751,500 to his campaign.

Lamont's personal wealth has been estimated at between $90 million and $300 million, according to his campaign. Lieberman launched an independent bid to keep his seat after losing the August primary.

Results of the Courant/University of Connecticut Poll, released Tuesday night on The Hartford Courant's Web site show Lieberman leads by 8 percentage points. Among likely voters, Lieberman had a 48-40 percent edge, with 8 percent undecided. About 15 percent of supporters for both candidates said they could still change their minds before Nov. 7.

Alan Schlesinger, the Republican candidate, garnered 4 percent.

"Lieberman has managed to do exactly what he set out to do after his primary loss. His goal was to finesse the party issue by appealing to independents and Republicans without completely alienating Democratic voters," Monika L. McDermott, the research director at the center told the Courant. "He's pulled it off so far."

The survey was a telephone poll of 637 registered voters conducted Oct. 4-9 and has a margin of error of plus or minus 3.9 percentage points.

A majority of respondents _ 60 percent _ agreed with Lamont that going to war with Iraq was wrong. But the poll suggests the war is not a big enough issue for Lamont, with Lieberman winning support from nearly one-third of anti-war voters and 70 percent of those who supported the invasion.

In last month's Quinnipiac poll, Lieberman led by 10 percentage points.

Both Lieberman and Lamont are spending heavily for TV ad campaigns as the fall race intensifies. Lamont has criticized Lieberman for missing Senate votes in a new commercial. One Lieberman ad receiving heavy air play accuses the Greenwich millionaire of lacking the experience to be an effective senator.

"Ned is not going to let Senator Lieberman's negative allegations and lobbyist-financed attacks go unanswered," said Lamont spokeswoman Liz Dupont-Diehl.

The Lieberman camp brushed aside the charges, insisting Lamont was planning more attacks on the incumbent.

"This is just another indicator that Ned Lamont is gearing up to continue and intensify his barrage of negative and misleading attacks against Joe Lieberman's record of results," Lieberman spokeswoman Tammy Sun said.

Lamont aides said he is self-financing much of his campaign because Lieberman is taking money from special interest groups and political action committees. Lamont has called for public financing of campaigns and lobbying reform.

Lieberman, who was the Democrats' vice presidential nominee in 2000 and ran for president in 2004, has built a national fundraising base. Some prominent Republicans are helping him raise money.

Lamont, a cable executive and great-grandson of the former chairman of JP Morgan & Co., estimates he is worth $90 million to $300 million. His firm, Lamont Digital Systems, wires college campuses for cable television.

$5 Million Pledged To Texas Democrat (WT)

By Hugh Aynesworth

The Washington Times, October 11, 2006

DALLAS -- A Houston trial lawyer's huge political contribution may tighten the Texas gubernatorial race in the final weeks.

John O'Quinn, 65, said yesterday he had donated $1 million and would give or raise an additional $4 million toward the campaign of Chris Bell, a Democrat challenging Gov. Rick Perry in the Nov. 7 election. The $5 million would be the largest single donation ever in a state race.

Texas does not limit individual donations to statewide candidates.

"Chris is not going to lose because he doesn't have the money," Mr. O'Quinn said.

Mr. Perry, a Republican, and independent challenger Carole Keeton Strayhorn have been spending heavily on television ads. Mr. Bell and independent candidate Kinky Friedman have not had the campaign money to keep up the pace.

Most polls show Mr. Perry leading by several points, receiving the support of 36 percent to 38 percent of those surveyed. He needs only a plurality of votes to win the election.

Mr. Bell, a former congressman who represented Houston, had been struggling to get out his message with little money.

The O'Quinn injection immediately energized the Bell campaign. Spokeswoman Heather Guntert said the Democrat already had placed more television ads in Houston and planned to buy heavily in other major markets this week.

Mr. Bell is revising his schedule so he can create new ads, his media chief said.

Even with Mr. O'Quinn's largess, Mr. Bell still trails Mr. Perry and Mrs. Strayhorn in funding.

DOJ_NMG_0079286

Campaign finance reports filed yesterday showed Mr. Perry with $9.2 million in cash on hand and Mrs. Strayhorn with more than $5 million.

Fort Worth lawyer Hedley Cochran said Mr. O'Quinn's support for Mr. Bell is a jab at the governor.

"[Mr. O'Quinn] is just trying to get back for the needed tort reform Perry and the other Republicans pushed for in recent years," he said. "They're all incensed at Perry."

Mr. O'Quinn is said to be a billionaire. In 1998, he was one of six lawyers who won a $17.3 billion verdict for Texas from tobacco companies.

He has endowed millions of dollars to hospitals and libraries and reportedly has collected more than 600 classic cars, worth more than $100 million. He bought former Pope Paul VI's 1975 Ford Escort at auction for $680,000.

Mr. O'Quinn did not return phone calls seeking comment yesterday, but he told the Austin American-Statesman he would ask nothing of Mr. Bell if he won the election.

"There will not be a piece of legislation introduced to benefit me or my business," he said. "The facts are the facts. Abraham Lincoln could not be elected president today if he didn't have a bunch of money."

Bell Calls On Kinky To Drop Out (DMN)

By Robert T. Garrett And Gromer Jeffers Jr.

The Dallas Morning News, October 11, 2006

Democratic nominee Chris Bell is trying to persuade independent Kinky Friedman to quit the race for governor, but Mr. Friedman insisted Tuesday that he's in to stay.

Mr. Bell left a voice mail message on Mr. Friedman's personal cellphone Tuesday, asking for a meeting at the mystery writer and former bandleader's ranch near Kerrville, Mr. Friedman said.

Mr. Bell later confirmed he sought a meeting so he could try to talk Mr. Friedman into dropping out of the four-way race, which is in its home stretch. The election is Nov. 7.

More Elections 2006

"I had hoped to talk to Kinky privately, but now that it's been reported by the Dallas Morning News, I'm going to ask him publicly: Please join me in defeating Rick Perry," Mr. Bell said in a statement his campaign issued late Tuesday.

"Kinky and I agree on some very important issues and our supporters all have a lot in common: they want change."

Mr. Bell credited Mr. Friedman with energizing voters but made it clear he thinks only he has a chance to win.

"Now is the time for us all to unite," he said. "So I'm asking for Kinky to join me."

Bell campaign aides said that Mr. Friedman performed poorly in Friday night's candidate debate and that Friedman supporters have told the Democrat that they'd support him if he could persuade Mr. Friedman to step aside.

Interviewed as he headed to evening campaign events in Dallas, Mr. Bell acknowledged that Mr. Friedman is siphoning votes away from him and Republican Gov. Rick Perry.

"He's taking from both," Mr. Bell said. "But he's taking more from me."

Mr. Friedman, campaigning in Brownsville, said of Mr. Bell and his advisers: "They're desperate and scrambling."

Asked whether he would consider the Democrat's request to step aside, Mr. Friedman said: "No. You're kidding ... for Chris Bell? What do you take me for?"

Mr. Bell, Mr. Friedman and independent Carole Keeton Strayhorn each trail far behind Mr. Perry, according to a recent Dallas Morning News poll of likely voters. But Mr. Bell's debate performance has won generally strong reviews, giving the Democrat hope he can emerge as the main challenger to Mr. Perry.

Mr. Friedman, who acknowledged he "didn't bring my A game" to Friday's debate, insisted he still finds strong support everywhere he travels this week. And he believes he can win a plurality of votes – all that is needed to win – if the anti-incumbent mood he sees sweeping the nation lifts voter turnout in Texas.

To drop out is unthinkable, he said: "I'd be letting a lot of people down."

But he took delight in Mr. Bell's message that the independent is taking a toll. "What can it possibly mean other than that we're killing him?" Mr. Friedman said. "We're getting all of the liberals. We're getting all of the conservatives."

Inside Politics (WT)

By Greg Pierce

The Washington Times, October 11, 2006

DOJ_NMG_0079287

A list ignored

" 'I just deleted it,' says an official at a Washington-based social-conservative organization. 'It looked like junk e-mail.'

" 'It' is what has become known as The List, a document naming allegedly gay Republican congressional staffers that has been e-mailed to a number of conservative groups in the last few days," Byron York writes at National Review Online (www.nationalreview.com).

"According to a report by David Corn, a writer for the left-wing magazine the Nation, anti-Republican 'gay politicos' sent the list to several social-conservative organizations -- among them Focus on the Family, the Family Research Council, and the Southern Baptist Convention -- in hopes of setting off 'a civil war within the GOP, to turn the anti-gay social cons against the GOP's Velvet Mafia.'

"As it turned out, at least two organizations apparently deleted the e-mail, either as part of routine file upkeep or because they weren't interested in its contents. Others didn't open the attachment -- the list was included as a separate file -- fearing that it contained a virus. And some opened it up and didn't see much that was new. 'We work on the Hill,' says one conservative activist. 'There weren't a lot of surprises on the list.' So far, the much hoped-for civil war doesn't seem to be happening," Mr. York said.

"But the campaign to spread The List is accomplishing something. It is offering clues about who is behind it.

"The version of The List sent to at least some of the conservative organizations originated from the e-mail address hprf@yahoo.com. That is the address of a California-based group, the Health Policy and Research Foundation, an organization devoted mostly to work involving AIDS, that is run by a businessman and former Democratic National Committee staffer named Rick Reidy."

McCain vs. Clintons

Sen. John McCain, Arizona Republican, yesterday accused former President Bill Clinton of failing to act in the 1990s to stop North Korea from developing nuclear weapons.

"I would remind Senator Hillary Rodham Clinton and other Democrats critical of the Bush administration's policies that the framework agreement her husband's administration negotiated was a failure," Mr. McCain said at a press conference in Southfield, Mich., after a campaign appearance for Republican Senate candidate Mike Bouchard.

"The Koreans received millions and millions in energy assistance. They've diverted millions of dollars of food assistance to their military," he said.

Mr. McCain also called on China to "step up to the plate" and vote for sanctions and reject calls for one-on-one talks between the United States and North Korea, the Associated Press reports.

"The worst thing we could do is to accede to North Korea's demand for bilateral talks," Mr. McCain said. "When has rewarding North Korea's bad behavior ever gotten us anything more than worse behavior?"

Angry Sharpton

The Rev. Al Sharpton accused Sen. Joe Lieberman of Connecticut of "flagrant race baiting" for highlighting his support of rival Ned Lamont as "remarkable," the New York Post reports.

"The charges came in a letter after Mr. Lieberman, at a Manhattan fundraiser last week, reportedly called it a 'remarkable moment' when Mr. Sharpton appeared onstage with Mr. Lamont after his Democratic primary victory as he questioned Mr. Lamont's commitment to Israel," the paper reported.

"It is your open and flagrant race baiting and your risking black-Jewish relations ... that is most troubling to me," Mr. Sharpton wrote.

Lieberman spokeswoman Tammy Sun criticized the "baseless, extreme and divisive [attack] from one of Ned Lamont's closest advisers."

Big lead

Florida Attorney General Charlie Crist has a commanding lead over Democratic nominee Rep. Jim Davis in their race to replace Gov. Jeb Bush, a new poll shows.

Mr. Crist was backed by 53 percent of likely voters, compared with 43 percent who said they favored the Democratic congressman from Tampa, with 3 percent undecided.

The random telephone survey of 783 likely voters was taken between Oct. 3 and 8 by Quinnipiac (Conn.) University Polling Institute. Mr. Crist was favored by 50 percent to Mr. Davis' 39 percent in a larger sampling of 968 registered voters.

The margin of error was 3.5 percentage points in the sampling of likely voters and 3.2 percentage points among registered voters.

Mr. Bush, a Republican, is prohibited from seeking a third term.

On the road again

DOJ_NMG_0079288

Officials will gather today in Atlanta for the sixth federally funded AIDS conference in the past six months -- "not counting the International AIDS Conference held in August that was attended by 78 Health and Human Services Department employees," says a Senate investigator who has chronicled the travel habits of HHS bureaucrats.

Despite the proliferation of AIDS-related travel opportunities, the three-day HIV/STD Educator/Trainer Network (ETN) Meeting in Atlanta bills itself as "the only meeting of its kind."

Meeting at the Crowne Plaza hotel in Atlanta's upscale Buckhead district, the taxpayer-funded conference coincides with the annual Taste of Atlanta food festival Saturday at Lenox Square Mall in Buckhead.

A roller coaster

"The ups and downs of this roller-coaster campaign year are starting to make my stomach queasy, but then again it may just be all of the airline food I've been eating lately," political analyst Charlie Cook writes at www.nationaljournal.com.

"The combination of the worsening situation in Iraq and the Foleygate scandal have effectively crowded terrorism, national security and falling gasoline prices out of the public eye, shifting the venue of this campaign away from three things that had, albeit briefly, advantaged Republicans," Mr. Cook said.

"Still, with four weeks to go, the nuclear test in North Korea should serve as a reminder that events could shift this spotlight yet again to more favorable -- or at least less unfavorable -- terms for the GOP. We will be watching the situation with North Korea to see if it gives Republicans any traction."

Washington Wire (WSJ)

WSJ Online's "Washington Wire", October 9, 2006

October 8, 2006, 1:30 pm Go Ahead and Talk

Former Secretary of State James Baker nudges the Bush administration to talk directly with North Korea, joining a growing chorus calling for reopening diplomatic ties with Iran or engaging in high-level talks with Syria. "You don't give away anything, but, in my view, it's not appeasement to talk to your enemies," Mr. Baker said on ABC's "This Week" television show.

Scholars at the conservative Hoover Institution at Stanford University recently issued a detailed paper urging the administration to offer full diplomatic relations with Iran as part of a bid to get Tehran to give up parts of its nuclear program. The U.S. cut off diplomatic ties with Iran 26 years ago, while the Bush administration has refused to engage in bilateral talks with North Korea, saying that all negotiations should occur within the setting of the six-country talks, which also include Russia, China, Japan and South Korea.

North Korea has long held out for bilateral talks with Washington, portraying its pursuit of nuclear weapons as a means of defense against what it sees as U.S. threats.

"I don't think you restrict your conversations to your friends. At the same time, it's got to be hard-nosed. It's got to be determined," said Mr. Baker, who was former President George H. W. Bush's top diplomat in the early 1990s. – Neil King Jr.

October 7, 2006, 1:06 pm A Convoy in Indiana

In his fight to wrest a congressional seat from House Veterans Affairs Committee Chairman Stephen Buyer (R., Ind.), Democratic challenger David Sanders has found support from a small army of veterans. First, a number of local vets fell in behind him, and he won the backing of former Sen. Max Cleland, a Georgia Democrat and a disabled Vietnam vet, who recently joined Sanders on the campaign trail.

Now, he has the support of a convoy. On Monday, Sanders is accompanying a day-long road trip around Indiana organized by No Vets Left Behind to protest cuts in veterans' benefits, from higher health-care copays to reduced eligibility to redefining post traumatic stress.

Still, the odds are long for the Purdue University scientist. Buyer, running for his eighth term, picked up 70% of the vote in 2004 – when he also faced Sanders. –Mary Lu Carnevale

October 7, 2006, 12:30 pm Peggy Noonan on Woodward's 'State of Denial'

Peggy Noonan writes in today's Journal: Thirty-two years into his career as a writer of books, Bob Woodward has won a reputation as slipshod ("Wired"), slippery ("All the President's Men," "The Final Days"), opportunistic ("Veil"; everything) and generally unaware of the implications even of those facts he's offered that have gone unchallenged. … Mr. Woodward has been that amazing thing, the boring fabulist.

The Bush White House has spent the past five years thinking they could manage him. Talk about a state of denial.

Now he has thwarted me. I bought "State of Denial" thinking I might have a merry time bashing it and a satisfying time defending the innocent injured.

But it is a good book. It may be a great one. It is serious, densely, even exhaustively, reported, and a real contribution to history in that it gives history what it most requires, first-person testimony. (It is well documented, with copious notes.) What is

most striking is that Mr. Woodward seems to try very hard to be fair, not in a phony “Armitage, however, denies it” way, but in a way that — it will seem too much to say this — reminded me of Jean Renoir: “The real hell of life is that everyone has his reasons.” Read the full column.

Bringing It Home Seat In Congress Helps Mr. Taylor Help His Business (WSJ)

By John R. Wilke

The Wall Street Journal, October 11, 2006

ASHEVILLE, N.C. -- Charles Taylor, wealthy businessman and banker, owns at least 14,000 acres of prime land in western North Carolina. He's also the local congressman. So when he steers federal dollars to his district, sometimes he helps himself, too.

Last year, Mr. Taylor added $11.4 million to a big federal transportation bill to widen U.S. Highway 19, the main road through Maggie Valley, a rural resort town in the Great Smoky Mountains. His companies own thousands of acres near the highway there and had already developed a subdivision called Maggie Valley Leisure Estates.

Mr. Taylor also got $3.8 million in federal funds for a park now being built in downtown Asheville with fountains, tree-shaded terraces and an open-air stage. It's directly in front of the Blue Ridge Savings Bank, flagship of his financial empire. He is among the richest congressmen with assets of at least $72 million, records show.

The Republican lawmaker is one of at least a half-dozen House members whose public actions in directing special-interest spending known as earmarks have also benefited their private interests or those of business partners, according to congressional, corporate and real-estate records. Among them is a senior Democrat, Rep. Alan Mollohan of West Virginia.

The lawmakers say they're working to help their districts, not themselves. "I fight for the priorities set by our local governments, universities and economic development organizations, not based on what will be of benefit to me," Mr. Taylor says.

But the growth of earmarks and the secrecy that shrouds the practice inevitably raises questions of self-dealing. Earmarking has been at the center of the influence-peddling and corruption probes that have shaken public confidence in Congress this year. The practice also played a central role in the case against former Rep. Randy "Duke" Cunningham. The California Republican was imprisoned after pleading guilty to accepting $2.4 million in bribes from defense firms in exchange for earmarks and other favors.

The growth of earmarking points to a shift in the way Congress works. Most federal spending originates in requests by departments and agencies. The Transportation Department might seek funds to build a highway interchange, for example, or the Pentagon might ask for new tanks. The spending proposals are then put into legislation which must win approval by Congress.

Earmarks are different because lawmakers can directly insert them into spending bills, often without public scrutiny. Many lobbyists and corporations have discovered in recent years that one of the fastest ways to get the spending they desire is to approach an individual lawmaker of either party on the House or Senate appropriation panel about an earmark. That has fed the growth in earmarks to an estimated $47.4 billion last year from $19.5 billion a decade earlier, according to the Congressional Research Service.

Earmarks range from pet projects -- such as Mr. Taylor's $500,000 earmark to help build a Teapot Museum in Sparta, N.C. -- to billion-dollar cargo-aircraft contracts that weren't sought by the Pentagon but are funded to keep jobs in a lawmaker's district. In California, Rep. Gary Miller steered $1.28 million to widen a road near an upscale shopping center he helped develop. The center is expected to include a Target store and 120 residential units. His business partner was Lewis Group, one of the nation's largest builders and a big contributor to his political campaign.

Federal prosecutors in Washington, Los Angeles and San Diego are looking closely at earmarking in the wake of the Cunningham case. At least four congressmen, including Rep. Jerry Lewis, a Republican from California who is chairman of the House Appropriations Committee, are being investigated for their role in earmarking or ties to lobbyists specializing in earmarks, people close to the inquiries say. Each lawmaker has denied impropriety. Mr. Taylor isn't known to be a target of any investigation.

Prosecuting these cases will be difficult because an earmark only becomes illegal if the legislator is clearly acting in exchange for money or to promote his private business interests. Under the prevailing interpretation of the constitutional separation of powers, most congressional correspondence and deliberations are out of reach of prosecutors.

Mr. Taylor, 65 years old, grew up in Brevard, N.C., where he still lives. He has long had an interest in real estate. He tells friends that he saved his pay as a grocery bagger in high school to buy his first piece of land. He was elected to the North Carolina General Assembly right out of law school and served there from 1966 to 1972. He then went into the family business, running Blue Ridge Savings, and continued to buy up land.

DOJ_NMG_0079290

Mr. Taylor was elected to the U.S. House of Representatives in 1990 and focused on winning a seat on the Appropriations Committee because, he said, the local Veterans Administration hospital was in poor shape and needed federal help. He now chairs the powerful subcommittee on the interior, which approves tens of billions of dollars in federal spending every year. One wall of his House office is covered with framed political cartoons attacking his record on the environment and his support for logging. He boasts of being the only registered forester in Congress.

This fall, Mr. Taylor is battling to hold on to his seat against Democrat Heath Shuler, a former Washington Redskins quarterback. Mr. Shuler has advocated fiscal responsibility and attacked Mr. Taylor's "irresponsible" earmarking. His campaign has also questioned why some of Mr. Taylor's earmarks funded Russian exchange students or lower-priority highway projects.

Mr. Taylor says using his clout to bring federal money to his district is nothing to apologize for. He warns that the largess might dry up if Mr. Shuler, a political novice, is elected. "Before I won a seat on the Appropriations Committee, folks in our region had spent decades being ignored by their own federal and state government. We're not going back to that," he says through a spokesman. "A freshman isn't at the table, he isn't in the room, he doesn't even know where the room is where decisions are made."

Among those receiving funding from earmarks sponsored by Mr. Taylor are nonprofit groups that he helped create and that are run by business partners and supporters. The largest of these, the Education and Research Consortium of the Western Carolinas, has received more than $30 million from Mr. Taylor's earmarks in recent years, according to the consortium's Web site. The consortium is run by a former top executive of his bank, who is Mr. Taylor's nephew. Several of the nonprofits list addresses in the Art Deco tower in Asheville's central Pack Square, where Mr. Taylor's own business ventures are based. Mr. Taylor's aides say the consortium has helped draw businesses to Asheville by funding high-speed Internet access for schools and industry.

In Maggie Valley, where Mr. Taylor earmarked funds for highway improvement, his companies own thousands of acres of mountain land bounded by U.S. Highway 19 and the famed Blue Ridge Parkway, which he has also supported with earmarks for guardrails and acquisition of buffer land. Earlier this year, he helped secure a $6.75 million federally guaranteed rural-development loan to reopen a mountaintop amusement park there called Ghost Town in the Sky. The park's owners were longtime campaign contributors to Mr. Taylor. He says he got the loan to create jobs in the valley.

Another Taylor earmark in last year's transportation bill steers $4.8 million to widen parts of U.S. Highway 64, a winding mountain road that runs near tracts of timberland that Mr. Taylor's companies own in Transylvania County, near the South Carolina state line.

"Every one of Congressman Taylor's earmarks in the last transportation bill was for a project near property that either he or one of his companies owns," says Erich Zimmermann, who studied the bill's special-interest spending for the nonpartisan Washington group Taxpayers for Common Sense. "The pattern is pretty clear."

Mr. Taylor doesn't agree. "The millions in highway-improvement funding I've been successful in bringing to western North Carolina are for the benefit of our region -- period," he says. While spending on mountain roads "may be grist for the attack mill," he says, it is what people in the state really need -- not "mega-roads" built by bureaucrats.

Nevertheless, Mr. Taylor's earmarks have made some Republicans wary. The North Carolina Conservative, a monthly publication based in Linville, N.C., has run a series of columns critical of the congressman by Ann Ryder, of Mars Hill, N.C. She and a neighbor, Wanda Bradley, both longtime Republicans, have scoured county courthouses for deeds and tax records to describe the labyrinth of companies Mr. Taylor created for his landholdings.

County tax records show that Mr. Taylor, his family and various holding companies and partnerships own more than 14,337 acres in six counties, making him one of the state's largest landholders. He also is involved in commercial development projects and owned an Asheville site that became a shopping center anchored by a Wal-Mart.

Mr. Taylor and his partners also are investors in a mountaintop resort called Wolf Ridge, where hundreds of ski chalets are being built for sale to wealthy second-home buyers. Out-of-staters are drawn by breathtaking views, a heated pool, a steakhouse and the convenience of a nearby airport with a 3,500-foot runway suitable for private jets. Construction crews are carving the runway out of a ridge, their dynamite blasts echoing across the valley.

Mr. Taylor wrote a letter to the North Carolina Department of Natural Resources asking that the agency approve a sewage waste-water permit for Wolf Ridge and sister projects. He clipped his congressional business card to the letter. Mr. Taylor says he wrote it because of the many new jobs the project would bring.

Mr. Taylor has a role in many other commercial projects through Blue Ridge Savings Bank. He also owns a majority stake in Russia's Bank Ivanovo, where his partner is a former KGB officer.

While many House and Senate members invest in real estate or have business interests, few have such extensive holdings in their home district. House ethics rules say that being a congressman should be a full-time job, and they warn against any appearance of using one's public position to benefit personal business interests.

DOJ_NMG_0079291

Real-estate investing has made other lawmakers wealthy in recent years as well. Rep. Mollohan, the West Virginia Democrat whose earmarks are now under federal investigation, has become a multimillionaire in recent years through real-estate investments. As reported in page-one stories in The Wall Street Journal on April 7 and April 25, Mr. Mollohan's partners in these deals included earmark recipients and a former federal contractor.

Rep. Miller, the Southern California Republican who steered earmarks to the road next to a shopping center in which he had an interest, is an active buyer and seller of real estate in and around his district. He has sold property worth at least $11 million in the past year, according to his disclosure forms, and his net worth is estimated to be twice that. (Lawmakers are required to disclose only ranges of income and assets, so precise figures aren't usually available.)

Rep. Miller also inserted a provision in a transportation bill forcing the closure of the Rialto, Calif., municipal airport, over the objections of the Federal Aviation Administration. The airport, a vast expanse of cracked blacktop and scrubland that is home to a flying school and forest-fire-watch patrols, boasts spectacular views of snowcapped mountains in the distance and direct access to a new interstate highway. The Lewis Group, Rep. Miller's business partner, is negotiating to buy the site and build 2,000 luxury homes there, as reported by the Hill, a Capitol Hill newspaper.

Rep. Miller defends his business ties and 30-year friendship with the Lewis family and says there was "no quid pro quo" in the campaign contributions. An aide to the congressman says local governments were "very supportive" of the airport closure. As for the road next to the shopping center, he says in a news release that he supported its improvement because it will cut congestion. An aide said yesterday that his ownership interest in the project ended before the road construction began.

Congress has done little to police itself, although lawmakers enacted an internal rule last month requiring members to sign their names to some earmarks. Mr. Taylor voted in favor of the measure, saying members should be willing to stand up for earmarks. He called such spending "absolutely essential" to rural areas of the country.

Mr. Taylor also said that eliminating earmarks entirely wouldn't save money. "The same tax dollars would be spent," he said through a spokesman. "The decisions about where and how much would just be left to unelected bureaucrats."

The measure has big loopholes and exempts appropriations bills the House already has passed this year. Because it is an internal House rule, not a law, it will expire when the current congressional session ends in a few weeks.

Philanthropy From The Heart Of America (NYT)

By David Leonhardt

The New York Times, October 11, 2006

Valley County, not far from the center of Nebraska, seemed to be one of those Great Plains communities that was dying. From World War II to 2000 it had lost almost half its population, and the decline was gathering speed at the end of the century. The I.G.A. and Jack & Jill grocery stores closed, as did most mom and pop gas stations and the local dairy processing plant.

In the last five years, though, something utterly unexpected has happened. The decline has stopped. More people are moving to Ord, the county seat, than leaving, and the county's population is likely to show its first increase this decade since the 1920's.

The economics of rural America have not really changed. If anything, the advantages that Chicago, Dallas, New York and other big cities have over Nebraska have only continued to grow. But Ord has finally figured out how to fight back.

It has hired a "business coach" to help teach local stores how to sell their goods over the Internet and to match up retiring shop owners with aspiring ones. Schoolchildren learn how to start their own little businesses — like the sixth-grade girl who made a video of the town's history and sells it at school reunions — so they will not grow up to think the only job opportunities are at big companies in Omaha or St. Louis. Graduates of Ord High School who have moved elsewhere receive mailings telling them about job opportunities back in town.

None of this happens naturally in a free-market economy, because the efforts cost money that will never be fully recouped. But it has happened nonetheless thanks to one of the few advantages that Ord does have over Chicago, Dallas and New York: it is in a state with some of the most generous wealthy people in the country.

In San Francisco, a retired money manager named Claude Rosenberg has founded a small organization called New Tithin g Group. It tries to persuade Americans to base their charitable giving on their assets as well as their income, given how many now have substantial assets. And using tax returns, NewTithing has put together a devilish ranking of the 50 states.

It began by estimating the liquid assets of households with more than $200,000 in annual income, counting cash, stocks, bonds and the like, but not houses or retirement accounts. Then, with the same federal tax data, it calculated what percentage of those assets the households have given to charity, on average, in recent years.

Nebraska ranked third, with its affluent residents giving away just over 1 percent of their assets each year. That does not include the state's most famous donation, Warren E. Buffett's huge gift to the Bill and Melinda Gates Foundation this year, which

DOJ_NMG_0079292

came too late to be counted in the ranking. But it does include many smaller gifts to local charities like the Nebraska Community Foundation, which is trying to resuscitate Ord and other towns.

What is striking about the top of NewTithing's list is that it is dominated by a group of states that run from the Rockies through the Plains and down into the Southeast. The only ones ahead of Nebraska were Utah (where the Mormon Church asks members to donate 10 percent of their incomes) and Oklahoma, while Minnesota and Georgia came next.

As Emmett D. Carson, president of the Minneapolis Foundation, points out, these are places that do not have many beaches, famous cultural institutions or other obvious ways to attract residents. "So how do you build a community that is a destination?" Mr. Carson asked. "You have to be a lot more intentional about it."

The states with beaches and museums, those that have been winning a growing share of the nation's economic pie, generally failed to crack the top 20 in the ranking. The average affluent resident of New York (23rd on the list) or Florida (41st) owns about one-third more assets than the average affluent Nebraskan, but the Nebraskan still gives away a bigger pile of money. Also lagging are California (21st), Virginia (25th), Massachusetts (32nd), Texas (34th) and Washington (35th).

No single list, of course, can fully capture how generous a state's residents are. Through federal taxes, wealthy states like California and New York transfer a significant amount of money to poorer states every year. The NewTithing ranking, by its nature, also fails to count donations that are not tax-deductible, like informal gifts and time spent on community service.

But the ranking makes an important point. The middle of the country has developed a culture of philanthropy that the coasts and the Southwest, for all their wealth, do not yet have. Ord is never going to turn into anything resembling New York, no matter what it does. But New York could become a little more like Ord and, in the process, blunt some of the rough edges of inequality that have come with prosperity.

There is even a bit of evidence that some people on the coasts are starting to catch on. Next week, Mr. Carson will be leaving the Minneapolis foundation he has run for 12 years to take over the Silicon Valley Community Foundation. Part of his mandate, he said, is to transplant some of Minnesota's culture to the donors of Northern California.

"They have the wealth," he said. "They want to capitalize on it and build a community."

Rice Asserts U.S. Plans No Attack On North Korea (NYT)

By Thom Shanker And Warren Hoge

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — Secretary of State Condoleezza Rice said Tuesday that the United States did not intend to invade or attack North Korea, but she warned the North's leaders that they now risked sanctions "unlike anything that they have faced before."

Even China, North Korea's most important ally, said Tuesday that tough measures were in order, though its representatives said the punishments might not necessarily be the harsh ones that Washington was proposing.

"For China, we need to have a firm, constructive, appropriate, but prudent, response," said Wang Guangya, the country's ambassador to the United Nations. "There have to be some punitive actions, but also I think these actions have to be appropriate."

The United States, Britain and France all want a resolution drafted under Chapter VII of the United Nations Charter, which makes sanctions mandatory and poses the possibility of military enforcement.

While both China and Russia have spoken of the importance of taking serious action against North Korea's reported nuclear test, they are traditionally against invoking Chapter VII and have not indicated whether they would end their opposition.

The United States wants agreement on sanctions this week. But even as the administration sought to push tough language into a Security Council resolution, the White House expressed doubts about the capacity of North Korea's nuclear program, based on evidence that the reported test had a smaller yield than expected. [Page A10.]

Sanctions sought by the United States include international inspections of all cargo moving in and out of North Korea to detect weapons-related material. But that might prove difficult for China and Russia to accept, in part because their coastlines and borders would be affected.

The diplomatic moves came a day after administration officials responded with shock and outrage to an official announcement from North Korea that it had detonated a nuclear device.

In an interview on CNN, one of a series of television appearances, Secretary Rice stressed that "the diplomatic path is open" for the North, and that giving up its nuclear program would "lead to all kinds of benefits for North Korea."

But she said the North's decision to pursue its nuclear program meant that it would face "international condemnation and international sanctions unlike anything that they have faced before."

The United States has imposed economic curbs on North Korea since the opening of the Korean War in 1950, though President Clinton lifted a few of them toward the end of his time in office, when relations seemed to be thawing.

DOJ_NMG_0079293

Now, in its bid to tighten sanctions, Bush administration officials say, the United States is pursuing a two-track approach: trying at the United Nations to persuade other countries to cut off economic ties with the North, and using American banking laws to punish banks overseas that deal with North Korean companies.

At the United Nations on Tuesday, Britain, China, France, Russia and the United States, plus Japan, met twice to work out differences on the sanctions proposed Monday by the United States. John R. Bolton, the American ambassador, reported the group was making headway and would meet again Wednesday.

"I think there is convergence on many issues, more than I would have predicted perhaps a day or two ago," Mr. Bolton said. "That's not to say we're there by any stretch of the imagination, but I'm pleased by the positive nature of the discussions and look forward to more progress tomorrow."

Mr. Bolton said he had discussed the proposal for North Korean ports separately with Mr. Wang, the Chinese envoy.

As for Russia, Mr. Bolton began the day complaining that Vitaly I. Churkin, the country's ambassador, had arrived at the morning session with no instructions from his government. He said it had left "a hole" in the conversations.

But after the afternoon session, he said Mr. Churkin had heard from Moscow and was able to take part in the debate. "We'll have some areas to discuss there and he raised some issues we had not thought of entirely, but by and large his comments were supportive," Mr. Bolton said.

Mr. Churkin left without making any comment.

Mr. Bolton declined to discuss specifics of the talks but said one amendment suggested by Japan — a ban on travel by members of the North Korean government — had attracted particular support.

Asked if he would limit the American demands in the interests of speeding the process of drafting a resolution, he said: "We want firmness and swiftness, and I think we can have both. That's our objective."

In television interviews and briefings for reporters, Secretary Rice and other officials reiterated past assurances that the United States was not moving toward occupying North Korea or toppling its government.

She said the administration's policy was still that the diplomatic path would be multilateral, through the stalled six-party talks, and not the two-way dialogue that North Korea has sought with the United States.

But even as the administration sought to unify its international allies, there were signs of fissures among Republicans over whether Washington should negotiate directly with North Korea.

Representative Heather Wilson, a New Mexico Republican and former Air Force officer who has played a leading role on national security issues, advocated bilateral negotiations, within the context of the six-party talks. "The idea here is to open a path for this rogue regime to walk back from the edge of the ledge," she said. "I don't think there's anything wrong with straight, tough talk with countries that are not our friends."

In the administration's quest for tough sanctions, much of the effort is focused on China, Japan and especially South Korea, which supply most of North Korea's imports and investments. Indeed, South Korea has invested heavily in the Kaesong Industrial Park, an economic enclave in the North that employs thousands in factories that produce shoes, cosmetics and other export goods.

The United States has tried, without much success, to get South Korea to limit its involvement in the enclave, arguing that North Korean financial institutions that are involved in it are also involved in illicit activities. In the wake of North Korea's latest nuclear steps, persuading South Korea may be easier, American officials say.

The unilateral drive by the United States is likely to expand on existing efforts that American officials maintain have already had a damaging effect on North. Indeed, the sanctions may have propelled North Korea to walk away from negotiations on its nuclear program and test a weapon, some experts say.

Now, with the enactment of American laws and executive orders after Sept. 11, 2001, new tools have become available, and they are likely to be expanded in coming weeks.

Under the U.S.A. Patriot Act, signed into law shortly after the 2001 attacks, the United States labeled a bank in Macao, Banco Delta Asia, as a "primary money-laundering concern" and declared that any bank doing business on American soil — virtually every big bank in the world — could not do business with it.

Administration officials say the ban on Banco Delta Asia badly disrupted North Korean activities, effectively froze the personal accounts of North Korean leaders and sent a message throughout the international financial system that the United States was prepared to do more.

Backing up that threat, President Bush has accused several North Korean trading corporations of being involved in nuclear proliferation and missile activities, often in conjunction with Syria, Iran and Pakistan. American officials have also visited banks in Europe, Asia and the Middle East to tell them that dealings with those entities could jeopardize ties with American banks.

DOJ_NMG_0079294

The aim, according to Stuart Levey, under secretary of the treasury for terrorism and financial intelligence, is to put the international community “on notice about a particular threat” and get them to voluntarily end their dealings with North Korean entities.

Analysis: Should U.S. Talk To N. Korea? (AP)

By Anne Gearan

AP, October 11, 2006

North Korea's apparent nuclear weapons test may bear out the warnings of Bush administration hard-liners that the reclusive regime can never be trusted, but it also forces an examination of whether the silent treatment those same hard-liners have given North Korea for years has backfired.

Convinced that the Clinton administration got conned when it offered carrots to the North Koreans, the Bush administration has offered mostly sticks. The White House has firmly withheld the biggest carrot of all — direct, one-on-one talks between Washington and Pyongyang.

The United States is the power North Korea most fears and is the foil for the propaganda that helps keep the communist regime afloat. The North says it needs nuclear weapons, and missiles to deliver them, to counter U.S. aggression.

The United States is also the nation the North would most like to talk to, for both the prestige that direct talks could bring the regime and the security promises the talks might produce.

One interpretation of this week's test holds that it is North Korea's latest and most alarming attempt to get Washington's attention.

But the United States has insisted on talking to North Korea only with four other nations at the table, including China and South Korea, the two countries that Pyongyang relies on most for its economic survival. That, the U.S. argues, makes it harder for the North to walk away from negotiations.

"The United States tried direct dialogue with the North Koreans in the '90s, and that resulted in the North Koreans signing onto agreements that they then didn't keep," Secretary of State Condoleezza Rice said during an interview Tuesday on CNN.

The White House contends that North Korea wants to set up a confrontation with the United States and direct talks would play to that hand. By insisting on talks only in the awkward company of four other nations, the argument goes, the United States deprives the North of the chance to play David to the U.S. Goliath. Instead, the North also has South Korea, Japan, China and Russia to answer to.

"The North Koreans would like to make this about the United States, and I prefer that the Chinese and the South Koreans and the Japanese are saying the same thing to the North Koreans today that we are saying," said Assistant Secretary of State Christopher Hill, Rice's top negotiator for North Korea.

The six-nation talks have been stalled for more than a year, but Hill and other U.S. officials refuse to declare them dead.

For now, U.S. officials are pushing for tough sanctions at the U.N. Security Council, and the United States hasn't ruled out taking other steps on its own, such as intercepting ships entering or leaving North Korean ports.

Contrast that with the situation six years ago, when then-Secretary of State Madeleine Albright became the first ranking U.S. official to meet with North Korean dictator Kim Jong Il. Albright even gave a delighted Kim a basketball autographed by Michael Jordan.

When Bush took office, the North's nuclear reactor was frozen under a 1994 Clinton pact that conservatives disliked. Many in the new Republican White House were skeptical of the deal's offer to give the North reactors for nuclear energy, and when then-Secretary of State Colin Powell expressed support for the Clinton approach in early 2001 the White House pulled him up short.

The conservative skepticism was partly proved right when it became clear that the North had cheated almost from the start of the Clinton-era deal.

Frosty relations got even worse in 2002, when Bush included North Korea in an "axis of evil" with Iran and Iraq. The North pressed on with its nuclear program and may now have enough material for up to a dozen weapons.

Now the Bush administration is under growing bipartisan pressure to try a version of the Clinton approach and engage North Korea directly. Some U.S. allies have also suggested that the United States has little to lose and potentially much to gain from sitting down alone with the North.

Rep. Heather Wilson, R-N.M., a senior member of the House Intelligence Committee and a retired Air Force officer, broke Republican ranks Tuesday.

"I feel strongly that there is nothing wrong with straight, tough talk with countries that are not our friends," said Wilson, R-N.M. "I think that there is an argument that says doing this in a bilateral way sends a much stronger message."

DOJ_NMG_0079295

"Bilateral talks" is State Department speak for old-fashioned one-on-one diplomacy, and it is a plum that the Bush White House has recently withheld not only from North Korea but also from what it considers thuggish regimes in Iran and Syria.

Drawing a bright line against engagement with bad guys has the value of purity. But it also leaves little room to negotiate — there is no fallback position and any shifting of position, as the U.S. did earlier this year on Iran, risks being painted as capitulation.

James A. Baker III, the former secretary of state who has long served Republican presidents, has questioned the approach at least with respect to Iran and Syria.

"I don't think you restrict your conversations to your friends," Baker said Sunday on ABC's "This Week."

"It's got to be determined," Baker said. "You don't give away anything, but in my view it is not appeasement to talk to your enemies."

White House Rejects North Korea Talks (AP-Y)

By Deb Riechmann

AP-Yahoo, October 11, 2006

The Bush administration rejected anew Tuesday direct talks with North Korea and said it would not be intimidated by a reported threat from Pyongyang that it could fire a nuclear-tipped missile unless the U.S. acts to resolve the standoff.

"This is the way North Korea typically negotiates by threat and intimidation," said U.S. Ambassador John Bolton. "It's worked for them before. It won't work for them now."

The White House said, meanwhile, there is a "remote possibility" that the world never will be able to fully determine whether North Korea succeeded in conducting a nuclear test Monday. While acknowledging that the action was provocative, White House press secretary Tony Snow suggested that it's possible that the test was something less than it appeared.

"You could have something that is very old and off-the-shelf here, as well, in which case they've dusted off something that is old and dormant," he said. The comment appeared to indicate that the White House was attempting to downplay the significance of the test, but Snow said later that he was merely posing a hypothetical question.

While Democrats claimed the test was evidence of a failed U.S. policy, Snow argued that the test has left the nations involved in the six-party negotiations with the communist regime more unified and determined to convince Pyongyang incentives to give up its nuclear weapons ambitions. He also denied that the demands of the war in Iraq hampered the Bush administration's ability to dissuade North Korea from developing nuclear weapons.

"The Chinese, the South Koreans, the Japanese — they all have more direct leverage over the North Koreans than we do," Snow said. "The people who have the greatest ability to influence behavior are now fully invested in equal partners in a process to deal with the government of North Korea."

North Korea stepped up its threats, saying it could fire a nuclear nuclear-tipped missile unless the U.S. acts, the Yonhap news agency reported Tuesday from Beijing. But even if Pyongyang is confirmed to have nuclear weapons, experts say it's unlikely the North has a bomb design small and light enough to be mounted atop a missile.

Asked about the Yonhap report, Bolton said, "Well, I think it's been perfectly obvious for quite some time that North Korea has been seeking a delivery capability for its nuclear weapons. It's one reason why as far back as 2001, President Bush led the effort to get the United States out from under the restrictions of the Anti-Ballistic Missile Treaty, so we could build missile defense against precisely this kind of threat."

In response to North Korea's purported nuclear test, the United States is pressing at the United Nations for stringent sanctions on Pyongyang, including a trade ban on military and luxury items, the power to inspect all cargo entering or leaving the country, and freezing assets connected with its weapons programs.

Meanwhile, Democratic New Mexico Gov. Bill Richardson, a former U.S. ambassador who has visited North Korea, said the Bush administration should abandon its long-standing refusal to engage in direct talks with North Korea. He said President Bush was right to seek sanctions against North Korea in the U.N., but should next move to direct talks with the reclusive nation.

In taking that stance, Richardson echoed the message that former Secretary of State James A. Baker III said Sunday, as Baker urged the administration to talk directly to adversaries around the world.

The administration has been attempting for years to get more countries to join its anti-proliferation initiative, aimed at stopping countries like North Korea from selling nuclear weaponry and missiles. But it has refused one of North Korea's key demands: that the United States engage in direct one-on-one talks. Instead the administration insists on sticking to the so-called six-party format, where Russia, China, South Korea and Japan have joined the United States in talking to North Korea.

DOJ_NMG_0079296

Bolton, interviewed on CNN and on CBS' "The Early Show," said that if North Korea wanted to talk with the U.S., it needed to rejoin the six-party talks.

"If they want to talk to us, all they have to do is buy a plane ticket to Beijing," where the talks have been stalled for months, Bolton said. "The North Koreans can talk to us anytime they want on a bilateral basis if they come back to the six-party talks, which they have been boycotting."

Bolton cast the standoff with Pyongyang as one "between North Korea and the rest of the world" that will result in sanctions or more if the rogue nation does not restart talks with the international community.

Asked about the possibility of U.S. military action against North Korea, including a possible naval blockade, Bolton said, "Well, we're not at that point yet."

"We keep the military option on the table because North Korea needs to know that, but President Bush has been very clear he wants this resolved peacefully and diplomatically," Bolton said.

Bush Administration Rejects Talks With North Korea (MCT)

By Warren P. Strobel

McClatchy Newspapers, October 11, 2006

WASHINGTON - The Bush administration, under fire for policies that have failed to stop North Korea from advancing its nuclear weapons arsenal, on Tuesday ruled out direct talks with Pyongyang in the aftermath of its apparent nuclear test.

Instead, the United States and other world powers began discussing tough U.N. sanctions on North Korea that would authorize inspection of cargo going to or coming from the country to halt weapons-related transfers.

In a significant development, China, which is North Korea's principal ally, said for the first time that it would agree to sanctions on the government of North Korean leader Kim Jong Il.

"I think there has to be some punitive actions," said Wang Guangya, China's ambassador to the United Nations. "We need to have a firm, constructive, appropriate but prudent response to North Korea's nuclear threat," he said, without being more specific.

China, which has led diplomatic efforts to engage Pyongyang, was deeply embarrassed by North Korea's action. But Beijing is wary of destabilizing North Korea because a collapse of the regime could flood China with millions of extremely poor refugees. It's unclear how far it will go in curtailing crucial food and energy supplies or other trade.

"I think they're going to do some sanctions that will sting, but not ultimately paralyze North Korea. The only thing they worry more about than a nuclear weapon is the collapse of North Korea," said Kurt Campbell, a former top Pentagon official on Asia policy who's now at the Center for Strategic and International Studies, a national-security research center.

Officials from the United States and other Western governments privately echoed that analysis.

North Korea's claimed nuclear test - U.S. intelligence agencies still hadn't confirmed it Tuesday - has brought wide condemnation and given new impetus to the U.S. drive for further sanctions.

But the White House also found itself on the defensive Tuesday against critics who said President Bush's policy of refusing to engage North Korea in direct, one-on-one talks had backfired.

Bush said in May 2003 that the United States wouldn't tolerate a nuclear-armed North Korea. Since that time, Pyongyang is thought to have expanded its stockpile of nuclear weapons, has broken a self-imposed moratorium on test-firing ballistic missiles and on Monday apparently conducted its first underground nuclear-weapons test.

Campbell, who served during the Clinton administration, gave the Bush administration high marks for its muscular response to the crisis this week. But he said the administration should have tried a different approach earlier.

"The biggest problem has been a reluctance to engage (North Korea) diplomatically," he said. The administration, he said, seems to "worry that by talking to them at a very high level, that we are somehow blessing . . . a reprehensible regime."

Secretary of State Condoleezza Rice and other Bush aides ruled out direct talks, arguing that the Clinton administration had tried it and that it failed.

"The United States tried direct dialogue with the North Koreans in the `90s. And that resulted in the North Koreans signing on to agreements that they then didn't keep," Rice said in an interview on CNN.

She referred to a 1994 deal known as the Agreed Framework, under which North Korea's known nuclear program, involving plutonium, was frozen. The United States charges that Pyongyang cheated on the deal by pursuing a second, covert program based on uranium enrichment.

Rice argued that the United States is now in a stronger position to deal with North Korea because Japan, South Korea and, especially, China are prepared to take united action against the country.

The Bush administration has been riven by internal disputes over dealing with North Korea almost from the moment it took office.

DOJ_NMG_0079297

Then-Secretary of State Colin Powell announced in 2001 that Bush would continue Clinton's policy of talking to the North Koreans, but an unhappy White House forced him to retract the remarks.

Even today, Vice President Dick Cheney and his allies in government are thought to favor putting so much pressure on Kim's regime that it collapses.

Many State Department experts argue that the tough approach plays right into Kim's hands and further isolation is unlikely to matter to the world's most isolated country.

The U.S.-proposed sanctions would bar imports and exports of arms, nuclear- and missile-related material and luxury goods to North Korea and would authorize inspections of inbound and outbound cargo by third countries.

Japan, which has historical enmity with North Korea, has proposed even tougher measures, including broad trade sanctions, refusing to allow North Korean ships and planes to enter other countries and banning travel by top North Korean government officials.

China is unlikely to go that far. China and North Korea have had close relations as communist neighbors, and Kim has visited China to learn about its economic reforms.

Intelligence officials said Tuesday that they were still analyzing the underground blast that occurred Monday morning local time in North Korea.

U.S. Air Force monitoring aircraft haven't yet picked up the signs of radiation usually associated with such a test. The blast itself is thought to have had less than a kiloton of force, perhaps significantly less, leading experts to question whether the test was only partially successful.

U.S. Fears Export Of Technology (LAT)

By Peter Spiegel And Greg Miller, Times Staff Writers

The Los Angeles Times, October 11, 2006

Preventing North Korea from selling nuclear materials would depend on China and Russia.

WASHINGTON — The sanctions demanded by U.S. officials in response to North Korea's announcement this week that it had tested a nuclear device would focus on closing pathways to proliferation of weapons technology.

But U.S. officials say any such effort would have to focus on the air and land routes through China and Russia that the government in Pyongyang has used in response to American monitoring on the high seas.

Since the 1990s, the Pentagon has used naval ships and aircraft to track and even intercept weapons shipments coming out of North Korea.

"Our folks pay very close attention to the vessels they are using and where they go; we stay on top of this one," Adm. William J. Fallon, the U.S. military's top officer in the Pacific, said last month. "One thing we can't do anything about is the air movement, because it goes over Chinese or Russian airspace. It's up to those countries to do things."

The new United Nations sanctions resolution proposed by the United States would direct all members "to undertake and facilitate inspection of cargo to or from" North Korea. In effect, it would require China to help close the gap in American efforts.

It's a challenge unlike any yet faced by U.S. diplomats and military officials. Until now, nations that have developed a nuclear capability have not viewed their new weapons as potential export commodities, as many believe Pyongyang does.

U.S. intelligence officials said Tuesday that they were still collecting data on Monday's declared blast, and knew little about the device involved. One military official said the Pentagon was awaiting data from its lone WC-135 "sniffer" aircraft, which was stationed at Kadena Air Base in Japan at the time of the North Korean test.

At the U.N., Chinese and Russian diplomats resisted tougher proposals by the Americans and Japanese, and U.S. Ambassador John R. Bolton dismissed a North Korean threat to launch a nuclear-tipped missile if Washington refused direct talks. Diplomats hope for a vote on a response to North Korea by Friday.

Past international efforts to block exports and enforce embargoes have had limited and short-lived success. But North Korea's use of Chinese routes for conventional weapons exports raises the concern that it may attempt to use similar means to transship nuclear technologies.

"In the early days, it is absolutely true that the North Koreans sent both missiles and missile fuel and components to the Iranians and the Syrians by sea," said David Kay, a former U.N. weapons inspector who specialized in nuclear proliferation issues. "But they now know that's not a good way to do it, so most of it goes overland via China."

Kay said that, from China, the weaponry probably is flown to places such as Iran and Syria. North Korea also has sold missile technology to Yemen and Pakistan.

The Bush administration has complained repeatedly that Beijing has not lived up to agreements to stop North Korea's shipments of weapons technologies. In testimony last month before a U.S. government commission, State Department officials said they "remain deeply concerned" over China's lack of commitment to its nonproliferation promises.

DOJ_NMG_0079298

Thus far, however, U.S. proliferation concerns have centered on Pyongyang's trade in parts for long- and medium-range missiles. By some estimates, North Korea is the world's dominant exporter of ballistic missiles. An evaluation by the London-based International Institute for Strategic Studies estimated that missile sales had earned the North Korean government hundreds of millions of dollars, making it a significant source for hard currency.

But deliveries of missile components have begun to shrink in recent years as North Korea's traditional customers, particularly Iran, have developed their own capabilities. Experts fear that Pyongyang will view nuclear technology, and nuclear material such as plutonium, as a replacement revenue source.

"The thing that worries most people is actually the export of fissile material itself," Kay said.

"I don't think people are worried at this stage about North Korea sending weapons to Iranians or terrorists," Kay added, "although there is virtually nothing on the face of the Earth that the North Koreans have gotten their hands on that they haven't been willing to sell."

China has let North Korea ship missile parts through its territory and airspace and has exported missile systems to rogue governments itself. But U.S. officials consider Beijing less likely to tolerate North Korean nuclear shipments because such exports could undermine China's status as the only nuclear power in East Asia.

"North Korea is China's neighbor, so they, in a sense, have a more proximate cause for worry than even the United States," State Department spokesman Sean McCormack said.

Nonetheless, enforcing any tightened counter-proliferation regime, even with Chinese cooperation, would be challenging, U.S. officials and arms experts said. The Pentagon can track ships, but it is nearly impossible to determine precise cargoes.

"The ability to recognize every single thing that's on every ship is a challenge," Adm. Fallon said.

The administration's proposed U.N. resolution would essentially establish an international agreement to allow the boarding of ships suspected of carrying prohibited items to or from North Korea.

Pentagon officials, however, said that any large-scale effort would be many times more complicated than tracking the vessels, and would require the participation of other countries. As a result, tactical planning has not begun for a U.S. blockade of North Korea, a Defense Department official said.

"The presumption is this would have to be an international effort," said the official, who spoke on condition of anonymity because of the sensitivity of the issue. "You can't willy-nilly stop every ship; you need to search methodically."

Similarly, China's ability to monitor North Korean deliveries across its border may be limited. Beijing polices the border, but experts say the frontier remains somewhat porous and that China may not be employing the most modern sensors and other detection equipment.

"It's like moving drugs into the United States from Mexico," Kay said. "The Chinese could do a far better technical job than they've been doing. Radiation detectors along the Yalu River" — between North Korea and China — "would be a good thing, but they can be beaten."

UN Resolution Focuses On Naval Searches (FT)

By Stephen Fidler

Financial Times, October 11, 2006

North Korea has earned over the past two decades a reputation for peddling its missile capabilities around the world. Many governments are worried not so much that it will use the bomb as that it will shop its nuclear expertise around, to earn foreign exchange for its stricken economy.

“The real risk, as we and others see it, is of onward proliferation from North Korea to other countries of concern,” said a British official on Tuesday.

A US draft of a United Nations Security Council resolution, circulated on Tuesday, calls upon member states “to undertake and facilitate inspection of cargo to and from [North Korea]” to ensure that no arms, nuclear or missile-related items or luxury goods could be shipped there.

That paragraph, if agreed by the rest of the Security Council, raises many practical and legal questions about how such inspections would be carried out. To work, it would almost certainly need the backing of China, not only in the Security Council but also as a practical matter because many of the sea lanes out of North Korea pass close to China.

“Chinese co-operation would be essential to any such measure,” said Mark Fitzpatrick, a former State Department official at the International Institute for Strategic Studies. Even if China did not board North Korean ships, it would ease the practical difficulties of enforcing the policy if it made its ports available for inspections, he said.

DOJ_NMG_0079299

Chinese officials have indicated that Beijing would contemplate punitive measures against Pyongyang, but it was not clear on Tuesday whether they would back such an embargo.

As interpreted by most countries, the law of the sea prevents the boarding of ships on the high seas unless permission is given by the master of the vessel or by the government of the country whose flag it is flying.

The US usually permits itself a liberal interpretation of that law and any Chapter 7 Security Council resolution would presumably be deemed to give it and other countries the right to board North Korean vessels.

Though it is early for any such move, some thought may be given to the development of an international patrol similar to those deployed in the Gulf and off the Horn of Africa. Though both are dominated by the US Navy, the presence of other nations' vessels confers international legitimacy to the patrols.

Still, the likelihood is that any attempt to board a North Korean cargo ship would be refused and the interdiction force would have to contemplate shooting across the ship's bows and mounting an opposed boarding.

Such an event would probably be interpreted by North Korea as a hostile act, potentially leading to a significant further escalation of tensions in the region.

The Bush administration has led the formation of a coalition of countries, now numbering more than 70, aimed at preventing their waters or ships from being used to transport weapons of mass destruction.

Yet the Proliferation Security Initiative has no explicit basis in international law. It operates mainly in the coastal waters of its members and on vessels sailing under the flags of members.

A number of bilateral boarding agreements also permit the legal boarding of ships flying flags of convenience, such as Liberia.

"The PSI is a method of handling this kind of thing and could be adapted, if needed, to the North Korean case," said a former US official.

China Says It Will Back Sanctions On N. Korea (WP)

By Colum Lynch And Maureen Fan

The Washington Post, October 11, 2006

Beijing Stresses Limits on U.N. Action Against Ally

UNITED NATIONS, Oct. 10 -- China on Tuesday expressed a rare willingness to support U.N. sanctions against its ally North Korea, but it said any punitive action would have to be narrowly targeted at the country's ballistic missile and nuclear weapons programs.

The United States and Japan continued to press the U.N. Security Council to support far stronger economic and trade measures that would permit international inspections of all North Korean cargo to search for weapons and to strangle Pyongyang's ability to finance its nuclear program.

Varied responses to the nuclear test that North Korea apparently conducted early Monday emerged as the Bush administration sought to assuage fresh worries by its foreign counterparts that the tough strategy may cause hardship for the country's impoverished population or topple the government. France, for instance, voiced concern that a Japanese proposal to ban all North Korean exports could fuel a humanitarian crisis.

John R. Bolton, the U.S. ambassador to the United Nations, insisted that the U.S. sanctions plan calls for the exemption of food, medicine and other humanitarian goods for civilians. State Department spokesman Sean McCormack, meanwhile, specifically ruled out any attempt at regime change. "We have made it very clear that the United States has no intention to attack North Korea. That element of our policy still stands," he told reporters. "What we have sought is a change in the behavior of the North Korean regime."

China's tougher stance against North Korea came as officials in Beijing faced criticism at home over their diplomatic strategy, which relies primarily on the now-stalled six-nation talks to contain North Korea's nuclear program.

The talks have been "a total failure," said Zhang Liankui, a professor at the influential Central Party School's Institute for International Strategic Studies. "North Korea's reaction is a challenge to the whole world. Every country should have a clear and definite attitude, including China.

"If peaceful means can't stop North Korea from conducting a nuclear test, then there should be other means," Zhang added. "The appeasement policy was very popular in the international community, and I think that's very dangerous. Within 10 years, people will suffer from this attitude."

Chinese Foreign Ministry spokesman Liu Jianchao acknowledged that North Korea's action "will undoubtedly exert negative impact" on the two countries' relations. But he said the six-party talks remain "the best and practical way and effective way to resolve this issue, so I don't think it's a failure of China's diplomacy."

DOJ_NMG_0079300

Still, Wang Guangya, China's U.N. ambassador, conceded that the council would have to impose "some punitive actions" on Pyongyang to persuade it to heed international demands. He added, however, that "these actions have to be appropriate" and "more specifically targeted toward the nuclear- and missile-related areas."

U.S. officials welcomed China's willingness to consider punishing a traditional ally and a neighbor that it has shielded from international pressure for decades. White House spokesman Tony Snow said China's announcement suggested that North Korea's ability to use "bluff and bravado" to obtain concessions may have ended.

Secretary of State Condoleezza Rice told CNN that "I've never seen universal condemnation of the kind that North Korea is now facing, and condemnation, by the way, not just from the United States and Europe and Japan but from its closest supporters, those who are the ones who give them assistance."

The United States has told the North Koreans "that there is no intention to invade or attack them," Rice added. "So they have that guarantee." The president "never takes any of his options off the table," she said. "But the United States, somehow, in a provocative way, trying to invade North Korea? It's just not the case."

But other U.S. officials made it clear that they think tougher measures are required to ensure that North Korea will not ignore another unenforceable council dictate. They note that a U.N. measure that was passed in July, Resolution 1695, already bans international trade in ballistic missiles and nuclear technology with North Korea. But it lacks any enforcement provision.

The United States supports a resolution under Chapter 7 of the U.N. Charter, which can be enforced by sanctions or military action.

The U.S. draft resolution calls for imposing stringent financial penalties on North Korea and providing broad powers to foreign governments to inspect all trucks, trains, vessels and planes traveling in and out of the country. The U.S. text would also confront North Korea with a 30-day deadline to reverse course or face further penalties.

Japan has introduced a series of amendments that would ban North Korean exports and prohibit the arrival of North Korean ships or planes in foreign countries.

China opposes any deadlines or trade restrictions that would undercut North Korea's struggling economy.

It also insists that any resolution must exclude the possibility, however remote, that force could be used against North Korea. China proposed that a sanctions resolution refer simply to a provision in Chapter 7, known as Article 41, that would authorize only the imposition of sanctions.

"We have not reached agreement -- do not misunderstand me," Bolton told reporters after meetings with China and other major council powers. "I know when you're making progress and I know when you're not making progress, and I'm still pleased with the directions things are going."

Fan and researcher Jin Ling reported from Beijing; staff writer Glenn Kessler in Washington contributed to this report.

China Calls For Punitive Actions On N Korea (FT)

By Caroline Daniel, Stephen Fidler, Anna Fifield, Richard Mcgregor, David Pilling And Mark Turner

Financial Times, October 11, 2006

China said yesterday that North Korea should suffer "punitive actions" for its claimed nuclear test, in an apparent retreat from its long-standing opposition to international sanctions against Pyongyang.

The extent of sanctions favoured by Beijing was still unclear but Wang Guangya, China's ambassador to the United Nations, said a 13-point US proposal - which included inspections of cargo ships entering and leaving North Korea - provided a "good basis for working". He added: "There has to be some punitive actions, but these actions have to be appropriate."

A US draft resolution circulating yesterday would compel governments to prevent the transfer of arms, missiles or nuclear items - or luxury goods - to or from North Korea. Additional proposals from Japan, which chairs the security council, would bar North Korean ships and aircraft, and high-ranking officials, from member states.

John Bolton, US ambassador to the UN, said after meeting Mr Wang: "There were substantial areas of agreement. There is a strong view to move as quickly as we can . . . a strong resolution and a swift response."

The Russian position was unclear since the delegation had no instructions from Moscow.

Sergei Ivanov, Russian defence minister, said the reported test was a "colossal blow" but any UN resolution would not involve the use of force.

China's reaction is critical to the passage of an effective resolution and its policing. Pyongyang's decision to carry out missile and nuclear bomb tests in spite of strong Chinese opposition has been seen in China as a demonstration of the failure of Beijing's strategy of playing a moderating role between North Korea, regional neighbours and the US.

In Seoul, the "sunshine policy" of economic engagement with North Korea is being questioned after Pyongyang's decision to go ahead with the test showed how little sway South Korea had over its neighbour. "The government sees it is unavoidable to make certain changes to its policies as we are in a situation where adjustments to inter-Korean relations are inevitable," said Lee

DOJ_NMG_0079301

Jong-seok, South Korea's unification minister. "But I believe the government must be careful when taking any measures that would raise tension or make our people feel uneasy."

Tony Snow, White House spokesman, said the US had less ability to influence Pyongyang than countries in the region.

Shinzo Abe, Japan's prime minister, has called for "harsher measures" against Pyongyang, a position echoed by Koji Omi, his finance minister, who said Japan was considering additional financial sanctions.

China Supports Sanctions Against N. Korea (USAT)

By Calum Macleod

USA Today, October 11, 2006

BEIJING — China signaled support Tuesday for tough sanctions against its longtime communist ally North Korea, a reflection of its anger over Pyongyang's apparent nuclear test.

China's strong disapproval echoed a chorus of global concern. Chinese Foreign Ministry spokesman Liu Jianchao said the test was carried out “flagrantly” and “will undoubtedly exert a negative impact on our relations.”

At the United Nations, Chinese Ambassador Wang Guangya said the Security Council must deliver “punitive actions” against North Korea, but the response should be “appropriate.”

Wang spoke before the five permanent council members — Britain, China, France, Russia and the United States — met to discuss U.S. proposed sanctions, including a ban on imports of military goods to North Korea.

China historically has been cool to sanctions against North Korea. China supplies much of the regime's food and oil. It fears a refugee exodus across its borders if sanctions destabilize the North Korean government.

The council session ended with no decision. Another session was scheduled for today. U.S. Ambassador John Bolton sounded upbeat about the prospects for agreement.

“We don't have complete agreement on this yet, that's hardly a news flash, but we're making progress,” Bolton said.

North Korea showed no remorse for conducting the test. In Brussels, Ri Jong Hyok, a visiting North Korean official, said the test was a result of pressure and threats by the United States toward North Korea. “We have to take these measures so that we have a nuclear deterrent against the Americans,” he said.

In Washington, Secretary of State Condoleezza Rice said the United States had no intention to attack North Korea, rejecting a suggestion that Pyongyang may have felt it needed to test a nuclear weapon for security.

Bolton rejected holding direct talks with North Korea. “North Korea has had a successful history of intimidating other countries … but they're not going to be successful with us this time” he said on CBS' Early Show.

North Korea has refused for a year to attend six-nation international talks aimed at coaxing it into giving up its nuclear program. Pyongyang has called for direct talks with Washington and for the United States to drop sanctions it imposed to punish North Korea for alleged counterfeiting.

The United States has yet to confirm North Korea's claim that it exploded a nuclear device. White House spokesman Tony Snow said there was a “remote possibility” the world will never know what happened.

China: N.Korea Must Be Punished For Test (AP)

By Nick Wadhams

AP, October 11, 2006

The North Korean nuclear crisis settled into diplomatic debate Tuesday, with China agreeing to punishment but not the severe U.S.-backed sanctions that it said would be too crushing for its impoverished communist ally.

Scientists and other governments, meanwhile, suggested that Monday's underground test was a partial failure, producing a smaller blast than planned.

The Bush administration asked the U.N. Security Council to impose a partial trade embargo including strict limits on Korea's profitable weapons exports and freezing of related financial assets. All imports would be inspected too, to filter out materials that could be made into nuclear, chemical or biological weapons.

The United States reiterated that it would not talk with the North Koreans one-on-one, but Secretary of State Condoleezza Rice assured the North that the U.S. would not attack.

Rice rejected a suggestion that Pyongyang may feel it needs nuclear weapons to stave off an Iraq-style U.S. invasion. President Bush, she told CNN, has told "the North Koreans that there is no intention to invade or attack them. So they have that guarantee. ... I don't know what more they want."

DOJ_NMG_0079302

U.S. Ambassador John Bolton sounded upbeat after Tuesday's round of talks at the Security Council, but said differences remained in advance of Wednesday's meeting.

"Look, we don't have complete agreement on this yet, that's hardly a news flash, but we're making progress and we're I think at a point we can try and narrow some of the differences we do have," Bolton said.

China, which reacted to Monday's blast with a strong condemnation but considers North Korea a useful buffer against U.S. forces stationed in South Korea, said it envisioned only a limited package of sanctions — not what the United States and especially Japan were demanding.

China and Russia object to plans to interdict shipments and block financial transactions. They also oppose a new suggestion that Japan proposed Tuesday — to include mention of the North's abduction of Japanese citizens in the 1970s and '80s.

"We certainly understand that Japan is close to the country. But I think you cannot ask by this resolution to kill a country," China's U.N. Ambassador Wang Guangya told The Associated Press. He said the Security Council must impose "punitive actions" but that they have to "be appropriate."

Though far less than what the Americans and Japanese seek, even calling for some punishment was significant for China, which usually opposes sanctions, particularly against an ally such as North Korea.

Pyongyang again demanded one-on-one talks with Washington and threatened to launch a nuclear-tipped missile if the U.S. doesn't help resolve the standoff. Bolton dismissed the demand, saying the North should instead "buy a ticket to Beijing," and rejoin stalled six-nation talks over its nuclear and missile programs.

The war of words suggested tough negotiations before the U.N. takes any action against North Korea. In the meantime, scientists and governments tried to determine what exactly happened early Monday, deep below the earth in North Korea's northeast mountains. The North Korean government has released few details.

A South Korean newspaper quoted a North Korean diplomat, whom it did not name, saying that the blast was "smaller in scale than expected.

"But the success in a small-scale (test) means a large-scale (test) is also possible," he said in comments posted on the Web site of the liberal newspaper Hankyoreh, which has good ties with the communist nation.

The diplomat also said the North could take "additional measures" and that it doesn't fear sanctions.

Philip Coyle, at the Center for Defense Information in Washington, a nongovernment think tank, expressed a growing view that "they got a partial result" and not the full-power explosion that they sought. Several Western estimates said the blast was less than a tenth the size of the bomb that the United States dropped on Hiroshima in 1945; the force of the Hiroshima bomb was equivalent to 15,000 tons of TNT.

But "for them it was enough ... to say that it was a success. It helps them to claim that they are a nuclear power, and that the world should take them seriously, which is what they want. But I wouldn't be surprised if after several months they don't try again."

The White House said there is a "remote possibility" that the world never will be able to fully determine whether North Korea succeeded in conducting a nuclear test Monday.

Democrats said the test was evidence of a failed Bush administration policy, which White House press secretary Tony Snow denied.

"The Chinese, the South Koreans, the Japanese — they all have more direct leverage over the North Koreans than we do," Snow said. "The people who have the greatest ability to influence behavior are now fully invested in equal partners in a process to deal with the government of North Korea."

Sen. John McCain, R-Ariz., said President Clinton was to blame for his 1990s program to entice the North Koreans toward more cooperation. "The Koreans received millions and millions in energy assistance. They've diverted millions of dollars of food assistance to their military," he said.

After the reclusive regime announced it had set off an underground atomic explosion, the Security Council quickly condemned North Korea's decision to flout a U.N. appeal to cancel the test. The 15-nation council urged Pyongyang to return to stalled talks, refrain from further tests and keep its pledge to scrap its clandestine weapons program.

Diplomats said Tuesday there was a general agreement that the Security Council must pass a sanctions resolution in the next few days. The council's image suffered badly the last time it deadlocked over a major crisis, over the summer when it needed a month to pass a resolution on ending the war between Israel and Hezbollah.

"All I can say is that we are having a very good discussion, trying to identify what really we are going to be able to achieve, and i think there is general understanding also about the need to get our act together, and fast," Japan's U.N. Ambassador Kenzo Oshima said. "On that we agree."

DOJ_NMG_0079303

Despite the positive assessment, familiar fault lines that have plagued past negotiations over North Korea already began to appear.

Japan, which holds the presidency of the Security Council for October, demanded the toughest sanctions of all, possibly including a blanket air and naval blockade of North Korea, as well as a ban on senior North Korean diplomats traveling abroad. In Tokyo, Japan's leader said the country could slap sanctions on North Korea without waiting for confirmation that it did indeed test a nuclear weapon.

Yet China, traditionally an opponent of Security Council sanctions, warned that the world must not focus too much on punishment. China can use its veto power in the council to block any move, and would likely have the support of Russia.

"Instead, the international community and the United Nations should take positive and appropriate measures that will help the process of de-nuclearization on the Korean peninsula," Foreign Ministry spokesman Liu Jianchao said.

One worry for Beijing is that too much pressure could cause economically unsteady North Korea to collapse, sending North Koreans streaming across the border into northeast China and inviting intervention by the American military.

Nonetheless, China was clearly rattled that the North went ahead with the test. Liu vented China's anger against its communist ally over the test for a second day.

"The nuclear test will undoubtedly exert a negative impact on our relations," Liu said. He said Monday's test was done "flagrantly, and in disregard of the international community's shared opposition."

The North warned that it would soon be able to put a nuclear warhead on one of its missiles.

"We hope the situation will be resolved before an unfortunate incident of us firing a nuclear missile comes," Yonhap, the South Korean news agency, quoted an unidentified North Korean official as saying. "That depends on how the U.S. will act." Yonhap did not say how or where it contacted the official, or why no name was given.

The news agency quoted the official as saying the nuclear test was "an expression of our intention to face the United States across the negotiating table."

China Ready To Slap Sanctions On N. Korea Over Nuclear Test (AFP)

By Gerard Aziakou

AFP, October 11, 2006

China signaled readiness to join other major UN powers in slapping sanctions on neighboring North Korea over its nuclear test as a defiant Pyongyang reportedly threatened to fire a nuclear-armed missile unless it secures US concessions.

"I think there has to be some punitive actions but also these actions have to be appropriate," Chinese Ambassador to the UN Wang Guangya told reporters.

The key question is how far China and Russia, which despite their traditional close ties with Pyongyang have condemned the nuclear test, will be willing to go in backing tough sanctions pushed by the United States and Japan in a draft resolution invoking Chapter Seven of the UN Charter.

Chapter Seven, invoked in cases "of threat to international peace and security" authorizes tough sanctions or even as a last resort the use of force to ensure compliance with Security Council resolutions.

"We want to see some elements from Chapter Seven," Wang told reporters after a second round of private consultations with his British, French, Japanese, Russian and US counterparts.

US Ambassador John Bolton described Wang's comment as "significant" although he conceded that "We don't have complete agreement on this."

Beijing is by far the most important provider of aid and trade to the cash-strapped regime of North Korean leader Kim Jong-Il.

US Secretary of State Condoleezza Rice voiced confidence that China would back tough action, noting that Beijing had used unusually harsh rhetoric in calling North Korea's announced nuclear test "brazen" -- a term she said Beijing had used diplomatically "only four or five times in decades."

Envoys of the five veto-wielding members of the Security Council -- Britain, China, France, Russia and the United States -- plus Japan met twice privately Tuesday to try to narrow differences on the sanctions and agreed to meet again Wednesday.

Experts of the 15-member council also met Tuesday and were to meet again Wednesday to craft an acceptable draft resolution.

The draft is based on US proposals for a raft of punitive measures under Chapter Seven, including international inspection of all cargo to and from North Korea, new financial curbs targeting Pyongyang's nuclear and missile programs, and restrictions on exports of goods with military uses and sales of luxury items.

DOJ_NMG_0079304

Japan put forward even tougher measures such as bans on North Korean ships and aircraft from entering or landing in member states' territories and on all North Korean products as well as a travel ban targeting senior North Korean government officials.

But a defiant North Korea threatened to fire a nuclear-tipped missile unless the United States makes concessions in the standoff over Pyongyang's nuclear weapons program.

"We hope the situation will be settled before an unhappy incident of us firing a nuclear missile occurs," South Korea's Yonhap news agency quoted an unidentified North Korean official in Beijing as saying.

The Stalinist state has repeatedly argued it needs nuclear weapons to deter any attack from the United States, which it fears will try to topple one of the last pure Communist regimes in the world.

Pyongyang said it was willing to return to six-party nuclear disarmament talks it has boycotted since last November, but "only if the United States takes corresponding measures." No further details were given.

In Washington, Rice warned Pyongyang that launching a nuclear-armed missile "would not be good for North Korea's security".

"The North Koreans are not confused about what would happen," she said.

South Korea, which is not a Security Council member, made it clear it opposed any UN resolution involving military action.

"We support a UN resolution, but our position is that the resolution must not include any military measures because of its possible impact on the Korean peninsula," South Korean Prime Minister Han Myung-Sook told parliament.

Rice also reaffirmed that Washington was not considering military action against North Korea, a possibility the communist regime has frequently cited as a justification for its nuclear arms program.

In Moscow, Russian Defense Minister Sergei Ivanov said Pyongyang had now become the "de facto" ninth world nuclear power and had dealt a "colossal blow" to non-proliferation efforts.

Japan said Tuesday that its monitoring aircraft had detected no unusual radiation levels in dust samples collected over the major Japanese islands of Kyushu, Honshu and Hokkaido.

"It is hard to say," if there has been a successful nuclear test, Japan's Prime Minister Shinzo Abe said in parliament.

White House spokesman Tony Snow also said the United States did not have confirmation of a nuclear test. "There is a remote possibility that we'll never be able to determine fully," Snow said.

After North Korea's Bomb Test, China Ponders A Problematic Friendship (CSM)

By Simon Montlake

The Christian Science Monitor, October 11, 2006

BEIJING

North Korea's reported nuclear test and the ensuing diplomatic fallout come as China calibrates its role as a rising global power. How a newly emboldened China decides to handle its erratic ally - after what has widely been seen as a slap in the face for Beijing's negotiating track - could also shape China's foreign policy on other fronts, analysts say.

China strongly condemned Monday's test, which may have upended its status as the only confirmed nuclear power in East Asia. Foreign Ministry Spokesman Liu Jianchao said Tuesday that North Korea's test had damaged bilateral relations, and that China wanted to see "appropriate action" from the United Nations Security Council.

But behind China's stern rebuke is a reluctance to use multilateral sanctions or military force to bring Kim Jong Il's regime to heel - tactics that Beijing would see as unwelcome precedents with potentially destabilizing effects on the region.

Instead, China has historically put its stock in dialogue and negotiations with North Korea while propping up its neighbor with fuel and food. The apparent failure of that policy to keep the Korean peninsula nuclear-free, and to avert an international crisis, is a setback that will weigh heavily on the shoulders of China's leadership, say analysts.

"What the test has shown is that the road to Pyongyang doesn't necessarily run through Beijing. There's got to be another path," says Russell Moses, a Beijing-based political analyst.

"So there's a conflict in the [Chinese] leadership: Do we find some way to show we're a major power, or wash our hands of it and hand it over to the US?" Mr. Moses says.

Chinese diplomacy puts economic cooperation and political stability on a pedestal that leaves little room for the niceties of democracy and human rights - such as in its dealings with Sudan or Zimbabwe. At the same time, China is increasingly aware of its international image and the prestige and power of joining its peers.

As the convener of the six-party talks that brought together North Korea, Japan, the US, Russia, and South Korea, China grasped an opportunity to play mediator and promote peaceful negotiations. By testing a bomb, North Korea has scuttled the talks and prompted the UN Security Council to consider much tougher action than was imaginable a week ago. China eyes its next move

DOJ_NMG_0079305

Now the question for China is whether it can stay on the sidelines of UN actions and still claim to be engaged in finding a solution to the North Korean crisis. Analysts say Beijing may go along with demands for limited sanctions, while arguing that it's counterproductive to isolate the regime further.

China may also impose bilateral sanctions on North Korea in order to bring it back to the negotiating table.

Some analysts argue that China could emerge as a powerbroker between the US and North Korea, even if Beijing doesn't see eye to eye with the Bush administration.

"China should play a bigger role in Northeast Asia as a coordinator," says Huang Dahui, associate professor of international studies at People's University in Beijing. "This would show that China is a responsible power. The US may come to rely even more on China."

But elevating its diplomatic profile would require Beijing to stop coddling North Korea, its former comrade-at-arms. North Korea relies on its giant neighbor for economic support, and its latest defiance may be reason enough to rethink the relationship, says Niu Jun, a historian of the Chinese Communist Party at Peking University.

"The old policy is too rigid and China has an opportunity to shift its foreign policy. Even before the nuclear test, China had realized that something is wrong with this relationship," says Mr. Niu. But, he adds, "Chinese leaders don't have a clear idea on how to deal with North Korea."

Such a policy shift would bring China closer in line with Japan. A successful summit last weekend between President Hu Jintao and newly appointed Prime Minister Shinzo Abe had already signaled a partial détente between the two nations.

South Korea is grappling with its own dilemma on whether to punish the North or continue its own "Sunshine Policy" of economic engagement. China's leverage

The North Korean nuclear crisis comes during China's annual Communist Party policy meeting, where political heavyweights are jostling for influence after a recent purge of Shanghai's top leadership.

While analysts differ on how much leverage China has over North Korea - which is driven as much by internal politics as rational self-interest - China has taken harsh measures previously against its neighbor, such as halting energy supplies in order to jolt Pyongyang into action.

China has also sought to persuade Mr. Kim to adopt the market reforms that have wedded Beijing's brand of authoritarian rule to a sustained economic boom.

Yet even tough action by Beijing may not tame a regime that cherishes self-reliance above all, says Peter Beck, director of International Crisis Group's office in South Korea.

"Pyongyang took the calculated gamble that it would not be forsaken by Beijing or Seoul," Mr. Beck says. "But they also made the calculation that even if they are, they can stick it out."

China Hints Agreement On N. Korea (WT)

By Betsy Pisik, The

The Washington Times, October 11, 2006

NEW YORK -- The U.N. Security Council edged yesterday toward passing broad sanctions against North Korea, with the Chinese delegation, stung by Monday's reported test of a nuclear device, showing more willingness than ever before to penalize its communist neighbor.

John R. Bolton, U.S. ambassador to the United Nations, said the diplomats had made "substantial progress" but declined to say how soon the issue might be brought to a vote. Emyr Jones Parry, Britain's ambassador to the United Nations, told the British Broadcasting Corp. that he expected the resolution within a week, and possibly as soon as Friday.

Shock waves from Pyongyang's claim to have conducted a nuclear test reverberated far beyond the Security Council, with South Korean President Roh Moo-hyun saying his government was reconsidering it's "sunshine policy" toward the North and the Chinese foreign ministry calling a nuclear test "unimaginable."

North Korean leader Kim Jong-il "has clearly gotten the attention of everybody in this," Secretary of State Condoleezza Rice said in one of a series of broadcast interviews last night.

"I've never seen universal condemnation of the kind that North Korea is now facing, and condemnation, by the way, not just from the United States and Europe and Japan, but from its closest supporters, those who are the ones who give them assistance."

In Washington, a White House spokesman said it was still not clear whether the sub-megaton explosion monitored in North Korea on Monday was indeed a successful nuclear blast, and that there was a "remote possibility" it would never be known.

"You could have something that is very old and off-the-shelf here, as well, in which case they've dusted off something that is old and dormant," said Tony Snow, White House press secretary.

DOJ_NMG_0079306

The five permanent Security Council members and Japan met through most of the day to discuss a U.S. draft resolution that would stop all military and luxury goods and nuclear materials from entering North Korea; ban international travel by North Korea's senior officials; and freeze its assets connected with money laundering, counterfeiting and narcotics.

Outside the chamber, the Japanese delegation also proposed that North Korea's ships and planes be turned away from international ports.

The draft specifically exempts resources "necessary for basic expenses, including payment of foodstuffs," debts, medical supplies and other legitimate expenses. The text also demands that Pyongyang return to six-party talks with the United States and North Korea's neighbors -- China, South Korea, Russia and Japan.

"I see that many of the elements in the 13-point proposal provide a good basis for working," said Wang Guangya, U.N. ambassador for China, which has never voted in favor of U.N. sanctions against any country, much less North Korea.

Separately, Mr. Wang said Beijing could accept some elements of the draft being passed under Chapter 7 of the U.N. Charter, which would make them legally binding upon all member states. He was quoted earlier saying the Security Council must impose "punitive actions" but that they have to "be appropriate."

U.S. diplomats met privately on the sidelines of the council talks with representatives from China, one of the few nations thought to have any influence with Pyongyang.

"We continue to move ahead," Mr. Bolton told reporters late in the afternoon. "There is convergence on many issues, but that's not to say we're there yet by any stretch of the imagination."

Reports from the region quoted North Korean officials saying they had conducted a nuclear test in hopes of prompting direct negotiations with the United States, and threatening to attack America with nuclear-armed missiles if talks were not successful.

"I think the North Koreans know that firing a nuclear missile would not be good for North Korea's security," said Miss Rice. "The North Koreans are not confused about what would happen."

In Brussels, a North Korean legislator yesterday defended his country's announced nuclear test, saying it had been facing sanctions and threats from the United States for more than 60 years and had to defend itself.

He said North Korea would be ready to resume international talks about its nuclear program if financial sanctions are lifted.

Ri Jong-hyok, a member of North Korea's Supreme People's Assembly, spoke on a rare visit by a North Korean to the European Parliament, where he took part in an exchange of views with parliamentarians from the European Union.

Bush administration officials insisted they would not change their policy of refusing to talk to the North Koreans except in the context of six-party talks in Beijing, which have been stalled since the United States froze Pyongyang's overseas bank accounts in September 2005.

"If they want to talk to us, all they have to do is buy a plane ticket to Beijing," Mr. Bolton said in a television interview. "The North Koreans can talk to us any time they want on a bilateral basis if they come back to the six-party talks, which they have been boycotting."

North-South Relations Suffer A Sudden Chill (WP)

By Anthony Faiola And Joohee Cho

The Washington Post, October 11, 2006

As 'Sunshine Policy' Dims, So Does Hope for Families

SEOUL, Oct. 10 -- Like so many other South Koreans, Lee Won Son, a gaunt 97-year-old watchmaker, will remember Monday's professed nuclear test by North Korea as the day night began to fall on the "sunshine policy."

The policy, launched by Seoul, had since the late 1990s provided the impoverished North with financial benefits and a road map for national reunification. It had also offered tens of thousands of South Koreans the prospect of reuniting with their loved ones, relatives in the North who had been completely shut off from the world in the aftermath of the 1950-53 Korean War. For Lee, who in 1949 had left his family in the North to prepare for the new life they hoped for in the South, there was no greater prize the Pyongyang government could have offered.

But Monday's reported test cast a sudden chill on North-South relations, stalling Seoul's financial incentives to the North and indefinitely ending nearly eight years of emotive family reunions. Though about 13,000 families have briefly come together under the watchful eyes of North Korean guards, Lee's turn to glimpse the sons and daughters he last saw sleeping in their beds nearly 60 years ago had yet to come up. Aging and ailing, he said he now fears it never will.

"The joy I felt when I first signed up for the reunions was indescribable -- such elation at the thought of seeing even one of my children again," he said, slipping a bony finger under his watchmaker's monocle to dry his tears. "But the North Koreans have robbed me of my chance. They have tricked us and deceived us, using our hearts to open our wallets. All they wanted was

DOJ_NMG_0079307

South Korean money, and now they've tested this thing, this bomb. They have what they wanted and I've lost hope of ever seeing my family again."

Lee's views echo the changing sentiments across South Korea in the wake of Monday's purported test, which was something of a national wake-up call in a country where the perception of a North Korean threat had all but evaporated after years of detente.

For North-South relations, the biggest potential casualty of the announced test appears to be the sunshine policy itself -- a concept fashioned by Kim Dae Jung, then South Korean president, in a historic bid to end Cold War tensions on the peninsula. Kim received the Nobel Peace Prize in 2000.

South Korean officials say it is too early to declare that detente is dead, noting that it may take as long as two weeks to determine whether the explosion detected in North Korea was indeed a nuclear test or merely a bizarre bluff using massive amounts of nonnuclear explosives. Officials also are waiting for the lead of the U.N. Security Council, which is considering sanctions against the North.

But for now, the South Korean government is taking the North's claim at face value, leaving many of the leading voices for detente here to express a profound sense of shock and betrayal. A number of them are calling for a complete review of the policy they had long held up as the cornerstone of Korea's eventual reunification. Many are advocating an accelerated policy of disengagement, which had already begun in the aftermath of the Pyongyang government's July 4 ballistic missile tests.

In the most significant step to date, President Roh Moo Hyun -- who had become South Korea's leading voice for engagement -- effectively acknowledged on Monday that the sunshine policy had failed.

"The South Korean government at this point cannot continue to say that this engagement policy is effective," Roh said in a nationally televised news conference after the North announced a test. "Ultimately, it is not something we should give up on, but objectively speaking the situation has changed. Being patient and accepting whatever North Korea does is no longer acceptable."

Following the July missile launches, South Korea suspended regular humanitarian aid shipments to the North -- an act that led the North Koreans to halt the North-South family reunions. Construction ceased on a multimillion-dollar pavilion meant to host the reunions.

Now, South Korean government sources say, Seoul is reviewing whether to suspend the two biggest pillars of the sunshine policy -- the massive Kaesong industrial park and the Kumgang Mountain tourism resort on the northern side of the border. Those facilities were built and managed by South Koreans and employ thousands of North Koreans.

The three-year-old industrial park, a major source of hard currency for the North Koreans, currently houses more than a dozen South Korean factories, which have helped account for the dramatic boost in inter-Korean trade, from $425 million in 2000 to more than $1 billion last year. A suspension of the project would mark a huge step for South Korea and is still strongly opposed by some leaders members of Roh's ruling Uri Party, as well as by the South Korean companies that have invested millions of dollars to set up shop in the North. Its suspension would also amount to a painful financial hit for North Korea, which collects nearly $700,000 a month from salaries, rent and fees there.

"The test proved how incompetent our government has been with North Korea," said Na Kyung Won, spokesman for the opposition Grand National Party. "The Kaesong and Mount Kumgang projects are a direct cash route for the North Koreans, and we should immediately abandon these projects that give them much-needed cash."

In a sign that the Roh administration is increasingly serious about dimming the lights on the sunshine policy, the semiofficial agency in charge of Kaesong's expansion said on Tuesday that it would indefinitely suspend the approval process for new companies seeking to open factories there.

That marks a radical shift in thinking in South Korea, where public opinion had dramatically swung in favor of North Korea in recent years, even as anti-Americanism rose to record levels.

"Everything changed on Monday," said Ko Gi Gwan, a 58-year-old street vendor in Seoul's sprawling Great South Gate market who said he had supported the sunshine policy for years. "The North Koreans showed us their true faces. We gave them gifts of rice and money, but now look what they have given us -- something we never wanted, nuclear weapons on the Korean Peninsula."

Even if dusk falls only temporarily on the sunshine policy, those like Lee, the watchmaker, may not last long enough to see its resumption. Tens of thousands of people remain on a waiting list for family reunions.

"All I wanted was a chance to look my children in the eye and tell them how sorry I am -- sorry that I left them too early, and that they got stuck in North Korea," Lee said, his voice trembling. "Not a day goes by without my thinking of the conditions they grew up in. I just wish I could have given them a deep bow of apology before I go."

Clouds Over Seoul's 'sunshine Policy' (FT)

DOJ_NMG_0079308

By Anna Fifield

Financial Times, October 11, 2006

For almost a decade South Korea has tried to embrace its errant northern neighbour, sending to Pyongyang everything from concrete and rice to trucks and violins so as to prove that being part of the international community is more fruitful than being outside it.

This "sunshine policy", pioneered by former president Kim Dae-jung in 1997, has also been intended to mitigate the economic catastrophe that would result from any sudden collapse of the North. Like China, South Korea's primary preoccupation has been maintaining stability on the Korean peninsula.

Seoul resolutely adhered to the policy despite a string of brazen actions from Pyongyang – including withdrawing from the nuclear non-proliferation treaty, its declaration that it had become a nuclear power and July's missile launches – but with Monday's provocative nuclear test it has become patently clear that South Korea has gained next to nothing for its efforts.

"I think this [nuclear test] will give the administration the incentive to rethink this policy," said Chung Jae-ho, of Seoul National University. "I was in full support of this policy at the start because no one has pushed this approach before. The basic goal was to change North Korea's behaviour . . . but we do not have anything to show for the past eight years."

Many South Koreans agree. "North Korea broke its promise, which is very upsetting," said Kim Yang-bu, a coffee shop owner. "The engagement policy is . . . counterproductive. We need a stronger policy."

Indeed the patience of president Roh Moo-hyun's administration now appears to be wearing thin.

"It is true that North Korea's nuclear test has -created a situation where we have to reconsider our engagement policy," the president said on Tuesday after meeting ruling and opposition party leaders in Seoul. "But I would like to suggest that we take time to figure out the causal relationship between the engagement policy and the nuclear test."

Although the government suspended humanitarian aid to the North after July's missile tests, it continued to pump cash into the regime through the Mount Kumgang tourist resort and Kaesong industrial park projects on the northern side of the border.

Business was carrying on as usual on Tuesday at the shoe and plastics factories in Kaesong, where North Korean labourers work under South Korean managers. "Regular businesses in Kaesong haven't halted [because of the nuclear test]," Kim Ki-mun, chairman of South Korean watchmaker Romanson, told Yonhap news. But Lee Jong-seok, unification minister, told the National Assembly that Seoul might reduce or suspend its economic exchanges and co-operation, a move supported by opposition parties.

"Regarding the issue of [halting] the Mount Kumgang tours and Kaesong industrial complex development projects, the government will take measures that correspond with measures put out by the international community," Mr Lee said.

Nearly 400,000 South Koreans visit Mount Kumgang each year, with the South Korean operator Hyundai Asan paying undisclosed royalties direct to Pyongyang.

Some analysts, however, doubt South Korea will jeopardise its primary goal of maintaining stability. "The bottom line is that neither China nor South Korea want any sudden change on the peninsula," said Peter Beck of the International Crisis Group.

Some say, though, that Seoul has little to lose from wielding a bigger stick. "The most important aspect of -stability has been broken," said Mr Chung. "So the -question now is how does South Korea co-operate with Japan, China and the US to bring stability back to the peninsula?"

Word Of Test Confirms Stances In 2 Nations (NYT)

By Norimitsu Onishi And Martin Fackler

The New York Times, October 11, 2006

SEOUL, South Korea, Oct. 10 — In the suburbs north of here, the thaw between the Koreas has led South Korea to dismantle highway barricades meant to slow down an invasion of North Korean tanks. Japan, meanwhile, has begun investing billions of dollars in erecting a high-tech shield against North Korean missiles.

South Korea and Japan, America's two major allies in this region, have grown increasingly apart in their attitudes and policies toward North Korea, even though President Roh Moo-hyun said Monday that the North's announcement of a nuclear test had put him on the same page as Japan's prime minister, Shinzo Abe.

Still, despite the gravity of an reported nuclear test, the calculations and interests that have led each country on its respective path have changed little. What's more, random interviews with South Koreans and Japanese on Tuesday suggested that the test, rather than changing public opinion, has merely reinforced it.

South Koreans interviewed, while expressing anger and disappointment, said they did not support the economic sanctions and other punitive measures sought by the United States and Japan, but called for continuing to engage the North, though with more sticks. Japanese were decisively hawkish.

DOJ_NMG_0079309

"The North Koreans are so greedy," said Moon Won-tae, 69, who like most South Koreans of his generation was once fiercely anti-Communist. "They want more and more from us. They keep transferring the aid we give them into weapons."

Mr. Moon was chatting on a street corner with Jung Soon-ni, 74, who blurted out, "Why does our government keep supporting North Korea?"

But when pressed, both men said they still backed the engagement policy, though with a firmer hand than Mr. Roh's and more concessions from North Korea. "Putting a stop to engagement also creates problems," Mr. Moon said, adding that he considered South and North Koreans to be one people.

A 28-year-old mother, Bae Soo-jung, walking in downtown Seoul with her daughter and mother-in-law, said word of the test had made her feel "nervous." But she was even more nervous about isolating the North even further.

"If we impose economic sanctions," she said, "that will push North Korea to the edge. We need to keep engaging it."

In Japan, people interviewed agreed that the country should take a firmer stance, both in punishing North Korea and in strengthening its own military. While all said that Japan should maintain its defense alliance with the United States, their comments showed that many here now accept a level of rearming that would have been considered radical just a decade ago.

"Of course there should be economic sanctions," said Shoko Fukuzawa, a 61-year-old hairdresser shopping in downtown Tokyo. "Whatever Japan can do, it should do."

And that includes rearming, she added. "Every country is building its defenses. But we don't need nuclear weapons."

Mr. Abe affirmed to a parliamentary committee on Tuesday that Tokyo had "no intention" of possessing nuclear weapons.

Public opinion toward North Korea has been crafted, in great part, by the governments in Seoul and Tokyo.

In South Korea, decades of cold war confrontation gave way in the late 1990's to the "sunshine policy" of former President Kim Dae-jung, who won a Nobel Peace Prize for his work on a rapprochement with the North.

Lim Doo-hyuk, 24, a college student at Kwangwun University here, said that in elementary school, he once won a prize for writing the best anti-North propaganda: "Be careful of North Korea all the time — while awake and asleep."

But by high school, with the sunshine policy, North Koreans were no longer regarded as enemies. "My teachers began teaching me that they were our brothers and we should live with them," Mr. Lim said. "So people of my generation, including myself, have a positive image of North Korea.

"Roh Moo-hyun has been too weak — he keeps giving to the North but receives nothing. Engagement shouldn't be unilateral. But we should have an effective engagement policy."

Until about 1997, most Japanese had little interest in North Korea, which at the time appeared to be a quirky but harmless neighbor. Japan's North Korea policy was largely controlled by pro-North Korea Japanese of Korean descent, who were originally brought to Japan as forced laborers and maintained strong ties of identity with their homeland.

In the late 1990's, public attitudes started to harden, as major news media and politicians began to take more seriously claims that dozens of Japanese missing since the late 1970's had actually been abducted by North Korean spies. The image of North Korea as an unpredictable threat was reinforced in 1998 when it test-launched a Taepodong missile over Japan.

But the big turning point came in 2002, when North Korea admitted to abducting citizens and returned five survivors. The image of agents snatching people from Japanese shores turned public opinion decisively against North Korea, analysts said, even more so than missiles or Monday's reported nuclear test.

"The abduction issue is much bigger in Japan than the nuclear issue," said Masao Okonogi, the dean of the law faculty and a specialist on Korean politics at Keio University in Tokyo. "It forms the basis of Japan's current view of North Korea."

The issue was also seized by Liberal Democrat hard-liners, led by Mr. Abe, who rose to political stardom by advocating a tough line on North Korea. They brandished the perceived North Korean threat to argue for long-cherished conservative goals, including revising the American-imposed peace Constitution and remaking Japan's defense forces into a full-fledged military.

"At this point, I think Abe is good," said Eiji Noguchi, 33, an office worker in Tokyo. "The firm stance toward North Korea is good."

Mr. Okonogi said Japan and South Korea's perceptions of the North would keep heading in opposite directions, adding, "And the gap will just keep growing after this nuclear test."

U.S. Seeks Data On North Korea's Nuclear Test Claim (WSJ)

By Robert Block

The Wall Street Journal, October 11, 2006

WASHINGTON -- The U.S. has marshaled a network of military aircraft, ships, seismic-listening posts, spy satellites and intelligence agents to glean as much as possible about North Korea's claim that it tested a nuclear device, and officials say they may have a good idea about what took place as soon as today.

DOJ_NMG_0079310

The objective is to detect radioactive isotopes and gases released in the atmosphere, usually within 72 hours, after such a test. The presence or absence of these indicators will tell analysts if the device detonated underground Sunday was a nuclear weapon.

According to Matthew Godsey, a researcher at the Wisconsin Project on Nuclear Arms Control here, radiation leakage from a test site is almost inevitable. He said a smaller bomb -- as may have been detonated, based on the limited seismic activity -- is more likely to vent xenon gasses and isotopes, such as krypton and cesium, into the air than a large device, which can melt rock and seal the site.

Although North Korea's claims have angered both foes as well as friends, there is no clear consensus about the detonation. Mr. Godsey said the size of the explosion was more likely to indicate a failed nuclear detonation than a conventional bomb. Until the scientific data and intelligence are analyzed, it is impossible to say.

The Air Force Technical Applications Center, based at Patrick Air Force Base, Fla., has the leading role in tracking down the scientific data with a global network of nuclear-detection sensors. The Air Force was given the job of monitoring nuclear tests early in the U.S. nuclear-weapons program, and though tests moved underground in 1963, the Air Force kept the mission.

The Air Force has hydroacoustic monitors to listen for explosions underwater. The Air Force also gathers data from ground-based monitors and from airborne samples. If the Aftac system senses a disturbance underground, underwater, in space or in the atmosphere, it is analyzed for nuclear identification and the findings are reported to National Command authorities through Air Force headquarters.

Within hours of the detonation, the center ordered special aircraft to fly downwind from the test site near the Chinese border to try to catch any radioactive material that might have been vented into the atmosphere. These samples would allow the national weapons laboratories to determine whether Pyongyang used plutonium or uranium in the blast.

The U.S. also activated a special Air Force detachment located at South Korea's seismic-listening post in Wonju, close to the border with North Korea, officials said.

Small Blast, Or 'Big Deal'? U.S. Experts Look For Clues (NYT)

By David E. Sanger And William J. Broad

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — The White House seized on further evidence on Tuesday that North Korea's proclaimed nuclear test had resulted in a surprisingly small blast, questioning at one point whether the test was, in the end, "a big deal event."

The White House spokesman, Tony Snow, appeared to backtrack from that assessment later in the day, as he turned from mounting a defense of the administration's troubled history with North Korea to arguing that the only logical response to the test was to impose harsh sanctions.

The statements came as American intelligence analysts developed their first theories of what might have gone wrong in the barren mountains of North Korea's northeast provinces to have produced an explosion much smaller than even North Korea had apparently expected.

The officials said that their current assessment was that North Korea had in fact detonated a nuclear device, and that they were discounting some reports that North Korea had staged a hoax, trying to disguise a large conventional explosion as a nuclear blast.

"The working assumption is that this was a nuclear explosion of some kind," one intelligence official said, speaking on condition of anonymity. "The conventional explosion theory doesn't make a hell of a lot of sense, even for the North Koreans."

But that left the mystery of why the explosion appeared to be so small, less than a kiloton, or a fraction of the explosions at Hiroshima and Nagasaki in 1945.

Theories ranged from the possibility that North Korea had used old, polluted plutonium to the possibility that it had manufactured imprecise nuclear triggers. But at this point, intelligence officials said, they were just taking educated guesses, and would need hard evidence, or the testimony of spies or defectors, to figure out exactly what happened. The officials agreed to speak about the classified intelligence assessments only on condition of anonymity.

Intelligence officials said they had yet to determine the exact size of the weapon, or whether it was a plutonium bomb, the most likely scenario, given North Korea's stockpile of spent nuclear fuel.

The Pentagon said it had dispatched planes carrying sensitive atmospheric sensors into international airspace along the North Korean coast, in hope of picking up a whiff of radiation vented from the test site. But so far, they said, none has been detected.

DOJ_NMG_0079311

Mr. Snow contributed to some of the speculation at a morning meeting with reporters when he noted that North Korea began reprocessing nuclear fuel only two years ago — it was actually closer to three years, the North Koreans say — asking reporters, "Do you seriously believe that they have actually done everything within two years?"

"You could have something that's very old and off the shelf here as well, in which case they've dusted off something that was old and dormant," he added. "I don't know."

Mr. Snow later said "that was just me talking." But he seemed to be suggesting that the North Koreans reached for plutonium believed to be produced in the late 1980's or early 1990's.

That first batch of North Korean plutonium is widely suspected by experts to have been contaminated with a high amount of plutonium 240, which can cause a chain reaction to start prematurely and end in a fizzle.

Thomas B. Cochran, a senior scientist at the Natural Resources Defense Council in Washington, a private group that tracks nuclear arms, said the plutonium 240 contamination problem was well known, and probably understood by the North Koreans.

More likely, he said, they had difficulty getting timers, detonators and explosives to work in the perfectly choreographed manner that was needed to compress the fuel uniformly — one of the technical requirements of building a plutonium bomb.

Philip E. Coyle III, a former head of weapons testing at the Pentagon and a senior adviser to the Center for Defense Information, a private group in Washington, said other explanations might be reasonable.

"Maybe they were trying to be sophisticated, and trimmed back on the amount of fuel" in trying to perfect a small warhead for missiles, he said. "Maybe they wanted a Ferrari the first time out of the box, and got a Model T instead."

So, was it a big deal after all? Mr. Snow, reconsidering his original question, told reporters it was a "big deal in the sense that the North Koreans have, in defiance of the international community and their neighbors, said that they were going to test, and they have claimed to have tested a nuclear weapon. That is an important deal."

U.S. Waits For Firm Information On Nature And Success Of Device (WP)

By Dafna Linzer And Thomas E. Ricks

The Washington Post, October 11, 2006

The White House yesterday played down North Korea's nuclear capability as government scientists and intelligence analysts waited for additional data to confirm whether Pyongyang had conducted a successful nuclear test.

Intelligence and administration officials said they were still working under the assumption that North Korea had managed to detonate an atomic device, but they said they needed additional environmental sampling before they could formally rule out other possibilities, such as the blast being caused solely by conventional explosives. Intelligence officials were concerned that North Korea could conduct another test, either to improve upon the first test or to prove its capabilities.

A U.S. military RC-135, an electronic monitoring aircraft, flew around the Sea of Japan yesterday in an effort to detect nuclear radiation, two intelligence sources said. The same aircraft, based in Okinawa, Japan, was used in July after North Korea carried out a set of ballistic missile tests. The sources cautioned that it could take several days before winds push radioactive particles toward an area where they can be clearly detected.

"Over time, whenever the prevailing winds blow out over the Gulf of Japan, it will be more likely that we get some detection," one intelligence official said yesterday, requesting anonymity because the effort involves classified information.

Pentagon spokesman Bryan Whitman said officials would use a variety of means besides seismic data to try to draw a conclusion about the explosion, including some he would not discuss. "There is a possibility that particulate fallout is detectable, and then there's a variety of other intelligence means to determine the veracity of the allegation of the tests that they conducted," he said.

North Korea announced Monday that it had carried out its first nuclear test, and seismic readings suggested a blast inside a mountain in the country's north from the equivalent of 500 tons of explosives.

"We ourselves are operating under the assumption that, yes, in fact it was" a nuclear test, State Department spokesman Sean McCormack said yesterday. "But I can't confirm that."

The aircraft and monitoring stations on the ground are seeking to detect particulate data that would indicate that a nuclear explosion had taken place. But those efforts will not necessarily determine the nature of the blast, a Defense Department official noted, because the explosion was relatively small and the North Korean government said it was contained.

"There are multiple ways" the U.S. government will seek to verify North Korea's claim that it detonated a nuclear device, the official said. But there is no hard information yet, the official said. Intelligence analysts are also reviewing intercepted communications and other data.

The official declined to be quoted by name, saying that the Pentagon is not playing a lead role in the U.S. response and that he wanted to defer to the White House.

DOJ_NMG_0079312

White House press secretary Tony Snow said there is a "remote possibility" that U.S. intelligence will be unable to fully determine whether the test succeeded. Several nuclear tests conducted by other countries, including a number of Pakistani tests in 1998, have never been fully understood by U.S. intelligence. Many intelligence analysts believe a 1979 flash in the waters off the southern tip of Africa was caused by a nuclear test carried out by Israel, with South African help. But it has never been confirmed and remains a mystery.

Snow suggested yesterday that it is possible that the test was conducted with an older weapon from before President Bush's time in office.

"You could have something that is very old and off the shelf here, as well, in which case they've dusted off something that is old and dormant," he said.

North Korea's arsenal is estimated by U.S. intelligence to have grown substantially during Bush's presidency.

At the end of George H.W. Bush's time in office in January 1993, North Korea was presumed to have enough plutonium for one to two nuclear devices. But in 2002, Pyongyang announced that it had begun to reprocess additional plutonium for weapons. It could now have plutonium for as many as a dozen devices, depending on their size and sophistication.

Nuclear experts said there was little possibility that the explosion could have been the result of a chemical blast or a radioactive "dirty" bomb masked as a nuclear explosion.

"It would be much more difficult to mimic the radioactive isotopes you get from a nuclear blast" than to conduct an actual nuclear test, said Charles D. Ferguson, a nuclear expert at the Council on Foreign Relations. "A dirty bomb uses one type of radioactive isotope, whereas a nuclear explosion would give off dozens of different ones," he said.

Ferguson agreed with government nuclear scientists that the most likely reason North Korea's blast was relatively small was that only a fraction of the plutonium detonated during the test.

Officials believe the low yield probably resulted from the poor design of the device. To create the kind of plutonium-based blast that North Korea claims, it would have needed to simultaneously set off a series of conventional explosives around a plutonium core. The force of the simultaneous blast produces a shock wave that causes the material to compress into the center and implode.

If any of those steps is imperfect and only part of the plutonium is imploded, the result is a low yield, such as the one produced by the North Korean test Monday. A low yield, deep underground, is more difficult to detect.

A government scientist who was not authorized to speak publicly said that in addition to radiation in the air, ground sensors may be able to pick up seepage that emerges through the soil, sometimes months after a test.

Michael Green, who was the senior director for Asia at the National Security Council during President Bush's first term, said the North Koreans have always made good on nuclear and missile plans they announced ahead of time, leaving him confident that they had in fact conducted a nuclear test.

"They have always telegraphed what they were up to on the plutonium side," he said.

White House Suggests Weapon Was Old (WT)

By Joseph Curl

The Washington Times, October 11, 2006

The White House yesterday said the purported nuclear device detonated by North Korea on Monday might have been a "very old and off-the-shelf" weapon, but would not confirm that it was nuclear and could not explain why the blast was so small.

Bush spokesman Tony Snow said there is a "remote possibility" that the world never will be able to determine whether North Korea succeeded in conducting a nuclear test Monday.

Mr. Snow said the test appears be on a smaller scale than claimed by North Korea.

"You could have something that is very old and off-the-shelf here as well, in which case they've dusted off something that is old and dormant," he said.

Asked when the administration would know what was detonated, Mr. Snow said: "That's really up to the scientists. They're really trying to take a look at all the seismic and other evidence to figure out whether it was a nuclear device.

"They do know that there was a seismic event, presumably an explosion. But at this point, the analysts are being extremely careful. They want to make sure they don't outrun the facts, and they continue to assess it."

The Washington Times reported yesterday that U.S. intelligence agencies surmised from preliminary indications that North Korea did not conduct its first nuclear blast as Pyongyang had claimed. The officials said seismic readings show that the conventional high explosives used to create a chain reaction in a plutonium-based device were triggered, but that the blast's readings fell shy of a typical nuclear detonation.

"There was a seismic event that registered about 4 on the Richter scale, but it still isn't clear if it was a nuclear test. You can get that kind of seismic reading from high explosives," one official said.

DOJ_NMG_0079313

Mr. Snow said, "There's a possibility that [scientists] will never be able to say to a complete certainly exactly what did occur."

What the explosive was matters little, he said, "because you still have a deliberate act of provocation that has the aim of ... either trying to frighten or destabilize the region."

U.S. intelligence officials said yesterday that the working assumption is that it was some type of nuclear test.

"At this point, we can't confirm it was a nuclear test but more than likely the North Koreans set off some type of nuclear device," one official said.

Other data based on nuclear-particle collecting aircraft could not be analyzed in the region and had to be sent back to a laboratory in the United States. If it shows that radioactive matter was released near the site of the test, it would provide more detail on the nature of the device, U.S. officials said.

Meanwhile, Russia's defense minister yesterday stood by Moscow's estimate of the strength of North Korea's nuclear test, putting the blast level at 5 to 15 kilotons. South Korea said the explosion was about 0.8 kilotons, France said it was about 0.5 kilotons and the United States said it was less than 1 kiloton.

At the upper end of Mr. Ivanov's estimate, it exceeded the 12.5-kiloton strength of the U.S. atomic bomb that destroyed Hiroshima during World War II.

"One can explain this difference of judgment in terms of political reasons. Some want this test to be more powerful, others less powerful," Mr. Ivanov said.

The minister refused to elaborate on his remarks or on how Russia came to its assessment, saying: "It's a secret method, and I won't tell you."

Even A Small Nuke Poses Big Threat (USAT)

By Dan Vergano

USA Today, October 11, 2006

A dud, a fake or something else? Experts are dubious about the success of North Korea's underground nuclear test Monday.

Clearly, there was an explosion, a magnitude-4.2 blast from a near-surface location 40 miles north of Kimchaek, the U.S. Geological Survey says. But an estimate of the blast's strength, equivalent to 500-2,000 tons of TNT, makes it a pipsqueak as nuclear explosions go, says physicist Terry Wallace of Los Alamos National Laboratory in New Mexico.

Even so, the test had officials in other countries on edge. A magnitude-5.8 earthquake shook northern Japan today, and the Associated Press, quoting unnamed sources in the Japanese Foreign Ministry, reported that Japan suspected North Korea had conducted a second nuclear test. South Korean and U.S. monitors said they had detected no seismic activity in North Korea, and Japanese Prime Minister Shinzo Abe told the parliament he had no confirmation of a new blast.

Monday's blast had the abrupt beginning of a nuclear explosion, not the slow, rumbling start of an earthquake or the drawn-out TNT blasts seen in mine explosions, says seismologist Paul Richards of Columbia University. International monitors are waiting for confirmation in the form of measurements of airborne radioactivity, which usually spike after a test, he says.

“Most likely they tried to get a larger yield and things went wrong,” says physicist Wolfgang Panofsky, a veteran of the Manhattan Project, which developed the first atomic bombs six decades ago.

In a plutonium atomic bomb, which North Korea is suspected of building, the radioactive material is compressed by precisely timed TNT blasts. A nuclear chain reaction produces an instantaneous explosion, Panofsky says. Mistiming or other imperfections can cause the chain reaction to fizzle.

“It could even be a fake — conventional explosives masquerading as a nuke,” nuclear proliferation reporter Richard Stone of Science magazine, says by e-mail. Richards says, however, that timing 500 or more tons of TNT to ignite simultaneously — and getting the explosives to the test site without being detected by satellites — seems “not very credible.”

Some analysts, such as physicist David Albright of the Institute for Science and International Security, suggest that the North Koreans may have miniaturized a bomb to arm missile warheads.

Panofsky says that even the smallest possible plutonium bomb should produce an explosion the size of that at Hiroshima in Japan in World War II. That blast had an explosive force equivalent to about 15,000 tons of TNT.

“But the main thing is the cat is out of the bag,” Richards says. “Even if this is quite small by nuclear standards, something like this set off in a city would be an enormous disaster.”

Quake Raises Fears Of 2nd N. Korea Test (AP)

By Carl Freire

AP, October 11, 2006

DOJ_NMG_0079314

A strong earthquake in northern Japan on Wednesday may have led the Tokyo government to suspect that North Korea had conducted a second nuclear test.

In Washington, White House spokesman Blair Jones said U.S. officials had not detected any evidence of additional North Korea testing.

"Japanese officials are now saying that this occurrence may be related to an earthquake in northern Japan," Jones said.

The reaction to the earthquake underscored the jitters in Asia over reports that North Korea planned a second test after it announced Monday it had conducted its first nuclear test. Some analysts expect the regime to conduct more tests amid suspicion the first, relatively small explosion might have partially failed.

"We have very real concerns that they may conduct another nuclear test and that they may do so very soon," Australian Foreign Minister Alexander Downer told reporters on Wednesday, a day after he met with North Korean Ambassador Chon Jae-hong to condemn the atomic program.

A senior State Department official said the U.S. would not be surprised if there were multiple tests, but so far there is no sign of one. The official spoke on condition of anonymity because of the sensitivity of the situation.

Alarm was triggered when Japanese media reported early Wednesday that the government had detected tremors in North Korea, leading it to suspect Pyongyang had conducted a second nuclear test.

Japanese Prime Minister Shinzo Abe's spokesman confirmed the government was checking whether the North had tested another nuclear device.

Shortly after that, the Japanese meteorological agency said a strong earthquake with a preliminary magnitude of 6.0 shook northern Japan.

The quake, which struck at 8:58 a.m., was centered off the coast of Fukushima, 149 miles northeast of Tokyo at a depth of about 19 miles. The agency said that the tremor was a genuine quake and had nothing to do North Korean nuclear testing.

The U.S. Geological Survey in Golden, Colo., said Japanese broadcaster NHK called the USGS to check on seismic activity in the region at about 7:40 a.m. local time, more than an hour before the earthquake.

Later Wednesday morning, Abe said he had no information to confirm North Korea had conducted a second nuclear test.

"I have had not received information about any indications ... that a test has taken place," the prime minister said at a parliamentary budget meeting.

U.S. and South Korean monitors said they had not detected any new seismic activity Wednesday in North Korea.

The U.S. Geological Survey said it had detected an earthquake in Japan but not in North Korea.

"Either it was very small, or it didn't happen at all," USGS official Bruce Presgrave said of the reports on North Korea. "If the event would have been 2.5 or bigger, we would have seen something."

The North Korean nuclear test on Monday registered the same force as a magnitude-4.2 earthquake.

The head of South Korean seismic monitoring station said no activity has been detected in North Korea that could indicate a possible second North Korea nuclear test.

"There's no signal from North Korea, even no small event," Chi Heon-cheol, director of the South's Korea Earthquake Research Center, told AP.

The earthquake off Japan's coast was centered approximately 780 miles from the site where North Korea conducted its nuclear test. It occurred about 740 miles from the closest point on the North Korean coast.

There were no reports of damage or injuries.

Japan To Keep Prohibition On Nukes (WT)

By David R. Sands

The Washington Times, October 11, 2006

Japanese Prime Minister Shinzo Abe said yesterday that North Korea's claim it conducted a nuclear test will not affect his country's constitutional ban on developing nuclear weapons, but all of the North's neighbors face fundamental military and foreign policy questions in the wake of the test.

Mr. Abe, a hard-liner who has long pushed for a more assertive Japanese defense, told a parliamentary committee that fears in the region that Japan will seek a nuclear deterrent in response to North Korea's test are unfounded.

"We have no intention of changing our policy that possessing nuclear weapons is not our option," Mr. Abe said. "There will be no change in our nonnuclear arms principles."

Security analysts said new pressure to rewrite Japan's post-World War II pacifist constitution is just one potential result of Pyongyang's test. A Japanese military buildup, they warn, could spur China to bolster its own arsenal, and set off a regional arms race.

DOJ_NMG_0079315

"Given that some people perceive that Japan's new leadership might wish to reconsider Japan's nuclear policy, it is vitally important that the United States lead an intense and sustained effort with Japan, South Korea and China to clarify each other's intentions and policies in ways that avoid any nuclear competition," according to George Perkovich, a nuclear proliferation specialist at the Carnegie Endowment for International Peace.

South Korean President Roh Moo-hyun has already conceded that Seoul faces a fundamental review of its decadelong "sunshine policy" of economic and political engagement with the North, in light of the purported nuclear test.

China, for its part, had found North Korea's combative regime a useful tool in tying down U.S. military assets in the region and preventing the emergence of a pro-U.S. united Korea on its border. Pyongyang's suspected nuclear test Monday, in the face of repeated warnings by China, presents Beijing with a dilemma of how hard to punish its nominal ally.

Even North Korea faces a new diplomatic headache as a result of its test.

Pyongyang's tactic of playing its neighbors off one another has been undercut as Mr. Abe, Mr. Roh and Chinese President Hu Jintao have presented a united front in meetings over the past week against Pyongyang's nuclear ambitions. The three leaders recently had been sharply at odds over such issues as Japan's World War II record and territorial claims.

Despite Mr. Abe's assurances, many in East Asia are nervously watching Japan's internal debate over defense and nuclear policy.

Former Australian Prime Minister Paul Keating, according to the Australian newspaper, said at a financial conference in Sydney, "My great concern is that Japan may use the [North Korean test] to move into nuclear weapons itself, eschewing the nuclear protection provided to it by the United States under its umbrella."

Taiwanese Foreign Ministry spokesman Michael Lu said Taipei "fears the nuclear test might trigger an arms race and the proliferation of nuclear weapons, thus undermining the security and welfare of people in the Northeast Asian region."

Former Japanese Prime Minister Yasuhiro Nakasone, who served in the mid-1980s, this past summer issued a report saying Japan should study the nuclear military option because it could not count forever on U.S. protection from its neighbors.

"There are countries with nuclear weapons in Japan's vicinity," Mr. Nakasone said at the time. "We are currently dependent on U.S. nuclear weapons as a deterrent, but it is not necessarily known whether the U.S. attitude will continue."

The Scramble For A Way To Stop Nukes (CSM)

By Peter Grier

The Christian Science Monitor, October 11, 2006

WASHINGTON

North Korea's apparent test of a nuclear device could have a devastating effect on the world's long struggle to contain the spread of the most powerful military weapon known to man.

Experts have long worried that if the Pyongyang regime flaunted its atomic hardware, Asia might be drawn into an arms race reminiscent of the early days of the cold war. The spiral could develop like this: Threatened, Japan and South Korea start their own weapons programs. China piles up bombs to protect its regional superpower status. India strives to catch China, and then Pakistan tries to counter India, and then....

But this nightmare scenario is far from inevitable, point out experts. Everything depends on what the US and other interested governments do to try to repair a nonproliferation system that, despite its faults, has served the globe well for decades.

"Now is the time for farsighted, collaborative, and smart policies to prevent the further spread and use of nuclear weapons," concludes George Perkovich, a nuclear strategy and nonproliferation expert at the Carnegie Endowment for International Peace in Washington.

Tuesday North Korea took its nuclear bluster to a new level, saying it could fire a nuclear-tipped missile unless the US agreed to bilateral negotiations.

Monday's nuclear test was "an expression of our intention to face the United States across the negotiating table," an unnamed North Korea official told South Korea's Yonhap news agency.

Most experts in and outside the US government doubt that Pyongyang has the expertise to produce a nuclear warhead small enough to fit on an intercontinental ballistic missile. North Korea was simply trying to negotiate with threats and intimidation, said John Bolton, US ambassador to the UN.

"It's worked for them before. It's not going to work this time," Mr. Bolton said.

At the United Nations Security Council, discussions resumed concerning sanctions proposed by the US. The sanctions package could include everything from international inspection of all cargo leaving or entering North Korea to a prohibition on any military trade with the reclusive Pyongyang regime.

DOJ_NMG_0079316

As US officials noted, even North Korea's claim that it had exploded a nuclear device represented the crossing of a fateful threshold. If nothing else, Pyongyang had called Washington's bluff, some experts pointed out. President Bush, among others, has said in the past that the US would not "tolerate" an overtly nuclear North Korea.

Given the military difficulties of attacking a nuclear-weapon state, and of destroying stockpiles of fissile material, "tolerate" may no longer be the operative word.

"Any US statements that North Korea cannot be allowed to acquire nuclear weapons are meaningless bluster," writes Anthony Cordesman, a military expert at the Center for Strategic and International Studies, in an analysis of the meaning of the North Korean test.

At the same time, the test shows that current US policies aimed at curbing North Korea's nuclear ambitions haven't worked, says Daryl Kimball, executive director of the Arms Control Association in Washington. A new, more energetic diplomatic approach is needed - and fast, he says.

North Korea's actions could "have devastating effects on the struggle against proliferation," says Mr. Kimball.

Even before the test, current six-party talks on North Korea were stalled due to inflexibility on the part of both Washington and Pyongyang.

The US has indicated that a face-to-face meeting with North Korea might be possible in the context of these six-party negotiations. That offer should remain on the table, say some experts, despite North Korea's provocative actions.

However, in the short term, the US probably faces a period of tension and harsh words in its dealings with the unpredictable North Korean regime, says Jim Walsh, a proliferation expert at the Security Studies Program at the Massachusetts Institute of Technology in Cambridge.

Mr. Walsh, who visited North Korea last year, says that officials there continually told him that their ultimate goal is a denuclearized Korean peninsula - but that they would get nuclear weapons first, on the path toward that goal.

Thus a quick reversal of course on the part of the North Koreans may be unlikely.

"In the near term, this is not going to be undone," says Walsh.

But there are nuclear programs that have been rolled back, he notes. South Africa, among others, decided that atomic weapons were not in its national security interest.

North Korea - or, more specifically, the small cadre that runs the nation - does not so much want to be a nuclear power as to survive, says Walsh. Right now, it sees an atomic arsenal as a means to that end.

"What they really want is normalized relations," says Walsh.

Meanwhile, US policy has been inconsistent, veering back and forth between officials who want to negotiate with North Korea and those who want to squeeze it.

For now, the nuclear test is likely to strengthen the hand of US hard-liners.

"This will clarify US policy, but in a direction unlikely to yield results," says Walsh.

Asia Weighs Risk Of Sanctions (WSJ)

By Gordon Fairclough In Shanghai, Evan Ramstad In Seoul, South Korea, And Jay Solomon In Washington

The Wall Street Journal, October 11, 2006

North Korea's Neighbors Fear Pressure May Breed Regional Chaos

As the United Nations Security Council mulls sanctions against North Korea, it must consider one question that could affect the stability of North Asia for years to come: Would the collapse of Kim Jong Il's government prove more dangerous than leaving him in charge of a nuclear-armed state?

The prospect of regime change in Pyongyang may cheer many in Washington who view Mr. Kim as running a militarist regime that has tortured and starved its own people and traded missiles to Pakistan, Iran, Syria and others. But turmoil in North Korea could damage the economies of China and South Korea, set off a refugee crisis and lead to military conflict.

How the U.S. and Asia assess these risks could influence the outcome of Security Council meetings to decide how to respond to Pyongyang's announcement Monday that it detonated a nuclear device. The Bush administration is seeking to isolate North Korea, choking off money flow to its elite and preventing it from trading in materials used in weapons systems. It remains to be seen how long the regime would survive under strict sanctions.

Yesterday, China's U.N. Ambassador Wang Guangya told reporters China is willing to back "some punitive actions" but said those actions "have to be appropriate."

Still, the U.S. push for comprehensive sanctions that could topple the Kim regime is likely to be resisted by China and South Korea. "China won't agree to very stern sanctions," said Tao Wenzhao, a researcher at the Chinese Academy of Social Sciences in Beijing. A collapse of the North Korean regime would cause "serious economic and social problems for China" and "be bad for stability in Northeast Asia," he said.

DOJ_NMG_0079317

The Bush administration has never formally tied itself to a policy of regime change, but instead it continues to hold open the possibility of negotiating with North Korea to eradicate its weapons programs. At the same time, Washington has ratcheted up financial pressure on Pyongyang over the past two years. That has made it increasingly difficult for North Korea to access outside funds. The U.S. has also, along with Japan, largely stopped food-aid shipments to North Korea. Both countries provided large amounts of such aid to the country in the 1990s.

Many North Korean officials view U.S. policies as wholly focused on removing Kim Jong Il, say people who recently visited. "No doubt that's how they see it," said Selig Harrison, an American researcher who met with senior North Korean officials last month.

Some U.S. officials who have worked on North Korea policy in recent years argue Washington has only limited understanding of the fallout from a potential regime change. They say the Bush administration's approach has largely been driven by what they describe as President Bush's hatred of Mr. Kim, and not a comprehensive strategy.

"I'm sure at times there are people who look at the odds of collapse and there are all sorts of contingency plans," said David Straub, who headed the State Department's Office of Korean Affairs from 2002 to 2004. "But no one really knows if and when there'd be an institutional collapse."

In South Korea, the approach taken by President Roh Moo Hyun -- trying to engage the North with economic incentives -- has meant regime change was rarely discussed in public. In the wake of the claimed nuclear test, some opposition lawmakers are starting to raise the topic.

"The nuclear test changes the circumstance," said Chung Mun Hun, a legislator who belongs to the conservative Grand National Party.

One concern among Chinese and South Korean policy makers is who would take over if Mr. Kim were deposed.

"The alternatives could easily be worse," said Peter Beck, a Korea expert at the nonprofit International Crisis Group. "The most likely thing would be a military junta. That's the best-case scenario."

Another possibility is civil war, with factions within the army and other parts of the elite struggling for control. Such a scenario could prompt China, South Korea or other players to intervene, either to back favored successors or to attempt to quell violence.

U.S. military experts say they expect Chinese troops would move into North Korea to establish a buffer zone and prevent refugee flows across the border. The U.S. military's top priority would be securing North Korea's nuclear material and other suspected weapons of mass destruction.

South Korea's army would likely try to restore order and extend Seoul's U.S.-backed administration over the northern half of the Korean peninsula -- resulting in a possible struggle for influence with China, analysts said.

A collapse of the Kim regime would also likely spark economic dislocation. South Korean government planners predict more than two million North Koreans, out of a population of 23 million, would flee south across the demilitarized zone, overwhelming social services. The planners say financial markets would swoon and inflation would jump. Crisis-management costs alone could total $6.5 billion.

Marcus Noland, a Korea expert at the Institute for International Economics in Washington, estimates the cost of unifying North and South Korea would be about $600 billion over the first decade the two states merged.

Many Chinese fret over the costs of a potential refugee exodus to China's economy. "We worry it will damage China's golden opportunity for development," which needs "a nice stable environment," said Shen Shishun, a researcher at the Chinese Institute of International Studies.

Backers of fast change in North Korea's regime argue that supporting gradual transformation of the North will be far more expensive than a sudden break with the past. They say rebuilding the North Korean economy would be much more efficient with the old regime and its centrally planned economic system out of the way, and both North and South would derive a significant peace dividend by demobilizing their militaries.

Ralph Cossa, president of the Pacific Forum CSIS think tank in Honolulu, an arm of the Center for Strategic and International Studies, said other countries have tolerated North Korea because the cost of ousting Mr. Kim and rebuilding the country has been perceived to be too high.

"But if the cost of not having regime change is having it as a demonstrated nuclear state, then maybe that cost is too high," he said. "It's got to be the Chinese and South Koreans who say enough is enough."

Deep Insecurity Led Kim To Build Nuclear Program, Experts Say (NYT)

By Donald Greenlees, International Herald Tribune

The New York Times, October 11, 2006

HONG KONG, Oct. 10 — The military in North Korea is by far the largest consumer of the country's scarce resources. But even so, its combat jet pilots get only about two hours of flying time a month, its soldiers sometimes have to grow their own food, and much of its equipment is old and outclassed by that of its neighbors. According to South Korean and Western experts, if a conventional war breaks out on the Korean Peninsula, the best the North Korean military could manage would be to fight to a bloody stalemate.

It is the deep insecurity born of these shortcomings, the experts say, and not any desire to grab attention or gain leverage, that drove President Kim Jong-il's decision to defy international warnings and declare this week that his country had tested a nuclear weapon.

"I think North Korea wants an effective deterrent against the U.S. in case of war on the Korean peninsula," said Park Yong Ok, a former lieutenant general in the South Korean army who served as vice minister for defense in the late 1990's. "Kim Jong Il wants a nuclear weapon at hand. It's not a bargaining chip."

Although the North has an active army of more than one million soldiers — an immense number for a country of 23 million people — its poor and outdated equipment and huge difficulties in maintaining combat readiness mean it is outgunned by the smaller forces of South Korea and the United States troops stationed in the South.

Until now, North Korea's main deterrent against attack has been the 8,000 artillery pieces and 2,000 tanks it has positioned close to the demilitarized zone that separates North and South. Many of the guns have ranges long enough to reach Seoul, a city of 10.3 million people, and can fire chemical-weapon shells.

But military officials and analysts interviewed today said that the North closely watched conflicts elsewhere in the world, particularly the invasions of Iraq in 1991 and 2003, and saw that masses of tanks and artillery could be neutralized with ease by superior American military technology. So, methodically but with growing nervousness, the Communist regime sought a new trump card to maintain the security standoff on the peninsula.

"It's a large army, but the equipment is old," said a Western military attaché based in Seoul, who did not want to be quoted by name because he was not authorized to speak for his government on the matter. "I think the caliber of the army is not that great anymore. Kim has to look at other means for protection."

The attaché said it was unlikely that the Mr. Kim would now bargain his nuclear arms away. "He might talk, but not to hand over that capability," he said. "It's his security blanket."

To many outsiders, North Korea's pursuit of nuclear weapons, in defiance of global opinion, is irrational because it is further isolating the country and attracting increasing pressure on the regime.

But Michael Breen, author of a 2004 book, "Kim Jong-Il: North Korea's Dear Leader," said that it was a mistake to regard the North's nuclear program as an erratic dictator's bargaining ploy.

"He is not trying to make foreigners dance to his tune," Mr. Breen said of Mr. Kim. "In many ways, the foreigners are irrelevant. He decided many years ago that he has no friends, and he needs a nuclear weapon in order to survive."

He also recognizes, Mr. Breen said, that his country is falling behind in conventional strength and that his country's "military first" policy was an enormous drain on its resources. "Nuclear weapons are quite economically attractive," compared to the cost of arming and training an immense army, Mr. Breen said.

Still, the nuclear test that the North claims to have conducted on Monday is only one step on the path to achieving a battlefield nuclear deterrent. Beyond building a workable device and setting it off in a test, the Northfaces the considerable technical challenge of making it small enough to fit in a missile warhead, aerial bomb or artillery shell so that it can be used against an enemy.

The consensus among analysts is that the North Koreans are not there yet. "They need to reduce the size of the nuclear weapon," Mr. Park, the former South Korean vice minister for defense, said in a telephone interview from Seoul. "But I think it is only a matter of time before they have the technological capacity to enable a nuclear warhead to be put on a missile."

North Korea has a variety of short- and medium-range missiles that are capable of threatening the immediate region, including Japan, but they are apparently not yet able to hit targets more than a few hundred miles away.

A test of the country's longest-range missile so far, the Taepodong-2, failed in July when the vehicle blew up shortly after launch. In theory, the Taepodong-2 would have a range of 9,320 miles, enough to reach the West Coast of the United States, if it worked properly.

Still, the North's apparent progress on both the bomb and the delivery system should prompt the South Korean government of Roh Moo-hyun to rethink its recent policy of seeking greater military autonomy within the country's alliance with the United States, according to Mr. Park.

DOJ_NMG_0079319

South Korea, he said, cannot contemplate pursuing its own nuclear weapons program, he said, so "the issue now is how to make the alliance as strong as it was in the past."

Iran Distances Itself From N Korean Crisis (FT)

By Gareth Smyth

Financial Times, October 11, 2006

Iran on Tuesday distanced its own nuclear dispute from the North Korean crisis, reiterating its claim that it opposes nuclear weapons.

While analysts abroad speculated that Tehran could be emboldened by North Korea's defiance, comments from officials and the media put the emphasis on the different paths taken by the two countries.

Tehran, they stressed, remained committed to the Nuclear non-Proliferation Treaty.

North Korea's claim that it had conducted a nuclear test comes as western powers grapple with policy towards Tehran, which has repeatedly resisted international demands for a suspension of uranium enrichment tests, the most sensitive part of its nuclear programme.

Tehran insists its nuclear experiments are designed for the production of energy but western governments suspect the Islamic Republic is intent on developing nuclear weapons.

The US and European governments are now seeking to raise the pressure on Iran through gradual sanctions at the UN Security Council.

But in the Iranian press on Tuesday some commentators warned that undue US pressure on North Korea had backfired.

Jam-e Jam, a conservative daily, blamed Washington's "unilateral, expansionist military policies" for the collapse of the six-party talks over Pyongyang's atomic programme.

The reformist paper Etemad-e Melli said the "west should have known intimidation and threats would be not only inefficient but would also push a country's resources towards an end with little benefit for its people."

Gholam-Hossein Elham, the government spokesman, argued "big powers with hegemonic ambitions" - terminology often applied to the US - should begin nuclear disarmament and that Israel should give up its atomic arsenal.

But there have also been calls for the US to engage with Pyongyang as a means to defuse the crisis. Iran has had intermittent co-operation with North Korea over developing missiles, and Iranian exiled groups opposed to the Islamic Republic have alleged there has also been swapping of nuclear technology.

In January 2002 US president George W Bush lumped both Iran and North Korea alongside Iraq as "an axis of evil" that was "arming to threaten the peace of the world by seeking weapons of mass destruction."

Aftab, a website close to Hassan Rowhani, a leading conservative pragmatist, suggested Iran could be either the biggest winner or the biggest loser of the "gambling" by Kim Jong-il. Making the "threat of Korea into a chance for Iran" required a "dispassionate analysis" of the international situation, a commentary on the site said. In April, Mr Rowhani, the former top security official, demanded that the government of president Mahmoud Ahmadi-Nejad showed "more reason, and less emotion" over the nuclear crisis.

Iran Blames U.S. For N. Korea Nuke Test (AP)

By Ali Akbar Dareini

AP, October 11, 2006

Iran took a tough line on its nuclear program Tuesday, blaming Washington for North Korea's reported test blast and vowing to keep developing its own suspect atomic program.

Iran appeared emboldened by North Korea's defiance as its hardline Islamic leaders pledged not to bow to international demands that Tehran suspend uranium enrichment.

"The Iranian nation will continue its path of dignity based on resistance, wisdom and without fear," President Mahmoud Ahmadinejad was quoted as saying on state-run television.

Iran also stood apart Tuesday from the widespread international condemnation of North Korea.

Government spokesman Gholam Hossein Elham told reporters that Iran opposed "any use of weapons of mass destruction, especially nuclear weapons." But he did not criticize North Korea and instead faulted the United States for the test.

"The root cause of this should be sought in the policy, behavior and method adopted by the rulers of the United States," Elham said.

The U.N. Security Council has demanded Iran suspend uranium enrichment because of suspicions Tehran is trying to develop atomic weapons in violation of its treaty commitments. Iran ignored the council's Aug. 31 deadline despite a threat of sanctions.

DOJ_NMG_0079320

Though the Security Council is giving precedence to considering sanctions against North Korea, a State Department spokesman said Tuesday that senior officials of the United States and five other countries planned to confer by video Wednesday on possible U.N. sanctions against Iran.

Enriched uranium is a key component for nuclear bombs. But it also can be used to fuel nuclear reactors that generate electricity, and oil-rich Iran insists that is the sole goal of their program.

Israeli officials said Tuesday they feared the North Korean test would set a dangerous precedent and the communist country would transfer materials and technology for the development of nuclear weapons to Iran, whose president has said the Jewish state should be wiped off the map.

"Nuclear capability in the hands of irresponsible, undemocratic regimes is a world problem," said Miri Eisin, spokeswoman for Israeli Prime Minister Ehud Olmert.

Iran has long refused to comment on its close relationship with North Korea. Western intelligence agencies have reported that Iran's Shahab-3 missile, which is capable of carrying a nuclear warhead, is based on a North Korean rocket. But Iran denies this.

Many Iranian newspapers voiced sympathy Tuesday for the North Korean regime. The hardline Resalat newspaper said in an editorial that Washington's "expansionist policies make the world such a dangerous place, it is to be expected that countries seek such weapons as a deterrence."

But the moderate independent newspaper Hambastegi criticized North Korea. The paper ran a cartoon showing that country's leader, Kim Jong Il, holding a bomb in one hand and saying to the world: "Why can't we be friends? Give me your wallet."

Amir Rafati, who writes for the financial paper Jahan-e-Eghtesad, said North Korea's test was "both a chance and a threat for Iran."

"It is a chance because it will reduce the pressure on Iran," Rafati told The Associated Press. "It is a threat because it may make things worse for Iran in the long run."

Feelings about North Korea were mixed in the streets of Iran's capital, Tehran.

"I think this nuclear test could be a very good example for Iranian people to see that despite pressure from America, wide sanctions and several problems, North Korea tried and was successful," said Reza Tavassoli, a government employee.

But university student Arash Navidkia condemned the communist nation. "North Korea's nuclear tests are a big danger to the entire world, to global peace and security. No country should do such tests," he said.

Bomb Test May Scupper Indo-US Nuclear Deal (FT)

By Jo Johnson

Financial Times, October 11, 2006

North Korea's nuclear test will reduce the chances of the Indo-US civilian nuclear energy agreement being passed by a lame duck session of the Senate in November and strengthen the non-proliferation lobby in the US, Indian security analysts warned on Tuesday.

US President George W. Bush is expected to face renewed criticism that he is rewarding bad behaviour by allowing a resumption of civil nuclear trade and co-operation with India, despite its 1998 nuclear test and refusal to join the nuclear non-proliferation treaty.

Critics of the deal have argued that US support for a normalisation of nuclear relations with India, long subject to a grinding technology-denial regime, will encourage other countries with nuclear ambitions to test the strength of the non-proliferation system.

"The non-proliferation lobby will again raise a hue and cry, as it will seem as though India is being singled out for special treatment," said Harinder Sekhon, senior fellow at the Observer Research Foundation, a New Delhi think-tank.

"It will be hotly debated [when the Senate reconvenes in November]. There won't be a rubber stamp," said Daryl Kimball, executive director of the independent Arms Control Association and a critic of the proposed agreement with India.

"The North Korean situation shows that when the international community, and particularly the United States, forgives and forgets states that have violated non-proliferation standards, it gives greater licence to future proliferators to bend or break the rules."

The Indo-US pact is already in trouble in the US Congress, and if the Senate does not take up the enabling legislation for the deal in the brief caretaker session that follows next month's congressional elections, the legislative process must start again from scratch next year.

Under such circumstances, Indian Prime Minister Manmohan Singh would be likely to come under renewed domestic pressure to harden his negotiating stance from coalition allies opposed to what they see as his pro-US foreign policy tilt.

DOJ_NMG_0079321

"The non-proliferation issue in this debate will assume greater significance, but the US Congress is by and large still overwhelmingly supportive," said Major-General Dipankar Bannerjee of the Institute for Peace and Conflict Studies.

The Indian government, which has condemned the North Korean test, is redoubling its lobbying efforts in Washington in an attempt to stress its own "impeccable non-proliferation record" and no-first-use policy with respect to nuclear weapons.

"India tested, no doubt about it, but we have a strong no-first-use policy and had never joined the Nuclear Non-Proliferation Treaty, whereas North Korea has never given such assurances and opted out of the NPT," said Mrs Sekhon.

The Hindu, perhaps India's most influential newspaper, said New Delhi's criticism of Pyongyang's "adventurism" smacked of "double standards" and "hypocrisy".

Additional reporting by Guy Dinmore in Washington

A Blink, A Nod, A Bomb (WSJ)

By Henry Sokolski

The Wall Street Journal, October 11, 2006

As if the Bush administration wasn't busy enough with Iraq and Iran, now it must face the immediate policy fallout from Pyongyang's weekend nuclear test. U.S. diplomats filed a United Nations resolution condemning the test and calling for the naval interdiction of North Korean vessels and the freezing of the outlaw state's financial assets. It's unclear if this will fly with the other members of the Security Council. But with critics of the administration already blaming the test on the White House's unwillingness to talk directly with Kim Jong Il, action of some sort is certain.

What's less clear, however, is whether any of these measures will keep other states from following Pyongyang's model misbehavior. A Security Council resolution, however "tough," may fail to dissuade other would-be proliferators, especially Iran, if it does not clearly link sanctions with North Korea's longstanding violations of the nuclear rules.

North Korea is an exceptional proliferator, to be sure. It not only signed and defied the Nuclear Non-Proliferation Treaty (NPT), which prohibits acquiring bombs, it formally withdrew and tested a nuclear device. In contrast, India, Israel, and Pakistan never signed, and Iran and Iraq never tested. But precisely because Pyongyang so brazenly violated the NPT, it's critical that any sanctioning or punishment be tied to this crime.

Then there is the matter of avoiding ever repeating our feckless policies toward North Korea. For more than two decades, the U.S. and its allies blinked at the regime's nuclear-weapons activities, even when they clearly violated international treaties Pyongyang had signed; bent the nuclear rules to accommodate North Korea's misbehavior; and groveled more than once before Pyongyang and Beijing to keep this duplicitous diplomacy afloat.

The U.S. first blinked almost as soon as it discovered Pyongyang's construction of a military production reactor at Yongbyong in 1984. The reactor had no hook-up with any portion of North Korea's electrical grid, yet we decided to act as if it did. In 1985, with Soviet help, we got Pyongyang to sign the NPT. The treaty requires that new members complete an agreement with the International Atomic Energy Agency (IAEA) within 18 months. When Pyongyang failed to do this, we again blinked (this time several times, for more than six full years). To get Pyongyang to sign, George H.W. Bush finally acceded in l991 to North Korean demands that the U.S. first remove its tactical nuclear weapons from South Korea and allow North Korea to inspect South Korean military bases -- arguably our first grovel.

On the plus side, Washington got Pyongyang and Seoul to agree not to reprocess or enrich uranium or to acquire nuclear weapons. There was only one problem: Pyongyang was in violation of this agreement almost before the ink was dry. The IAEA confirmed this point after their first inspections revealed Pyongyang had reprocessed some of its spent fuel. After Pyongyang refused IAEA requests for further inspections, the IAEA referred the matter to the United Nations Security Council, which was ready to impose sanctions against North Korea.

What happened next resulted in a major bending of the rules. Bill Clinton blocked U.N.-sanctions action with a generous offer of energy assistance, including a promise of two large light water reactors along with a suspension of routine IAEA inspections. In exchange, all Pyongyang was asked to do was promise eventually to come back into compliance with its NPT and IAEA obligations. For nearly a decade Pyongyang did no such thing. When the Bush administration finally discovered Pyongyang was cheating on its pledge not to make nuclear weapons-usable fuel, the White House suspended further energy assistance and the IAEA again referred North Korea's case to the Security Council.

Then, we blinked again. Rather than back the IAEA's complaint against North Korea for violating its NPT obligation to permit routine IAEA nuclear inspections, the U.S. called for multilateral talks with North Korea, Japan, South Korea, Russia and China to get Pyongyang to voluntarily disarm. In this, the U.S. had to plead with North Korea and China to cooperate (Pyongyang to come and Beijing to pressure Pyongyang to behave). Ultimately, neither did. Yet, in an attempt to get both on board, the U.S. again caved by agreeing to a set of negotiation principles that included respecting North Korea's right to peaceful

DOJ_NMG_0079322

uses of nuclear energy and the need to discuss at the appropriate time the subject of provision of a light-water reactor to the DPRK.

None of this history makes for very good reading. It certainly suggests that any attempt at partisan blame-gaming is rather foolish. Here everyone -- Democrat and Republican -- is culpable (although the Clinton administration deserves special mention). It also suggests that whatever our stated purpose is for sanctioning North Korea, it ought to include getting our practice of blinking and bending -- i.e., at the NPT, the IAEA safeguards and the Korean denuclearization statement of 1991 -- behind us.

Indeed, this might be the most important reason to sanction Pyongyang. It certainly seems improbable that we can pressure it to surrender its nuclear weapons. It also will take a good deal more than any U.N.-sanctions resolution to put Kim Jong Il out to pasture. Instead, the U.S. and its allies should use the occasion of sanctioning North Korea to pursue two sets of objectives. The first should be regional -- to frustrate Pyongyang's designs to parley its nuclear gains to unify Korea on terms favorable to the North, to reassure Japan and keep it from going nuclear, and to undermine the North Korean regime. Here it would be useful to recall North and South Korea's NPT pledges not to acquire nuclear weapons and hold both of them to their binding 1991 pledge not to make nuclear fuel. It is also an opportune time to get the South Koreans to reconsider their failed policies to pacify the North and revitalize security ties with their democratic neighbors.

The remaining objectives are global. First, we must prevent Iran and other would-be bomb makers from thinking they can violate the NPT and withdraw with impunity as Pyongyang did. Here it would make sense to explain the reasons for the U.N. to sanction Pyongyang. The most important of these is that its test "proves" Pyongyang was necessarily violating the NPT before it left the treaty in 2003 (in order to make the device it tested). Offering this explanation now would also be helpful in lending support to long-standing, sensible French proposals for U.N. consideration that would hold NPT violators -- including those that withdraw -- automatically accountable.

Second, we should keep others from testing. This point is particularly salient in the case of India, with whom the U.S. is currently seeking a civilian nuclear-cooperation agreement. One of the sticking points is whether the U.S. will demand, as it has with other states, that all nuclear cooperation will cease if the recipient tests nuclear weapons. Congress should insist on binding language on this point while making it clear that the same condition must also apply to U.S. nuclear assistance to China as well.

Finally, sanctioning North Korea should be used to help keep friendly nations who are hedging their security bets with "peaceful" nuclear energy programs of their own (e.g., Egypt, Turkey, Algeria, Indonesia and others) from thinking that they can proceed even if their programs are dangerous and make no economic sense. The NPT is clear that its aim is to share the "benefits of peaceful nuclear energy." What Iran and North Korea developed was neither beneficial nor peaceful. It's high time that we clarify what is. Here, America's current binge of subsidizing nuclear power and backing nuclear fuel-making projects deserves a second look, as do the all-too-minimal requirements to safeguard these facilities against military diversions.

All of this will take time. But North Korea's nuclear test and our response to it is the right place to begin. The alternative -- more nuclear tests by more states -- should certainly give the U.S. and its allies more than enough incentive to try.

Mr. Sokolski, executive director of the Nonproliferation Policy Education Center, is editor of "Taming the Next Set of Strategic Weapons Threats" (Institute of Strategic Studies, 2006).

The Bus Is Waiting (NYT)

By Thomas L. Friedman

The New York Times, October 11, 2006

As eras go, the post-cold war has been a pretty good one. The collapse of communism, the spread of free-market democracies and the general reign of stability bought and paid for by U.S. power all combined to create a world in which China and India have been able to rise peacefully, America has prospered, and Europe has become whole and free. Yes, there's been 9/11, Bosnia, the rise of the petro-dictators and African wars — which are hardly trivial. But all in all, compared with the vast repression and nuclear standoff that characterized the cold war, the post-cold-war era has been much better for a lot of humanity.

Too bad it's probably over.

Yes, one day historians may argue that the post-cold war started on 11/9 and ended on 10/9.

The Berlin Wall fell on 11/9 — Nov. 9, 1989, which ushered in the post-cold-war world. The apparent North Korean nuclear test went up on Oct. 9, 2006, which, may have ushered out the post-cold-war world and ushered in a much more problematic era — the post-post-cold-war world.

This post-post-cold-war era will be defined by three new features — if things continue as they are. First is a nuclear Asia, triggered by North Korea's flaunting of its nuclear weapons. How long will Japan, Taiwan and South Korea remain nonnuclear with Kim Jong-il brandishing his bomb? Second is a nuclear Middle East. Iran is almost certain to follow North Korea's lead, and

DOJ_NMG_0079323

once the Shiite Persians in Iran have the bomb, how long will it be before the Sunni Arabs in Saudi Arabia, Egypt, even Syria have one too? Third is a disintegrating Iraq in the heart of the Arab world, with its destabilizing impact on oil prices and terrorism.

Together these will add up to a much more dangerous and volatile post-post-cold-war world — unless ...

Unless, what? Unless China and Russia get their act together and understand that the post-post-cold-war world is a much bigger threat to their prosperity than a post-cold-war world in which U.S. power is pre-eminent. You read me right — the post-cold-war world can be preserved only if Russia and China get over their ambivalence about U.S. power and if the Bush team gets over its ambivalence about Iran and North Korea.

How so? The U.S. is sanctioned out when it comes to Iran and North Korea. We don't have any more unilateral sanctions with which to pressure either regime to halt its nuclear adventure. The only countries that could have an impact on North Korea and Iran are China and Russia.

If China told North Korea that unless it dismantled its nuclear program and put its facilities under U.N. inspection, Beijing would cut off its energy and food, Kim Jong-il would relent. He is not suicidal. Anything less than such an explicit Chinese threat will mean a nuclear North Korea and eventually a nuclear Asia — which will certainly not be good for China's growth prospects.

And if China and Russia told Iran that they would join in the toughest possible U.N. economic sanctions on Tehran if it persisted in its nuclear program, the ayatollahs would also back down. Because then the Europeans would have the spine to join in sanctions and Tehran would face a united front.

To be sure, both moves would be greatly helped by a declaration from the Bush team that it had overcome its infighting and decided to pursue changes in behavior instead of changes in regimes in North Korea and Iran, and would be prepared to give explicit security guarantees to both if they verifiably ended their nuclear programs. When an administration can't make up its mind between regime change and change of behavior, it gets neither. And that is what the Bush team has gotten.

So, thanks to North Korea's nuclear test, we've come to a moment of truth. Yes, we have to make up our minds, but so, too, must Moscow and Beijing. They constantly advocate "multilateral" solutions. Well, will they sign up for the kind of biting multilateral sanctions that would work vis-à-vis Iran and North Korea and make "unilateral" U.S. military options unnecessary? If Russia and China want to see the post-cold-war world continue, they can't be free riders anymore — opposing both U.S. unilateralism and effective multilateralism that requires them to do something hard. They've got to start paying a price to preserve this world.

If they do, this relatively benign post-cold-war world might continue. If they don't, if they keep trying to be free riders on our bus, we'll all stall — because America can't keep this bus moving alone any longer, especially when the road gets this dangerous.

The bus stops here.

We Need A New Deterrent (WP)

By David Ignatius

The Washington Post, October 11, 2006

"Present at the Creation" was the title Dean Acheson gave to his memoir about the founding of the post-World War II order. Now, with North Korea claiming to have tested a nuclear weapon in defiance of the international community, and Iran seemingly on the way, Harvard professor Graham Allison argues that we are present at the unraveling.

The North Korean bomb test is a seismic event for the world community. It tells us that the structure created to maintain global security is failing. The five permanent members of the U.N. Security Council -- the United States, Russia, China, Britain and France -- all warned North Korea against taking this step. Yet the leaders in Pyongyang ignored these signals and in the process blew open the nuclear Non-Proliferation Treaty.

The North Korean leadership, puny in everything but weapons technology, has been marching toward this moment since the 1950s. It's unrealistic to think that, having brazened their way to detonating what they say is a nuclear bomb, the North Koreans will now give it up. The proliferation machine isn't going to run in reverse. In that sense, the question is less how to repair the old architecture of nonproliferation -- practically speaking, it's a wreck -- and more how to build a new structure that can stop the worst threats.

What are the right cornerstones of this new security structure? I put that question to Allison, who is a national resource when it comes to matters of nuclear proliferation and deterrence. He wrote the definitive book, "Essence of Decision," on the Cuban missile crisis, the world's closest brush with all-out nuclear war. In recent years he has been studying the danger of nuclear terrorism, and he edited a prescient discussion of the implications of a North Korean breakout that appears in the September issue of the Annals of the American Academy of Political and Social Science.

Allison believes that the world must focus on what he calls "the principle of nuclear accountability." The biggest danger posed by North Korea isn't that it would launch a nuclear missile but that this desperately poor country would sell a bomb to al-

DOJ_NMG_0079324

Qaeda or another terrorist group. Accountability, in Allison's terms, means that if a bomb explodes in Manhattan that contains North Korean fissile material, the United States will act as if the strike came from North Korea itself -- and retaliate accordingly, with devastating force. To make this accountability principle work, the United States needs a crash program to create the "nuclear forensics" that can identify the signature of fissile material of every potential nuclear state. Arms control expert Robert Gallucci describes this approach as "expanded deterrence" in his article in the September Annals.

President Bush seemed to be drawing this red line of accountability when he warned Monday: "The transfer of nuclear weapons or material by North Korea to states or non-state entities would be considered a grave threat to the United States, and we would hold North Korea fully accountable for the consequences of such action."

Tough words, but are they credible? That's why the second essential pillar of a new security regime is a restoration of deterrence. The Bush administration warned North Korea over and over that it would face severe consequences if it tested a nuclear weapon. So did China and Russia, but Kim Jong Il went ahead anyway. Iranian leaders are similarly unimpressed by Bush's saber rattling, viewing America as a weakened nation bogged down by an unwinnable war in Iraq. To restore deterrence, the West needs to stop making threats it can't carry out. And the United States must salvage its strategic position in Iraq -- either by winning or organizing the most stable plan for withdrawal.

After the Cuban missile crisis, President John F. Kennedy got serious about preventing nuclear war. He installed a "hotline" so the White House and the Kremlin could talk when crises arose; he negotiated the 1963 test ban treaty; and he began the discussions that led to the 1968 Non-Proliferation Treaty. That treaty worked adequately for almost four decades. Instead of the 20 nuclear states that Kennedy feared would exist by 1975, we had just eight, until last weekend. But the North Korean test threatens to begin what a 2004 U.N. commission warned would be "a cascade of proliferation" that could spread to Japan, South Korea, Iran, Egypt and Saudi Arabia.

We are present at the unraveling. We must "think about the unthinkable" with new urgency. The United States and its allies must begin constructing a system that can succeed where the Non-Proliferation Treaty has failed. A terrorist nuclear bomb in Manhattan or Washington isn't a thriller writer's fantasy; it's a probability, unless America and its allies establish new rules for nuclear accountability that are clear and credible.

McCain Targets Both Clintons (WP)

By Charles Babington

The Washington Post, October 11, 2006

In what sounded to many Washington ears yesterday like an early shot in the 2008 presidential campaign, Sen. John McCain (R-Ariz.) singled out Sen. Hillary Rodham Clinton (D-N.Y.) as he denounced the Clinton administration's policies toward North Korea.

"I would remind Senator Clinton and other Democrats critical of Bush administration policies that the framework agreement her husband's administration negotiated was a failure," McCain said in a speech near Detroit, where he was campaigning for a Republican Senate candidate. "Every single time the Clinton administration warned the Koreans not to do something -- not to kick out the IAEA inspectors, not to remove the fuel rods from their reactor -- they did it. And they were rewarded every single time by the Clinton administration with further talks."

Aides said McCain was responding to Hillary Clinton's comments Monday, when she criticized North Korea for its announcement of having tested a nuclear weapon and added: "Some of the reasons we are facing this dangerous situation is because of the failed policies of the Bush administration. I regret deeply their failure to deal with the threat posed by North Korea. And I hope that the administration will now adopt a much more effective response than what they have up until now."

The comments, made in response to reporters' questions during a Columbus Day Parade in New York City, drew modest attention on Monday. But McCain pounced on them before the cameras yesterday in Michigan, and other Republicans were soon distributing his remarks.

The two senators are considered serious contenders for the 2008 presidential nominations. McCain's comments seemed designed to highlight his foreign policy differences with Hillary Clinton and to link her to aspects of her husband's presidency that some Republicans feel can be successfully attacked.

Philippe Reines, spokesman for Hillary Clinton, said of McCain's remarks: "Now is not the time to play politics of the most dangerous kind. . . . President Bush has been in charge of North Korea policy for six years, and two days ago we saw the brazen result."

He said the New York senator "supports an approach that protects us from the threat of North Korean nuclear weapons, as the Clinton administration successfully did for eight years."

In his speech, McCain said North Korea is testing the resolve of South Korea, Japan, China, Russia and the United States, which have pressed the isolated country to refrain from developing a nuclear weapons program. He said Bush is right to call on

DOJ_NMG_0079325

the U.N. Security Council "to impose a military arms embargo, financial and trade sanctions, and, most importantly, the right to interdict and inspect all cargo in and out of North Korea."

Under the Clinton presidency, McCain said, "We had a carrots-and-no-sticks policy that only encouraged bad behavior."

McCain's remarks echo those made by Bush administration officials in early 2003. Abandoning a previous insistence that only North Korea was to blame for the brewing nuclear crisis, Bush allies then began arguing it was the predictable result of a flawed 1994 agreement between the Clinton administration and Pyongyang. The pact, they contended, granted benefits to North Korea while leaving until later the threat of sanctions.

Allies of the Clintons have hit back, and Reines continued the defense yesterday. He said Bush "has allowed the 'Axis of Evil' to spin out of control. Our Iraq policy is a failure. Iran is going nuclear and North Korea is testing nuclear weapons." Bush policies, he said, "have made America less safe, not more so, and it is time for a new direction."

Reines later distributed an eight-point memo on actions that Hillary Clinton has taken regarding North Korea since early 2004.

McCain and fellow Republicans left little doubt that his remarks were made with an eye on presidential politics, which will move to center stage after the Nov. 7 midterm elections. McCain political adviser John Weaver fielded reporters' calls, and Republicans including House Majority Leader John A. Boehner of Ohio disseminated highlights of the Michigan speech.

McCain "is absolutely right," Boehner said in a statement. Congressional Democrats, he said, "haven't learned a thing from the mistakes the Clinton administration made with respect to North Korea."

McCain Criticizes Clinton On N. Korea (AP)

By Sarah Karush

AP, October 11, 2006

Republican Sen. John McCain on Tuesday accused former President Clinton, the husband of his potential 2008 White House rival, of failing to act in the 1990s to stop North Korea from developing nuclear weapons.

"I would remind Senator (Hillary) Clinton and other Democrats critical of the Bush administration's policies that the framework agreement her husband's administration negotiated was a failure," McCain said at a news conference after a campaign appearance for Republican Senate candidate Mike Bouchard.

"The Koreans received millions and millions in energy assistance. They've diverted millions of dollars of food assistance to their military," he said.

Democrats have argued President Clinton presented his successor with a framework for dealing with North Korea and the Republican fumbled the opportunity. In October 2000, Secretary of State Madeleine Albright made a groundbreaking visit to Pyongyang to explore a missile deal with Chairman Kim Jong Il. There was even talk of a visit by President Clinton.

Reports this week suggesting North Korea tested a nuclear device prompted a number of Democrats to criticize Bush, arguing that he focused on Iraq, a country without weapons of mass destruction, while ignoring legitimate threats from Pyongyang.

The criticism took a presidential campaign turn on Tuesday as McCain, the Arizona senator considered the Republican front-runner for the party nod, assailed Clinton's husband and mentioned her by name. The New York senator is considered her party's leading candidate in 2008.

Sen. Clinton's spokesman dismissed McCain's criticism and argued that it was time for a new policy from the president.

"Now is not the time to play politics of the most dangerous kind — with our policy on North Korea," Philippe Reines, spokesman for Clinton, said in a statement. "History is clear that nothing the Bush administration has done has stopped the North Koreans from openly testing a nuclear weapon and presenting a new danger to the region of the world."

Five years after the Sept. 11 terrorist attacks, Bush "has allowed the 'axis of evil' to spin out of control. Our Iraq policy is a failure. Iran is going nuclear and North Korea is testing nuclear weapons," the statement said.

McCain's criticism also elicited a strong response from Democratic Sen. John Kerry, the 2004 presidential nominee and a potential 2008 candidate.

"He must be trying to burnish his credentials for the nomination process," said Kerry, who labeled McCain's comments "flat politics and incorrect."

"The truth is the Clinton administration knew full well they didn't have a perfect agreement. But at least they were talking. At least we had inspectors going in and we knew where the (nuclear fuel) rods were. This way, we don't know where the rods are, the rods are gone. There are no inspectors. Ask any American which way is better," Kerry said.

The Massachusetts senator made the remarks in Nevada during a campaign appearance with Elizabeth Carter, wife of Democratic Senate candidate Jack Carter.

DOJ_NMG_0079326

In U.S.-North Korea relations, the initial breakthrough occurred in October 1994 when U.S. negotiators persuaded North Korea to freeze its nuclear program, with onsite monitoring by U.N. inspectors. In exchange, the United States, with input from South Korea and Japan, promised major steps to ease North Korea's acute energy shortage.

These commitments were inherited by the Bush administration, which made clear almost from the outset that it believed the Clinton policy ignored key elements of North Korea's activities, especially the threat posed by the hundreds of thousands of troops on permanent duty along the Demilitarized Zone with South Korea.

McCain, a member of the Senate Armed Services Committee, said he backed tough U.N. sanctions against North Korea in response to the reported test. The measures, he said, should include a military embargo, financial and trade sanctions and the right to inspect all cargo in and out of North Korea.

McCain also called on China to "step up to the plate" and vote for sanctions and rejected calls for one-on-one talks between the United States and North Korea.

"The worst thing we could do is to accede to North Korea's demand for bilateral talks," McCain said. "When has rewarding North Korea's bad behavior ever gotten us anything more than worse behavior?"

Test Byproduct: Quick Scramble To Point Fingers (NYT)

By Sheryl Gay Stolberg

The New York Times, October 11, 2006

WASHINGTON, Oct. 10 — North Korea's claim that it detonated a nuclear device rippled through American politics on Tuesday, nowhere more so than at a Shriner's hall in Michigan, where Senator John McCain, the Arizona Republican, sought to place the blame on former President Bill Clinton.

"I would remind Senator Clinton and other Democrats critical of the Bush administration's policies that the framework agreement her husband's administration negotiated was a failure," Mr. McCain said, referring to his potential rival for the presidency in 2008, Senator Hillary Rodham Clinton of New York.

Mr. McCain's attack was part of an increasingly bitter partisan row over who was responsible for allowing North Korea to achieve nuclear ability.

Republicans sought to focus attention on what they said was a misguided and naïve policy of negotiating with North Korea during the 1990's. Democrats pressed the argument that North Korea's claimed advance was a byproduct of President Bush's decision to wage war against Iraq, which proved not to have any banned weapons, while doing too little to confront a real threat developing in North Korea.

"I have been very adamant that we are not safer since 9/11, and my opponent takes the opposite position," Claire McCaskill, the Democratic candidate for Senate in Missouri, said in an interview on Tuesday morning, harking back to a speech she gave about Iraq and North Korea in May. "I think North Korea doing this certainly comes down on my side of the equation."

With polls showing Republicans having difficulty holding on to their traditional strength when it comes to which party is better suited to keeping Americans safe, the candidates and parties have moved quickly to take political advantage of the crisis.

At first blush, a nuclear test by North Korea is just the kind of development that would ordinarily work well for Republicans late in a campaign: a potential national security threat that highlights the dangers facing the United States and spotlights the president's role as commander in chief. But with polls showing deep dissatisfaction with the war in Iraq, candidates and strategists in both parties said the news from North Korea could cut both ways.

Democrats like Ms. McCaskill, the Missouri state auditor who is in a tight Senate race with the incumbent Republican, Jim Talent, have spent months saying Mr. Bush paid too much attention to Iraq, while ignoring threats like North Korea. Now, Democrats are now busy saying "I told you so" to voters.

But Republicans like Mike McGavick, the Senate candidate in Washington State, are offering up an "I told you so" of their own, by spotlighting Democratic opposition to a missile defense system that is strongly backed by Mr. Bush.

Democrats, including Mr. McGavick's opponent, Senator Maria Cantwell, say they would support a missile defense program if one were proven effective. But Republicans say Democrats cannot have it both ways, voting against the system while criticizing the president.

"I think this makes it even clearer why missile defense is part of an overall strategy to protect America from an unsafe world," Mr. McGavick said. "It reminds us that we live in an extremely dangerous world."

Republicans say that any time national security is front and center, it is good news for them. They are hoping the test will push the Mark Foley sex scandal off the front pages and the cable news programs, although Mr. Foley's case was all over television again on Tuesday.

"To the extent it resonates for Democrats, the resonance will be in the eye off the ball argument: too much focus on Iraq, look what's happening in North Korea now," said T .J. Pempel, a political scientist at the University of California who is an expert

DOJ_NMG_0079327

in East Asian studies. “But I think it could resonate almost equally as well for Republicans if they say: ‘The world is a scary place. There are all sorts of dangers out there. Osama bin Laden is one, Kim Jong-il is another.’ ”

Indeed, Mr. Kim, the North Korean leader, seems to have become the latest bogeyman in Republican political imagery. On Tuesday, the Republican National Committee circulated a photograph of Madeleine K. Albright, Mr. Clinton’s secretary of state, clinking glasses with Mr. Kim.

The picture was taken during talks in 2000 that were aimed at persuading the North to limit its nuclear program. Ken Mehlman, the Republican National Committee chairman, said in an interview that voters might be seeing more such images in the coming weeks — accompanied by a reminder that Ms. Albright had presented Mr. Kim a basketball autographed by Michael Jordan.

His committee coined a phrase for it — “basketball diplomacy” — which Mr. Mehlman sprinkled through his remarks.

Under an agreement Mr. Clinton struck with North Korea in 1994, the North agreed to “freeze” its production of plutonium at its main nuclear plant at Yongbyon, in return for energy aid. North Korea abided by the freeze.

But starting around 1997, the North Koreans took steps to start a second, secret nuclear program, one based on enriching uranium. South Korean and American intelligence agencies did not find conclusive evidence of that program until the summer of 2002, and that fall the Bush administration confronted the North Koreans with its evidence.

Now, under attack by Republicans like Mr. McCain, Democrats, including Mrs. Clinton, are firing back. The Senate Democratic leader, Harry Reid of Nevada, has called on Mr. Bush to appoint a senior official to conduct a thorough review of his “failed North Korea policy,” while a spokesman for Mrs. Clinton issued a stinging response to Senator McCain.

“President Bush has allowed the axis of evil to spin out of control,” said the spokesman, Philippe Reines.

One candidate who hopes to turn this week’s developments to his advantage is Mike Bouchard, a Republican who is running against Debbie Stabenow, an incumbent Democrat, for the Senate seat in Michigan. Mr. McCain made his remarks about North Korea in Southfield, Mich., with Mr. Bouchard, a county sheriff who has been emphasizing national security, by his side.

“It’s becoming increasingly clear that we live in a dangerous world that includes rogue nations, Mr. Bouchard said in a telephone interview afterward. “I would much prefer that we were in a completely peaceful moment, but without question, a dangerous world is certainly a more apparent pointer to my credentials.”

White House Rejects Criticism Over North Korean Test (AFP)

By Laurent Lozano

AFP, October 11, 2006

The White House rebuffed criticism that failed US diplomacy led to North Korea's nuclear test, while downplaying the significance of Pyongyang's blast, which rattled the world.

White House spokesman Tony Snow branded criticism faulting the US approach for failing to bridge differences with North Korea, Iran and Iraq and leading to the world-stunning test announced by Pyongyang Monday as "back-seat generalship".

"What you have is the fact that the United States has been engaged actively on all three problems ... We are continuing to work aggressively on diplomacy with the Iranians and with the North Koreans," Snow said.

Snow responded to comments especially from opposition Democrats that the administration of President George W. Bush had taken the wrong approach to dealing with perceived global threats, as signified by the North Korean nuclear test, which came after years of attempts to convince Pyongyang to not develop a bomb.

"What it tells you is that we started at the wrong end of the axis of evil," said former Democratic senator Sam Nunn, referring to Bush's designation for Iraq, Iran and North Korea.

And North Korean specialist Selig Harrison, writing in the Washington Post, said US sanctions on North Korea have "given the initiative to hardliners in Pyongyang."

The criticism appeared to put the White House on the defensive, coming as it did exactly four weeks before legislative elections. Pollsters say Democrats may have a chance to possibly end Republican control of Congress due to voter discontent over the Iraq war and other security issues.

"Diplomacy had run its course when it came to Iraq," Snow said.

"We are still hopeful that diplomacy is in fact going to yield the desired results when it does come to North Korea and Iran."

US State Department spokesman Sean McCormack also rejected the idea that the US policy can be blamed for Pyongyang's first nuclear weapons test.

"The North Korean regime has been developing a nuclear weapon for decades," he said.

Snow meanwhile downplayed the significance of the test, despite the strong international reaction.

DOJ_NMG_0079328

"A massive event?" Snow said in response to a question at a White House briefing. "A big-deal event? There was an event... The earth moved, we can say that," he said.

He added that the United States did not have confirmation of a nuclear weapon test.

"This may take some time. It's a complex undertaking, and it involves questions like, was there venting or was there not," Snow said. "There is a remote possibility that we'll never be able to determine fully."

But he added: "It does not change our view that this is an act of provocation, nor does it change the view, more importantly, of our partners in the neighborhood, who view it much the same way."

Snow spoke of a "new sense of resolution" among US partners in dealing with North Korea, especially China and South Korea, who have joined the US, Russia, Japan in six-way talks with Pyongyang over halting its nuclear program.

"Everybody is on the same page in terms of talking about sanctions," Snow declared.

Earlier he brushed off calls by some analysts to accept North Korea's request for bilateral talks on its nuclear program.

"If we're to deal one-on-one, we'd be playing a weaker hand, and the president is not going to play a weaker hand. Because the notion of dealing on one-on-one, again, gives the North Koreans a chance to try to split a united coalition.

"We have less leverage than these guys (the Chinese and South Koreans) do. We have now brought into the diplomatic process the people who can make a difference.

"The most significant factor from a diplomatic standpoint is that you got a lot more diplomatic muscle than you've ever had on either of these problems."

McCormack also rejected bilateral talks with Pyongyang.

"In a bilateral discussion with North Korea, all of a sudden all the pressure is on the United States to make concessions," McCormack said. "It's not a strong hand from which to start."

He said that former president Bill Clinton's administration negotiated with North Korea to little effect.

"They negotiated an agreement with them. And the North Koreans were cheating on it almost as soon as the ink was dry on the thing," he said.

Kerry Blasts Bush NKorea Policy At Nevada Campaign Stop (AP)

By Kathleen Hennessey

AP, October 11, 2006

BOULDER CITY, Nev. --Sen. John Kerry said Tuesday that a nuclear test in North Korea is evidence of the Bush administration's "failed policies," and called for the U.S. to engage in direct talks with Pyongyang.

"The president attacks the place that has no weapons of mass destruction and does nothing about the place that does," Kerry told reporters at a campaign stop for Democratic U.S. Senate candidate Jack Carter. "For five years, I have been calling for the United States to engage in direct talk with North Korea. ... Instead, for five years this administration has ignored them. They fundamentally left this to other people."

Kerry made the comments one day after North Korea claimed to have successfully tested a nuclear device.

The Bush administration has been trying for years to get engage more countries in its anti-proliferation efforts, aimed at stopping nations such as North Korea from developing and selling nuclear weaponry and missiles. But it has refused one of North Korea's key demands: that the United States engage in one-on-one talks. Instead the administration pushed for a so-called six-party format, in which Russia, China, South Korea and Japan would join in the discussions.

"The six-party talks are a cover for the administration to avoid direct discussion," Kerry said.

The Massachusetts senator reacted strongly to comments from his Republican colleague, Arizona Sen. John McCain, who in a speech earlier in the day put the blame for North Korea's developing nuclear program on the Clinton administration. McCain said a 1994 agreement allowing United Nations inspectors into the country was a "failure."

Kerry, speaking at a veteran's home about 30 miles south of Las Vegas, called McCain's comments "flat politics and incorrect."

"He must be trying to burnish his credentials for the (presidential) nomination process," said Kerry, the 2004 presidential nominee and a potential 2008 candidate whose appearance in Nevada comes less than two months after the state was picked for an early Democratic caucus.

McCain and New York Sen. Hillary Clinton are considered their party's front-runners for 2008.

"The truth is the Clinton administration knew full well they didn't have a perfect agreement." Kerry said. "But at least they were talking. At least we had inspectors going in and we knew where the (nuclear fuel) rods were. This way, we don't know where the rods are, the rods are gone. There are no inspectors. Ask any American which way is better."

Kerry said he would support sanctions imposed by the United Nations.

The senator appeared with Carter's wife, Elizabeth Carter. Carter is running against Republican incumbent Sen. John Ensign for Nevada's second Senate seat.

In Search Of A North Korea Policy (WP)

By William J. Perry

The Washington Post, October 11, 2006

North Korea's declared nuclear bomb test program will increase the incentives for other nations to go nuclear, will endanger security in the region and could ultimately result in nuclear terrorism. While this test is the culmination of North Korea's long-held aspiration to become a nuclear power, it also demonstrates the total failure of the Bush administration's policy toward that country. For almost six years this policy has been a strange combination of harsh rhetoric and inaction.

President Bush, early in his first term, dubbed North Korea a member of the "axis of evil" and made disparaging remarks about Kim Jong Il. He said he would not tolerate a North Korean nuclear weapons program, but he set no bounds on North Korean actions.

The most important such limit would have been on reprocessing spent fuel from North Korea's reactor to make plutonium. The Clinton administration declared in 1994 that if North Korea reprocessed, it would be crossing a "red line," and it threatened military action if that line was crossed. The North Koreans responded to that pressure and began negotiations that led to the Agreed Framework. The Agreed Framework did not end North Korea's aspirations for nuclear weapons, but it did result in a major delay. For more than eight years, under the Agreed Framework, the spent fuel was kept in a storage pond under international supervision.

Then in 2002, the Bush administration discovered the existence of a covert program in uranium, evidently an attempt to evade the Agreed Framework. This program, while potentially serious, would have led to a bomb at a very slow rate, compared with the more mature plutonium program. Nevertheless, the administration unwisely stopped compliance with the Agreed Framework. In response the North Koreans sent the inspectors home and announced their intention to reprocess. The administration deplored the action but set no "red line." North Korea made the plutonium.

The administration also said early this summer that a North Korean test of long-range missiles was unacceptable. North Korea conducted a multiple-launch test of missiles on July 4. Most recently, the administration said a North Korean test of a nuclear bomb would be unacceptable. A week later North Korea conducted its first test.

It appears that the administration is deeply divided on how to deal with North Korea, with some favoring negotiation and others economic and political pressure to force a regime change. As a result, while the administration was willing to send a representative to the six-party talks organized by the Chinese in 2003, it had no apparent strategy for dealing with North Korea there or for providing leadership to the other parties. In the meantime, it increased economic pressure on Pyongyang. Certainly an argument can be made for such pressure, but it would be naive to think it could succeed without the support of the Chinese and South Korean governments, neither of which backs such action. North Korea, sensing the administration's paralysis, has moved ahead with an aggressive and dangerous nuclear program.

So what can be done now that might have a constructive influence on North Korea's behavior? The attractive alternatives are behind us. There should and will be a U.N. resolution condemning the test. The United Nations may respond to calls from the United States and Japan for strong sanctions to isolate North Korea and cut off trade with it. But North Korea is already the most isolated nation in the world, and its government uses this isolation to its advantage. Stronger sanctions on materials that might be of use to the nuclear program are reasonable, but the horse is already out of the barn. Economic sanctions to squeeze North Korea would increase the suffering of its people but would have little effect on the elite. In any event, they would be effective only if China and South Korea fully participated, and they have shown no inclination to do so.

There will be calls to accelerate our national missile defense program. But the greatest danger to the United States from this program is not that North Korea would be willing to commit suicide by firing a missile at the United States, even if it did develop one of sufficient range. Rather, it is the possibility that the North Koreans will sell one of the bombs or some of their plutonium to a terrorist group. The president has warned North Korea not to transfer any materials from its nuclear program. But the warnings we have sent to North Korea these past six years have gone unheeded and its acts unpunished. It is not clear that this latest one will have any greater effect. If a warning is to have a chance of influencing North Korea's behavior it has to be much more specific. It would have to promise retaliation against North Korea if a terrorist detonated a nuclear bomb in one of our cities. It must be backed by a meaningful forensics program that can identify the source of a nuclear bomb.

This test will certainly send an undesirable message to Iran, and that damage has already been done. But it is important to try to keep this action from precipitating a nuclear arms race in the Asia-Pacific region. Both Japan and South Korea have the capability to move quickly to full nuclear-weapon status but have not done so because they have had confidence in our nuclear umbrella. They may now reevaluate their decision. We should consult closely with Japan and South Korea to reassure them that

DOJ_NMG_0079330

they are still under our umbrella and that we have the will and the capability to regard an attack on them as an attack on the United States. This may be necessary to discourage them from moving forward with nuclear deterrence of their own.
